In further support of this petition we inclose herewith an article on the subject, reprinted from FOREST AND STREAM, to which we ask your attention.

Fisheulture.

FISHWAY CONSTRUCTION.

Editor Forest and Stream:

I have been called upon so often recently for information in regard to fishways that it has become impracticable for me to prepare replies to individual inquiries. I have thought, therefore, that a brief presentation of the conditions necessary to be fulfilled in fishway building and a sketch pointing out the characteristics of the different types or designs of fishways in use or suggested would be acceptable to your readers, and be of some assistance to those who are seeking information in regard to fishways.

Whatever form of fishway may be selected, certain conditions must be fulfilled in order to secure success and satisfaction in operation. These may be indicated briefly as follows:

1. The capacity of the fishway and the volume of water discharged through it should be in some proportion to the total volume of the stream under ordinary conditions of water. For trout and bass a fishway presenting a passage from 6 to 12in. in width would be ample, provided the location of it was such that fish approaching the obstruction would be sure to find their way into the entrance. A much larger construction, with capacity for the discharge of a greater volume of water, would be necessary for large rivers, where the intention is to provide for the passage of salmon, shad and other fish of considerable size.

2. The fishway should be so located that the discharge from it will be in line with or above the main obstructions in the course of the stream, so that under the natural conditions of movement the fish will be certain to find the entrance without difficulty.

3. The construction should be of such strength and so protected as to be absolutely safe from damage or destruction by flood or ice. When these requirements are met, almost any of the numerous designs of fishways which have been proposed from time to time would be effective. As a matter of fact, in construction these fundamental conditions have usually been disregarded or ignored, and the failures in fishways have been due to this rather than to any fault in the particular design employed.

Although the number of designs for fishways is very large, all of them may be brought under one of three classes:

1. The pool and fall fishway, which was among the first to be designed, and which has been long in use in various countries in Europe. Here the total fall is broken into a series of small falls, with intervening pools and narrow sluiceways leading from one pool to another, alternating in position from one side to the other in descent, so that the velocity of the water is expended in each pool, the velocity accumulated in descent from one pool to the next below not being sufficient to prevent the ascent of vigorous fish. This form is not much in use in this country, though the recent design by Hoskin, of Nova Scotia, belongs to this type. This consists essentially of a succession of pools separated by narrow partitions and connected by openings below the surface of the pools. In this design no water can enter the fishway except what passes through the opening leading from the upper pool into the dam. The successive openings from one pool to the other being of the same size, it follows that the surface of the water in the second pool will stand above the opening into the next at the same level that the surface of the water in the dam stands above the opening from the dam into the first pool; and this is true for all the succeeding ones.

2. The inclined plane fishway, in which the water is led down a flat slope, and its velocity arrested by causing it to pursue a sinuous course by the introduction of deflecting buckets at intervals in its course. The Brackett, the Atkins, and a number of others of this type have been suggested. The Rogers fishway belongs also to this type and presents no novelty whatever in the means of arresting the velocity of descent of water. It owes the success which it measurably has obtained to the fact that in its construction the conditions which I have indicated as necessary for success have been observed by the builders. The fishway has been built either in a cribwork above the dam or in the dam itself, so that the discharge from the lower end will be in a direct line with the obstruction. As a device for aiding the ascent of fish, it must be classed with the other fishways built on this inclined plane system, presenting no novelty over existing forms, and certainly no improvement over the Brackett.

In the two general plans above indicated the fish follow the same path that the water does, which requires a very indirect and sinuous course in passing over the obstruction.

3. The general plan which was first suggested by myself, in 1879, aims to secure the retardation of the water by causing it to expend its acceleration in friction, pursuing the same devious course that it follows in the Brackett and other fishways of that system, and at the same time to provide a direct easy swimming way for the fish. This is accomplished by erecting an inclined sluiceway, built of boards or timber, with deflecting plates so arranged and alternating as to arrest and return against gravity one-half of the volume of the descending current. This return current meeting the remaining direct current, establishes a water dam which practically breaks up the descent into a series of pools, and so reduces the acceleration of the water as to establish an easy, direct swimming way for fish. Small openings at the lowest point of each of the series of deflecting buckets permit sand and gravel and other small material which may find its way there to fall through and pass in succession through the entire series and be discharged at the outlet, so that practically the fishway automatically frees itself from sediment and remains open.

I have sketched briefly the necessary conditions for successful fishway building of whatever type, and have indicated the three general plans of types under which all existing constructions fall. The question of success in any particular case will turn rather upon the intelligence and skill displayed in the location and adaptation of the fishway to the conditions of site than upon the particular form employed, and the question of the selection of any particular plan in any case would be determined by questions of cost and peculiarties of site, and special adaptation to conditions prescribed.

MARSHALL MCDONALD,
Commissioner of Fisheries.

WISCONSIN FISHCULTURE.

MADISON, Wis., Jan. 27.—*Editor Forest and Stream:* I take pleasure in writing you a few lines, that your numerous readers may know what Wisconsin is doing this winter in the way of artificial propagation of fish.

The brook trout spawning season opened about Nov. 10 and closed Jan 13. During this time the Commission took some 5,000,000 brook trout eggs, being an average of 750 eggs from each female trout. I think this is, without doubt, the greatest number of brook trout eggs taken at any one station in the Union.

Our California mountain trout began to spawn Jan. 18, and we have taken to date (Jan. 25) 580,000 eggs from 322 females, making an average of 1,801 eggs per fish. One fish which we spawned yielding 4,025 eggs. We expect to take about 4 000,000 of the eggs of the mountain trout. The fry of this fish will be planted in the large streams, rivers, and lakes of the State, where they seem to do well.

The largest mountain trout which I have known to be caught from our streams, with a hook and line, weighed 10.lbs. 2oz. My friends, Clark and Mather, both distinguished fishculturists, claim that it is impossible to impregnate and hatch 50 per cent. of the rainbow trout eggs. With us we have no difficulty in hatching 80 per cent. of the eggs taken. When our eggs are first taken they are laid on wire trays, 2ft. long, 16in. wide. On each tray we lay 10,000 eggs. The eggs are picked over when first laid down and all bad eggs removed. The eggs are not picked over again for two weeks. After the third week the embry is formed. We have no more trouble in handling them than we do other eggs.

I would like to hear from some of the superintendents of hatcheries as to what their experience has been in using salt for young fry when they become diseased and begin to die; as we have all had more or less experience with the loss of young fry. As for myself I never had any faith in salt until last season, when our rainbow trout, which were about ten days old, began to die, and do what we would we could not save them. We got a barrel of salt and used it freely for two days. At the end of this time our fish were doing nicely and we had no further trouble with them. For the remainder of the season while we had fish in the troughs they were salted every morning. At present I have such faith in salt that I am using it every day on our brook trout from the time they are first hatched, and I shall continue to do so until I am convinced that I am in the wrong.

The call for fry for our streams and lakes increases each year; and although we have greatly enlarged our facilities for hatching we find we are as far from supplying this demand as we have been at any time during past years.

If a suitable location can be found it is the intention of the Commission to establish a branch hatchery on the Wisconsin Central or on the M., L. S. & W. Ry. to hatch pike and muskallonge fry with which to replenish the waters in the northern part of the State.

During the past two seasons Mr. W. D. Marks, Superintendent of the Michigan Fish Commission, and myself have been experimenting in hatching white bass. In June, 1891, we succeeded in hatching some 20,000,000 of bass fry. We are making preparations to hatch this gamy fish in large numbers this season, as a large number of the parent fish can be easily secured. Each female bass will produce an average of 50,000 eggs. With the water at a temperature of 60deg. F. the eggs will hatch in fifty-six hours from the time they are taken. From past experience we have learned that we can hatch 50 per cent. of the eggs in incubation, but with improved appliances and experience, in the future we may be able to hatch a larger percentage. When we once get this valuable game fish introduced into the many lakes to which they are not indigenous; they will add greatly to the food supply of the people.

Last summer the Commission built a new hatching house on their Madison grounds. The building is a splendid frame structure, 40ft. wide, 85ft. long and two stories high. The superintendent's office is in the vestibule on the first floor. The first story contains but two rooms—the office mentioned above and the main or hatching room. There are no pillars or braces on the first floor, the ceiling being supported from above. The water supply enters at both ends of the building. The hatching troughs extend from either end toward the center; leaving an aisle 13ft. wide extending from the main entrance across the middle of the building. At the further end of this aisle is an alcove with fire-place and mantel.

The first story is ceiled and finished with long leaf Georgia pine, hard-oil finish; and in due time the second story will be finished the same as the first. It is the intention of the Commission to use the second floor as a museum, in which all the different species of fresh-water fish of America will be exhibited.

The building complete cost $6,000; and I doubt whether there is another State hatchery which presents as fine an appearance throughout as this.

The Commission is making preparations for a fish display at the World's Fair. The State Board of World's Fair Commissioners have granted us funds with which to commence operations; and the next Legislature will, no doubt, grant us an additional appropriation sufficiently large to enable us to make a creditable display. We hope to make an exhibit that will compare favorably with those of other States.

JAS. NEVIN, Supt.

NEW YORK FISH COMMISSION.—It is said that Dr Sargent of Watertown was to have been appointed in Mr. Burden's place, but somebody suggested that the Doctor was a Republican, and that settled it. We learn that Gen. Robert Lenox Banks of Albany is talked of for the place.

The Kennel.

DOG SHOWS.

Feb. 9 to 12.—Fourth Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Sec'y.

Feb. 16 to 19.—Second Annual Show of the Central City Kennel, Jackson, Mich. Chas. H. Ruhl, Sec'y.

Feb. 23 to 26.—Sixteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Supt.

March 1 to 4.—First Dog Show of the Keystone Kennel Club at Philadelphia, Pa.

March 8 to 11.—Washington City Kennel Club, Washington, D. C. Fred. S. Webster, Sec'y, 738 Broadway, New York.

March 15 to 18.—Second Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Sec'y.

April 6 to 8.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Sec'y.

April 13 to 16.—Third Annual Dog Show of the Continental Kennel Club, at Denver, Col. R. W. Isenthal, Sec'y.

April 20 to 23.—Fourth Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.

May 4 to 7.—Annual Dog Show of the California Kennel Club, at San Francisco Cal. Frank J. Silvey, Sec'y.

Entries for Jackson, Mich., show close to-day, with Chas. Ruhl, Jackson, Mich. W. K. C. entries close Feb. 8.

PACIFIC COAST FIELD TRIALS.

[*Special Report.*]

THE annual field trials of the Pacific Coast Field Trials Club were held Jan. 18 to 22, at Bakersfield, Cal., and were an unqualified success. The weather was delightful and birds plentiful, and the attendance of visiting sportsmen greater than at any previous meeting. The country being perfectly level, the spectators are able to ride and see the work of the dogs. The headquarters of the club is at a hotel and a good room is set apart for business and social meetings.

The judges were Messrs. R. T. Vandevoort, of Pasadena; D. M. Pyle, of Bakersfield, and H. T. Payne, of Los Angeles. The sportsmen present came from all parts of the State.

THE DERBY.

Owing to a delay in the arrival of some of the officers of the club, the dogs to run in the Derby were not drawn until Monday morning, which delayed the opening trials several hours. The first brace put down were Mr. Kerckhoff's black, white and tan setter Sam K. Gladstone and Mr. Linville's black, white and tan setter Dottie Day. Sam Gladstone was handled by D. M. Walters and Dottie by Wm. Dermott. The birds were wild, moving in large bevies and sought the willow thickets, where the dogs could not be seen. Much of the time they were both very fast and pretty workers. In the more open ground better work was done and several good points made. Of these Gladstone got three and Dottie two. Other qualities being about equal, the former won. The dogs were down 1h. 10m.

FLAKE L.—DEL MONTE.—The next brace put down were P. D. Linville's black and white setter Flake L. and W. J. Golcher's pointer Del Monte. The former was handled by Dermott and the latter by George T. Alexander. Both dogs were very fast and wide rangers, but Flake showed the most stamina, holding her speed throughout. She made the most points and was awarded the heat. The dogs were down 1h.

OTTILIE—ALICE GLADSTONE.—The third brace were J. M. Barney's pointer Ottilie and T. J. Watson's setter Alice Gladstone. The former was handled by Allender and the latter by Dermott. This was a very speedy pair. In fact, all the dogs thus far had shown more speed than nose, causing them to dash in among birds that should have been drawn on and pointed. Fewer points were made than in former heats, but Alice had the best of it, after working 40m., and was awarded the heat.

STARLIGHT—RUSH CROXTETH.—The last brace were T. J. Watson's setter Starlight and Charles Studarn's pointer Rush Croxteth. The former was handled by Dermott and the latter by its owner. Starlight was a fast and beautiful worker, quartering the ground nicely, while the pointer was slow and lacking in style. It looked as though the pointer would not be in it, but, to the surprise of all, he found and pointed bird after bird, while the setter was dashing about through the cover like a blue streak, but doing nothing except to make one point and back Rush on one of his points. The dogs were down half an hour. This ended the first series of the Derby.

TUESDAY.

Second Series.

Several more visitors arrived to-day from San Francisco, among them George Crocker and a party of friends in a private car. The work to-day was over the same grounds as yesterday. Birds were plentiful enough but did not lie well to the dogs till toward evening.

SAM K. GLADSTONE—FLAKE L.—The first dogs put down in the second series of the Derby were Sam K. Gladstone and Flake L. The former won.

RUSH CROXTETH—ALICE GLADSTONE.—The pointer Rush Croxteth and setter Alice Gladstone were next down. The former was handled by the owner and the latter by Dermott. Rush Croxteth was declared the winner.

Third Series.

SAM K. GLADSTONE—RUSH CROXTETH.—In the third series Sam K. Gladstone beat Rush Croxteth and won first money.

FLAKE L.—DOTTIE DAY.—Then Flake L. and Dottie Day were run to determine which would be best to put down against Rush Croxteth to go for second money, and Flake was selected. She defeated her opponent and won second

money. The third was divided between Studarn's Rush Croxteth and D. J. Golcher's pointer Del Monte.

Three parties went out to-day for private shooting. One bagged eighty quail, another seventy and a third forty, the latter shooting three miles from town, while the other went sixteen miles to grounds that had not been shot over.

WEDNESDAY.

MEMBERS' STAKE.

The work done to day was very enjoyable, as the Members' Stake is always a popular one, and each owner handles his dog. The dogs were worked over open ground on the Miller & Lux ranch near town, where the spectators had a fine view of all that was done. Birds were not, however, very plentiful, as the ground had been shot over during the season. The dogs were drawn as follows: W. H. Wallace's Solano B. with R. Liddle's Fanny; J. M. Bassford's Queen with George Sperry's Count Dick; and J. M. Kilgariff's Sirius with Messrs Post & Harper's Pelham.

First Series.

SOLANO B.—FANNY.—The first heat was between Wallace's Solano B. and Liddle's Fanny. The former is a veteran field trial dog, while the latter is but a puppy. Solano B. had no trouble in winning, making several staunch points and working his ground carefully.

QUEEN'S LAST—COUNT DICK.—J. M. Bassford's Queen's Last and J. Sperry's Count Dick were to have been next, but Count and his owner were elsewhere enjoying a hunt, which gave Queen's Last a bye.

SIRIUS—PELHAM.—An interesting heat followed between Kilgariff's Sirius and Post and Harper's Pelham. Several points and backs were made by each, but Sirius was declared the winner.

Second Series.

SOLANO B.—QUEEN'S LAST.—The second series opened with a heat between Solano B. and Queen's Last, and was very close and interesting, both dogs doing good work. The latter won.

QUEEN'S LAST—SIRIUS were put down to contest for the first place. This was a long race, consuming nearly two hours. Many points were made by each, the former staunchly backing in each instance, and Sirius ranged very wide, frequently being a quarter mile from the handler, his aim being to find bevies, while Queen's Last worked within a radius of 100yds. or so and quartering her ground carefully. She is one of the merriest workers yet seen in these field trials, and unlike most field trial dogs, is a very pleasant one to shoot over. She had to work, however, to beat the veteran Sirius, but finally did so, hence the membership trophy fell to Joe Bassford, of Vacaville, who is a prince among the sportsmen of the State.

The trials to-morrow are looked forward to as that is Ladies' Day, and a number of ladies from the vicinity are expected to attend. This evening the annual meeting was held, particulars of which were given last week. Among the new arrivals to-day were Hon. W. W. Foote, of San Francisco, who is an ardent admirer of dog and gun and seldom fails to attend the trials, and P. Finnigan, ex-Director of the State Agricultural Society.

THURSDAY.

To-day was the most pleasant day of the meeting. A large number of the citizens of the town escorted their feminine friends and relations to witness the work of the dogs. The weather was rather warm but otherwise delightful. The work of the day was over the ground used on the first two days. Birds were found in great numbers and some grand work was done early in the day and late in the afternoon. The rest of the day the air was warm and the ground and cover so devoid of moisture that the birds gave out very little scent, thus baffling the efforts of the keenest-nosed dogs to locate them in the low sagebrush. Birds also seemed restless and the small army of noisy spectators in carriages, on horseback and on foot tramping over the ground close behind the dogs kept the birds running away and dodging under the cover. Under the circumstances the work of the dogs was commendable and the fact was established that California can boast of having some dogs equal to the best in the country.

ALL-AGE STAKE.

The dogs were drawn as follows:

Thos. Higgs's Trippo with Messrs. Post and Harper's Pelham.

J. M. Bassford's Nick W. with Messrs. Post and Harper's Petronella.

J. E. Watson's Black Joe II. with T. J. Watson's Starlight.

W. H. Shockley's Rowdy with H. Huber's Sally Brass II.

First Series.

LADY TRIPPO—PELHAM.—The first heat in the All-Age Stake was between the orange and white setter Lady Trippo and the orange belton setter Pelham. The former was handled by Allender and the latter by Dodge. Trippo is a recent importation from Canada. She is a grand worker, pointing bird after bird in quick succession and winning the heat in 15m. Pelham is also a grand little dog, quartering and working the ground in fine shape, but Lady Trippo outclassed him.

NICK W.—PETRONELLA.—The lemon and white pointer Nick W. and the lemon belton setter Petronella ran next. The former was handled by Dermott and the later by Dodge. Excellent work was done by both dogs, the pointer, however, having the best of it, and he won after an hour's run, although his work was not up to what he is capable of. He was hunted hard yesterday and was lame.

BLACK JOE II.—STARLIGHT.—The third heat, between the black pointer Black Joe II., handled by Allender, and the black, white and tan English setter Starlight, handled by Dermott, lasted 50m. and was won by the pointer. Many points and backs were made during the heat.

ROWDY—SALLY BRASS II.—After lunch the black, white and tan English setter Rowdy and the liver and white pointer Sallie Brass II. ran the fourth and last heat of the first series. Sallie Brass is another recent importation and classes with Lady Trippo. She defeated her opponent in 35m. Sallie Brass was handled by Allender and Rowdy by Walters.

Second Series.

LADY TRIPPO—NICK W.—Lady Trippo won over Nick W. after a 40m. run. The latter was far from being himself, but gave Lady a hard push as it was.

SALLY BRASS II.—BLACK JOE II.—Sally Brass beat Black Joe in a very closely contested and exciting heat.

This closed the sport for to-day.

To-night a grand ball was given at the hotel in honor of the visiting sportsmen.

FRIDAY.

The trials to-day were held on the same grounds. Owing to the heat the working in the dry sage brush made it hard on the dogs and affected scenting powers, but the work was of a high order nevertheless. R. T Vandervoort, one of the judges, and who is one of the most experienced field trial men in the Union, declares that making allowances for the heat and dryness the work done by the dogs this week compares favorably with the best he ever witnessed among the crack dogs of the East.

Second Series.

LADY TRIPPO—SALLY BRASS II.—The first race was between Lady Trippo and Sally Brass II. As both were being handled by Allender, their trainer, it was expected by many that there would be a very closely contested heat, but Sally seemed to have left her nose at home on this occasion, for Lady Trippo won handily. This gave the latter first money. Then Pelham and Nick W. were put down and the pointer won. Nick W. then had to contend against Sally Brass II. for second money, and Sally beat him. The pointer Black Joe and Nick W. concluded the trials by running off for third place. Three heats in succession for Nick W. against fresh dogs and on a hot day were too much for him, and Joe won. All three winners were handled by Allender. The meeting has been a most enjoyable one, and the future of the club looks bright. Fourteen new members have been added, and the list now embraces most of the prominent sportsmen in the State. CALL.

"OLD LAMPS FOR NEW."

Editor Forest and Stream:

The recent action of the Pet Dog Club calls to mind a little personal experience.

Recently I became dissatisfied with my reading lamp and decided a new one was indispensable. The old had lighted us well; all about the table read with ease; the neighbors called us fortunate in its steady light. But we pined for greater brilliancy; for the fine glare of electricity with the softness of kerosene illumination; for a reading lamp that would light up my Holbein in the far corner as well as the pages of my book close at hand. I hied me to the neighboring city, and duly became possessed of a lamp with the most improved headlight, double-action burner, a novelty; a success in all its trials, I was assured.

But said the madame on my return, "Did you get that burner? Don't you know they advertise it to do so much it doesn't do anything? It flickers, it sticks when you push it up and flies up when you push it down, it does not burn even and the wicks never fit. Oh, that is worse than no burner at all!"

More information followed, all gathered from Mrs. Jones, whose aunt had a Sinbad burner and knew all about it; so, full of righteous indignation, I sought the sellers of that lamp and upbraided them for palming off on me a worthless article.

"My dear sir," said the polite salesman, "have you tried this particular burner we sent you?"

"No, of course not; don't I tell you it is worse than no burner?"

"But how can you tell us that until you have tried it? Don't you think it would be well for you to light it just once and test it? Your statement would then seem a little more just."

Well, of course it was impertinent in that clerk to put me in the wrong, for I must confess he made me feel so; at least I could not find the crushing argument necessary to answer him. I had not tried the burner, and I did not know its worth or worthlessness. Somehow my accusations sounded a little premature and—silly.

Far be it from me to speak rudely of a club I admire; each individual member of which, I am sure, is logical, just, magnanimous; free from prejudice and above petty resentment; large-minded enough to bear defeat cheerfully, game to be "good losers" as well as modest winners.

But, as a body, are they not a little hasty, if, as reported, they are "very angry with the Westminster Kennel Club for assigning pugs to Mr. George Raper," and object to his judging pugs "for the reason that he has more than sixteen other classes to judge, and * * * there was no necessity for crowding them in with so many other classes on Mr. Raper"?

Is it quite fair to assume that the English judge will do less justice to the noble pug than to the tender mastiff?

Until he has been tested, might we not justly assume that he will give careful attention to every class, and that one will be as safe in his hands as another?

Exactly what does the Pet Dog Club want? It has petitioned to have a different judge for its pets than those appointed in previous years. It has, apparently, thrown up its own official list of judges. The Westminster Kennel Club has heeded its petition and given it a foreign judge against whose knowledge and fairness no charge has hitherto been made. Behold! "very angry" is the P. D. C. What shall be done to appease it? G. C. A.

ASSOCIATE MEMBERS OF THE A. K. C.

Editor Forest and Stream:

I have seen two tickets nominating officers of the Associate Members of the American Kennel Club, one emanating from the West, the other from the East. I will candidly say that the one from the West seemed to me very much fairer than the one from the East, as the latter has not extended to the South or West what rightly belongs to them, viz., one delegate. The one from the West nominates but one. Now as a matter of fact, I find that in the official list of Associate Members, as published in the *Kennel Gazette* for December, 1891, there are 335 members. Of these 107 are considered as Southern or Western members, a good showing, and one that should at least have a little courtesy extended them in this way by giving us at least one delegate if the East has the remaining officers and delegate. The sop thrown out to the South and West by the Eastern ticket is merely the empty honor of a vice-presidentship, not even naming him as a delegate. The entire lot of officers and delegates, except the vice-president, are named from New York city; from which I take it the New York members have an idea that New York city constitutes the whole American continent. If this is not clique work then what is it? We think such a way of doing business is what is fast making enemies for the American Kennel Club every day. Not that we think it emanates from the members as a club, but it certainly comes from some few of its members. I have a number of times been solicited to become an Associate Member, and should like to do so, but as long as a certain clique is running the machine I will not. Let the delegates of the A. K. C. wake up and force this cliquism out of the club, see to it that we have no North, no South, no East, no West, then we can all pull together, put our shoulder to the wheel and make her "hum." E. DELONG.

CHICAGO, Ill., Jan. 25.

OLD BLUCH.

YEARS ago, the boys of Frankfort, Ky., used to go swimming in the Kentucky River just above the L. & N. railroad bridge, where there is on the west shore a high ledge of rocks abruptly rising from the edge of the water. They had a rope fastened to the limb of a tree near the brow of the cliff, and would in turn catch this rope, give a short run, swing out over the deep water and drop off to enjoy the plunge, swimming back to shore to repeat the operation.

Following the boys every hot summer afternoon to this famous bathing spot was a big brindle bulldog, owned by the late Wm. H. Gray, bearing the euphonious name of Bluch. Old Bluch seemed to relish the sport as much as the boys. He would, in turn with the rest, seize the rope in his teeth, make a short run down the slope toward the edge of the bank, swing out over the water and drop off, just as the boys did, with a big splash into the stream below. Swimming back he would await his turn with eagerness, and no one dared to cheat him out of his place in the line; if they attempted it his fierce growls and display of teeth showed his readiness to fight for his rights. Poor Bluch! Like his owner and many of those who used to take the afternoon plunges with him, he is now resting peacefully under the sod.

SOME DOGS.

Editor Forest and Stream:

If I would be allowed to join "Podgers" in his dog column, I would be pleased to do so. I will begin with the dogs of Florida, as I have met more queer specimens here than anywhere it has been my fortune to be located. Florida dogs in general run to all kinds, and of no particular breed; although the cracker that owns him will generally make him out something quite out of common, and will tell you that a dog one-half "full-blooded hound" and one-half "full-blooded cur" will run deer the best. Also that a dog with light eyes and a black mouth will make a good bear dog. I have proven that the last is not always so, as my setter, that answers the description, cannot be made to go within 50ft. of a "dead bear." I will say first, that I will not tell any second-hand stories in this column, and am prepared to prove what I do tell. Most of the dogs here have sense enough to be shy of snakes, and it is quite common for them to bay a rattler until some one comes to kill it. I knew of a bitch, at Mosquito Inlet, with nine puppies, which lived entirely on raw fish and depended on their owner to catch them a meal of sheepshead every morning. Most of the cracker families here keep a sort of all-round dog, that will trail or tree any kind of "varmint," to protect the chicken house. This is my favorite dog generally, as when I go out with him in a strange place all I have to do is to follow his lead, and he is sure to tree either a coon, fox or squirrel. "Foxes that climb" trees will be a novelty to some of the Northern readers. The sheriff of this county has an Irish setter and a pointer that will trail deer and give tongue equal to a hound—they are also excellent bird dogs for this country, where most of the gunning is done from horseback. I suppose they got into the notion of doing this by being in the company of hounds and a pair of tame deer that the sheriff keeps. The deer are kept in the jail yard, and this winter got into the notion of jumping out and going to a thicket near by to feed on acorns. One day the buck bounded into the yard with a piece of string tied to his neck, followed by a dog. In a short time a man came up out of breath, with his hat gone and clothes torn, and inquired of the sheriff if he had seen a deer pass that way. He said that his dog cornered a deer and he caught it and was about to lead it away, when it began to buck and strike with its forefeet and he was obliged to release it. "Reckon that was my tame deer you were after, stranger." "Is that so? Why, I thought it was a wild one. I'm very sorry, sir." He was reminded by the sheriff that it was the close season for deer, and allowed to depart in search of his hat.

SANDHILL.

THE SOUTHERN FIELD TRIALS.

[*Special to Forest and Stream.*]

NEW ALBANY, Miss, Feb. 2.—There were 21 starters in the Derby in the following order: Ridgeview Donald with Belle Noble Gladstone, Amy Robsart with Little Miss, Arline with Lora, Spurgeon with Latonia, Frienzi with The Ghost; Tennessee Axtel with Count Anteo, Miss Ruby with Picciolo, Wun Lung with Ruby Gladstone, Hope's Mark with Nancy Dill, Donovan with Rod's Roi, Bob Cooper a bye. The first series was run off to-day. Weather delightfully pleasant. Judges are Messrs. L. Stone, P. H. Bryson and Whyte Bedford. The work done is of good class. Birds somewhat scarce.

NEW ALBANY, Miss., Feb. 2.—Thirteen dogs were left in the second series of the Derby and ran as follows: The Ghost with Count Anteo, Spurgeon with Tennessee, Axtel with Miss Ruby, Wun Lung with Picciolo, Hope's Mark with Amy Robsart, Lora with Little Miss, Bob Cooper with Latonia. Third series—Count Anteo with Wun Lung, Miss Ruby with Hope's Mark, Amy Robsart with Bob Cooper, Lora with Latonia. Fourth series—Count Anteo with Hope's Mark, Wun Lung with Miss Ruby. The work was of an unusually high order and the stake was very closely contested. Wun Lung won first, Count Anteo second and Hope's Mark and Miss Ruby equal third. The All-Aged Stake has 21 starters, drawn to run as follows: Sam R. with Mack's Mac, Dan Tucker with Dave B., June with Andromeda, Fannie with Laddie, Glen with Wythe B., Paul Bo with Bounce, Blade with Dad Wilson, Jr., Bonnie Bondhu with Fremont, Eugene T. with Antevolo, Top Mark with Natalie II., Dolly Hill a bye. The attendance of prominent sportsmen is large. Weather is very pleasant. Messrs J. W. Renfroe, T. M. Brumby and A. M Young will judge the All-Aged Stake, which begins to-morrow. B. WATERS.

RE THE NAME PSOVOI VS. BARZOI.

Editor Forest and Stream:

I hope you will give me the space of a few lines to reply to Lieut. G. Tarnovski, as it is usual to allow the attacked party the last word. Now, Lieut. Tarnovski's letter in your issue of Jan. 21, 1892, was partly amusing, partly interesting to me. The amusing part was where he stated substantially the same thing which I have said all along, only in his own way, a highly personal one besides. In these personalities I shall not imitate him. The etymological discussion of Russian words I do not suppose will interest your readers. Suffice it to say that he acknowledges that the breed in question was called Borzoi until recently.

Here comes the interesting part. If an important Russian sporting club has changed the name of the breed recently, the fact has not reached us here yet, and we are grateful to Lieut. Tarnovsky for the information, which we will now try to verify. The questions to be settled are whether this new name was only proposed, or really accepted by this club, and finally whether the new name has been generally accepted by the consensus of the proper authorities in Russia.

We desire to use the rightful name of the breed, and we are glad to receive pointers in a civil way, and without presumption of authority, that will induce us to look for reliable information.

Meanwhile, pending investigation instituted by us, our dogs will bear their proper name of Borzoi notwithstanding, until we are satisfied that the term has been rightfully changed. T. COLIN.

PITTSBURGH, Pa., Jan. 28.

THE SPANIEL DARKIE.—London, Ont.—*Editor Forest and Stream:* In your reply to query by "R. A. M., Omaha," I think you have made a slight mistake, owing to two dogs, or rather a dog and bitch, having same name—Darkie I think from the query that it is the dog Darkie that I bred he wants pedigree of. Darkie (A.K.R. 1000) was bred by me; he was out of Nellie by Frank, Nellie by Don ex Saff, Frank by Frank ex Nellie, she by Bass ex Nellie, Frank by Old Bab, by Young Bebb ex Flirt. I think it likely this is the pedigree he wanted for Darkie. I am out of the dog world now, but I still keep up my interest in dog reading, and am always glad to be of use to any cynologist.—J. S. NIVEN.

BALTIMORE DOG SHOW.—Baltimore, Md., Jan. 30.—*Editor Forest and Stream:* I beg to advise you that our club determined (at meeting held here Jan. 27) not to hold a dog show this year. I at once notified Mr. A. P. Vredenburgh, secretary of the A. K. C., to this effect, thus enabling them to hand over our dates promptly to any club holding priority of choice, at the same time claiming the dates following the W. K. C. show for 1893.—JAMES F. PEARSON, Secretary.

DOG CHAT.

THE entries for the Mascoutah Kennel Club's dog show to be held at Battery D and Armory, Chicago, Feb. 9 to 12, number a total of 953, composed as follows:

Mastiffs	44	Bull-terriers	28
Great Danes	56	Boston terriers	22
St. Bernards	133	Dachshunde	15
Bloodhounds	4	Beagles	22
Newfoundlands	8	Fox-terriers	73
Psovies	7	Irish terriers	9
Deerhounds	15	Scotch terriers	3
Greyhounds	27	Welsh terriers	1
Foxhounds	12	Bedlington terriers	1
Pointers	52	Dandie Dinmonts	3
English setters	61	Skye terriers	4
Irish setters	43	Yorkshire terriers	7
Gordon setters	13	Black and tan terriers	6
Chesapeake Bay dogs	5	Toy terriers other than Yorkshire, under 7lbs	6
Irish water spaniels	12	Whippets	2
Clumber spaniels	2	Pugs	32
Field spaniels	9	King Charles	8
Cocker spaniels	34	Blenheim spaniels	5
Collies	65	Italian greyhounds	13
Poodles	6	Miscellaneous and puppies	55
Bulldogs	14		

The following noted dogs are among the entries: In mastiffs, champion Sears, Monarch, Ormonde and Hector. Great Danes, the $8,000 dog Imperator, champion Melac, champion Irene, Don Senator and Miuka II. St. Bernards, Sir Bedivere, Plinlimmon, Jr., champion Victor Joseph, Ben L., Fernwood Bruce, Bloodhounds, Jack Shepard, Marmaduke and Pembroke Star. Newfoundlands, Prince and Prince Hal. Psovies, Ellekhoi, Osnaday, Osidcff and Viola. Deerhounds, Robber Chieftain and Clansman. Greyhounds, champion Master Rich, Gem of the Season, champion Miss Rare and White Lips. Pointers, champion Robert le Diable, Trinket's Chief, Tory White, Count Graphic and Lady Trinket. English setters, champion Cincinnatus, Paul Gladstone, Edgemark, Albert's Nellie, Dad Wilson II., Toledo Blade and Breeze Gladstone. Irish setters, champion Kildare, champion Dick Swiveler, Elfreda, Tearaway and Kildare Glenmore. Gordon setters, Leo B. and Ivanhoe. Cocker spaniels, Black Dufferin, champion Black Duke and champion Bessie N. Collies, champion Roslyn Wilkes, champion Roslyn Dandy and Metchley Surprise. Poodles, Dexter. Bulldogs, champion Harper, Bo'swain, Duchess of Parma and Peckham Lass. Bull-terriers, Dufferin. Boston terriers, Bostonian. Dachshunde, Gill and Bergman. Beagles, Roy K. and Tony Weller. Fox-terriers, Raby Mixer, Dona and Starden's King. Skye terriers, Sir Stafford and Bruce. Yorkshire terriers, Minnie York, Toon's Royal and Venus. Black and tan terriers, Ruby H. and Rissette. Pugs, champion Kash, Sprake, Bob Ivy and Bo Peep. King Charles spaniels, Nell Gwynne and Topsy. Italian greyhounds, Prince Shallies and Zula.

A general exhibition will be held by the Toronto Kennel Club, Feb. 5, in Richmond Hall, Toronto. The judges will be Messrs. C. A. Stone, J. S. Williams and R. W. Boyle. At the meeting of the club held last week two interesting papers were read to the members, one on the St. Bernard by Mr. J. S. Williams and another on Diseases of Dogs and their Treatment, by Dr. F. A. Campbell.

It is not generally known how seriously ill Mr. John A. Logan, Jr., owner of the Oriole Kennels, has been. It seems an abscess formed on his neck behind the ear, and at one time the side of his face was paralyzed and he was not expected to pull through. Now, we are glad to say, he is convalescent. This reminds us that his dogs which have been on sale privately for some time will be finally disposed of at the American Horse Exchange during the New York show. Fox-terrier men will be sorry to hear of Mr. Logan forsaking the fancy and trust it will be only temporary, as these are the men we want to keep in the ranks as long as possible.

Next Monday, Feb. 8, is the last day for making entries for the W. K. C. show. Entries are coming in steadily all the time, and this week will of course as usual be reserved for the general influx. Those who wish to enter dogs from up town can do so by procuring entry forms from Dr. Glover, 1,293 Broadway, and W. Tallman, 109 West Thirty-fourth street, New York city. The club has made the following additional classes: Challenge class for Bedlington terriers and the same for Skye terriers. The challenge black and tan terrier class has been divided by sex, and a class made for Irish terrier puppies. The W.K. C. offers $25 cash for the best greyhound that has won a course at any public meeting in America or Great Britain. Entries to be made with and verified by Mr. H. W. Huntington, secretary National Greyhound Club, on or before Feb. 8. No entry fee will be charged. The *Sporting Times*, New York, offers $10 cash for the best black and white pointer dog, also $10 cash for the best black and white pointer bitch in the open classes.

When the Philadelphia Kennel Club resigned from the A. K. C. a new kennel club was organized in that city to be called the Keystone Kennel Club, with the ostensible purpose of holding a dog show. It was to secure membership in the A. K. C. and then hold a show on the dates claimed by the Philadelphia Kennel Club. Before arrangements could be made, however, the Chesapeake Bay Dog Club claimed the dates, and nothing further was done. Now that the Chesapeake Bay Dog Club have abandoned their show, a meeting of the executive committee of the Keystone Club was called last Monday, with a view to authorize the officers to go on at once with their preparations for a show, and it was decided to hold a show on March 1 to 4. We understand that the Philadelphia Tattersall's building will be the place where the show will be held, and as there is ample room to hold a very large show a first-class gathering of dogs may be expected. The idea at present is to ask Mr. George Raper to be one of the judges. If the club intends applying to the A. K. C. for admission they must do so on or before Feb. 15, as after that date their application cannot be passed upon till the May meeting. The new club is in no way antagonistic to the older club, but simply wishes to encourage kennel interests by holding a show. Mr. James Watson, we believe, is one of the promoters of the club.

Mr. A. H. Moore is not backward in putting down his money when he wants a good thing, and his purchase of Worth, the brother to Sunol, the trotting record mare, is a matter of interest to dogmen. Mr. Moore paid $14,500 for the yearling colt. No man's name was more prominent in kennel circles than Mr. A. H. Moore's in the very early 80's, when Berkeley and Thunder with Ben Lewis in tow did our shows.

After our return from Charleston, S. C., where champion Laura B., the noted Irish setter, was shown by the Fountain City Kennels, the proprietor of the Seminole Kennels wrote us regarding her appearance. He now sends word he has purchased her, and also champion Tim from Mr. Wenzel, quite as noted a dog as Laura B. is among the opposite sex. Cherokee, a litter brother to Duke Elcho, is another good one just purchased to take care of the open class, and Lenore, a daughter of champion Elcho, Jr., completes the list which, as Dr. Sauvoeur modestly writes, "makes a kennel with which we are in hopes of winning a few second prizes at least."

Competition in the Irish setter classes promises to be keener than ever before, and a prominent Irish setter breeder told us the other day that never before has he known the Irishmen to be in such demand, and that he could sell forty pups if he had them. The Irish setter trials are bearing fruit from the first year's growth.

Now that retrieving has been done away with in some of the trials, there will perhaps before long be an opening for the English retrievers. Mr. Davey, in a chatty letter such as we like to receive from our fancier friends, tells us he is importing a brace of retrievers from England, together with a brace of pointers. A year or two since Canada was of no account in "pointerdom," but now, thanks to Mr. Davey, Canada can show a team that will hold its own almost anywhere, and what is more "to the point," they are field dogs, too. The president of the C. K. C. will show a team of ten setters and pointers at Chicago and New York.

The pointer Lad of Kent is by ch. Bracket out of Reine, so we fail to see how his future winnings can rebound to the credit of the W. K. C.'s King of Kent, as one of our "authorities" would make it appear.

Kennel stud cards are showered upon us just now, and some are quite artistic, notably one from the Seminole Kennels, which is very tastefully arranged round an almanac, and another almanac from the Wyoming Kennels with pretty pictures of Sir Bedivere, Plinlimmon, Jr., and Lady Wellington. The Swiss Mountain Kennels has also a very pretty one with pictures of King Regent and Ben Ormonde on the covers.

The following quotation is from a letter received from Mr. Hagans, president of the Mascoutah Kennel Club. "I am pleased to acknowledge your favor of the 22d, together with its inclosure and clippings from FOREST AND STREAM and *Fanciers' Journal*. The suggestion therein is capital, and I think you will be gratified to know that we have decided to make a special ring for toy dogs. This ring will be elevated and carpeted." A move in the right direction and one that will please the gentler sex.

A notable sale has just been made in beagle circles. The noted dog Frank Forest, that won the championship at the beagle trials in 1890, has just been sold by the Forest Beagle Kennels to Mr. W. S. Gates, Chagrin Falls, Ohio, for the unprecedented sum of $1,000. No doubt Frank Forest is a valuable dog and a good one, but this price for a beagle has never, to our knowledge, been approached, and both parties must be congratulated. The National Beagle Club can stick another well-earned feather in its cap.

Mr. Kreuder has purchased a number of Belgian hares and, when in the natural order of events they have multiplied, they will in June next be turned down round Nanuet, N. Y., in anticipation of the trials next fall.

The annual meeting of the A. K. C. will be held in the Madison Square Garden on Thursday, Feb. 25, at 2:30 P.M. The regular quarterly meeting will be held immediately after.

The annual meeting of the Associate Members will be held at the same place Wednesday, Feb. 24, at 8 P.M.

The report of the Elmira dog show must go by the board this week. Not arriving in time it is late news now, and space is at a premium.

Mr. T. M. Aldrich is located at Jamestown, N. C., in charge of Mr. Durkee's dogs. He reports the worst winter he ever experienced in that State, but at the time of writing the thermometer stood at 70deg. in the shade. Birds are plentiful, but wild, and turkeys are seen very often, though he has not potted one as yet.

We have received from Mr. Mercer a capital photograph of two crack Clumbers, Lady Bromine and Lady Snow.

Mr. E. B. Bishop seems to be comfortably settled out in Kansas. He writes us he has all the shooting he wants, within twenty miles, and "not a kick in the Territory if one is social with the farmers. A cigar or a 'big horn' go a long way."

Mr. R. W. Isenthal, secretary of the Continental Kennel Club, Denver, Col., informs us that they intend holding their third annual dog show April 13 to 16, and are hard at work on premium lists, etc. They expect this to be *the* show west of Chicago.

The pointer Sally Brass II., that Mr. Chas. Heath sold to Mr. Henry Huber, of San Francisco, some months since, seems to have rendered a good account of herself in the new country, winning second in the All-Aged Stake at the Pacific coast trials, Lady Trippo, another Eastern dog, from Canada, winning first money.

At a meeting of the Pacific Coast Field Trials Club, on Jan. 21, a proposition was received from the citzens of Bakersfield to add $250 next year to the purses and was accepted with thanks. The citizens will also trap 2,500 quail and place them upon grounds near the city, on which trials may be run, in order to avoid the long journey of fifteen miles to the grounds, as is now necessary in order to find birds in sufficient numbers. This and the extra purse money will have a beneficial effect on next year's trials. Altogether they seem to take a great deal of enjoyment out of their trials there and look upon them as a diversion and not the matter of fact business enterprises that our trials in the East have become. The only interest that the townfolk of High Point, or Lexington, N. C., take in the trials is that evinced by the "floaters" of the town on a lookout for a stray drink; the livery stable men and hotel keepers, who make hay while the sun shines, and the constable on the lookout for trespassers on the alleged sidewalks and the half of the $3 fine which is imposed on the luckless rider. These are trials with a vengeance.

In anticipation of the published account of the Advisory Committee meeting held at 44 Broadway, Jan. 18, we were able to give exclusively several items of the business transacted. Messrs. John S. Wise, James L. Anthony and Thos. H. Terry were present. *Re* Eberhart's Cashier being entered in the challenge class at Lexington, Ky., before he was entitled to the four wins, the committee orders the dog not entitled to the challenge win at that show and it is cancelled. Mr. Eberhart's action is reprehensible and not cured by the fact that the dog afterward won the prize at another show his owner had claimed in advance. As we have before stated, Mr. Hawkes's disqualification was removed, the action of the Rockford show people being reversed and annulled. *Re* sale of cocker spaniels.—Mr. Chas. M. Nelles was disqualified for failing to deliver the dog to Mr. E. A. Wilson after the purchase price had been paid or to return said purchase money. As the judge gave no reserve number in the Irish setter award which was protested at the Washington City Kennel Club's show, in March last, the special cannot be awarded to any other kennel when the original award was successfully protested. As no specific date was given when the new amendments to the A. K. C. rules should go into effect it was decided that they should begin with the New York dog show, Feb. 23. Appeal for support of Dr. Gibier's Pasteur Institute to be discussed at the next meeting of the A. K. C. The request of the Canadian Kennel Club that the World's Fair show rules be changed to place the C. K. C. on the same footing as the A. K. C. is considered a fair one and the committee recommends the granting of the same. The committee is also of opinion that the rules of the A. K. C. should be the rules to govern the World's Fair bench show. Dr. Perry's letter of declination has already been published, and the committee regretted Dr. Perry's action. The question of establishing dividing lines for different show circuits in the U. S. was held over for further consideration.

A writer in a Louisville paper says: "There are a great many admirers of hunting dogs in Kentucky who would like to see field trials given in this State. The Kentucky sportsmen now have a chance of gaining that desired end, not by starting a new field trial club, but by merely securing suitable grounds and placing them at the disposal of an established, and one of the largest field trial clubs in the country. A sportsman of this town has received a communication from the United States Field Trial Club, asking if suitable grounds can be found and secured in this State for holding its annual events, as it has about been decided to give up the present grounds near Bicknell, Ind., and locate in some new place that is easy of access, has plenty of birds, is comparatively level, with good cover and open so far as woodland is concerned. If good grounds can be secured in Kentucky, the chances of getting the United States Club to locate here are very favorable. An effort in this direction will be made."

We have received a letter from Mr. Frank F. Dole which rather upsets the prevalent opinion as to who was respnosible for the poor feeding, etc., at the late Albany dog show. From Mr. Rockenstyre's letter to Mr. Dole, which by the way should have been sent to us after our criticism appeared, it seems Mr. Farley was paid to bench, feed and water the dogs, and they were to be fed on Austin's dog biscuits and meat, and as he remarks, "you can see for yourself how well he fulfilled his contract, and if you doubt my word I can show you proof." Our only object in giving this publicity is to right a wrong, as we were led to believe that Mr. Rockenstyre was to blame for it all; but this gentleman should have written at once, and explained his position, as he was the ostensible superintendent and manager.

The second annual dinner of the American Spaniel Club will be held at Morello's No. 4 West Twenty-ninth street, on the evening of the second day of the dog show, Feb. 24, at 8 o'clock. Tickets may be procured of A. Clinton Wilmerding at $2 each. It is requested that applications for tickets be made at once so that proper arrangements may be made. All friends of the spaniel are invited and a pleasant reunion of breeders and exhibitors is anticipated.

A new order has been issued by the Treasury Department in regard to importations of animals for breeding purposes. On and after April 1, 1892, no animal which is brought into the United States from foreign countries for breeding purposes shall be admitted free of duty unless the importer furnishes a certificate which shall contain a pedigree showing that *all the ancestors have been recorded in a book of record established for that breed for five generations on the side of the sire and four on the side of the dam*, together with the affidavit of the owner, agent or importer that such animal is the identical animal described, etc. Should the necessary papers not be at hand when the animal arrives, but satisfactory evidence be produced that they are entitled to free entry, a bond may be accepted for double the value for the production of the proper certificates. This will create consternation among dog importers if the letter of the law is carried out. At present it is simply necessary that the dog itself should be registered.

In the list of new kennel advertisements this week we notice that E. B. Bishop offers well bred Irish setter pups for sale, R. H. Burr trained Irish setter and pup, E. A. Carrier trained English setter, W. C. Cushman well bred fox-terrier, W. H. Hyland two pointer bitches, F. W. Sacket bloodhound, bull-terrier and two foxhounds, J., Gordon setters. J. Zimmerman pointer bitch, J. H. Miller foxhounds, F. L. Cheney well bred Irish setter, L. A. Parkhurst, pointer pups, A. H. Moore English setters, R. E. Smith beagle, Fred Fairhead setters and pointer, N. B. Hill brood bitches. In the Stud—W. H. Hyland, pointer Pommery Sec. Exchange—John I. Ferguson, trained pointer for 12ft. boat.

The annual meeting af the American Spaniel Club will be held at Madison Square Garden Feb. 24, at 4 P. M. A full attendance is requested.

The annual meeting of the American Mastiff Club will be held at Madison Square Garden on Wednesday, Feb. 24, at 3 P. M.

The noted mastiff Ilford County Member may find a new home in Mr. James W. Whitney's kennels before long, as we understand negotations are being carried on. This dog won another first at Derby, England, a couple of weeks since.

THAT IRONCLAD COURSING RULE.

Editor Forest and Stream:

In your issue of Jan. 14 the letter by Mr. L. I. Fowler under the above caption about hits the nail on the head.

Mr. Wade, in FOREST AND STREAM of to-day, says "that there is no shadow of authority in coursing rules for visiting any penalty on the owner of a hound on account of the contesting hound running into him."

I would like to ask the FOREST AND STREAM did not the owner of Chicopee Lass ride over Pearl of Pekin when they collided? Did not Pearl go lame? Are riders allowed to ride ahead of the hounds by the rules of the American Coursing Club? Is it not the custom in older clubs to give the course to the hound so run into or ridden over?

HENRY OSBORN.

NEW YORK, Jan. 28.

POINTS AND FLUSHES.

[From a Staff Correspondent.]

CHICAGO, Ill., Jan 30.—It is gratifying to learn from advices from Southern correspondents that the weather in the South has become settled and pleasant, so that there is a prospect that the weather conditions will be most favorable for the Southern Field Trials Club's trials, which take place at New Albany next Monday.

The Mascoutah Kennel Club's entries closed on Jan. 23 with 953 entries, 128 more than those of last year.

There are rumors in the air that the Associate Members will hold a most interesting meeting at the New York show and bring forward some points of great interest to the body to which they are appended. B. WATERS.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

THE VELVET TRAIN of the Monon Route between Chicago and Cincinnati offers the best and most luxurious service obtainable between those points.—Adv.

THE SUPERINTENDENT SIGNED THE PROTEST. - Chicago, Ill.—*Editor Forest and Stream:* In your issue of Jan. 7 I note an article, or rather an editorial, commenting on Mr. Hawkes' letter and challenge. Mr. Hawkes charges me, as the judge of his dogs, of being one of the signers who charged him with misconduct, etc., and lodged the complaint with the A. K. C. In this Mr. Hawkes is mistaken. I did not charge him with anything in my capacity as judge; but as superintendent of the show I did sign the charges as my duty and the officers of the club required me to do.—HARRY L. GOODMAN.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

BRED.

☞ **Prepared Blanks sent free on application.**

Black Meg III.—Little Lad. J. E. Weston's (Utica, N. Y.) cocker spaniel bitch Black Meg III. (champion Black Pete—Black Meg II) to his Little Lad (Newton Abbot Beau—Dinah Bennett), Jan. 16.

Topsey—Black Dash. H. Williams's (New Hartford, N. Y.) cocker spaniel bitch Topsey (Sir Charles—Flossie) to J. E. Weston's Black Dash (Oberon—Susie), Dec. 18.

Trot—Little Lad. J. E. Weston's (Utica, N. Y.) cocker spaniel bitch Trot (Black Duck—Aida) to his Little Lad (Newton Abbot Beau—Dinah Bennett), Dec. 2.

Flora—King Regent. W. Eberhart's (Philadelphia, Pa.) rough St. Bernard bitch Flora (Eiger—Flora) to Swiss Mountain Kennels' King Regent (Prince Regent—Duchess of Kent), Sept. 6.

Lady Castlereagh—King Regent. Swiss Mountain Kennels' (Germantown, Pa.) rough St. Bernard bitch Lady Castlereagh (Puritan—Ravine) to their King Regent (Prince Regent—Duchess of Kent), Sept. 23.

Dart—King Regent. Swiss Mountain Kennels' (Germantown, Pa.) rough St. Bernard bitch Dart (Duke of Wellington—Tip Top) to their King Regent (Prince Regent—Duchess of Kent), Oct. 8.

Mountain Queen—King Regent. O. W. Volger's (Buffalo, N. Y.) rough St. Bernard bitch Mountain Queen (Burns—Lady Valentine) to Swiss Mountain Kennels' King Regent (Prince Regent—Duchess of Kent), Sept. 26.

La Bonivarde—King Regent. F. A. Mortimer's (Pottsville, Pa.) rough St. Bernard bitch La Bonivarde (Bonivard, Jr.—Madam Barry) to Swiss Mountain Kennels' King Regent, Nov. 7.

Donna Silva—King Regent. Chestnut Hill Kennels' (Chestnut Hill, Pa.) rough St. Bernard bitch Donna Silva (Duke of Wellington—Calypso) to Swiss Mountain Kennels's King Regent, Nov. 21.

Betsey Bobbett—King Regent. D. McClinch's (Philadelphia, Pa.) rough St. Bernard Betsey Bobbett (Nero—Hecla) to Swiss Mountain Kennels' King Regent, Nov. 28.

Sunray—King Regent. Swiss Mountain Kennels' (Germantown, Pa.) rough St. Bernard bitch Sunray to their King Regent, Dec. 21.

Loraine—Ben Ormonde. Swiss Mountain Kennels' (Germantown, Pa.) rough St. Bernard bitch Loraine to their Ben Ormonde, Nov. 11.

Lady Buffet—Ben Ormonde. P. H. Jacobs's (Hammonton, N. J.) rough St. Bernard bitch Lady Buffet (Archduke—Madam Barry) to Swiss Mountain Kennels' Ben Ormonde, Nov. 30.

Lottie—Snowball. Swiss Mountain Kennels' (Germantown, Pa.) spaniel bitch Lottie to their Snowball, Oct. 14.

Hecla—King Regent. Swiss Mountain Kennels' (Germantown, Pa.) rough St. Bernard bitch Hecla (Hector—Nell) to their King Regent, Oct. 25.

Lady Blanca—Lord Bute. Swiss Mountain Kennels' (Germantown, Pa.) rough St. Bernard bitch Lady Blanca to Menthon Kennels' Lord Bute, Nov. 11.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Gypsey. T. H. Cackett's (New Hartford, N. Y.) cocker spaniel bitch Gypsey (Sir Charles—Flossie), Dec. 8, six (three dogs), by J. E. Weston's Black Dash (Oberon—Susie).

La Bonivarde. F. A. Mortimer's (Pottsville, Pa.) rough St. Bernard bitch La Bonivarde (Bonivard, Jr.—Madam Barry), Jan. 3, thirteen (seven dogs), by Swiss Mountain Kennels' King Regent.

Chip K. Swiss Mountain Kennels' (Germantown, Pa.) cocker spaniel bitch Chip K. (Obo II.- Black Bess II.), Jan. 2, three (one dog), by J. P. Willey's champion Jersey (Obo II.—Darkie).

Lady Gay. Swiss Mountain Kennels' (Germantown, Pa.) cocker spaniel bitch Lady Gay (Bingay—Mollie), Dec. 24, four (one dog), by C. G. Browning's Cherry Boy (Ebony—Fanchon).

Brownie S. Swiss Mountain Kennels' (Germantown, Pa.) cocker spaniel bitch Brownie S. (Black Graff—Chien), Oct. 6, four (three dogs), by Brant Kennels' Brantford Red Jacket (champion Brant—Woodstock Dinah).

Hecla. Swiss Mountain Kennels' (Germantown, Pa.) rough St. Bernard bitch Hecla (Hector—Nell), Dec. 31, one, by their King Regent.

Dart. Swiss Mountain Kennels' (Germantown, Pa.) rough St. Bernard bitch Dart (Duke of Wellington—Tip Top), Dec. 9, seven (four dogs), by their King Regent.

Flora. W. Eberhart's (Philadelphia, Pa.) rough St. Bernard bitch Flora (Eiger—Flora), Nov. 9, one, by Swiss Mountain Kennels' King Regent.

SALES.

☞ **Prepared Blanks sent free on application.**

Little Lad—Daisy W. whelps. Black cocker spaniel dogs, whelped Sept. 16, 1891, by J. E. Weston, Utica, N. Y., one each to John S. Davies, Utica, N. Y., and C. B. Wilder, Richfield Springs, N. Y.

Little Lad—Nell W. whelps. Cocker spaniels, whelped April 13, 1891, by J. E. Weston, Utica, N. Y., a black and tan bitch to H. Graystone and a chestnut and tan bitch to F. D. Devine, both of same place.

Black Dash—Dollie W. whelps. Black cocker spaniels, whelped July 15, 1891, by J. E. Weston, Utica, N. Y., a bitch each to Prof. G. C. Hodges and L. H. Jones, both of same place, and a dog to Miss Kate A. Curtis, Newport, R. I.

Archduke—Blush whelps. Rough St. Bernards, whelped July 2, 1891, by Swiss Mountain Kennels, Germantown, Pa., an orange and white dog to J. Pityman, St. Louis, Mo., and an orange tawny bitch to Mr. Eberhart, Philadelphia. Pa.

Archduke—Hecla whelps. Rough St. Bernards, whelped July 7, 1891, by Swiss Mountain Kennels, Germantown, Pa., an orange, correct white markings, bitch to P. J. Ford, Wilmington, Del., and an orange, correctedly marked, bitch to Dr. Mattison, Ambler, Pa.

Swiss Nero—Tico whelp. Orange and white rough St. Bernard bitch, whelped Feb. 3, 1891, by Swiss Mountain Kennels, Germantown, Pa., to J. H. Vose, Henderson, N. C.

Archduke—Dart whelps. Orange and white rough St. Bernard bitch, whelped April 5, 1891, by Swiss Mountain Kennels, Germantown, Pa., to W. Eberhart, Philadelphia, Pa.

Snowball—Parvin's Queen whelp. Black cocker spaniel bitch, whelped June 21, 1891, by Swiss Mountain Kennels, Germantown, Pa., to E. B. Ulrich, Salem, N. C.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $2.00. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

THE NEW YORK C. C. last week received a challenge for its international cup from W. Ford Jones, of Brockville, Canada. Mr. Jones is building a new racer, and will be ready for a race in the early part of the season instead of in October.

SHUH-SHUH-GAH.—At the annual meeting of the Shuh-Shuh-Gah C. C., of Winchester, Mass., the following officers were elected: Capt., Raymond Apollonio; Lieut., Harold Nott-Smith; Purser, Roland N. Cutter, Sec'y, A. C. A. Chamberlain; Member of Ex-Com., J. Murray Marshall.

DOWN THE MISSISSIPPI.—II.

A Canoe Cruise in 1888.

BY COMMODORE GEO. W. GARDNER AND WM. H. ECKMAN.

[*Continued from Page 91.*]

"CLOTHES may not make the man," says the log, but a butternut suit of uncertain fit will obliterate every vestige of respectability possessed by the finest grained specimen of man that ever wielded a paddle. Even the skipper, otherwise a man of most excellent parts and dignified bearing, became an ordinary guy, while the scribe's appearance was a standing invitation to every small boy who caught sight of him to open up his battery of slang—"Ob, look at nm." "What is it?" "Did it blow in?" and "Ki-y, fellers, it's alive." We attribute our immunity from molestation by river thugs and thieves to our dress. However low he might be, no thief would ever tackle a man in butternut duck in hope of realizing on the venture. It is to be said, however, that, for the purpose, the suits were perfect. In addition to the butternuts, the following constituted

The Cruising Equipment.

Two full suits of clothing, 2 white flannel dress coats, 2 blue flannel shirts, 2 white flannel shirts, 4 linen shirts with collars and cuffs, 4 suits of underclothing, 2 pairs shoes, 2 pairs slippers, 2 pairs high rubber boots, 4 pairs long stockings, 2 pairs knickerbocker pants, 2 pairs rubber gloves, 2 pairs woolen wristlets, 2 Tam O' Shanter caps, 1 uniform club caps, 2 uniform club hats, 1 overcoat, 2 rubber coats, 1 rubber cap with havelock.

Camp Equipment.

One canvas duck A tent, 8ft. high at the ridge and covering 6x8ft. When set up with a complement of pins, canoe masts being used for tent poles, this tent can accommodate three; 8 single wool blankets, 3 rubber blankets, 2 padded comfortables, 1 life preserver used for a pillow, 1 air cushion, 1 rubber bag, 1 wash basin (paper), 4 towels, 1 box toilet soap, combs and brushes, headquarters flag.

Quartermaster's Stores.

Three lanterns, 1 large bottle of matches, selected woven cordage, 1 hatchet, 1 brad awl, 1 large clasp knife, 1 pike pole, 1 set lifting belts, 1 wrench, 1 compass, 1 thermometer, 2 sponges, 2 sets lateen sails, 2 sets colors, 2 canvas hatches, 2 trolling lines, 4 briarwood pipes, 1 set Mississippi River charts, 2 bamboo cash cases and 2 ditto chart cases, presented by Captain Ellard, of Cincinnati; 4 pairs paddles.

The Cuisine.

One 2-gallon copper kettle, with a pail and cover, inclosing the following made to fit snugly therein: 1 deep stew pan, 1 iron skillet with folding handles, 4 quarter-round cases for sugar, coffee, tea and salt, made to fit into the pan, and 1 half-pint cup; this very compact apparatus was presented by the Cincinnati C. C.; 4 tin plates, 2 sets knives and forks, 1 large table knife, 2 tablespoons, 6 tin cups, 1 pocket spirit stove used for cooking on board and in the tent, when stress of weather or other cause prevented the building of a camp-fire.

Subsistence and Other Stores.

Six and three-quarter pounds bacon, 5lbs. flour, 8lbs. hard-tack, ½ peck potatoes, 3lbs. granulated sugar, 2lbs. ground Java coffee, 1lb. black tea, 3 pint cans of baked beans, 2 pint cans prepared soup, 1 bottle pickles, 1 can condensed milk, 2lbs. butter, 2lbs. oatmeal, ½ doz. lemons, ½ box (2lbs.) salt, 4oz black pepper, 1 box (500) matches, 1qt. alcohol, ½gal. lamp oil, 4lbs. smoking tobacco.

Medical Stores.

Fifty 2gr. quinine pills, 10 morphine powders, 4oz. paregoric, 1 pint brandy, 1 bottle Jamaica ginger, 1 book court plaster.

Miscellaneous.

One canvas portfolio, containing writing paper, envelopes, postage stamps, book of manifold paper, 1 memorandum book, 1 sketch book, and the log. The portfolio was carefully wrapped in a waterproof cloth held with rubber bands, 1 pack of playing cards, 2 distance tables, 1 river guide, 1 pair field glasses.

No article in the list was a superfluity, nor do I now recall an occasion when anything was requisite which was not at hand. The blankets were folded with great care to fit the floor of the cockpit, and laced up in the rubber blankets to prevent wetting, and thus furnish a soft seat when paddling, and an easy lounge when sailing. The mast and sails were folded around the long boom and lashed on deck; the rubber garments, rough-weather hatches and caps, pipes, matches, tobacco, pouches, spirit stove, tea, coffee, brandy, hard-tack, charts, compass and field glass were stowed within easy reach, the balance of the outfit being arranged in the water-tight apartments. Slippers were worn on board, the rubber boots being close at hand. The lamps were also kept within easy reach, and lighted at sunset. No weapons of offense or defense of any kind were carried, and no occasion for their use was met during the cruise. The camp was never molested, but every vestige of the camp fire and every light was carefully extinguished on retiring, in order that undue attention should not be drawn to the locality. There is no guarantee of immunity on the lower river, and every cruiser should judge for himself in the matter of weapons; of one thing he may be assured, if the river pirate or thug essays an attack it will mean business at once. It is safer to go into camp some distance from the towns rather than within sight, and the nearer proximity of isolated dwellings is not desirable. Civility to all, familiarity to none, is a pretty good rule of conduct when among strangers.

To resume the cruise. After a short pull at the paddles a spanking breeze caught us on the quarter; every rag was set and in less than an hour the ten miles to Cloverport had been covered. Ten minutes later the mainmast of the City of Cleveland snapped under the pressure and went by the board; the craft was a helpless wreck, so far as further sailing was concerned. The two canoes were lashed together side by side, all available canvas was spread, and a fine run, but a wet one, of eight miles was made. Turning a headland threw us out of the wind and four hours of paddling finished the day. Before the paddles were taken up, an extemporized table was made on deck with the hatches, the spirit stove and mess chest was brought forth, and a midday meal of hot bean soup, hard tack, pickles and hot coffee was served in style, as we floated along broadside to. On a number of occasions a like luxury was indulged in.

Some regularity has been made as to the difficulty of securing comfortable camping ground, and our ingenuity was frequently exercised to overcome this difficulty. How we did it on one occasion is told as follows: Long stretches of low sandy beach reaching far inland on the one hand, and a bluff bank on the other, with a long, narrow tow head (island of sand) in mid stream, offered no suggestion of a camping ground. After a careful survey it was agreed upon that it was sand or nothing, and, calculating the strength of the wind and the unstable nature of a tent pin in loose drifting sand, it was further agreed that the tent was not available—that the canoes must provide a resting place. The cramped dimensions of the flag ship's cockpit did not commend the City of Cleveland as a desirable place of rest, and the rotund form of the Commodore quite precluded the idea of his occupancy thereof, so for once an exchange was agreed upon. Each became the guest of the boat in each instant slept abroad, the better to accommodate his guest. No material being at hand wherewith to build a camp-fire, the pocket stove was made to serve. Pea soup, bacon, beans, hard tack and coffee, served seriatim, constituted the meal; the wind contributed to the hilarity of the occasion and the relish of the feast by depositing a semi-occasional handful of sand on the viands. The meal was one of quantity rather than quality, amount rather than flavor. Having settled the canoes firmly in trenches scooped out of the sand for the purpose, a shelter was rigged over the cabins with sails and rubber blankets.

A somewhat lugubrious discussion was entered into over a bowl of hot and well-sanded punch and an accompanying pipe. Suppose some monster of the deep should crawl upon the low shelf of sand, some river pirate should float down upon us, what then? Or what seemed more possible, suppose that in the dead vast and middle of the night the wind should cover us in a blanket of sand, bury us and erect over us a mountain of sand; or suppose that this erratic flood should rise and float us away all unconscious. These were contingencies upon which the moon declined to throw a ray of light. Half an hour after the final good-nights had been said the rain began to patter down upon the improvised shelter. It may fairly be said that the slumber was not over sweet or balmy, wind, rain and sand had been active during the night, there was not much of either, but what there was was ample. Upon an inspection the following morning it was found that small rivulets had crept in under the blankets and soaked the canvas uniform in spots, while the sand had driven in at every crevice; sand was everywhere—in hair, eyes, ears and noses. On the garments, in the garments and under the garments, a universal blanket of sand covered and permeated everything. It would be an easy matter to write a chapter on sand, but I forbear.

At 8 o'clock we got under way, *sans* breakfast, a lack of fuel and a pronounced longing to leave the sand bank, being more potent than appetite. The wind was in our teeth, and it was no gentle breeze. It never was a gentle breeze.

At Evansville we had our first experience with the ubiquitous newspaper man; thereafter we met him at every turn, and I venture to remark that the line "Paddle your own canoe" never got such an airing as it did that winter. It may not be amiss to state here that the gentlemen of the press everywhere on our route treated us with uniform courtesy and consideration. Through the agency of the irrepressible reporters our coming was heralded in advance, and very seldom was a town passed where a contingent was not on hand to give us a cheer as we went by or ready to render any assistance called for. And on several occasions a delegate or delegates from a solitary farmhouse would shout, "Hello, Cleveland!" as we passed by.

"This is Mount Vernon, the capital of Posey county, and the wickedest town on the river," said the citizen as we paddled up at a landing. Finding this informant alike intelligent and communicative, he was asked upon what ground the town claimed so great a distinction. Straightening himself up, and sending a miniature Niagara of liquified natural leaf into the middle of the street, he answered, "No man was ever hung in this yere town legally; but since three years ago we have taken twenty-seven from jail and lynched 'em; we've mobbed and riddled with lead six niggers, and there is been four murders in the last six weeks." The tale was fully corroborated. This little incident calls to mind the fate of the town of Napoleon, which disappeared from off the face of the earth, largely by reason of its ultra wickedness; you've doubtless all read "Mark Twain's" story of the disappearance. Among Mississippi River towns the fate of Napoleon is not exceptional.

A number of towns, built upon the banks and having a thriving river business, have suddenly found themselves set far inland by an unlooked for change in the river bed and channel. Some have been left from five to six miles inland in a single day, no vestige of the river being now in sight, and the mould of disuse and decay having gathered over their stores and dwellings. The former landing at the city of Vicksburg is no longer accessible, and boats now land two miles below the city. These changes in the channel are constantly occurring, and of course tremendous destruction of property results. The Mississippi River Commission, which expends the immense annual national appropriation for the purpose, has done much to improve the navigation of the river and to keep it within bounds, but their efforts in the latter direction avail but little. The Mississippi River has not its equal in the world in its disregard for every barrier imposed by man upon its turbulent force.

Here's another extract from the log: The fog which hung thick and heavy over the river soon lifted and the sun came forth vigorously, so much so that all superfluous clothing was removed; the very slight up-stream breeze died entirely away, and by 10 o'clock the atmosphere was too warm for comfort. The river was unusually lonesome. The cornfields were solitudes, the wooded hill-sides were silent, the "tow heads" were dreary wastes, the occasional farm house gave out no sign, save the lazy ribbon of smoke ascending perpendicularly from the chimney; the towns and hamlets seemed deserted. The river itself, a yellow glare without a ripple, save where an obstruction twisted and surged into fantastic eddies. No craft of any kind came into view until 2:30 in the afternoon.

We had passed Bay City and entered upon an unusually wide expanse of river—a miniature lake—when the side-wheeler Henry T. Dexter entered at the other end. The heat had become oppressive, and as a consequence the paddles were being lazily wielded. The skipper was fully half a mile in the lead, and the Dexter that much further down stream and hugging the opposite bank; but in a few moments she swung gracefully into the stream, heading directly for the skipper. And then began a series of dodging. The steamboat bent on running the canoe down, and the canoe animated with a very apparent disinclination to be swamped in that way. The guileless scribe looked on, wondering by what freak of nature the channel had been made so erratic, and what force was keeping the skipper directly in that steamboat's path. He found out. On came the steamboat well to starboard, but now she heads directly for the scribe. Laziness and meditation of nature's mysteries vanished and the paddles were plied vigorously. In vain. The nose of that puffing monster remained directly in front, a foreshortened leviathan. That weary perspiring scribe "tumbled to the racket" only when that steamboat was within a hundred feet of him, dropped his paddle and shouted his benediction to the pilot, whose face broadened into a benevolent smile as he peered forth from his eyrie between the smokestacks. That pilot's name is Bill Luty, and from the next camp the scribe mailed him the following billet doux:

"PADUCAH, Ky., December, 1883.—*William:* Your bowels of compassion must be shrunken, even to the dimensions of a mustard grain; in fact, if you have no more bowels than you have compassion, I wonder what stowage you can find for feed, yet you look very like a party who feeds well, but my friend, do you not stand in fear of a possible ghost—the spook of an unhappy canoer—that may come to you in the dead watches of the night, to confront you with your inhuman chase of two innocent and guileless strangers, over the broad expanse of waste water near Bay City to-day. How could you do it. We enjoyed it when we "got on to your racket," but it was hot for a brief season. If you ever find yourself in our neighborhood, find us, and we'll recall the incident that relieved a long day of paddling."

Mr. Luty evidently enjoyed his joke, as the Evansville *Journal* some days later contained the following:

"Readers of the *Journal* will remember a paragraph a few Sundays ago, descriptive of two canoes making the trip with their occupants to New Orleans, from Cleveland and Cincinnati. The boys started from here Sunday morning, paddled to Bay City, where they met the Dexter. Bill Luty was at the wheel and in a spirit of fun headed the Dexter for one of the canoes. The boys had been paddling about the upper lakes where small craft are in the habit of getting out of the way of steamers instead of steamers getting out of the way of small craft. When the occupant of the canoe saw Dexter heading for him he was floating leisurely in the sunlight, but getting panicky, grabbed his paddle and paddled for dear life to get out of the way. It pleased Bill to see him work, and having plenty of river he headed her for the other canoe, whose occupant also took a big scare and paddled frantically out of the way. Bill kept it up until the boys took in the situation and realized that he was having some fun at their expense, put up their paddles and went to mopping the sweat from their brows with their bandanas. On arrival at Paducah, going down, somebody handed Bill a letter with the card of the Richmond House on it, and directed to him. Bill had a guilty conscience and is naturally, as Mooney expresses it, 'a suspicious character,' and was afraid to open it. After a trip or two he got over his scare, and by the constant importunities of Capt. Damron, King Cobbs, and the other boys on the boat, took courage, opened the letter, and here it is, a little late, it is true, but none the worse for age."

On the morning of Dec. 15 the cruisers were sent out of the Ohio and into the Mississippi with every inch of canvas drawing and colors at every peak. Mainsails and mizens were set, and a spanking breeze on the quarter sent us booming into the tumbling surge caused by the meeting of the two great streams. For three hours the breeze held favorable, and had it not been for the frosty leaven in the wind the run would have been most enjoyable. At the end of that time a twist in the waterway and another in the wind gave us such work as fully counteracted the cold. The wind increased and set in dead ahead, a nasty, wet, choppy sea resulting. After the noon hour the mercury had fallen several degrees, the spray froze as it fell upon deck and paddling became labor.

The night was passed at Hickman under the roof of a hotel, that is to say it's called a hotel. The mercury stood at 32° when we turned in. At 8 o'clock the next morning, with the mercury still at the freezing point, the cruisers paddled out into a very strong head wind, expecting to reach the Everett farm, 27 miles below, where Dr. Neide had been storm bound for three days the year before. Fate had, however, decreed otherwise. The wind became a gale, tumbling the water in a way to remind us of many a mad dash on Lake Erie. As the wave crests broke into spray and tumbled on board the drops froze at once, covering decks and clothing with a coat of ice. Little headway could be made, as, notwithstanding the windings and turnings of the river, no lee could be found, the wind was blowing up stream, directly in our teeth. A shute behind Island No. 8 seemed to offer a possible escape, but it proved a delusion and a snare. Grievously we mourned our unwisdom, as the breeze (which had toyed with us in the broad open channel), was a gentle zephyr compared with the howling fury that met us in that shute. In an hour and a half we had covered a short mile, half a mile further on lay the main river and we hungered to get into that open water as a starving man hungers for rations, but we had yet another foe to meet and conquer. The water grew shallow as we proceeded, the paddles turned up the mud of the bottom, the keels touched and we were aground. The water in the shute, ordinarily of much less depth than in the main channel, had been blown out by the heavy wind, thus leaving scarcely enough to float a chip, but uncovering a wide stretch of its muddy bottom on each shore, an impassable barrier. To land and go into camp was thus made impossible; to go ahead, picking out a channel as we proceeded, involved drudgery and a fair chance of being defeated in the end; to retrace our steps, go back over that water we had struggled so to master: the situation was interesting.

The storm of wind continued with unabated fury, rendering progress slow and paddling wearisome. Finally a high headland, jutting well out into the stream, indicating a sharp bend in the river, loomed up ahead. Below that bluff lay Everett farm and the end of our day's toil. The spruce blades were plied with renewed vigor and the headland gained. A tangled mass of driftwood had lodged on the narrow shelf of mud and sand at the upper base of the bluff. This had from time to time been added to as logs and trees which had been uprooted and brought down by the floods were caught on their way and held by the entangled mass, through which the current rushed with an angry hiss that warned us against too near an approach. Beyond this barrier, swaying and twisting and groaning under the lash of wind and current, was the open river. Catching our breath under the lee of the headland and adjusting seats, paddles and belongings for the impending struggle, we pulled straight

out into the stream, the wind carrying the canoes several points up stream as they came broadside to. Then came a tug.

In a few minutes the conviction was borne in upon our inner consciousness that the hour of our defeat had come. That bend was our Waterloo. Twice we essayed it. Already the shades of evening were upon us, the sky was crowded with heavy masses of flying storm clouds; in another hour deep, dense darkness would prevail. We were entirely ignorant of the formation of the banks below, and at the best speed we might attain it would require more than an hour to get through that howling gorge. Wearily and silently we pulled ashore and began the search for a camping ground. After a long and discouraging hunt we could do no better than pitch the tent on the narrow border or shelf of drift-encumbered sand at the base of the bluff. The bluff presented a perpendicular wall over thirty feet high, the top being, so far as we could discover, entirely inaccessible from our camp. The sand shelf was scarcely ten feet wide and at no place over six inches above the water. Thus hemmed in, with an unscalable wall back of us and a treacherous flood in front, liable at any hour to fall or rise indefinitely, the situation and outlook for a sound and enjoyable sleep were alike discouraging. Stiff and numb with the cold and the unusually severe strain upon muscle and patience, covered with mud and ice as we were, the unpacking and pitching of the tent and preparations for the night went forward slowly. It was 9 o'clock before the supper, prepared over the spirit stove inside the tent, was dispatched. As I recall it, the conversation was neither extended nor animated. Something like this: "Say, Bill, make it a little stronger and hotter." "Can't do it, Commodore." It was the clear stuff and boiling.

Then we sank to rest with the mercury at freezing point. This was Camp Neide located behind Island No. 10, of war fame, and seven miles above New Madrid, Ky.

[TO BE CONTINUED.]

THE PURITANS AT HOME.

AH, gentle Editor, your ask "What are the Puritans doing?" Well, I will tell you their latest move. On Saturday, Jan. 30, at 8 o'clock P. M., this club held a "house warming," all as per cut in the invitation you mention in your last issue. Now do not mistake the idea intended to be conveyed by that little card. No, we have not built a new house, nor have we moved into other quarters that need warming; but merely used that figure of speech on account of our having observed that whenever a large body of canoemen gather together for purposes of amusement there is likely to be a pretty warm time.

Here in Boston there is very little communion between canoemen, and realizing this fact the Puritans first took the set annual dinner, which is at best a more or less formal entertainment, and adopted the broad and social idea of an informal time for the enjoyment of the local canoemen generally. Along many lines this is far more in keeping with the accepted free and easy character of our sport; long may it thrive.

Despite the season and the inclemency of the weather there was a goodly representation of boating men present.

The spacious club room was liberally decorated with bunting, flags, paddles, etc., presenting a gay appearance. Tables and chairs scattered promiscuously about were surrounded by the visitors and King Gambrinus officiated well at the keg. Light lunch, beer, pipes, and tobacco were icensued at great length. At one end of the room a "gemman" of color was seated making things lively. Piano and cornet music by club members, recitations and songs made the hours fly. At ten P. M the lights were extinguished and an exhibition of lantern slides (kindness of Mr. Dunnell) was given. Commodore Winne's genial face was to be seen, and his silvery tongue spoke words of wisdom about the A. C. A. Among the well-known gentlemen present were Com. Winne, Mohican C. C.; W. B. Wackerhagen, Sec'y-Treas. A. C. A.; Capt. W. A. Hall, Newton B. C.; Dr. S. R. Upham, Exc. Com., E. D., A. C. A., Sekonk C. C., Purser Apollonio, E. D., A. C. A.; Henry Muler, of Albany and Mohican C. C.; ex-Com. W. U. Lawson.

Close upon midnight most of the guests departed, leaving some "tired" ones to sleep at the club house.

The following notice was conspicuously posted in the room:

NOTICE.

The late cars leave the corner of O and East 4th streets at 1 o'clock A. M., and every hour thereafter.

FURTHER NOTICE.

Any gentleman finding himself making too much leeway can sleep on the wharf or in the dock until the tide rises him.

ENTERTAINMENT COMMITTEE.

Thus ended the second annual "night" of the P. C. C.

Seriously speaking, we are assured of the success of this means of awaking interest in canoeing, and, as in this case, a few well chosen words upon the A. C. A. are calculated to arouse more enthusiasm with regard to that association, to which many of us bear allegiance, than any number of annual dinners, which are enjoyed by the few.

The following clubs were represented: Mohican C. C., Albany, N. Y.; Vesper C. C., Lowell Mass; Lawrence C. C., Lawrence, Mass.; Newton B. C., Auburndale, Mass.; Sekonk C. C., Providence, R. I.; Crescent Athletic Club, Brooklyn, N. Y.; Massasoit C. C., South Boston., Mass.; South Boston C. C., South Boston, Mass.; Red Dragon C. C., Philadelphia, Pa.; Shub-Shub-Gah C. C., Winchester, Mass; Boston Y. C., South Boston Y. C., Savin Hill Y. C., Corinthian Y. C., of Marblehead; Hull Y. C., Hull Corinthian Y. C., Massachusetts Y. C., Boston.

JAMES W. CARTWRIGHT, JR., Sec'y P. C. C.

THE EASTERN DIVISION TROPHIES.

THE Hartford C. C. has sent out the following letter in answer to the circular recently sent out by the Eastern Division:

James W. Cartwright, Jr., Vice-Commodore E. D., A. C. A.:

DEAR SIR.—In accordance with my promise, your request of Oct. 1 last was presented to this club at its annual meeting, recently held. The members expressed themselves fully, and voted that a committee be appointed by the president to formally embody the club's views in a communication to be forwarded to you, and offered to the FOREST AND STREAM for publication.

The report of the committee reads as follows: "President George L. Parmele: The committee appointed by you to consider the request of the Vice-Commodore of the Eastern Division that this club contribute $10 toward the expense of two trophies, to be raced for at each Division meet, beg leave to report: That we consider it the duty of this club to contribute the sum asked, if, upon further consideration, the executive committee of the Eastern Division deem it expedient to establish such trophies; and that it is the sentiment of this club that it should always respond cheerfully to the proper requests of the A. C. A. and its Eastern Division. That we question the policy of any action which shall increase the number of high-priced prizes or prizes of large pecuniary value at meets of the American Canoe Association, or that shall introduce such prizes at the meets of any of its Divisions. That we wish to record ourselves as in favor of prizes which shall become the property of the successful competitor; and we suggest that the Division follow the old custom of the A. C. A. of providing flags for such prizes. Respectfully submitted, W. B. Davidson, J. D. Parker, F. B. Lewis, Committee."

Awaiting your further consideration and advices, I remain, fraternally yours, FRED. B. LEWIS, Secretary H. C. C.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $10. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

THE FIRST COST OF SHIPS.—The *North American Review* for January contains a most interesting article on this subject by Mr. Charles H. Cramp, of the great firm that stands at the head of American shipbuilding. In the course of the article Mr. Cramp makes the positive statement that to day his firm can build a steamer to do the same work as the great Atlantic liners, the City of New York, Majestic or Columbia, at the same cost as in British shipyards. Further than this, he predicts that another ten years of progress in the United States will make it possible to build even more economically than in Great Britain. While the paper deals only with merchant and war vessels, Mr. Cramp's remarks on the character of the work and on the building of vessels to meet certain specified requirements, rather than the exact duplication of some given foreign vessel, are as applicable to steam yachts as to the other classes; and although the first cost of a steam yacht is at present considerably higher here than abroad, there is every evidence that with an increased demand for such vessels, they would be turned out here of a type far more suitable for the uses of American owners, and at but slightly greater cost.

There is nothing analogous in the building up of a merchant marine and a pleasure navy, the element of profit, vital to the success of the first, is entirely absent in the latter; and granted that the present laws relating to merchant vessels are wise and good, there is still no reason for the assumption that they are at all applicable to pleasure craft. Steam yachting is a sport that is yet in its infancy in this country, and that will require a deal of tender care before it is strongly enough established to withstand the paralyzing effects of tariff legislation. Before the building of steam yachts must come the use of them, every large yacht in commission through the season leads to the addition of others to the fleet, and for the present at least the first question, to builders no less than to yachtsmen, is the stimulation of a general interest in steam yachting. Whether the increase is in vessels of home or foreign build is a small matter.

Up to the present time the sea-going steam yachts of the American fleet, even including those of large tonnage but of a model unsuitable for off-shore work, have been of foreign design, if not of build; in fact those of purely American origin could be counted on one's fingers. The best of them are of British origin; in fact had this source of supply been shut off by any such policy of protection as is embodied in the McKinley Bill, it is probable that there would have been no American fleet to day. The presence of these foreign craft has been necessary in the absence of any special study on the part of American designers and builders to the life and growth of steam yachting, and from the latest products of American yards it is evident that the time has not yet come when yachtsmen may be entirely independent of foreign aid.

Steam yachting is a sport that is certain to become permanent and popular in America, to an extent that is likely to interfere seriously with sailing; but the rapidity of its growth depends almost entirely on the extent to which it becomes fashionable among wealthy men. The addition of new yachts, of whatever nationality, is certain to stimulate the demand for more; and once convinced that a steam yacht is a necessity, there will be found plenty of wealthy Americans who will not hesitate over the difference of cost between home and foreign yards. It must be admitted that up to the present time the British sea-going steam yacht is far ahead of the very few attempts made on this side; but there is a positive certainty that as soon as the demand exists among American owners for something still better, a vessel specially suited to the conditions of American yachting, that designers and builders will be found to meet the demand, and that progress in this direction will be no less marked than in the case of the design and construction of vessels of war.

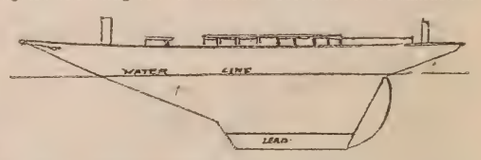
CAUSES AND RESULTS.—The present situation in yachting offers much that is amusing to those who took part in the movement in behalf of a classification by corrected length, some two years since. At that time two dire results were foretold by the opponents of the measure as almost certain to follow the adoption of corrected length: a falling off of the interest in building and racing, and the creation of a class of long narrow boats, virtually canoes. This view, which was held by Mr. Burgess, Gen. Paine and other Eastern yachtsmen, was very strongly pressed, in fact formed the backbone of the opposition arguments. The immediate result was, as everyone knows, that the movement was dropped, and classification was left on the same basis of waterline length as had existed for years.

The past two seasons have brought some curious changes, and now, at the beginning of the third, the clubs are face to face with the same dire conditions as the result of a continuance of the old order of things as were predicted as the awful and inevitable results of a change.

Within this time has been seen the failure of all the large club regattas, the dullest period ever known in schooner racing, the disappearance of the 70ft. class, the extinction of the 90ft. and 40ft. classes, and a general stagnation in building and racing, relieved only by the sudden creation of the 46ft. class. The first part of the prophecy has been fulfilled as completely under waterline classification as under one by corrected length. Since the close of last season, the second part of the prophecy has been realized to an extent that is now causing apprehension to the more conservative yachtsmen, who see in the Dilemma and her sisters the same canoe that was foretold as a result of the new classification, but in even a more dangerous form. In the new Dilemma, which Mr. Herreshoff has so cleverly named, the canoe idea, of great length, moderate beam and displacement, and small sail area, has been carried much further by the addition of a new feature, the loaded fin, by which the stability which is lacking in the canoe type is obtained to a remarkable degree. The true merits of the new craft are yet to be determined, but it seems certain that so far as racing and speed are concerned they will prove most dangerous opponents to the conventional keel craft, at least in the classes under 46ft. Such as they are, all around yachts, legitimate sailing craft, or pure racing machines, they are now ready to meet the existing boats in the 25 and 35ft. classes, and Mr. Herreshoff stands ready to turn out a 46 footer of the same type by the beginning of the season.

Whether the new type shall prove good or bad, it is difficult to see how a classification by corrected length could have produced any greater extreme than has come merely through natural causes, but under a waterline classification; or how the former could have done anything less for the advancement of designing, building and racing than the latter has accomplished.

YACHTS AND THE MCKINLEY BILL.—The decision of Judge Brown, rendered on Jan. 28, disposes of the Conqueror case in a manner that must be satisfactory to all friends of yachting, however distasteful it may prove to those who have for some time sought to impede and restrict the use of pleasure vessels of all classes. By this decision, which is so important that we print it in full, Mr. Vanderbilt is given possession of his yacht, the use of which he has been deprived of since last August, and a reference has been ordered to determine the damages to which he is entitled for such loss. The two vital points of Judge Brown's decision are that a yacht is not an import, that she cannot be classed as merchandise or a manufactured article, and consequently cannot be included under any of the general clauses of the McKinley bill, but that she must come under the laws relating to ships and vessels. This being the case, she is exempted from the payment of tonnage dues by Section 4,216 of the Revised Statutes. The exact status of the yacht, as the property of an American citizen, is clearly stated in the concluding portion of the decision. Messrs. Root & Clarke, the attorneys in the case, are to be congratulated on the successful result of the long and complicated struggle.



WE HAVE LOOKED in vain through the recent issues of *The Yachtsman* for the promised explanation and vindication of the new deed of gift by its Boston correspondent. We have no doubt that a plain, truthful and complete story of the whole history of the changes of the original and the second deed would be eagerly read on both sides of the ocean.

THE LAST ISSUE of *The Yachtsman* contains a very clever design for a single-hander with a shifting centerboard, such as we recently illustrated.

SAILING LENGTH.—The report of the fleet captain of the Corinthian Y. C., of New York, in another column, is a remarkably able and practical document, and every one of its several suggestions is worthy of the careful consideration of all yacht clubs. In the present stage of yachting development, with its bold experiments and rapid changes, the influences of measurement and classification are so slight, and so few yachts are building, that it is a small matter whether or no the change be made now or later on; and the coming season is likely to disprove the objections raised to the new classification, as well as to throw a needed light on the question of the most desirable limits for permanent classes. The need of a compact and definite term for both measurement and classification by waterline and sail area has been felt for a long time, and that suggested, "sailing length," or briefly "S. L," is the best yet offered. Though it is purely arbitrary, it is sufficiently definite and exact for all practical purposes, and its general use is to be commended in place of the cumbrous "classification by corrected length," or the borrowed and much abused "rating."

ANOTHER NOVEL YACHT.

THE one most evident proof of prosperity is the new yacht for Byron Wightman, of Providence, which is well under way at the shop of Geo. H. Saunders, Bristol. She is 35ft. 3in. over all, 23ft. 3in on the waterline. The beam is 9ft. and the draft 6ft. The standing room in the cabin is 6ft. The overhang forward is 5ft., and aft 5½ft. She will carry 848 sq. ft. of sail. The mainmast will be 40ft. and the mizenmast 20ft. She may be termed a cat yawl. The frame is of the best selected oak, the planking yellow pine, and the deck white pine. There will be 5,600lbs. of lead on her keel. At the widest point on top this strip of lead is 15in. through, and on the bottom 18in. It is made sharp at the end. The craft will have all the accommodations necessary for cruising, but the designer has figured on as much speed as possible. The deck house will be generously lighted with a long row of windows. The boat will be finished in

mahogany. Her chosen harbor is Nayatt Point. While she has an overhang forward and aft, the lines forward of the keel are not straight, and in this respect she differs from Gloriana. The wetted surface is much reduced. At the waterline point there is an outward curve, which lengthens the waterline measurement. This change, Mr. Saunders thinks, will give the yacht an easier entrance to the water. When under sail there will be no visible evidence of anything but a straight line forward. She has deep draft as compared with her other dimensions. There are three or four other boats of similar build in the bay, and it may be possible to get up a class to race next season. Andrew Borden of Fall River, owns one which is about 29ft. on the waterline. Gannet is about the same size. While this yacht does not have a fin keel, her lines are so narrowed down that to some extent the same result will be produced in racing. She has some of the features of Gloriana, and the improvements of Gloriana No. 2. She has also a feature in her lines forward which resembles that of some English yachts. She looks to be a fast boat.—*Providence Journal.*

BUILDING ABOUT BOSTON.

LAWLEY has the keel of the 90ft. Gardner schooner stretched, and some of the frames are up. The mechanical work thus far is first class, and some of the best iron fitters are engaged on the yacht. Capt. A. H. Clarke of this city is looking after the owner's interests, and yesterday he expressed himself as greatly pleased with everything. At present outlook the yacht should be framed out in 10 days. In the big shed the two 70ft. steam yachts are ready for the water. At the end of the yard, in the small shed, three 21 footers are being built for Messrs. Fowle, Dexter and Foster. All the boats are in frame. The Fowle boat is sure to cut a good figure in her class. The Dexter boat will be planked next week; like the Fowle boat, she was designed by Stevart and Binney. The Foster boat was designed by W. E. Waterhouse, formerly chief clerk to the late Edward Burgess. It is the first yacht built from the lines of Mr. Waterhouse. All three of the boats show up well.

On the south side of City Point Smith has about decided to build an out and out skimming dish for the "great little 21ft. class." It is to be hoped that the well known builder will do so, for his boat is sure to stand well up in the front ranks.

Williams has three boats under way, and the 18ft. keel boat is all smoothed and ready for painting. The boat is a very good one, and she should be fast. The frames of a large catboat are being set up, and also on a 55ft. steam yacht.

Pryor is putting the finishing touches on the steam yacht Arrow, and has a new 25ft. cat ready for her cabin work.

Borden has about finished a 15ft. square-sided catboat.

At East Boston, Ambrose Martin has the keel stretched on Commodore Morrill's 70ft. steam yacht, and she will be timbered out next week. The yacht is expected to make 13 knots an hour.

At Salem, Frisbee has finished the work of putting an English stern on the schooner Hope Leslie, and a very good job he has done. The yacht will be lowered into the water on Tuesday, and will then be towed to Gloucester, where she will be hauled out until next season. Frisbee has the keel out for a steam yacht for Dr. Charles G. Weld of this city. She measures 58ft. waterline, 70ft. over all, 14ft. beam, and 5½ft. draf. She is to be used for cruising.

On the wharf adjoining Frisbee's, Mr. David M Little is building a steam yacht from his own design. He is also the designer of the yacht being built for Dr. Weld. Mr. Little is constructing his own yacht, and has fitted out a building which he owns with steam power. The frames of his yacht are out, and she will be timbered next week. Ned McLeod of East Boston is the foreman. Mr. Little's yacht is for cruising, and there is no doubt but that she will make a very comfortable boat.

In sailmaking, Wilson and Silsbury are very busy. They have orders for new suits for the Sea Fox, Commodore Tucker; schooner Marguerite, Mr. R. S. Palmer; new forsail for the Hope Leslie, Mr. William Minot, and a jib for the cutter Wayward. The firm are to make sails for the new Herreshoff 46, 35-footers and the 2½ rater; a catboat, and a jib and mainsail; also a new suit of sails for the 46-footer Iderim, built last year, and for a 30ft. Hanley boat. Beside the above, the firm is to make sails for Mr. W. C. Young's sloop Modoc; catboat Tom Cat; suit of sails for Minneapolis parties; two suits for St. Paul yachtsmen; a suit for a New York catboat; suit for Herbert Hutchins' new catboat; suit for Mr. Bird's Caprice; for the boat to be built by Herreshoff for parties on Lake Minnetonka, and a suit for a four-master now being built by Brooks of East Boston.—*Boston Herald.*

January has passed with but one race for the ice yachts, and that of fourth class boats. The Hudson River Ice Yacht Club has elected the following officers: Com., John A. Roosevelt; Vice-Com., Dr. J. C. Barron; Treas., Archibald Rogers; Sec'y, E. P. Rogers; Regatta Committee, Guy C. Bayley, H. Livingston, W. H. Storms, Thos. H. Ransom; Meas., Chas. H. Van Loan. The club has appointed a committee with power to purchase suitable and handtome prizes to be sailed for by the different classes and to become the actual property of the winning yacht in each class; also an emolem of victory to be presented to and become the actual property of the yacht winning the club pennant in the annual regatta. The club now numbers 75 members and 42 yachts. Mr. Norman Wright has purchased the Dragon. Mr. Kane has sold the Reindeer and Mr. Rogers the St. Nicholas, but they are to be replaced by faster yachts. The ice yacht challenge pennant of America is still held by the Hudson River Ice Yacht Club and it also holds the Poughkeepsie challenge pennant. The club is in receipt of challenges from the North Shrewsbury Club and the Carthage Landing Club, and has accepted both. The races will be called at the earliest possible date that ice will permit. Guy C. Bayley has been appointed chairman of the regatta committee.

The steam yacht Wadena has not yet been reported, though she has been out for over three weeks. Sagamore, steam yacht, Mr. Slater, sailed from Bermuda on Jan. 24. Far Niente, steam yacht, was at Beaufort on Jan. 26 from Philadelphia, sailing on Jan. 28 for Jacksonville. Aztec, steam yacht, sailed from Charleston, S. C., on Jan. 26 for Florida. Oneida, steam yacht, is fitting out at Tebo's for a trip to the West Indies.

Vision, schooner, has recently been sold by F. W. Hawley to W. G. Cook. In coming from Boston to New York on Jan. 24 she grounded off Vineyard Haven, but was floated without damage. Lancer, schooner, has been sold by Col. Josiah Porter to G. C. Chisholm.

THE CONQUEROR CASE.

U. S. DISTRICT COURT, SOUTHERN DISTRICT OF NEW YORK.

FREDERICK W. VANDERBILT
vs.
THE STEAM YACHT CONQUEROR AND J. SLOAT FASSETT.

IN ADMIRALTY.

Elihu Root and Samuel B. Clarke, for the Libellant.
Edward Mitchell, United States District Attorney, and Henry C. Platt, Assistant United States District Attorney, for the Claimant and Respondent.

BROWN, J.—On September 1, 1891, the libellant brought the above possessory action against J. Sloat Fassett, Collector at this port, to recover possession of his yacht, the Conqueror, which the Collector had taken and held in his custody on the claim that she was subject to customs duties. The authority of the Court to proceed in the matter being denied, the Marshall, under an alias process and the explicit order of the Court, took the yacht out of the possession of the officers of customs into his exclusive custody; and thereafter on Oct. 19, 1891, upon the application of Fassett to the Supreme Court, an order was obtained requiring this Court to show cause why a writ of prohibition should not issue forbidding this Court from further entertaining the cause. On the hearing of that order the question, both of the jurisdiction of this Court and whether the yacht was dutiable under the customs laws, was fully argued. The Supreme Court denied the writ of prohibition on the ground that this Court had lawful jurisdiction, both of the parties and of the subject matter, without considering whether the yacht was liable to duty as an imported article.

The proofs since taken sustain the main facts stated in the libel and the answer. The defendant claims no other right to the custody of the yacht than for the collection of customs duties. The proofs show that Mr. Vanderbilt, a native born citizen of the United States and a member of the Royal Mersey Yacht Club, of England, purchased the yacht in England, on May 7, 1891, of W. S. Bailey, the registered owner of the yacht, by a bill of sale in the usual form; that after cruising in the waters of Great Britain and Norway, the yacht was navigated by her master to Halifax, and thence to the United States, arriving at the port of New York on or about July 6, 1891; that on arrival here the yacht was entered at the Custom House, the bill of sale, previously certified by the American Consul at Liverpool, being presented to the Collector for record and certification, and that the Collector's certificate was endorsed thereon in accordance with Articles 93 to 97 of the Treasury Regulations of 1884, entitling the yacht to the protection and flag of the United States, but not entitling her to engage in commerce (Rev. St., § 2497); that the Collector claimed that the yacht was subject to customs duties as an imported article, and that such duties not being paid, he, on August 27, 1891, by his deputies, took possession of and held her for the payment of such duties, until she was arrested by the Marshall as above stated.

The libel being filed to recover possession of a vessel alleged to be wrongfully detained, it is immaterial whether at the moment of the filing of the libel, or of the issuing of the original process, the yacht was within the territorial limits of this jurisdiction, or in the waters of the adjoining district, for she presently came within the territorial jurisdiction of the Court and was there lawfully and regularly arrested under the process. The process was not void merely because when issued the yacht was across the boundary line of this district. The Supreme Court having all the facts upon the record before it, has expressly affirmed the jurisdiction of the Court over both the vessel and the parties, and its authority to proceed with the cause. The only remaining question is whether the yacht is subject to customs duties. If she is not, the seizure and possession by the Collector were illegal, and it is the duty of the Court to give the libellant judgment, and a writ of possession.

The history of legislation in this country in reference to ships and vessels, as shown by scores of acts in the United States Statutes at Large, leaves no doubt, as it seems to me, that from the beginning ships and vessels have been treated as a subject *sui generis*, and that the acts of Congress in regard to them form a complete system by itself, wholly outside of ordinary tariff legislation as respects imported goods, wares and merchandise. Duties on vessels have always been imposed, but never in those acts, or in the same sections of acts, that deal with customs duties on goods, wares and merchandise. They have always been imposed either by independent acts, or by independent sections in the same act, and by different methods from those applicable to merchandise, viz., duties computed by tonnage. Protection to American industries also, and the development of American commerce and of the American marine, so sedulously studied from the first, have been provided for in ways altogether peculiar to ships and vessels alone; not merely by exacting higher duties on foreign built vessels than upon domestic ones, but higher duties also upon the cargoes brought in foreign bottoms (still the law except where exempted by special treaty stipulation); and, finally, by excluding foreign vessels altogether from American registry, so that no foreign built ship can become a vessel of the United States, except by a special act of Congress, or take part in the coasting or internal trade of the country. Not a decade has passed since the foundation of the Government, during which one or more, often several, changes have not been made in the regulation of the duties to be paid by foreign and domestic vessels, and in the discriminations affecting the vessels of particular countries. These acts are much more numerous than the tariff acts, and show the constant presence of the subject in the mind of Congress.

In view of such a body of legislation evidently forming a system by itself, and covering the subject of duties to be paid to the Government by foreign or domestic vessels coming to this country in the usual course of navigation, and presumptively, therefore, embodying the whole intention of Congress in reference thereto, the usual rule in the construction of statutes would exclude ships and vessels from the purview of ordinary tariff legislation as regards imports of goods, wares and merchandise, in the absence of any provisions showing a clear intention to include ships and vessels and thus to impose on them a double duty. Examination of all the tariff acts, including that of Oct. 1, 1890, shows that in not one of them are ships or vessels named in the schedules of imports; nor is there a single phrase under which they can be classed except by a strained and unnatural construction. By the rule of construction above referred to, therefore, and without reference to the practice of the Government for more than a century not to treat vessels coming here in the usual course of navigation as subject to tariff duties on imports, all such vessels should be held subject to such duties only as are imposed under the special acts dealing with ships and vessels, and not subject to the acts dealing only with duties on imported merchandise.

While the foregoing general view seems to me quite sufficient for the decision of the cause, the novelty of the subject makes proper, perhaps, a consideration of it more in detail.

Duties upon the yacht are claimed to be due under the customs act of Oct. 1, 1890 (26 St. at L., 567). That act declares, in its first paragraph, that "there shall be levied, collected and paid upon all articles imported from foreign countries and mentioned in the schedules herein contained, the rates of duty by the schedules prescribed." To come within the act the article must be (1) imported; (2) mentioned in the schedules, and (3) fall within the general scope and intention of this act, rather than within those other acts that provide specially for duties upon ships and vessels. Neither of these conditions seem to me to exist as regards such a vessel as the Conquerer. She is a sea going, schooner-rigged, screw steamship, 182½ft. long, nearly 25ft. wide, and 13½ft. deep; her measurement is about 372 tons gross, 219⅛ tons net. Her crew consists of twenty-five men. She came to this country in the ordinary course of navigation, as a pleasure yacht, duly entered at the Custom House, and presented the bill of sale in conformity with the Treasury regulations applicable to foreign built vessels purchased by citizens of this country as above stated. She paid no tonnage duty, because Section 4216 of the Revised Statutes abolished that duty upon yachts belonging to a regularly organized yacht club of a foreign nation which extended similar privileges to yachts of this country.

1. A vessel arriving in this way is not, in my judgment, an "imported" article within the meaning of the Tariff law. The word "imported" has in general the same meaning in the tariff laws that its etymology shows (*in, porto*, to bear, to carry). To import is to bear or carry into. An imported article is an article brought or carried into this country from abroad. This yacht was not borne or carried into this country. Vessels are the means or instruments of importation. They are not ordinarily themselves imported. The definition of a vessel in Section 3 of the Revised Statutes is "every description of water craft * * * capable of being used as a means of transportation on water." A vessel arriving in the ordinary course of navigation is no more imported, in the ordinary sense of that word, than she is transported. Occasionally small craft are carried from one country to another on board of larger vessels. When thus transported from one country to another they are imported, and so far may be subject to duties as imports. The present is no such case.

2. Ships and vessels are not "mentioned" by name in any of the schedules or paragraphs prescribing duties. The only paragraphs under which it is claimed they might be brought are paragraph 215, as "manufactures of iron or steel * * * whether partly or wholly manufactured;" paragraph 230, as "manufactures of wood;" paragraph 137, as "beams, posts, building forms, etc., together with all other structural shapes of iron or steel, whether plain or punched, or fitted for use;" paragraph 153, "anchors or parts thereof, of iron or steel, wrought iron for ships, forgings of iron or steel for vessels or parts thereof;" and Section 4 of the Act, as "articles manufactured in whole or in part, not provided for in this act." Paragraphs 137 and 153 plainly enough refer to the articles in their separate forms; not when found built into, or forming a part of, such a construction as a vessel, which must be treated as a unit. Paragraphs 215 and 230 and Section 4 relate only to articles "manufactured;" the first imposes a duty of forty-five per cent. ad valorem; the second thirty-five per cent., and the third twenty per cent. ad valorem. The mere etymology of the word "manufactured," that is, something made by hand, might admit of its application to a ship. And in the case of a vessel, though completed, brought into port on board of another vessel as merchandise, and not properly falling within the provisions or the intention of the special acts imposing duties on ships and vessels, I am not prepared to say that the description of it as a "manufactured" article under some of those drag net clauses, though it may be difficult to say which, might not be sufficient to render it chargeable with duties as an import "mentioned" in the tariff act, as in the case of the Madge, Treas. Dec., 4,960, March 17, 1882. But in the ordinary use of language, a vessel is no more "manufactured" than a house, or a cathedral. Ships are "built," or "constructed;" and those who build them are known as "ship builders," not as ship manufacturers.

Considering the fact that hundreds of objects are specifically named in the tariff acts, many of them of but slight consequence in comparison with ships and vessels; and considering the prominence of ships and vessels as the chief means of all importation, that they are so often presented to the attention of Congress, and that there is not a tariff act but contains some allusion to them, it is not credible that if it had been the intent of Congress to make ships and vessels coming to this country in the usual course of navigation subject either to specific or *ad valorem* duties, they would not have been mentioned *eo nomine* in some of the tariff schedules, and not left to be covered by such remote and far-fetched clauses as manufactures of iron or wood, or "manufactures not otherwise provided for." The absence of apt words affords a strong presumption that vessels coming here in the usual way are not included.

3. The controlling fact, however, which accounts at once for the absence of ships and vessels from the express provisions of the tariff acts, and for the lack of any apt words in those acts to include them, is the fact first above mentioned, viz.: that from the foundation of the Government the duties on ships and vessels have been regulated by acts independent of the customs laws, and under a different system of legislation. From the first, duties on imports and duties on ships and vessels have been always treated as separate and independent subjects. The first act of the first Congress was for its own organization. The second act was an act laying a duty on "goods, wares, and merchandise imported" (1 St. at L., Chap. 2, p. 24). The very next act, passed July 20, 1789 (1 St. at L., Chap. 3, p. 27), provided for duties on ships and vessels. It is enacted that the "following duties shall be and are hereby imposed on all ships or vessels entered in the United States" imposing different rates of duty per ton, viz: (1) on those built and owned here, 6 cents per ton; (2) on those built here, but belonging wholly or in part to foreigners, 30 cents per ton; and (3) on all other vessels, i. e., those built abroad, 50 cents per ton. This distinction between ships and vessels dutiable at certain rates per ton, and goods, wares and merchandise imported, and dutiable at specific or *ad valorem* rates, has continued to the present hour, and has been recognized in scores of acts. The Revised Statutes, § 4,219, enact that "upon vessels entered in the United States from any foreign port there shall be paid duties as follows," specifying various different rates per ton; Sec. 4,223 provided that "the tonnage duty imposed on all vessels engaged in foreign commerce shall be levied once a year" By the Act of June 19, 1886 (24 St. at L., p. 82, § 11), "A duty of 6 cents per ton, not to exceed 30 cents per ton per annum," was "imposed at each entry upon all vessels entered from any foreign ports, not, however, to include vessels in distress, or not engaged in trade." In the numerous statutes which have regulated the changes in the rate of tonnage duty, and the distinctions made between domestic and foreign-built vessels, these duties are sometimes spoken of simply as "duties on ships and vessels," as in the first act; sometimes as "duties" on the tonnage of ships, or as "tonnage duties on ships," or as a "tonnage tax." The various expressions all signify the same thing. All are "duties" imposed as directly upon ships as the tariff duties are imposed upon merchandise. The two classes of subject are wholly distinct. The tonnage duty is the duty provided to be paid by ships; the tariff duty by imported merchandise. Each class is governed by its own laws, and neither is designed to pay a double tax.

The reason for the distinction is obvious. Vessels are destined to come and go continually; merchandise to be consumed on shore. Merchandise, therefore, pays duty on its value but once, and once for all. If vessels were dutiable under the same law on their whole value at every entry into port, they would be speedily taxed out of existence, and navigation would become insupportable. Vessels, therefore, are taxable at a much lower rate, but payable at every entry, or yearly.

There is nothing in the act or 1890 so far as regards the question under consideration, that in any way distinguishes it from prior tariff acts. The words "articles imported," used in the act of 1890, have been used in several previous acts; and those words have no more extended meaning than the word "merchandise" in the earlier acts, since the word merchandise includes "chattels of every description capable of being imported." (Rev. St., § 2766.)

The revenue act of July 14, 1862 (St at L., p. 543), well illustrates the above views. That act in its first fourteen sections imposed duties on imported merchandise, etc. It provided also (do., p. 557) for duties on manufactures in substantially the same terms as paragraph 215 and Section 4 of the act of 1890. The next section imposed duties on ships and vessels as follows:

"Section 15. Be it further enacted, that upon all ships, vessels or steamers which shall be entered in any custom house in the United States from any foreign port or place, whether ships or vessels of the United States or belonging wholly or in part to subjects of foreign powers, there shall be imposed a tax or tonnage duty of 10 cents per ton * * * in addition to any tonnage duty now imposed by law." Here are the two classes of subjects, viz., "imported merchandise" as one group, and "ships and vessels" as the other brought side by side in the same act. The different duties and the different modes of imposing them on the two classes are clearly discriminated. No one would seriously contend that vessels liable to a tonnage duty under Section 15 of that act could be liable as an imported article to an additional duty under such general words in the prior sections as "manufactures of iron," or "manufactures not otherwise provided for." The manifest intent of Congress to provide independently in Section 15 for the duties to be paid by ships and vessels, excludes the prior sections from any application to whatever is covered by the latter. Similar provisions in the act of 1890 cannot receive any different construction.

In the case of the United States v. A Chain Cable, 2 Sumner, 362, where a chain cable had been bought in Liverpool by the master of an American vessel to replace an old one worn out, and was landed in Boston without a permit, and claimed to have become thereby forfeited, Mr. Justice Story held that the article, though brought in on board the ship and so imported, was nevertheless to be treated as a part of the ship and not as goods, wares or merchandise within the meaning of the general revenue laws. So in the Gertrude, 3 Story, 69, Mr. Justice Story, affirming the decision of Ware, J., held that the "tackle, apparel and furniture of a foreign vessel wrecked upon our shores did not come within the meaning of the revenue laws as imported merchandise."

But for the acts of June 29, 1870 (Rev. St. Sec. 4216), and of June 19, 1886 (24 St. at L., p. 82, Sec. 11), there can be no question that this yacht would have been required to pay tonnage duties like all other vessels coming from a foreign port. She is plainly within the special statutes relating to duties on ships and vessels, and was, therefore, not within the scope of the general tariff upon imported merchandise.

By the acts of 1870 and 1886 above referred to, Congress has exempted such yachts, not engaged in trade, from the payment of tonnage duties. The effect of this was not in any degree to extend the scope of the tariff act concerning imports, so as to make it applicable where it was not applicable before. The plain intent of Congress was to relieve such yachts from the prior burden of tonnage duty;

STEAM YACHT "CONQUEROR."

not to increase their burdens or to add any new ones. The reasons for it, if I am rightly informed, were for the improvement of navigation by the development of the finest models for speed, the free inter-communication between yachtsmen of different countries, their invitation to our shores, and the advantages to our own yacht builders likely to result therefrom.

4. It is urged, however, that though foreign vessels entering at our ports may not in general be subject to duty as imports, the case of the Conqueror is distinguishable from them in two respects: (1) That the former are treated by international comity as a part of the territory of the country to which they belong, and being here only temporarily, are by comity not considered as imports; (2) that the Conqueror presented her bill of sale at the Custom House and obtained the certificate of the Collector thereon, entitling her to the protection and flag of the United States, and that this act made her an import by change of domicile, and subject, therefore, to import duties.

If, however, the views previously expressed are correct, none of these suggestions have weight. They do not change the fact that the yacht was navigated to this port as a sea going vessel, and hence liable to duty, if at all, under the shipping laws, and not under the laws applicable to imported merchandise. The circumstances stated do not widen the scope of the tariff law, nor change the class to which the yacht belongs nor transform her from the one system of legislation to the other. After the bill of sale was made she was none the less governed by the shipping laws alone; and but for the acts of 1870 and 1886, she would have remained subject to tonnage duties precisely as before, whether the bill of sale was presented and certified at once or indefinitely postponed. The certification has not the effect ascribed to it. It contributed nothing to give the yacht an American domicile, or to make her American property. She was made American property months before by the bill of sale; and her domicile followed that of her owner. The certification did not make her a "vessel of the United States," nor give her the general rights or privileges of vessels of the United States. (The Merritt, 17 Wall, 582.) She could not enter into the foreign trade, nor into the internal or coastwise trade of the country (Secs. 4131, 4311, 2497). The only use of the certificate was to serve as "proof of American ownership," for her convenience in navigation as a pleasure yacht, and to absolve her from the payment of "light money" (Rev. St. 4225 and 4226; The Miranda, 47 Fed. Rep., 815; Sleight v. Hartshorn, 2 Johns., 531, 545). She had already once before entered this port under the libellant's ownership and paid "light money," not having certified papers. If she was not liable to import duties before the certification, when navigated by the libellant as owner, there is nothing in the tariff act or in Sec. 4226 that makes the payment of import duties either a condition or a consequence of such certification; and without that there can be no additional duties imposed.

As regards the other suggestion, it is not correct that foreign private ships are usually treated as parts of the territory of the country to which they belong. It is only public vessels that are enrolled to that exemption. As to private foreign vessels the contrary is the rule. They are subject to all the laws and regulations enacted in regard to them by the country which they enter. It is under such laws that foreign vessels are required to pay tonnage duties, pilotage fees and light money. That import duties are not enacted of such vessels is not because of any legal fiction or international comity, but because they are not within the scope of the tariff laws on imports and are dutiable according to the shipping laws alone. Had foreign vessels been within the scope of the tariff law on imports, it is certain that the Government would not have forborne to collect import duties on such vessels, either by reason of their temporary stay or of any notions of international comity.

In my judgment nothing in the case removes this yacht from the domain of the laws specially enacted for ships and vessels, as to the dutiable charges thereon; and as by these laws she is released from the payment of the ordinary duties imposed on vessels, without being charged with any other duties or made subject to the general tariff law on imported merchandise, her detention for customs duties was illegal, and the libellant is entitled to a decree for possession, with costs and damages.

JANUARY 28, 1892.

CORINTHIAN Y. C. OF NEW YORK.

FLEET CAPTAIN'S REPORT.

THE fleet captain reports, in relation to the progress during the past yachting season of the reform in the method of classification, to wit: the general adoption of classification by measurement which has been consistently advocated by the club since its inception, that the reform appears to have gained substantially during the season, making progress both in the minds of the yachting community and through the logic of fact resulting from the season's experience.

The leading clubs which have adopted the rule of classification by measurement since 1889 are: The Larchmont, Atlantic (in one class only) and the various clubs composing the Lake Yacht Racing Association. It has also been adopted by the Corinthian Navy, and (for one class) by the Corinthian Mosquito Fleet.

It has also been matter of discussion and special report (in general favorable) in the Eastern, Seawanhaka and New Rochelle Yacht Clubs:

Where put into practical effect the testimony is unanimously in its favor.

This club held its annual June race, as usual, under that system with entirely satisfactory result.

A committee appointed about a year ago considered carefully the question of the limits for the different classes in use by the club in the light of experience and of existing or vested interests. On full consideration it was determined to retain the same classes as being the most suitable, certainly for the present, viz.: not exceeding 20, 25, 30, 40, 50, 60, 70, 80, and 110 feet "sailing length" respectively

The sailing committee has also considered the question of nomenclature and determined upon the phrase "Sailing Length" [abbreviated S. L.] as the best arbitrary word-symbol to represent the result of the present system of measurement when applied to a yacht. The committee rejected the terms Sailing Rating (as more applicable to a system of measurement which embraces some cubical element,) Corrected Measurement and Sailing Measurement and Time Allowance Class, and Time Allowance Racing Class (as being all more cumbersome and no more expressive than the phrase Sailing Length.) It also rejected the phrase Corrected Length as in effect somewhat misleading, the process not being actually a correction of the length of the boat.

The committee has also amended the fourth sailing regulation in relation to measurement by bringing the same to a uniformity in relation to the exact points to which measurement shall be taken with certain other clubs, the forward point of measurement for the base line being now the point midway between the jib-top-sail stay and the jibstay on the bowsprit or flying-jib-stay on jibboom, making the rule uniform with the New York and other clubs.

The committee has also recommended efforts being made to bring about simplicity and uniformity in the management of races with other clubs as to certain matters of detail in relation to which difference of opinion as to their advisability can scarcely exist. For instance, the assigning of permanent numbers for racing boats to last during the season and be common to all clubs; arrangements of dates of races with other clubs that interferences may be avoided, etc.

The committee has also reported and the same have been promulgated to the club, a series of standing rules for handicaps and for cruisers' matches, as well as standing rules for the annual sweepstakes.

In concluding this report to the club I recommend in relation to the coming season:

A: The continued urging upon the yachting community of the propriety of adopting a classification founded upon the rule of measurement in use at any given time and not merely upon one (or more) of the separate elements which enter into the rule of measurement: With the result of removing artificial restraints from naval architects in the designing of boats and as giving opportunity for the development of various styles of boats at the same time; with the additional advantage; a possibility of comparison of the value of different designs.

B: The retention by the club of its present established class limits as: (1) Doing no violence to any vested interest.

(2) Providing for sufficiently numerous classes to meet the varying limits of expenditure which may be desired by those contemplating building.

(3) Not too numerous to prevent reasonably large classes.

C: The definite adoption of the phrase "Sailing Length," [abbreviation S. L.] as being the simplest, sufficiently expressive, arbitrary word-symbol, (among the terms suggested) to define the result or product of the application of the present rule of measurement to a yacht.

D: That efforts be made to bring about uniformity among the leading clubs in relation to existing trifling differences in the points to which actual measurement under the present rule are taken (in so doing so far as possible the points retained or fixed upon to be such as are the more permanent and least liable to change).

E: The advocating of co-operation among leading clubs on all matters of detail and points of routine as to which it may be conceded that for the purposes of convenience uniformity is of greater importance than any other point involved. As for instance:

(1) The issuing at the beginning of the season of permanent racing numbers to boats liable to race during the season.

(2) The issuing of measurement certificates to any boat applying therefor to hold good for the season if accompanied by owner's statement that no alteration has been made.

(3) The mutual arranging of dates for races, etc., including the adoption of a uniform racing season for the year, to which all regulations shall apply, say April 1 to Nov. 1.

Dated, January 1, 1892. AUGUST BELMONT, Fleet Captain.

NEWS NOTES.

THE annual meeting of the Corinthian Mosquito Fleet will be held on Feb. 8 at the Sturtevant House, New York, at 8:30. It is proposed to raise the annual dues to $5.

The following ticket will be voted on at the meeting of the Atlantic Y. C. on Feb. 8: For Commodore, David Banks, schooner Water Witch; Vice-Commodore, William Lewis Moore, steamer Kanapaha; Rear Commodore, James Weir, Jr., sloop Tigress; Measurer, H. C. Wintringham; Treasurer, Henry J. Gielow, and for secretary, Geo. H. Church. For Trustees—J. P. Howell, J. Rogers Maxwell, Edwin B. Havens, Thos. L. Arnold, W. W. Kenyon and P. G. Sanford. For Committee on Membership—Henry A. Gouge and Edmund Fish. For Regatta Committee—Henry B. Howell, Henry J. Gielow, S. F. Russell, Geo. B. McNulty and C. Benedict Frisbie. At the same meeting a change will be proposed which should have been made years ago, to start the club races outside the Narrows instead of at the crowded anchorage off Bay Ridge.

The Jamaica Y. C. has elected the following officers: Com., H. F. Hewlett; Vice-Com., Louis Bossert; Rear Com., Adam Balzer; Pres., J. H. Landman; Sec'y, Samuel Gilmore, Treas., F. A. Meyer. It is the intention of the club to build a club house on Hammill's dock.

Solheim & Abramson, of Twenty-sixth street, South Brooklyn, will build a centerboard sloop, from C. A. Solheim's designs, for Franklin Prentice, Brooklyn Y. C. She will be 34ft. over all, 22ft. l.w.l., 11ft. beam, 3ft. draft. The sloop Cricket, Mr. McCue, is being lengthened from 24 to 29ft. over all at the same yard.

The Monatiquot Y. C. has selected the following dates: Opening day race, June 1; club race, off Fort Point, July 9; first championship race, off Fort Point, July 23; second championship race, Aug 13; ladies' day, Aug. 16.

The partnership existing for the past five years between Messrs. George F. Clark and Jefferson Borden, under the firm name of G. F. Clark & Co., the Boston Yacht Agency, has been dissolved by mutual consent. Capt. Clark will wind up the business of the firm, while Mr. Borden, who has been the designer of the firm, will return to his home in Fall River. Capt. Clark retains his connection with the firm of W. K. Pryor & Co., the City Point boat builders, while Mr. Borden will look for such work in his line as Boston and Fall River patrons may have in mind.

Messrs. Stewart and Binney have an order for an auxiliary steam yacht of 100ft. l.w.l., to be built for next winter. They are also at work on a new sail plan for the keel in the schooner Marguerite, while Capt. Sherlock will make some alterations in the outside lead. They have made the cabin plans for the new steam yacht for Mr. Comstock, of Providence, designed by the late D. J. Lawlor.

Mr. Archibald Rogers has declined the nomination for rear commodore of the New York Y. C. The annual meeting and election takes place this evening.

The Chelsea Y. C. has made a change in its colors; the new club flag will be a white star in a blue circle on a red field. The shape of the flag has not been changed. The commodore's colors are swallow-tailed pennant, thirteen white stars enclosing white foul anchor on blue ground. The annual dinner of the club will be held at the Quincy House, Saturday, Feb. 15.

Commodore Soley of the Massachusetts Y. C. has appointed a special committee to confer with the Hull and Corinthian clubs in regard to a uniform rule of measurement.

A fourth 21-footer has been ordered for the Corinthian Y. C., to be designed by J. Borden and built on the McIntyre system of composite construction. The class promises to be a lively one this season.

A company has been formed in New York to push the scheme of a five-day steamer, a revival of the project which failed some years since in the domed steamer Meteor, now the yacht Golden Rod.

The Corinthian Y. C., of Marblehead, has done a graceful thing in leaving the office of commodore, held at his death by Mr. B. W. Crowninshield, vacant for a year.

Rifle Range and Gallery.

AMATEUR REVOLVER CHAMPIONSHIP.

THE contests for the determination of the Amateur Revolver Championship of America have been held in a number of cities. New York has had several evenings and Philadelphia had a very pleasant evening of scoring. Barberton, Ohio, where a knot of very clever revolver shots reside, sends in some capital records. At Cincinnati and at Chicago nearly a score of shooters competed and their targets are now in the FOREST AND STREAM office, as sent in by our staff correspondent, who managed the shoots. Not a target has been measured up as yet but all will be put through the gauge anonymously after the closing of this initial match for the trophy and the championship. The next shoot is set for Friday, Feb. 5, at the gallery of the Boston Athletic Association. Mr. Sumner Paine has taken considerable pains to arrange things for a proper representation of Boston's well-known ability in revolver work and we look for some extra fine targets coming from that direction. Any Boston shooter wishing to have an opportunity of scoring will please communicate with Mr. Paine at the Boston Athletic Association, Exeter street, before Friday evening. There will be another shoot in New York at the New York Pistol Club gallery, St. Mark's place, on some Saturday evening in the near future, not yet fixed. With this contest for the laggards the competition for the first holding of the trophy will close.

The Wurfflein Rifle and Pistol Club.

PHILADELPHIA, Jan. 20.—The final official scores for the month of January was finished on Friday evening, Jan. 29, showing J. J. Mountjoy in the lead, with H. J. Mehard a good second. Below is the official score for this week, at 25yds., off-hand, ring targets, using Wurfflein rifles:

J J Mountjoy	24	23	24	24	24	24	25	24	25	25—242
H J Mehard	23	22	24	24	24	23	25	22	24	24—235

New York Revolver Scores.

NEW YORK Feb. 1.—*Editor Forest and Stream:* The following scores were made by the members of the New York Revolver and Pistol Club at their last weekly practice shoot, held on Jan. 30 at their ranges, No. 12 St. Marks place. Distance 20yds., on Standard American target, first five strings of six shots each, no sighting shots, S. & W. revolvers:

H Oehl, .44cal.	39	50	41 40 50—220
Walther, .44cal.	47	50	48 43 41—229
Jantzer, .38cal.	46	48	47 42 45—228
Dr. Bell, .44cal.	48	50	53 53 45—249
Hecking, .38cal.	48	33	40 38 46—205
A Stein, .44cal.	47	44	51 53 59—251
Hoffman, .38cal.	40	140	55 45 44 49—233
F. HECKING, Sec'y.			

Garden City Rifle Team, Chicago.

THE Garden City Rifle Team met for their weekly contest Tuesday evening at Geo. McCune's shooting gallery, 146 South Halsted street. Conditions were, 25 shots each, 25yds., open sights, free off-hand position, Massachusetts paper targets, possible 200, score as follows:

J Hosie	271	T Ford	258
W J Gibbs	270	R Taylor	256
H S Burley	266	H A Parker	251

The Zettlers' Team Shoot.

THE second annual team shoot, under the auspices of the Zettler Rifle Club, will be held on Washington's Birthday, Feb. 22, at 219 Bowery, New York city, under the following conditions: Open to all regularly organized shooting societies or clubs. Teams of five men. Any club to enter as many teams as they wish, but no member to shoot in more than one team. All participants must have been active members of their respective organizations for at least two months prior to Feb. 1. Ten shots each man, off-hand, on the Zettler 25-ring target; any .22cal. rifle without restriction as to sight, weight or trigger pull. Team shooting to begin at 2 P. M. Two sighting shots allowed each man at option. Entrance fee $5 per team, entries close on Feb. 22, at 2 P. M. sharp. Books now open for entries. The customary shooting rules will be strictly enforced. Prizes: First prize, gallery rifle valued at $25; second, gallery rifle valued at $20; third, trophy valued at $10; one fine goblet to the competitor making the highest score during the tournament, valued at $5. The Zettler Rifle Club will not compete in this match. Committee, F. Russ, Gus. Nowak and H. Oehl.

World's Fair Shoot.

THE following board has been appointed at Springfield, Ill., to have charge of the international rifle competition to be held at Chicago during the World's Fair: Brig.-Gen. Jasper N. Reese, Adjutant-General of Illinois; Capt. W. W. Daugherty, 22d Infantry, U.S.A., now on duty at headquarters, Illinois National Guard; Capt. Wm. H. Brook, 24 Infantry, Illinois National Guard; Capt. Robert H. Aiken, Inspector of Rifle Practice 8th Infantry, National Guard, and Capt. Frank D. Baldwin, 5th Infantry, U. S. A.

New Jersey Rifle Shooting.

[Specially Reported for Forest and Stream.]

EXCELSIOR RIFLE CLUB.—Jersey City, Tuesday, Jan. 26.—Capt. L. P. Hansen. The scores made in the weekly competition for class medals are appended below. Ten shots off-hand, 25-ring target, possible 250:

Wm Robidoux	25	25	25	25	24	24	24	24	23	21	—240
L P Hansen	25	25	25	24	24	23	23	23	23	22	—236
W Channing	25	25	24	24	24	23	23	23	22	22	—235
W Weber	25	25	24	24	23	23	23	23	23	22	—235
F Kittridge	25	25	24	24	23	23	23	23	22	21	—233
Thos Hughes	25	24	24	23	23	23	23	23	22	22	—232
C Boag	25	24	23	23	23	23	22	22	22	22	—229
W J Hennessy	25	24	24	23	23	22	22	21	21	21	—226
J Chavant	25	24	24	24	23	23	22	21	20	20	—226
J Hughes	25	24	24	23	23	22	22	21	22	20	—224
C Bauchle	25	24	23	22	22	20	20	20	20	20	—216
C L Pinney	24	23	23	22	22	20	20	20	19	19	—212

The medal winners in their respective classes were Class A, L. P. Hansen, 236; Class B, Thomas Hughes, 232; Class C, W. Robidoux, 240. Chris. Bauchle and a plentiful supply of his numerous x's mixed ale drops were present. A weekly shoot without Chris Bauchle and his confectionery can not be thought of by the Excelsior "boys."

MILLER RIFLE CLUB, Hoboken.—Capt. Richard W. Dewey. Wednesday Jan. 27. The following scores were made in the respective classes for the weekly class medals:

First Class.

A Meyns	25	25	24	24	23	23	23	23	23	22	—235
F Liell	25	24	24	24	24	23	23	23	22	21	—233
E Fiecher	25	25	24	23	23	23	23	23	22	22	—232
D Miller	25	25	24	24	24	23	23	23	21	20	—232
L Sohl	25	25	24	24	23	23	22	22	21	20	—229
H D Bencken	25	25	24	23	23	23	22	22	20	20	—225
Capt Dewey	25	25	24	24	23	23	21	20	20	20	—224

First class medal won by Aug. Meyns, 235.

Second Class.

D Peters	25	25	24	24	24	23	23	23	23	20	—235
J H Kruse	24	24	24	24	23	23	23	22	22	21	—233
R Zoch	25	24	23	22	22	22	21	21	20	20	—220

Second Class medal was won by D. Peters, 235.

Third Class.

H Seltenreich	25	25	24	24	23	22	21	21	20	19	—224
A Stadler	25	24	23	23	22	22	21	21	21	20	—222
F Kammel	25	24	23	23	22	21	20	20	19	18	—215
J J Devlin	25	23	24	22	20	20	19	19	19	18	—210
H F Meyer	24	23	23	22	22	21	20	18	18	17	—208
F Dunstadt	25	25	23	22	20	20	20	18	18	17	—208

Third Class medal was won by H. Seltenreich, 224.

The club held its weekly medal shoot and election of officers at headquarters, 80 Hudson street, last night. The scores made by the medal winners, and the officers elected will be published next week.

Massachusetts Rifle Association.

BOSTON, Jan. 30.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day. The attendance of riflemen was good but the shooting conditions were unfavorable for high scores. The wind came very strong from 10 to 12 o'clock. Mr. Foster won the silver seal badge and Mr. Sydney the bronze pistol medal. Following are the scores made to-day, distance 200yds., standard American target, all being re-entry matches. All-comers' rest match: O. M. Howard 100, D. Martin 98, J. H. Hobbs 95, A. S. Wheeler 94, D. N. Winn 92, A. H. Ballard 91, T. Browne 88, S. W. Snow 86. All-comers' pistol match, 50yds.: H. Severance 94, W. Charles 91, A. D. Stevens 88, O. Moore 88, A. S. Hunt 84, M. T. Day 77, I. B. Low 75, J. B. Hobbs 71. Pistol medal match, 50yds.: J. B. Fellows 92, S. C. Sydney 91, M. T. Day 86, O. Moore 85, E. H. Foote 80, A. D. Stevens 79, J. B. Hobbs 75, M. T. Day 72.

Third Brigade Scores.

ALBANY, N. Y., Jan. 28.—The following scores were made by the Third Brigade Rifle Association:

Major C H Gaus	10	6	7	9	8	8	10	8	9	7—82
	9	5	7	8	9	9	9	9	9	7—81
	7	8	9	6	8	8	8	9	10	6—79
Wm C Gomph	8	8	10	7	8	10	10	10	9	5—85
	8	6	8	8	7	7	7	9	7	9—76
	7	6	8	10	7	8	8	10	10	7—81
Wm T Mayer	6	10	3	6	7	7	5	10	9	8—72
	10	8	9	8	9	9	5	6	7	10—81
	8	6	7	9	6	3	8	7	8	7—69
J B Taylor	10	9	7	10	7	7	6	4	9	9—78
	9	10	10	10	4	7	9	2	10	10—81
	10	8	9	9	6	4	9	10	4	7—76
Capt A Donner	5	8	6	7	10	8	6	6	7	7—70
	7	10	7	5	7	10	6	5	6	7—70
	7	7	5	8	7	5	10	10	8	5—72

Empire Rifle Club.

THE following scores were made by members of the Empire Rifle Club at their last weekly shoot at 2 St. Marks place, 10 shots on the 25-ring target, possible 250, distance 100ft.:

W Miller	232	H Zettler	226
A Rosenstraus	228	G Hillmeyer	209
C Zettler, Jr.	227		

W. MILLER, Sec'y.

Trap Shooting.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Feb. 4.—Emerald Gun Club, at Dexter Park.
Feb. 5.—Crescent Gun Club, at Dexter Park.
Feb. 6.—South Side Gun Club, weekly shoot at artificials, Newark, N. J.
Feb. 6.—Amateur Gun Club, weekly shoot at artificials, Newark, N. J.
Feb. 6.—Sewaren Land and Water Club, team and individual contests at artificials, at Sewaren, N. J.
Feb. 6.—John Erb's ground, live bird sweeps, open to all, begin at 1 P. M., Newark, N. J.
Feb. 6.—East Side—Mutual Gun Club, open sweep at 20 live birds, $15 entry, birds extra, 1 P. M., at Wiedenmayer's Park, Hamburg place, Newark, N. J.
Feb. 6.—Prospect Heights Gun Club, at Parkville.
Feb. 6.—Dexter Park Shooting Association, at Dexter Park.
Feb. 6.—W. H. Brinkner vs. M. Fay, 25 live birds each, at Dexter Park.
Feb. 9-11.—Reading Shooting Association's tournament, Reading, Pa. Walter D. Aller, Sec'y, Tenth and Muhlenberg streets, Reading, Pa.
Feb. 10.—Parkway Gun Club, monthly club shoot, at Dexter Park, Long Island.
Feb. 10.—Atlantic Rod and Gun Club, monthly club shoot, at Engeman's Park, Coney Island.
Feb. 10-12.—Forester Gun Club's tournament, Davenport, Ia.
Feb. 15.—Dr. Van Ord vs. C. Mohrman, 100 live birds each, at West End, Coney Island.
Feb. 15.—R. J. Sutherland vs. R. J. Dwyer, 50 live birds each, Atlantic Rod and Gun Club grounds. Same day and place, W. A. Weber vs. A. Holzer, 25 live birds each.
Feb. 16.—Ridgewood Gun Club, monthly shoot at live birds, at Ridgewood Park.
Feb. 16-17.—Big Four Gun Club tournament, Burlington, Iowa. A. Runge, Sec'y.
Feb. 17.—Team match for a supper at 50 bluerocks each, Roseville Gun Club grounds, Newark, N. J.
Feb. 18.—Newark Gun Club, monthly prize and open shoot, at live birds, John Erb's, Bloomfield avenue, Newark, N. J.
Feb. 19.—Marion, N. J., live pigeon shoot for a 400lbs. hog, open to all.
Feb. 22.—Cox and Malcolm vs. O. Von Lengerke and Antoine, 50 live birds per team, at Watson's Park, Burnside, Ill.
Feb. 23-25.—Oskaloosa Gun Club tournament, at Oskaloosa, Ia.
Feb. 24.—Glenmore Rod and Gun Club, monthly club shoot, at Dexter Park, Long Island.
Feb. 25.—Essex Gun Club, monthly prize shoot, at live birds, for members only, Jersey City Heights Gun Club grounds, Marion, N. J.
Feb. 25-26.—C. W. Budd vs. Thos. A. Marshall, 100 live birds each, for a $1 000 purse, at Oskaloosa, Iowa.
Feb. 25-28.—Louisiana Gun Club's tournament, New Orleans, La.
Feb. —.—Sorocco Gun Club's tournament, Sorocco, N. M.
April 19-21.—Elk Park Shooting Tournament, two days at artificials, third day at live birds, Royersford, Pa. Address H. E. Buckwalter, Royersford, Pa., or Harry Thurman, Germantown, Pa.
April —.—Ridgewood Gun Club tournament, at Ridgewood, N. J.
May 2-7.—Fifteenth annual tournament of the Missouri State Fish and Game Protective Association, Kansas City, Mo. W. V. Reiger, Sec'y.
May 10-12.—The Ohio trap-shooters' annual tournament, Columbus, O.
May —.—Capital City Gun Club's tournament, Washington, D.C.
May 17-20.—Annual tournament of Kansas City State Sportsmen's Association, at Council Grove. G. W. Cleck, Sec'y.
June 6-11.—Eighteenth annual tournament of Illinois State Sportsmen's Association, at Chicago. W. L. Shepherd, Sec'y.
June 13-18.—New York State Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.
Aug. 9-12.—Pennsylvania State Sportsmen's Association's annual tournament, Reading, Pa. Walter D. Eller, Sec'y.
Manufacturers' and Dealers' Association tournaments:
Baltimore, Md.—Second week in March.
Staunton, Va.—Second week in April.
Savannah, Ga.—First week in May.
Pittsburgh, Pa.—Second week in May.
Brooklyn, N. Y.—Second week in June.
Watertown, N. Y.—Fourth week in June.

Frank Class In Great Form.

THE first match of the series of three between Frank Class, of Pine Brook, N. J., and Fred. Lumbreyer, of the Larchmont Yacht Club, drew a fair-sized audience to "Old South Paw's" Marion trap grounds on Jan. 28, and it is safe to say that while some were disappointed others were completely astonished at the outcome of the match. A year ago, when Class was down to steady practice, nearly everybody with an eye to form in pigeon shooting was willing to grant that he outclassed Lumbreyer. From the spring of 1891, however, until a couple of months ago, Class was practically out of the ranks, and did no smooth-bore work beyond an occasional day's shooting in the field. As a consequence he was supposed to be comparitively "rusty," while Lumbreyer, on the other hand, has been doing considerable sweepstake shooting during the above period, and was supposed to be in good shooting form. The outcome of the match showed that the conditions were reversed, and that Class possessed the happy faculty of quickly catching a winning gait, while Lumbreyer as suddenly lost his. From the very outset the yachtsman was outshot, Class's form being first class both in the use of his first and second barrels.

FRANK CLASS.

Lumbreyer had the luck of the birds from start to finish, and his misses, as a rule, were of comparitively easy birds. The day was cold and raw, with a stiffish breeze blowing across the line of traps from the left. The birds as a whole can be classed as a fair lot, although they should have flown very much better with the wind than they did. The match opened at 2 o'clock. Neaf Apgar, of Plainfield, being chosen as referee; E. Jones, of Newark, trap puller; Jacob Pentz and C. H. Townsend, scorers.

Class went to the score first and quickly piled two charges of shot into a fairly good left-quarterer. Lumbreyer followed with the grassing of a circling right-incomer. Class lost his second bird, a fast left-quartering driver. His sixth was a hot right-quartering driver, killed with a good second barrel. His eighth was an ugly right-quarterer, very fast, but his first stopped its career in splendid shape. His tenth was an awfully vicious circler that was grassed with a quick double of which Brewer would have been proud. His fifteenth, a very fast circler to the right, caught two full loads of shot but concluded to fall dead outside the fence. His nineteenth was a very fast right-quartering driver, stopped in brilliant style with a quick first. Lumbreyer's eighth, a wicked right-quarterer, called for a brilliant second that called forth a round of applause. His sixteenth, which he lost, was another "hummer," circling to the right and carrying a double load toward the town of Marion. His twenty-fifth was also a hot one, and although hard hit did not stop until it received a fusilade from the "bushwhackers" outside the fence. Score on the first round 23 each.

On the second round Class lost his third bird, an ugly zig-zagger that was hard hit but carried the loads over the fence and fell under the guns of the out-rangers. Lumbreyer kept up the good work by losing his third bird, a rather cumbersome flyer. His fourth was a fast right-quartering driver that called for a beautiful second at long range. His second was a circling driver that scaled the fence, as did his eleventh, a circling driver, very fast, and his fifteenth a left-quartering driver. His sixteenth was an ugly left-incomer and was grassed with a fine second. Class's seventeenth was a very nasty circler to the left and Frank was obliged to put in a long second, which did the act in fine style. His twentieth joined the pots of the out-rangers. On the twenty-first he caught a tartar of a right-quartering driver and grassed it with his second at full 80yds. Score on the first half, Class 46, Lumbreyer 44.

On the third round Lumbreyer's fifth, a left-quartering driver, went over the hills and far away, as did his ninth and sixteenth. Class lost his eleventh and twentieth, the latter falling dead out of bounds. His seventh was a very fast left-quartering driver that carried two loads almost to the fence. His eighteenth was another of the same kind and direction, and called for a good second at long range. Lumbreyer put in a fine first on his fourteenth, a fast left-quartering driver, and had to use a long second on his twentieth and twenty-fourth, both very fast right-quartering drivers. On the end of the third round Class had killed 69 to Lumbreyer's 66, and everybody conceded the defeat of the yacht club's representative, who was steadily losing form.

On the last quarter of the race Lumbreyer had but two or three birds that could be called at all hard, while Class had a number of "screamers." Lumbreyer lost his second, a right-quartering driver, and his eleventh, a right incomer, which fell dead out of bounds. His thirteenth was a fast right incomer, killed in good style with his second. His eighteenth was a fast right-quartering driver, killed with a good first, and his twentieth, same direction of flight, called for a fine second. Class's seventh was a hot right-quartering driver, killed with a good second at 50yds.; ninth and tenth, same direction, were both grassed by good seconds. His twelfth was an awfully fast bird, same direction as above, which carried a double load almost to the fence. His fourteenth was a fast right-quarterer; twenty-first a bad circling driver, killed by a clever first, and his twenty-fourth, a right-quartering driver, very fast. He knocked down his twenty-five straight, the match ending with the fine score of 94 kills for Class and 89 for Lumbreyer.

Below will be found a tabulated record of the match, showing the trap from which each bird was sprung, number of barrel used and the direction of flight. The abbreviations are as follows: R, right; L, left; D, driver; Q, quarterer; I, incomer; H, hoverer; T, towerer; Tw, twister; C, circler.

Class shot a 12-bore W. W. Greener hammerless gun, 7lbs. 10oz., 3¼drs. Schultze powder and 1¼oz. No. 7 chilled shot, loaded in Squires's tournament shells, by Henry C. Squires.

Lumbreyer shot a 12-bore W. C. Scott hammer gun, 7lbs. 4oz., 4drs. Schultze powder and 1¼oz. No. 7 chilled shot, loaded in Von Lengerke & Detmold's Kynoch shells, by Von Lengerke & Detmold. Both men shot from the 30yds. mark, the match being otherwise under strict Hurlingham rules.

Among those who witnessed the match were Harry Piper, of Morristown; Fred. Class, of Pine Brook; James E. Wheaton, Chas. M. Hedden, Samuel Castle, Wm. G. Hollis, Geo. Mclaren, and W. Fred Quinby, of Newark; Wm. Courter, of Bloomfield; Wm. Hughes, of Jersey City; Al. Heritage, of Jersey City; Wm. Kraemer and Philip Schork, of Newark. Mrs. J. Frank Class and Miss Class, of Pine Brook, the wife and sister of the Jersey champion, were also among the interested spectators.

The birds were furnished by Cox & Lumbreyer, of West Washington Market, New York, of which firm Fred. Lumbreyer is a member. By the time this appears in print the two principals will be standing in front of the traps on the grounds of the Central Gun Club, at Branchport, N. J., where the second match of the series is to take place to-day.

An Iowa Shoot.

THE Oskaloosa Gun Club will give a three days' shoot here Feb. 23, 24 and 25 next, at live and clay-birds. During the tournament C. W. Budd, of Des Moines, Iowa, and Thomas A. Marshall, of Keitbsburg, Ill., will shoot a match of 100 live birds each, for a purse of $1,000.

G. W. SHOCKLEY.

Americans and Canadians at the Trap.

HAMILTON, Can., Jan. 29.—The long-talked-of shooting tournament, under the auspices of the Hamilton Gun Club, commenced here on Tuesday on the club grounds, between Hamilton and Dundas. The arrangements were complete and reflected much credit on the committee of management.

The weather was delightful, although intensely cold; the sun shone brightly over the snow-covered ground and all the marksmen present were in rare spirits and full of enthusiasm. Wooden sparrows were specially erected for the accommodation of the shooters and their friends, tables were provided for the press representatives, and nothing was left undone to insure the comfort of those present. The floors in the shanties were littered with shavings, and large stoves gave out a grateful heat which bid defiance to the frost and cold.

Dr. Overholt, the club's president, was most attentive and courteous, as was also Mr. F. Overholt, who acted as secretary. The shooting ground was laid out in two parts, the eastern portion being given over to the live-bird matches, while the western lot was the scene of the artificial trap-shooting. The shooting platforms were slightly raised, and the distances were clearly marked thereon, so that there could be no possibility of mistake. The traps were new and worked well, while the ropes ran through wooden tunnels, and were a great improvement upon those used in former years. The shooting ground was laid out under the immediate superintendence of Messrs. Wm. Stroud and James Hamilton, and their work deserves special mention. The committee of management consisted of Col. Axworthy and Messrs. Jas. Crooks, E. B. Wingate, J. W. Bowman, Wm. Stroud, E. V. Spencer, Geo. Allen, John Stroud, John Smyth, John Morris, John Bowran.

The live birds were an unusually good lot, being swift and strong, and with the wind blowing sharply across the field, the shooters had to do quick work in order to score at all.

Under the rules of the tournament the following experts were required to shoot at unknown angles at artificial birds and were handicapped as follows in the live bird shoots:

J. A. R. Elliott, Capt. Brewer, E. D. Fulford, Dr. Carver, C. W. Budd, 7 yds.; Kleinman brothers, W. Wolstencroft, Capt. Bogardus, Rolla Heikes, J. R. Stone, F. Class, E. D. Miller, 5yds.; Ed Murphy, Fred Erb, Paul North, H. A. Penrose, J. F. Riley, J. E. Haggerty, E. S. Benschoten, C. E. Cahoon, Kelsey, Wm. Crosby, Harvey McMurchy, J. A. Ruble, 4 yds.; Whitney, John Ruble, W. S. McDonald, F. Lindsley, Frank Parmlee, Jack Winston, H.E. Cyrenne; 3 yds.

The following shooters were present: G. A. Allen, Hamilton; E. Andrews, Sardinia, N. Y.; C. Wilmott, Pontypool; E. Brunt, J. W. Bowman, Hamilton; J. E. Bickerstaff, Toronto; Barney Brown, Morriston; Geo. Briggs, Toronto; H. A. Mallory, Drayton; Geo. Brant, J. Bowran, Hamilton; E. A. Clifford, Ancaster; E. Chamberlain, S. Wales, New York; R. Crooks, Hamilton; H. Cullon, Ridgetown; Cummings, St. George; W. C. Donaldson, Windsor; Doherty, Hamilton; W. Edmond, Toronto; John Evans, London; J. Forsyth, C. Forsyth, Hamilton; R. Ford, Windsor; F. Hamilton; S. Glover, Geo. Henry, J. Harding, Toronto; C. J. Heinold, Buffalo; Jas. Hamilton, Hamilton; D. Hanly, Cainsville; D. James, Grangeville; F. Kaiser, Hamilton; Jacob Hoch, Buffalo; Kelsey, East Aurora, N. Y.; Kelly, D. Leitch, Ridgetown; D. Miller, Woodstock; C. Montgomery, Brantford; G. Margetts, Niagara Falls; R. A. McCready, W. McDowell, Toronto; Dr. Neff, Port Colbourne; J. Oborne, Toronto; J. Overholt, Hamilton; G. W. Price, Fort William; J. Parker, Detroit; M. Reardon, Hamilton; D. Revell, Windsor; C. H. Rigg, Toronto; Redpath, London; J. M. Rainey, Birmingham; C. Sinclair, Flington; W. Stroud, Hamilton; Robt. Stroud, Richard Stroud, J. Stroud, Ed Spencer, Hamilton; E. Smith, H. B. Smith, La Salle, N. Y.; F. Shewan, Windsor; C. Skane, Ridgetown; C. Smith, Jos. Smith, John Smyth, Hamilton; A. Tymon, J. Taylor, Toronto; J. W. Thomson, Woodstock; H. B. Whitney, Phelps, N. Y.; J. Wayper, Hespler; Wheeler, Paris; W. Woodley, Dundas. The result of the tournament is annexed:

First Day.

Sweepstakes, 10 artificial birds, $1 entry:

James	0000101101 — 4	Thomson	1110101111 — 8

Purser	1111101111— 9	Graham	1101011111—8

Fourteenth event, 20 singles, consolation prize, two to qualify: Briggs 11, Bowman 14.

Fifteenth event, 20 singles, merchandise prizes; first prize, Marlin rifle and book; second, 2 000 trap shells and book; third, 12lbs. caribou powder and book; Leitch 19, Glover 20, Henry 16, Emond 18, Overholt 16, Charles ret., W. Stroud 16, Price 18, Cattan ret., Purser 13, Margetts 7.

Sixteenth event, 20 singles, merchandise prizes; first prize, handsome silver cup and book; second, 2,000 trap shells and book; third, 12lbs. caribou powder and book; Emond 16, Leitch 18, Ford 15, Glover 16, Skane 16, Overholt 18, Bowron 14, Brown 17, Sinclair 13, Price 15, Overholt beat Leitch in shoot-off.

Special match, 10 live birds, $15 a side: Morrison 2, Kaiser 5.

No. 1 sweepstak, 5 live birds, $2 entry:

W Stroud	11101—4	Doherty	00101—2
Wingate	01110—3	Kaiser	00010—1
J Crooks	10 01—3	Kamilton	101 0—3
Robt Stroud	11001—3	Reardon	11010—3
Smyth	00000—0		

The 3s shot off in the next sweep for second money.

No. 2 sweepstake, 5 live birds, $2 entry:

W Stroud	00011—2	Robt Stroud	10111—4
Hamilton	11101—4	Forsyth	01111—4
Wingate	11110—4	Reardon	11101—4
J Crooks	01011—3		

Shoot-off, 3 birds:

Hamilton	011—2	Reardon	111—3
Wingate	010—1	Forsyth	111—3
Robt Stroud	010—1		

Glenmore Rod and Gun Club.

THE monthly shoot of this thriving organization took place at Louis Miller's Dexter Park on Jan 27, there being a big turnout of members. The contest for the Keppy prize was very hotly contested and was finally won by G. Zohlman. The conditions were seven live birds per man, handicap rises. The results in detail are given below:

	Ties.		Ties.
G Zohlman (30)	1111111—7 11121	E Hilgars (28)	1221221—7 110
J Dennette (2)	2211112—7 22110	W Ferrais (29)	2111222—7 20
L Eppy (25)	2011121—6	D Van Wickler (28)	1002110—4
C Lyelbreet (25)	2121021—6	M Trouper (27)	2121021—6
J A Eppy (30)	0201211 —6	J Main (25)	0020001—2
J Worms (18)	1202122—6	H Hurz (30)	2001212—5
M E Hayten (25)	2012221—6	L Buchore (25)	1002100—3
W J Hartzo (27)	2122102—6	C Kelle (28)	2121013—4
J A Still (25)	1210221—6	C Mayer (25)	1020300—2
J Youngs (28)	1112002—5	W Herrington (23)	0010012—3
L A Vroome (28)	2210021—5	P Sutter (25)	00000.0—1

The following scores were next made in a match at 25 live birds each for $25 a side:

R Woods	0221111212122222211221220—23
J Bennett	2222111111111010?0?01223?—21

R. Woods and W. Levins next shot a match at 50 pluerocks each against J. Bennett and C. H. Silver, the scores being:

Bennett	42	Woods	37
Silver	37—79	Levins	40—77

Team match, 10 live birds each man:

J A Lilly	0220121210—7	J Young	0220120121—5
W Hartze	1102202011—7—14	M E Hayden	1020112012—7—12

Sweepstakes, 3 birds, 25yds. rise:

H E Hayden	001—1	W Thompson	202—2
J A Still	221—3	J Young	200—1

Sweepstakes, 5 birds, 25yds. rise:

M E Hayden	10212—4	W Thompson	12121—5
J A Still	21202—4	J Young	00101—2

March at 5 birds, 25yds. rise:

M E Hayden	10201—3	J A Still	10010—2

March at 10 birds, rise and out:

M E Hayden	1011021101—7	W Thompson	2010112100—6

March at 10 birds, 25yds. rise:

W Hartzo	1111020100—6	W Thompson	0122100121—7

Highland Gun Club.

DES MOINES, Iowa, Jan. 23.—The following scores were made at live birds and targets at Highland Gun Club Park, Jan. 21 and 22. Mr. Paul North, of Cleveland Target Club, was a visitor, but owing to a long ride and poor rest he was not in good form.

Shoot No. 1, 25 single live birds, Highland Gun Club rules to govern. Budd 3yds., others 28yds.:

Kircher	1101012111111210102022122—21

C. W. BUDD.

Plainfield, N. J., Has a New Club.

EVER since the collapse of the Middlesex Gun Club, which once held a position on the top round of the ladder, trap-shooting has been allowed to sink into innocuous desuetude in that vicinity, noted as it was in the days of yore for its crack live bird and pigeon enthusiasts. There is a chance, however, for the return of the oldtime enthusiasm and interest, as "Tee Kay" Keder, "Daicay" Smith, "Little" Neaf Apgar and a doz congenial spirits have put their shoulders to the wheel and started a real live club under the name and title of the Plainfield Independent Gun Club and intend to give the sport a genuine boom in their section. Every man in the new organization is a rustling hustler, and if not able to break or kill 100 straight, will at least break enough to keep up an active interest in everything pertaining to the great and glorious American gentleman's recreation. The club intends to hold an open-to-all tournament in the near future and will make things hum for fair.

I s first shoot was at Plainfield on Jan. 25, when the following events took place:

Event No. 1, 10 single targets:

N Apgar	0111101110—7	Geo Voehl	1100011010—5
C Smith	1111010101—7	A Trust	1010011001—4
T H Keller	0001110111—6	Wm Pearson	0010010001—3
Wm Squires	1111110000—4		

Match at 50 single targets:

Keller	1110111111111111111111011010101111111111001111101—41		
Apgar	1110101101111100111010111 011111101111101111001—36		
Smith	1111100101100111101111100110111111101110010111—37		

Six live birds:

Keller	111210—5	Trust	001020—2
Smith	01110—4	Pearson	100020—2
Apgar	120?0?—3	Voehl	000?0?0—1
Squires	10110—3		

The final event was a miss-and-go-home, $1 entry. The scores:

Apgar	211	Voehl	0
Keller	121	Smith	0
Squires	111	Trust	0

Thus ended the first meeting of the club, which will hereafter hold a contest at live birds and artificial targets once each month

Smashing Targets at Rutherford.

A TWENTY-MINUTES' ride over the N. Y., L. E. & W. brings one to the rustic town of Rutherford, and here the hacks are ready to take you up for a five minutes' drive over horribly muddy roads before they drop you at the pretty little club house on the Boiling Springs Fish and Gun Club, one of the most progressive and enterprising clubs that New Jersey can boast. Starting with something like a score of members, every one of whom was a hard worker and an enthusiast in trap matters, the club soon made a great reputation and rapidly grew in membership, its share of lucre likewise increasing, until now it is the proud possessor of a property ample enough in domain to accommodate half a dozen clubs. The club has one of the prettiest club houses in this vicinity, three stories in height. The ground floor is devoted to the wants of the shooters, being equipped with tables and gun racks enough to oblige half a hundred men. On the second floor are two rooms, each about 15×25ft., finished in oak and with polished floors. On Friday and Saturday last, when the club held its mid-winter tournament, the rear room was utilized as an office and an informal reception room, while the front room was converted into a restaurant, where all the seasonable dishes were served up at far below the current market rates. Front and back the house is provided with a broad varanda, from the rear one of which the non-shooting visitor can get a good view of the trap contests.

When the FOREST AND STREAM representative arrived at the grounds on the opening day of the tournament, the attendance was only fair, about a dozen shooters in all being at work. These, however, comprised the very cream of the profession, including E. D. Miller, of Springfield; Wm. Sigler, of Montclair; James L. Smith, of Hackettstown; Eddy Collins, of Hoboken; Wm. R. Hobart and Ferd. Van Dyke, of Newark; Frank Post, of Park Ridge, and Neaf Apgar, of Plainfield, every one of whom, when occasion requires, can go a considerable distance above 90 per cent. The Jeanerot brothers were flitting about in the endeavor to make everybody feel at home and they succeeded admirably. Messrs. Klees, Krebs, Outwater and other members also lent their aid in keeping the events running in prompt order. Along toward 3 P. M. the ranks were swollen by the arrival of J. J. Blauvelt, Sr., J. J. Blauvelt, Jr., Conductor James Blauvelt and everything went merrily as a marriage bell.

All the shooting was at bluerock targets, the five-trap rapid-firing system being used, the shooting being governed by American Association rules. The weather on Friday was mild and for the greater part of the day the sky was overcast. There was no wind to bother the flight of the targets.

Special interest was added to the shooting by the offering of a handsome gold medal to the shooter who should make the greatest number of breaks in all regular programme events. Friday's contest was hotly waged by Collins, Miller, Sigler, Van Dyke and Smith, all of whom were in the best of form. Collins finally succeeded in carrying off the coveted trophy. The following figures will show how closely the badge contest was waged between the five leaders:

	Shot at.	Broke.	Missed.
Collins	166	157	9
Miller	166	154	12
Sigler	166	151	15
Smith	166	151	15
Van Dyke	166	151	15
Aggregates	830	764	66

The scores of the several events shot during Friday are given in detail below:

Extra No. 1, 10 singles, $1 entry, two moneys: Post and Huck 9 each, Krebs and Van Dyke 8 each, Paul 7.

Extra No. 2, same as above: Paul 9, Post and Huck 8 each, Crebs 6.

Extra No. 3, same conditions but three moneys: Hobart and Sigler 10 each, Van Dyke, Post and Smith 9 each, Bing 8, Krebs, Huck and Peck 7 each, Paul 6, Apgar 4.

Extra No. 4, same conditions but four moneys: Post, Sigler and Collins 10 each, Smith and Hobart 9 each, Paul, Huck, Miller, Peck and Van Dyke 8 each, Bing 5, Apgar 4.

Regular events.—No. 1, 10 singles $1 entry, three moneys:

Hobart	1111111111	Sigler	1111111101 — 9
Smith	1111111111	Bing	1111011101 — 8
Van Dyke	1111111111	Huck	0110111101 — 7

Smith	11011 10 11 10—8	Fox	10011 00 10 10—5

Extra No. 5, 10 singles, $1 entry: Collins, Miller and Smith 10 each, Apgar, Van Dyke, Sigler and J. J. Blauvelt 9 each, Blauvelt, Jr., Ward and Hobart 8 each, Paul 7, Peck and James 6 each, Fox and Bing 3 each.

Extra No. 6, same as above: Hobart, Van Dyke, Ward and Paul 10 each, Sigler, Miller, Smith and Collins 9 each, Huck 8, Apgar, J. J. Blauvelt and Blauvelt, Jr. 7 each, Bing 5, Fox 4.

Extra No. 7, same: Miller, Collins, Sigler and Van Dyke 10 each, Apgar, Ward and Smith 9 each, Hobart 8, Penrose and Paul 6 each.

Saturday, the Second Day.

The day opened with a haze in the air which augured ill for later hours, but along toward 10 o'clock the air cleared somewhat and occasionally the sun would peep out. By noon the wind began to blow at a fresh pace and during the afternoon the "sauers" began to flip about at a rate that bothered the shooters somewhat in gauging their angles. Among the newcomers were Major R. H. Breintnall of Newark, Al. Heritage, the famous "Old South Paw" of Jersey City and A. C. Hunt of New York. The contest for a gold badge offered on similar terms to the one by Collins on the previous day was a close one, first one and then the other contestants being in the lead. At the finish, however, it was found that the badge was to become the property of Neaf Apgar, who on the previous day was away out out of form but who broke 159 out of 175 targets to-day. The standing of the leaders in the race was as follows:

	Shot at.	Broke.	Missed.
Apgar	175	159	16
Hobart	175	153	22
Collins	175	153	22
Miller	175	153	22
Breintnall	175	151	24
Hobart	175	149	26
Aggregates	980	918	132

During the two days' shooting in regular events Collins broke 310, missed 31; Miller broke 303, missed 38; Sigler broke 300, missed 41; Hobart broke 297, missed 44. This pace is good enough to win in almost any kind of company.

The detailed scores of to-day's contests are given below:

Extra No. 1, 10 bluerocks, 50 cents: Miller 10, Apgar 9, Breintnall 9, Post, 8, Krebs 6, Huck 4, Lamb 5.

Extra No. 2, same conditions: Miller 9, Apgar 8, Post 10, Krebs 8, Breintnall 19, Lane 5.

Extra No. 3, same as others: Huck 6, Krebs 8, Post 7, Miller 8, Apgar 7, Breintnall 10, Collins 8, Sigler 10.

Extra No. 4, $1: Collins 9, Sigler 10, Heritage 6, Miller 6, Hoff 5, Breintnall 9, Hobart 10, Peck 5, Post 6, Apgar 10.

Extra No. 5, $1: Collins 10, Sigler 8, Breintnall 8, Miller 9, Hoff 9, Hobart 10, Post 7, Apgar 8, Peck 9, Heritage 5.

Regular event No. 1, 10 bluerocks, $1:

Breintnall	1111111111—10	Miller	0111110111— 8

EAST SIDE—MUTUAL GUN CLUB, OF NEWARK, N. J.

Our First Live-Bird Shoot.

PORTLAND, Ore.—On Jan. 17 members of Portland's respective gun clubs met at their favorite shooting grounds, on the banks of the Willamette River, to determine their champion at live-bird shooting. Carroll E. Hughes now wears the honor in the shape of an elegant gold medal. This being the first experience of a majority of the shooters with live birds, opportunities were afforded numerous "pot-pie" fiends who lay in ambush at a safe distance.

At the conclusion of ten birds Harry H. Beal was thought a sure winner of the medal, to the satisfaction of all present, owing to the quick and effective work of his first barrel. In the last five birds the prospective champions found their Waterloo, their nerve seeming to have gone to pieces; and at the conclusion of the 15-bird shoot E. W. Moore (our old-time live-bird champion), C. E. Hughes, the acknowledged champion of the Northwest; Captain A. M. Cox and J. Bowles, a promising amateur, found to their surprise that they were yet "in it" with 12 birds each. Such an opportunity was not to be lost by Mr. Hughes, who killed his 5 birds, with our genial Captain of the police in second place. Following are the scores:

E W Moore	111101210101111—12	F Beal	110101011001201— 9
J Seed	011101022011010— 9	A L Powell	2ooll102111010
H H Beal	111111101010100—11	Mr Spencer	10012102201
C E Hughes	212c211o1011122—12	C K Harbaugh	0002010002010l1— 6
W A Storey	112101202122000—10	J Bowles	122202120211221—12
J Sewell	022o22022 o1001—10	G Clark	102o2002111020— 9
J Caraher	222111001101112—11	A Townsend	06001
A Millard	002220112202220—10	Mr Cartwright	0001112000102102— 7
C C Clark	212010102122220—11	F Lawler	0120o202022011— 8
C Merritt	201021011011111—11	C Hoxie	012221012011120—11
M F Sloan	0212202o020101— 9	J Evans	121210221001101—11
F Shangle	1121l0110111100—11		

In the shoot-off at 5 birds, C. E. Hughes won the medal with 5 birds killed, while Captain A. M. Cox secured second prize, one dozen photographs, with 4 dead birds.

C.

The Judges Defeat the Constables.

JAN. 25, with freezing cold air and cutting wind, was still a lively day on the grounds of the Atlantic Rod and Gun Club, at West End, Coney Island, and a number of live-bird shooters took the chances of frozen ears for the sake of indulging in their pet pastime. The first event on the programme was an open sweepstake at 7 birds per man, 25yds. rise, $1 entry, one money. The scores:

K F Sutherland	0102002—3	R J Sutherland	0001012—3
R V B Newton	2002202—3	J Powers	1200021—4
G Kleist	0001002—2	R J Dwyer	0020 20—3
Ira McKane	2200 02—4	W Boyle	0010012—3
W Caldwell	2000010—2		

McKane and Powers divided the pool.

Next in order came the big attraction of the day in the form of a team match between Judges R. V. B. Newton and K. F. Sutherland on one side against Constables G. F. Kleist and A. S. Jamison. The conditions were 25 live birds per man, 25yds. rise, for a stake of $100 a side. As is usual where constables attempt to override the Court, the verdict of the jury was in favor of the latter, as the following figures show:

The Judges' Team.	
R V B Newton	0020202001010102020100000— 8
K F Sutherland	2102 0020010200010o 0002 0—12—20
The Constables Team.	
G F Kleist	2012020221020212010201—16
A S Jamison	0000020020000o0,0000o0100— 3—19

Next came a match at 10 birds each, 25yds. rise, for $10 a side, between Judge Sutherland and W. Caldwell, the court again coming out ahead, as below:

Sutherland	2210020210—6	Caldwell	2021000201—5

W. Boyle and J. Dooley next shot a team race against A. Boyle and G. Morris, each man shooting at 10 birds, 25yds. rise, for $20 a side. The scores:

W Boyle	2212022112—9	A Boyle	0221120120—6
J Dooley	2111210010—7—16	G Morris	1212012022—8—14

Final event, sweep at 5 birds, 25yds. rise, $2 entry, two moneys:

	Ties.		Ties.
Dwyer	21221—5	2	Powers	20212—4	0
Hinman	12121—5	2	Boyle	20221—3	
Caldwell	20212—4	12	Kleist	0 2222—3	
McKane	20222—4	20	R J Sutherland	00101—2	
K F Sutherland	21021—4	0			

Hugh Goodwin was referee and J. Gavin scorer.

Brunswick Gun Club Shoot.

THE above club held its monthly club shoot at New Brunswick, N. J., on Jan. 30, twenty members being present. Among the contestants were Carl Von Lengerke of Von Lengerke & Detmold, of New York, and Fer. Van Dyke, manager of the above firm's Newark house. Each man shot at twenty artificial targets under American Association rules. A very high wind, which interfered with the flight of the targets, kept the scores down, as the following figures show:

Van Dyke	11111111111111111101—19	Ulrich	00111010101100001111—11
Stevens	11111111111010110101—16	J Fisher	11111011101111,01111—17
Sperling	01101110111101101111—14	Beekman	01101100,01000000011— 8

Iowa Tournament.

DES MOINES, Ia., Jan. 30.—*Editor Forest and Stream:* The Iowa State Association for the Protection of Fish and Game hold their annual convention and tournament at Des Moines, Ia., on May 24, 25 and 26.

NELSON ROYAL, Sec'y.

Chicago Traps.

CHICAGO, Ill., Jan. 30.—There has been a sudden burst of enterprise on the part of either the Associated Press or the United Press, and it has taken up a matter which is only two weeks old in the columns of FOREST AND STREAM. Last night a representative of the *Herald*, of this city, called on Mr. Mussey with the intelligence that there had come over the wires from the East a challenge from Mr. C. E. H. Brelsford, of Harrisburg, Pa., offering terms for a match between E. D. Fulford and Geo. Kleinman, or any other man in this city. This challenge purported to have appeared in the New York *Sun*, and it was stated that if Mr. Mussey would make a reply for Chicago, the answer would be sent to the morning press all over the country. Mr. Mussey furnished the daily press the letter which he had already prepared for FOREST AND STREAM. This letter may be seen elsewhere in these columns. It will be noted that the matter stands now practically as it did two weeks ago. My comment, covering the Chicago situation as to backing Geo. Kleinman, appeared in the same issue as Mr. Brelsford's "challenge," backing a man who had publicly declared himself a retired shooter. Mr. Mussey's letter covers the point more fully and completely than my two earlier mentions of Geo. Kleinman's disability. After reading this, the Eastern gentlemen certainly will not wish to accuse their Chicago friends of lack of candor and straightforwardness.

I don't think the Chicago men will be drawn into any foolish discussion of the "championship" sort, although Mr. Brelsford is credited with looking for a match, and not for a controversy. Other gentlemen may be less discreet than he. For the sake of those let us see just what position, in a controversial way, Chicago might assume. Chicago wanted a match, and said so; that is, FOREST AND STREAM in plenty of time announced this, although a formal challenge never was issued, because of Kleinman's going off in his shooting. No one stepped on Chicago's coat. To the contrary, Mr. Fulford was of his own act supposed to be beyond stepping on anybody's coat. Then, a week ahead of any "challenge" from the East, appeared the first, a statement that Kleinman was not shooting up to form. It was immediately after this statement, and not immediately before it, that the "challenge" of Mr. Fulford appeared in the columns of FOREST AND STREAM. Concurrent with this comes the full reasons for Chicago's change of position. Now, putting this on pure newspaper basis, which has the vantage: Harrisburg or Chicago? I do not think Harrisburg will care to press that question.

But this is not a question to wrangle or fret over. It is a clear, straight question among gentlemen. I think all the Eastern shooters will be ready to believe, first, that Chicago wanted to shoot; second, that she does not want to shoot just now; third, she will want to shoot as soon as she gets her man into anything like his old shooting condition. All Eastern gentlemen may believe that there was no bluff concealed in the first proposition, and that there is no subterfuge behind the second. The matter has been stated frankly, fairly and fully. The main regret for the failure of the plan exists in Chicago and not in the East, for Chicago sincerely wanted to have the Eastern shooters come out and have a little visit and a pleasant time.

I don't like shooting talk which savors of craftiness, of crookedness, or of bluffing. I don't like that sort of a man. Chinese beat gongs to get up their courage, and Fijis pose and prance to incite terror. The Anglo-Saxon, chief fighter of the world, goes straight and simply to the business of getting at the fighting. I am crediting Mr. Brelsford with being an Anglo-Saxon and not a Cainaman. Still, I confess I shouldn't like to see too much talk of too big stakes. It is an old trick to carry poker into match-making talk. I don't think Chicago will care to pit over $1,000, although much more than that might go on the side. I trust we shall not be afflicted with too much talk of $5,000 or $10,000 a side or no match. That is old. Much less than that amount will do to establish our reputation as sportsmen and not sports.

I don't know where the statement originated that there was "$1,000 in Billy Mussey's safe" to go on Kleinman. I know FOREST AND STREAM never published it. Chicago was at the point where that amount could be had at any time, but it was never triumphantly slapped on the leg in that way, because George Kleinman's shooting went off just before that point was reached. On these different points the *Herald* this morning has the following comment preceding Mr. Mussey's letter:

"Since the Chicago sportsmen first issued their challenge things have changed. Kleinman is out of condition and his gun does not suit. Brewer has been expected in the city for nearly a month, but has not shown up. If, however, either Brewer or Fulford comes this way he will be accommodated with matches. This let er to the editor of FOREST AND STREAM, which Mussey sent last night, fully explains the situation in Chicago."

There is, at this writing, just one man in this western country whom Chicago will back against either Mr. Fulford or Mr. Brewer, or both of them, and that is Charlie Budd. This is provided the match is shot in Chicago. If either of the Eastern gentlemen wants to shoot very much, the best way for him to do is to pack his grip and start right for Chicago, Anglo-Saxon fashion, not Fiji. He won't need to put $5,000 or $10,000 in his grip. His stock will rise 1,200 per cent. here the minute he gets off the train. This is pure, practical advice, of the sort which shooters rarely take. Yet, I am practically certain that, barring sickness, Charlie Budd will start for Chicago the train after he hears that either Mr. Brewer or Mr. Fulford is in, or near, or actually and really soon to be in or near Chicago. It is an open secret now that Charlie Budd is ready to shoot any man in this country for $250 a side. The boys here will raise a little more. We are Anglo Saxon out here, but we claim the privilege of fighting our best man.

As to Geo. Kleinman's future prospects, it is also much a matter of health. He has been shooting without health, and winning. It is a problem how long any man can keep that up. He may never reach his old form. This, I hope, will not deter the Eastern and Western men from getting together in a friendly trial of skill. We want to see how many dozen will get over the line to the 100 on Chicago grounds. Unless Mr. Budd's modesty prevent, it is hoped that formal challenge or invitation will follow this prospectus, and that we shall all see a pleasant and well-contested match or so shot here at an early date, before the birds lose vigor.

There will be a pleasant party of 10 or 15 Chicago men, possibly a special car, who will go south to the Mardi Gras tournament at New Orleans. This should be a good event from all accounts.

The late target match in which Mr. O. von Lengerke defeated Mr. J. A. Ruble, 43 to 40, brings to mind the thought that possibly we have another target shooter among us. Mr. von Lengerke tells me that he is usually good for about 47 out of 50, at 3 unknown traps.

A good little house party starts for Mak-saw-ba Club to-night, and on Monday there will be a general club entry in a live bird contest for the Haskell prize of a pair of opera glasses. This was won at the first contest by Mr. R. S. Cross.

The fever of trap-shooting will begin to die out here before long, as the spring season begins to approach. Our great stress of match making is over now in all probability. Still the birds are best in February, and there is no telling what a day may bring forth. E. HOUGH.

Mr. Brelsford Waxes Pleasant.

HARRISBURG, Pa., Feb. 1.—*Editor Forest and Stream:* Eastern shooters looked carefully through the last issue of FOREST AND STREAM to find some answer to the challenge that Fulford had published the week previous, directed toward Mr. Kleinman, and were all disappointed in not seeing any reference to it from your Chicago correspondent. The shooters there must certainly have seen it and it was certainly worded plain enough to be easily understood. They were not all down with the "grippe," as it must have cost Mr. Waters something for the "flea" story when they were congregated at their headquarters at Mussey's—there must have been a quorum on hand—but it may have taken all their time to initiate the poor helpless dog man. After all the talk about the $1,000 in Mussey's safe, Watson's "crack" birds, the Prize Machine gun, "fakes," "hippodromes," etc., etc., they didn't seem to have the nerve to take $500 out of Mussey's strong box and put in the hands of FOREST AND STREAM as a forfeit to make the match. And to crown it all we learn that they are really thinking of sending for Charlie Budd to help beat this man Fulford.

That caps the climax; to think Chicago should have to go outside of Billy Mussey's parlor to get a shooter to beat any one. Notice Dr. Carver is shooting pretty well lately; they had better send for him, too. Fulford is more than disappointed in not hearing from them. While he was not anxious to arrange a match with any one, he would have liked to have shot against Chicago's champion with the four-dollar (we believe the price has got as low as four now) prize machine gun. He dreamed the other night of standing on the edge of a broad prairie just at sunset, and saw "Gawge" walking toward the historic old horse and buggy, grasping the old gun in one hand and a huge bag of dollars in the other, and felt quite relieved when he found it was only a dream. But he still hopes in your next issue to see his little offer accepted.

It has been his hope night and day for two weeks to get a "whack" at Watson's birds beside that old gun of Kleinman's. He don't want to shoot Budd or Elliott or Carver or any one else but "Gawge," and only wants to shoot him when he is feeling real badly and with the old gun. The new one seems to be so coy about submitting to the rough embraces of its new owner that it would hardly be fair to shoot with it. But Fulford is wise if he is young, and he wants to know that a good-sized forfeit is posted in proper hands before he ventures near the wilds of Chicago. His offer is still open. We are also pained to hear that Brewer's face is turned to the wall. Let our Chicago friends satisfy him that there is some money there waiting to be covered and think John L.'s face would soon be set westward. C. E. L. BRELSFORD.

Mr. Mussey Speaks for Chicago.

CHICAGO, Ill., Jan. 29.—*Editor Forest and Stream:* In your issue of the 21st inst. appears a letter from C. H. Brelsford expressing E. D. Fulford's willingness to shoot a match or matches in Chicago with George Kleinman. I deem it proper on behalf of the Chicago sportsmen who were interested in promoting such a contest to state their side of the case as it now stands. Two months ago the Chicagoans stood ready, and so expressed themselves, to back George Kleinman for any amount in reason against any man in America, the match to be shot in Chicago. For this purpose a sum exceeding $1,000 was guaranteed, and the pledges still hold good. Mr. Kleinman, however had shot out his old gun with which he had so often defeated the American champion, J. A. R. Elliott, of Kansas City, and was awaiting the arrival of a new gun which he had ordered some time previously. The issuance of a formal challenge to Messrs. Fulford and Brewer was therefore delayed. When the new gun arrived it was found to be a very unsatisfactory shooter and it was therefore returned to the factory. It may, perhaps, be some weeks before Mr. Kleinman gets a gun to suit him.

Neither Mr. Fulford nor Mr. Brewer can in reason ask that the match be shot under present circumstances, as they appreciate fully the handicap of a poor shooting weapon. The Chicago sportsmen do not wish to be understood as weakening in the position previously taken. They simply wish to have their champion properly equipped, recognizing fully the undoubted ability of his proposed opponents. When the time comes a challenge in due form and accompanied by a substantial forfeit will be issued. It has been at various times reported that both Fulford and Brewer were en route to Chicago prepared for matches, I will state that, while Mr. Kleinman is not at present prepared to shoot, still either Fulford or Brewer will get a match for a few hundred if they come here. We are prepared to pay something to see an exhibition of their skill, and then, we do think there are some shooters in the West. For the present, however, no challenge will be issued on behalf of Mr. Kleinman. When he says he can do justice to himself it will be a different tale. W. P. MUSSEY.

Fulford is Disappointed.

WILLIAMSPORT, Pa., Feb. 1.—*Editor Forest and Stream:* My work will be all closed up for the winter and I disband until spring. I am disappointed very much about the Kleinmans, of Chicago, and their so-called backers.

I am all ready to go out there now, but I don't care to go on a wild goose chase, and my friend Brewer was right in not going till they put up their money in legitimate hands, and I am afraid if Brewer or myself waits till they do we will wait a long time the way it looks now.

I am not hunting matches, as you know; I don't care to shoot Mr. Budd, Elliott or, in fact, any man; but since Mr. Kleinman's friends have made such a stir in Chicago shooting papers and blown their man up to 104 in the shade, and seemed to doubt the work done by Mr. Brewer and myself, and seem to throw water on the birds, and intimate that the matches were crooked etc., I want to go to Chicago and show them how to kill red hot birds, and I want to shoot their star man, Mr. Geo. Kleinman, of Chicago, the tall, slick-looking fellow that shoots a $17 gun.

I have no backer, indeed, I don't need any and I will shoot Geo. Kleinman for from $500 to $10,000, under his own rules, on his grounds and dunghill, with my own money, and what more can a man do?

You can publish every word of this letter and sign my name.
E. D. FULFORD.

"Other Cheap Shooting Periodicals."

From FOREST AND STREAM, Jan. 21, 1892.

"HARRISBURG, Pa., Jan. 18.—*Editor Forest and Stream:* I notice each week both *in yours and other shooting papers* communications from Chicago stating they are very anxious to pit their man Kleinman against Fulford, and that 'Billy Mussey's' safe has $1,000 in it waiting to be covered to make a match. * * *"

From *Sporting Times*, Jan. 30, 1892.

"HARRISBURG, Pa., Jan. 18.—*Editor Sporting Times:* I notice each week in FOREST AND STREAM *and some other cheap shooting periodicals* communications stating that they are very anxious, indeed spoiling to put their man Kleinman against E. D. Fulford, and that 'Billy Mussey's safe contains $1,000 waiting to be covered,' that a match may be made. * * *"

HARRISBURG, PA., Feb. 1.—*Editor Forest and Stream:* I noticed that Saturday's issue of the *Sporting Times* had a copy of the note I sent you from Fulford, and commences by saying "I notice in the FOREST AND STREAM and some other *cheap* shooting periodicals." Now, that word "cheap" was never mine and I see no sense in its use except to give offence to some other paper.

You are the only one that I wrote to in reference to the Chicago affair.

As your paper had contained more references to the feeling in Chicago than the others, I thought it the proper medium to reply to them through; and how or why the article was misquoted is beyond my comprehension. I have written their editor that an explanation was due me as well as the other papers, and I hope he will explain it. I have been a subscriber to FOREST AND STREAM too long, and know its value too well, to treat it slightingly; and above that, its fairness and liberality in dealing with matters in our State and section entitle it to first place in the minds of all our best sportsmen. C. E. H. BRELSFORD.

Jacobstaff Speaks His Mind.

I WAS much pleased with Mr. Fulford's manly letter withdrawing from the arena of professional shooters at the trap. I have watched his career with a great deal of interest. His gentlemanly bearing, his ever ever good nature and courtesy under all circumstances toward his associates, his nerve and coolness under very trying situations, as when his gun so repeatedly failed him, all called for my hearty appreciation. At one time I was afraid the temptation had been too great for him to resist so early in his career at the traps, and that he might be classed with the long list of hippodromists that bring such obloquy on true sportsmanship. His last affair at Harrisburg at least looked that way, but it seems it was his own club and his brother members naturally wanted to see an exhibition of his prowess at his home ground. He did not fail them and he has retired with laurels untarnished, and I believe he stands to-day the best live pigeon shot at the trap in the whole wide world, under Hurlingham rules.

Hurlingham rules, confound them, they are gambling rules, and for gamblers and big scores only. Why cannot men, such Titans at the traps as Fulford and Brewer, shoot a sportsman's race? Face the traps as a sportsman would a covey of birds hidden in the field. Stand erect, with gun below the elbow as he would naturally carry it until the bird is flushed on the wing, and then knock it over like a gentleman. This kind of practice makes the wing shot. The holding of the gun almost glued to the armpit until the trap is sprung may make good scores, but it is not sportsmanlike. Out on such butchery. Why, the bird hardly has time to open his wings in many cases before the gun cracks—for oftentimes the twitching of the rope indicates to the shooter the trap from which the bird is to spring, and the gun is trained and the poor bird drops within a yard of the trap. Is that sportsmanship? What a match that would be between these two imperials under old Long Island or true American rules. Capt. Brewer is a magnificent field and brush shot, and I hear that Fulford's reputation is little, if any, below it among those of his friends who know. With good lively birds under the latter mentioned rules there would be in all likelihood no such scores made—100 straight, or 96 or 94 out of a hundred, I opine.

But it would be an exhibition worth going miles to see, and what a description Townsend could give of it. He has in his character the elements of the sportsman as his graphic writings show, and he would enter into the merits of the great occasion with the zest and enthusiasm of a shooter as well as reporter. Such a match would please and bring together again many lovers of the field and gun whose faces have not for years been seen at the club contests, having been disgusted at this great rush for big scores to the sacrifice of sportsmanship. Like billiards and pool, I suppose there is room for both among the disciples. But I would like to see one match with good, strong, lively birds, honestly and good naturedly contested between these two big ones under the rules I have mentioned. Cannot it be brought about?

And now, while I am in the mood, let me say a word more. What a magnificent paper you are making of the FOREST AND STREAM. It always was a good paper and filled the bill, and has been unto me as my Bible to swear by since its first issue in '74. It is everything now, filled to overflowing and more with the good things that sportsmen love. But whose idea was it to change the overcoat? I don't like it; no, sir, I miss the color so reminiful of the grass along the trout brook through the meadow and the bursting leaves of the forest trees. Give us the old familiar over-coats our eye could catch so quickly on the news stand as we passed, and be reminded of pleasant things. It is not worn threadbare and is not out of style by a long shot. JACOBSTAFF.

DRIVERS AND TWISTERS.

ALLEN WILLEY, editor of the Hartford *Globe*, who took part in the 25-bird sweep at Newark, is a comparative novice at live bird shooting, but nevertheless he wields an effective gun, his second barrel work being particularly good. When he becomes habituated to the sport and gets the knack of shooting quicker with his first, he will make some of "the talent" look to their laurels. Cool and deliberate under all conditions, with an unfailing fund of good nature and with the true "shooting eye" as to color; he will soon be able to make his mark before the traps when feathers are to be ruffled. A good-natured smile is continually lurking about the corners of his mouth, and hovers there no matter whether a bird falls in the boundary or soars over the fence. On the day of the shooting above mentioned Mr. Willey assured the writer that, while he had shot at an unlimited number of artificial targets, he had shot at but four live pigeons during his career. Move out of Connecticut, friend Willy and you'll have all you want of this kind of sport. Or better still, devote a column of the *Globe* to repealing some of the obnoxious "blue laws." Another thing told the writer by Mr. Willey was that at noon on Friday of last week—the day on which FOREST AND STREAM appears on the stands in Hartford—he was obliged to visit four stands before he could procure a single copy of the paper, so great is the demand for "the only sporting paper in existence" in that progressive city. He says that all the newsdealers have been compelled to increase their orders during the last two months and are still unable to keep up with the demand. All of which goes to show that the citizens of Hartford know a good thing when they see it.

* * *

Charles H. Burbige, of Hartford, he of the rotund figure and jolly smooth face, who came down with Mr. Willey to take part in the shoot at Erb's, is an enthusiast on all matters pertaining to smooth-bore work, and has promised to publish exclusively in FOREST AND STREAM the result of some extended experiments which he is now carrying on for the purpose of determining the value, as to pattern and penetration, of the various kinds of nitro-powder. In carrying on this series of experiments Mr. Burbige is actuated by no selfish motives and is controlled by no firm or company, so that the result of his tests will be of double interest to the shooters.

* * *

Another one of the Connecticut men who visited the above shoot—the first live-bird contest, by the way, that he ever witnessed—was W. M. Thomas, the noted expert of the Union Metallic Cartridge Co., a concern that is doing all in its power to perfect shotgun as well as rifle ammunition in this country. For its success in this direction the U. M. C. Co. is largely indebted to Mr. Thomas, who personally does all the experimental work for the firm. The .22cal. "Long Rifle" cartridge, which has created such a furore in the rifle-shooting world, was one of the results of Mr. Thomas's deep thinking. A deep thinker, of quiet habits, he has studied explosives from "A to Z," and is worth a fortune to his company.

* * *

Saturday will be a big day on the grounds of the East Side-Mutual Gun Club, at Wiedenmayer's Park, Newark, N. J., where all the live-bird experts will assemble to do or die in a big sweep at 20 live birds, under Hurlingham rules, $15 entry, birds extra. The event is open to all comers, and the birds, to be furnished by Cox & Lumbreyer, will be first-class. The event will begin at 1 P. M.

* * *

New York and New Jersey will send a strong contingent to the Reading tournament, on Tuesday, Wednesday and Thursday of next week. W. R. Hobart, of Newark, will look after the interests of Von Lengerke & Detmold; Neaf Apgar will represent Henry C. Squires; the Keystone Target Company will be looked after by Enoch D. Miller, of Springfield; American Wood Powder will receive its proper attention at the hands of M. F. Lundsley, of Hoboken; the W. Fred. Quimby Company's interests will be nursed by Eddy Collins, of Hoboken; Frank Post, of Park Ridge; Wm. Sigler, of Montclair; R. H. Breintuall, of Newark; and a strong contingent of others beside will go on an independent trip, satisfied to take their share of the sport even though they get left on the winnings. Taken altogether, Reading will get a strong backing from this section.

* * *

A pleasing piece of news to the shooting fraternity is in the fact that Enoch D. Miller, the famous crack of the Union Gun Club, of Springfield, N. J., has been appointed sole Eastern representative of the Standard Keystone Target Company, of New London, Conn., and will hereafter look after their interests in this section. As a hustler for business Mr. Miller has no peer, while his ability as a shot, either at live birds or targets, needs no comment. He is immensely popular wherever he goes, and it is safe to predict that he will be successful in his new field. Both Mr. Miller and the Keystone Company are to be congratulated upon the combination just formed.

* * *

A big sweep at live birds, the winner to become the proud possessor of a 400lb. porker, will take place at Marion, on Thursday, Feb. 18, and a very large entry list is anticipated. The shoot will begin at 2 P. M., and will be preceded and followed by minor sweepstakes, subject to the wishes of the shooters present.

* * *

Connecticut trap shooters will have lots of fun on Washington's Birthday at New Haven where the main attraction will be the second team contest for the State trophy donated by the Standard Keystone Target Company. The contest is open to teams of three men from any club in the State, each man to shoot at thirty artificial targets, the winning team to hold the trophy until the next monthly shoot. The club will hold an all-day tournament at artificials in connection with the above event.

* * *

"Tee Kay" Keller assumed his new duties with the United States Cartridge Company on Feb. 1. It is safe to say that the firm's order books will soon show the results of Mr. Keller's hustling abilities.

* * *

The monthly shoot of the Newark Gun Club will be held on John Erb's grounds next Thursday and some lively shooting is expected. The regular club event will be at ten live birds per man, $5 entry. The shooting on club days of this organization is always open to visiting sportsmen.

* * *

A big sweep at twenty-five live birds per man, with an entrance fee of $20, birds included, will take place on the Old Stone House grounds of John Erb, Bloomfield avenue, Newark, N. J., on Feb. 22. The event will be open to all comers and a large entry list is anticipated.

* * *

On the grounds of the Maplewood (N. J.) Gun Club on Saturday last, the Dean brothers, Charles and Lewis, were pitted against one another in a contest at 50 artificial targets each for the club's "Challenge Cup," C. Dean won this cup in the first general competition held on New Year's day. The conditions are that the winner shall hold it subject to a challenge from any member, the cup to become the property of the member winning it six times. Two weeks ago C. Dean shot against A. Sickley, the former winning. Last Saturday he suffered his first defeat at the hands of his brother, who broke 41 to Charley's 33.

* * *

W. Fred. Quimby left on Monday for a six weeks trip through the West in the interest of the W. Fred. Quimby Company. As usual Mr. Quimby took his smoothbore along, and will have an occasional shoot en route.

* * *

H. A. Penrose has been in and about New York for a week looking after the interests of the Standard Keystone Target Company, and meanwhile has been booming the coming tournaments of the Interstate Manufacturers and Dealers Association.

* * *

A meeting will be held at the store of Von Lengerke and Detmold, this afternoon, to form an association to be known as the New Jersey Target League, which will comprise every target shooting club in New Jersey. The object of the League will be to foster and promote an interest in trap shooting by arranging

for a series of team and individual contests, to be held alternately on the grounds of each of the clubs.

***

The half-tone engraving shown in this issue was taken in front of the clubhouse of the East Side—Mutual Gun Club at Weidenmayer's Park, Newark, N. J., and all the figures in the group are members of that enterprising organization, a history of which was given in last week's FOREST AND STREAM.

***

Frank Class struck a great pace in his last match with Fred. Lumbreyer, despite the fact that he was "rusty," from long inaction.

***

The Toronto Gun Club of Toronto, Can., is in a very prosperous condition and will do plenty of shooting during the current year. On Feb. 23-25 they will run a live pigeon tournament with $1,200 in guaranteed prizes. In March a sparrow match will be shot between teams captained respectively by President Miller and Vice-president Leeming. This latter affair will be followed by a team match at live pigeons between teams representing the Toronto and Guelph Gun Clubs.

The twenty-first annual meeting of the Toronto Gun Club was held on Jan. 29, and the following officers were elected. President, Wm. Miller; Vice-president, W. R. Leming; Secretary, F. Fensom; Treasurer, Wm. Bugg; executive committee, Gerhard Heintzman, M. Walsh, B. Pearsall, F. Martin and Geo. Briggs; auditors, T. C. Smith and Robert Gallagher.

***

The following officers were elected by the Washington Heights Gun Club of New York on Jan. 29, President, Charles H. Preyer; Vice-President, H. W. Oliver; Secretary, J. R. Terhune; Treasurer, R. B. Saul; Captain, C. R. Terwilliger; Executive Committee, M. Cox, W. W. Disbrow, W. K. Benedict, J. J. Organ, and D. Wagner. A challenge will be sent to the Jeannette Gun Club of New York to shoot a live bird match on the grounds of the Algonquin Gun Club. The teams will consist of twelve men, and they will shoot at ten birds each under modified Hurlingham rules.

***

On Jan. 27, Thomas Brantingham of Plainfield and W. H. Perrine of Marlborough, N. J., had a little "go" at 10 live birds each for $50 a side, at the latter place. Perrine won the pot, grassing 8 to Brantingham's 7.

***

An interesting match will take place at West End, Coney Island, on Feb. 15, when Dr. Van Ord of the Fountain Gun Club, and C. Mohrman of the Atlantic Rod and Gun Club, will shoot at 100 live birds each for a stake of $200. The men will shoot from the 27yd. mark.

***

W. H. Brickner and M. Fay will shoot at 25 live birds each for a purse of $200, at Dexter Park, on Saturday.

***

R. J. Sutherland and R. J. Dwyer will shoot another match at 50 live birds per man, for $50 a side, at Coney Island on Feb. 15. Sutherland will stand at 25yds. and Dwyer at 30yds. On the same day W. A. Weber and A. Holzer will shoot a match at 25 live birds each, 25yds. rise, for $50 a side.

***

Albert Whatton, Alfred Whatton and J. Gantz will shoot against B. A. Rist, Geo. Huff and C. Hughes, on Feb. 17, each man to shoot at 50 bluerocks, the losing team to stand the expense of a supper. All the above men are enthusiastic members of the Roseville Gun Club, and the match will be shot on the club grounds, on Bloomfield avenue, Newark, N. J., commencing at 1 o'clock P. M. Open-to-all sweeps will precede and follow the above event.

***

Invitations have been sent out for a meeting of the firms represented in the Interstate Manufacturers' Association, to be held in the Astor House, New York city, on Tuesday, Feb. 16, at 11 o'clock A. M., when all details for the coming season's tournaments will be discussed. H. A. Penrose stated that everything points to a most successful circuit, with more interest on the part of the shooters than ever before. The programmes for the Baltimore tournament, to be held the second week in March, will be out within a week. The programme will be published in very elaborate style, with an engraved title page. The engraving shows the trade mark of the association—a Cupid with drawn bow ready to discharge an arrow at one of a pair of pigeons flying in the air. Scattered about the archer are the various articles represented by firms in the association, and in the foreground are two tents. The design is a neat one and is sure to attract attention.

Cockefair Wins the Big Pot.

SATURDAY was a cold day at John Erb's Old Stone House grounds, in Newark, in more senses than one. Cold because from 1 P.M. until dark the mercury had been steadily moving downward and the wind which blew almost a gale from the direction of the Orange Mountains had a keen edge that cut like a knife, and also very "cold" owing to the fact that John Erb put out a lot of birds which fooled the talent. The main attraction of the day was the big sweep at 25 live birds per man, $20 entry. It was expected that this shoot, which was arranged at the request of over a dozen of the local shooters, would draw at least a score of entries. The entries, however, number but eleven and of these only eight were local men.

Among the visitors to the grounds were Allen Willy, editor of the *Hartford Globe*, of Hartford, Conn., one of the most expert target shots in the wooden nutmeg State; C. H. Burbige, another of Hartford's well-known target smashers, who has also made a reputation as a live-bird shot but was slightly off his form; W. M. Thomas, of Bridgeport, the popular and talented expert and experimentalist of the Union Metallic Cartridge Company; Frank Lawrence, the well-known billiardist, poolist and gun-below-the-elbow-until-bird-is-on-the-wing shooter of New York; and Vane Cockefair, the farmer sportsman from the rural precincts of Bloomfield, N. J. The Connecticut men came all the way down to Erb's grounds for the express purpose of indulging in a littles live bird shooting, which is forbidden by law in their own State. And by the way, what consistency is this? A man who shoots at a pigeon when the latter is released from the trap is amenable to a law for the "prevention of cruelty," etc.; although even if he fails to kill his bird with the first or second barrel, it is killed immediately by the gatherer or by the "bushwhackers," who are found in swarms outside every shooting ground in America. On the other hand a man may go out and shoot, in season of course, at game in the covert and the so-called guardians of the law never worry themselves to inquire how many wounded birds or rabbits crawl away under a bush to die a lingering death from the effect of wounds inflicted by the hunter. Although a law should certainly be upheld so long as it remains on the statute books, it is pretty nearly time for some of the Connecticut books to be relegated to oblivion.

But to go back to Erb's. As I have said, Johnny put out a fine lot of birds for the big sweep, there being scarcely a dozen slow ones in the 275 shot at in the big sweep. Drivers, twisters, and all other kinds were there to delight the onlooker and harass the soul of the poor shooters. It has often been said that nothing short of a 95 per cent. gait would bring a man in a place at Erb's grounds, but on the above occasion, with some of the finest shots in the race, 22 took first prize alone, and second was won by a score of 21, while the highest five scores aggregated only 103 out of a possible 125. John Erb offered to wager 10 to 1 that no man in the race would kill 20 straight, but could find no takers. Previous to the big event the following sweeps were shot, the conditions in each being four birds per man, $3 entry, there being two moneys in the first and three moneys in the second event. The results:

Sweep No. 1:			
Willy	1211—4	Lawrence	1201—3
Cockefair	2221—4	Burbige	0121—3
Smith	2011—3		

First money divided, second was carried over to the next event.

Sweep No. 2:			
Hedden	2121—4	Francis	2021—3
Castle	1121—4	Hollis	1012—3
Lawrence	1121—4	Erb	0111—2
Smith	1110—3	Burbige	0220—2
Willy	0122—3	Cockefair	0120—2
Wheaton	1120—3		

The moneys were divided. Lawrence won second from the preceding event.

Then came the big sweep, as above mentioned, there being four moneys, the shooting being under modified Hurlingham rules. The scores are appended:

Cockefair (20)	2?2121212101112101221222—22
Smith (28)	2?2211102121212180030?222—21
Castle (28)	1011011o11112?121?121201—20
Willy (28)	2211c2010201121110111121—20
Lawrence (30)	21210022201012022211111?—20
Hedden (30)	1210211o1111?1c1110022210—19
Hollis (28)	2010221012101111c01c111121—18
Henry (28)	0101121111110110020101112?—18
Jones (30)	1211000212200122c200122110—16
Williams (28)	1100121020110201000121111—16
Burbidge (28)	0220100221000220120122120—15

Cockefair won first pot, $60.70; Smith won second, $45.50; Castle, Willy and Lawrence div. third, $30 25; Hedden took fourth, $15.15. By the time this shoot was ended it was too dark for further shooting, and the party dispersed for their homes.

There was only one unpleasant incident connected with this shoot, and as the writer was directly connected with this, he assumes the right to make it clear.

Cockefair's twenty-first bird was hard-hit with both barrels, and no one expected it to escape. It reached the boundary fence, however, upon which it attempted to alight, but was too weak to gain a foothold. While making the attempt, with its wings still flapping, the bird was shot by an outsider and it fell inside. Being referee, the writer, using his own judgment entirely in the matter, called it "no bird," and allowed the shooter another to shoot at. The majority of the shooters and a number of visiting shooters, who were disinterested in the shoot except as spectators, pronounced the decision as absolutely correct, but two of the shooters persisted in saying that the decision was "dead wrong," and that the verdict should have been a "lost bird." In giving his decision the writer used the privilege accorded to a referee by the rules, and right here I wish to state that whenever I am called to act as referee, I shall, in case of the slightest doubt in my own mind, give the full benefit of the doubt to the gun, without the slightest regard to outside opinions. One shooter in the above case said that the bird had gone "a foot" beyond the fence and then came back to it before trying to obtain a foothold. This is absurd on its face, as at the height the bird was flying when it neared the fence it could not have got over.

In Memoriam.

ALBERT BANDLE is dead. While hardly yet in the prime of life, with a massive frame and apparent robust health, which seemed to indicate length of years, he was prostrated by an insidious disease and passed peacefully away.

The shock of his death was greater and wider spread than the usual shock of such events. It reached wherever his fame was known.

He had personal friends throughout the country and his premature death was a personal grief to each. His qualities were those which enabled him to make friends and hold them when made. He had a gentle and genial spirit, a generous and kindly nature.

Among his intimate associates his presence was a pleasure, and his domestic life was a loving and kind husband. His public

AL BANDLE.

career was free from strife or bitterness and his triumphs left no sting. He was a born shot. Nature had bestowed upon him the gift of unfailing marksmanship, a gift bestowed upon few, and an art acquired, by those not thus favored, only by laborious and persistent effort.

His physical attributes were such as to develop his prowess and insure superiority. In his public competitions there was no chicanery. They were never open to a suspicion of favoritism or fraud, but were always honest, manly, earnest endeavors to achieve success.

Therefore, *Resolved*, That by the death of Albert Bandle, the city has lost a good citizen and the business community has lost a worthy member.

Resolved, That by his death the interests of sportsmanship have been deprived of a zealous supporter and his brother sportsmen have parted with a cherished companion.

Resolved, That we offer our sincere condolence to his bereaved widow and that a copy hereof be suitably engrossed and presented to her in token of our sympathy.

ED. TAYLOR.

CINCINNATI, O., Jan. 25

Lively Work at Claremont.

SATURDAY'S shooting of the New Jersey Shooting Club drew a fair number of shooters to Claremont, and some good scores were run up despite the tricky wind. A summary of the several events is given below:

Event No. 1, 10 bluerocks: F. G. Moore 10, R. Schaefer and G. E. Greiff 9 each, G. S. Virden and J. H. Richmond 8 each, C. M. Hathaway and A. F. Compson 6 each.

No. 2, 20 bluerocks: Schaefer 15, Moore 15, Richmond 16, Purdy 17, Compson 15, Virden 8, Hathaway 15, Greiff 17.

No. 3, 10 targets, unknown angle: Bigoney 6, Moore 5, Compson 4, Greiff 7, Hathaway 4.

No. 4, 25 bluerocks with club handicap for a diamond badge, to be shot for monthly. It represents an enameled bluerock target in the center of which is a diamond mounted on a double-barreled shotgun: Schaefer 20, Compson 24, Virden 18 Bigoney 16, Greiff 21, Moore 15, Richmond 16, Purdy 22, Pope 18. With handicap added Compson and Greiff tied, shooting off at 5 bluerocks, Greiff winning the badge with a score of 4 to 3.

No. 5, 10 targets: Richmond 3, Moore 10, Purdy 10, Compson 9, Greiff 4:

Final event, 5 pairs of targets:

Greiff	11 10 11 01 11—8
Compson	10 10 01 11 10—6
Moore	11 11 01 01 10—7

The Roseville Gun Club.

THE Roseville Gun Club held its monthly medal shoot on the club grounds, in rear of Old Stone House Grounds, in Newark, on Jan. 27, each member shooting at 25 Ligowsky clay pigeons. The scores:

Rist	1111100111101111011011110—19
Hughes	0111011101101 0101000001—13

Gantz	1101150111011010010101061—14
Huff	1111000101000100?0011101—12
Whatton	1060111100101111010010111—15

At the Larchmont Yacht Club.

SATURDAY was a big day on the grounds of the Larchmont Y. C. A number of the finest live bird shots in the country were there to take part in a series of sweepstakes, and the birds were the hardest lot of flyers ever seen on the grounds.

The first event was a 3-bird sweep, $5 entry, 90 per cent to winner, ties miss and out. The result:

Oakleigh Thorne (30yds)	122—3	N S Simpkins (28)	20w
Chas MacAllester (32)	220—2	N Money (25)	0w
A W Money (30)	120—2	Bayard Thayer (28)	0w
W B Smith (29)	110—2		

Event No. 2, cup or $50, 4 birds, $5 entry, twelve entries to fill, one re-entry allowed; ties miss and out, second score to save stake:

MacAllester (32yds)	1212—4	MacAllester (32)	0122—3
A W Money (30)	0122—3	Thorne (30)	2122—4
Thorne (50)	020?—1	N Money (25)	1212—4
N Money (25)	00 —0	A W Money (30)	0221—3
Smith (29)	0022—2	Smith (29)	2021—3
Simpkins (28)	0101—2	Simpkins (28)	2020—2
Thayer (28)	0201—2	Thayer (28)	0111—3
MacAllister	?21	MacAllister	212
Thorne	???		

Event No. 3, sweepstake $5 entry, miss and out, two moneys:

MacAllester (32yds)	1220—4	Smith (29)	21212—5
A W Money (30)	2110—4	Simpkins (28)	20 —1
Thorne (30)	12112—5	Thayer (28)	0 —0
N Money (25)	12120—4	Goodfriend (27)	0200'—1

Event No. 4, cup or $100, entrance $10, 10 birds each, ties miss and out, twelve entries to fill, second score saves stakes, 27yds. and under, one miss to count as no bird:

Goodfriend (27yds)	0222222222—9	MacAllester (32)	1001
Thorne (30)	0221222222—9	Thorne (30)	11001
MacAllester (32)	1202221220—8	Smith (29)	12000
N Money (25)	1210120122—8	Smith (29)	2220010

Smith (30)	1221222—7	MacAllester	120w

Ties: Goodfriend 22, A. W. Money 10, Simpkins, 30, N. Money 0, Smith 0.

Sweep, $5 entry, 10 birds:

Thorne (30yds)	2111111112—10	A W Money (30)	0112212?1 —8
MacAllester (30)	202121111 — 8	N Money (25)	0112220?0 —6

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

DEACON.—Your inquiry will be answered with an illustration.

J. D. A., Princeton.—The sloop Priscilla is now the schooner Elma.

F. W. D., Newark.—The index of the last volume has not yet been issued.

OLD SUBSCRIBER, New York.—The schooner America has always been a keel yacht.

J. H., Albany, N. Y.—1. The piano polisher should be able to refinish the gun stock. 2. For method of loading write to the manufacturers direct.

W. V. B.—1. The address of Frank Wesson, the rifle maker, is Worcester, Mass. 2. We refer you to our advertising columns for a first-class hammerless shotgun.

SAM A., Fair Haven, Vt.—1. Will black duck decoy to wood duck or teal? 2. Will wood duck decoy to black duck or teal? 3. Will teal decoy to black duck or wood duck? Our duck shooting is mostly on the above ducks. 4. Where can I get decoys and how many of each would I need? Ans. 1. Yes, usually; but black duck are shyer than the other two. 2. Yes. 3. Yes. 4. From the dealers whose advertisements are in this journal.

F. C. S., Darien, Wis.—Please let me know as to the use of "tea lead" for casting bullets for rifles? I have several hundred balls cast of that lead for my .32 Winchester rifle, and have heard that "tea lead" bullets would injure a barrel. Ans. Tea lead is not a pure lead, but an alloy to enable the close rolling of the sheet without breaking. It is always better to start bullet making with pig lead and tin. Old type, solder, tea lead, etc., are to be avoided.

SALT WATER IN BOOTS.—The salt must be removed before your gum boots will keep dry, therefore, soak them in fresh water and they will dry readily.—JAKE RAIN. Unless the salt is all dissolved by repeated soakings in fresh water, it will continue indefinitely to deliquesce and produce a feeling of dampness. I once dropped a canvas gun case overboard in salt water, and my gun rusted unaccountably until I bethought me what was the matter. Then I gave the case a forty-eight hours bath in fresh water, dried it, and had no more trouble.—C. L. N.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

IT is of the utmost importance to Anglers who contemplate taking a trip to Florida for Tarpon Fishing that they provide themselves with proper tackle.

Our Noib Wood Tarpon Rod, patent compensating steel pointed Reels, Tarpon Lines and Snells on forged hooks, made expressly for this kind of fishing, have stood the most severe tests and given perfect satisfaction.

Send 10 cents (to cover postage) and we will mail you our 136 folio page illustrated catalogue.

ABBEY & IMBRIE, 18 Vesey St., New York.

SHYNESS EXEMPLIFIED

We dislike to tell about ourselves so much; about how good, how honest, how enterprising, how dependable, how deserving of your patronage, we are.

We are shy and innocent and would really feel better if some one else were to mention our good points (we have no bad ones), but no one seems willing to blow our horn.

Some one of our twenty correspondents will be glad to answer any letter you may chose to write us; answer it quickly, courteously and, we hope, intelligently; any topic; you will find it hard to stump us.

Montgomery Ward & Co., 111 to 116 Michigan Ave., Chicago

The Celebrated Smith & Wesson Revolvers

HAVE BROKEN ALL RECORDS FOR REVOLVER SHOOTING.

The Most Perfect Small Arms

EVER MANUFACTURED.

Unrivalled in Beauty of Finish, Durability and Accuracy.

Manufactured in calibers .32, .38 and .44-100. Single and Double Action Hammerless Safety and Target Models, with all latest improvements——Automatic Shell Extractor, Rebounding Lock and Patented Safety Device.

The Smith & Wesson Revolvers are constructed entirely of **best wrought steel,** carefully inspected for workmanship and stock, and GUARANTEED. Do not be deceived by IMITATIONS largely manufactured of **malleable cast iron,** and often sold for the genuine Smith & Wesson. All of the Revolvers of this firm are stamped upon the barrels with their name, address and dates of patents.

If dealer cannot supply you, orders sent to address below will receive prompt and careful attention. Catalogues and prices furnished upon application.

IF NOT, WHY NOT?

Have you seen the CHUBB Catalogue of FISHING TACKLE for 1892?
If Not, Why Not?
This Catalogue contains 96 pages, devoted entirely to fishing. It describes and illustrates Fishing Tackle of *to-day*. It has Two Lithographic Plates of Eight-Strip Split Bamboo and Lancewood Rods, in seven colors. These have been pronounced by prominent anglers to be elegant, and to mark a new era in illustrating Fishing Rods.
It also contains eight plates, or over one hundred varieties, of Artificial Flies, in twelve colors, which every angler should have to select from.
Send 25c for Catalogue. This may be deducted from first order for goods amounting to One Dollar or more, by enclosing Coupon which accompanies Catalogue.

AN EXCURSION TO
ALASKA.

The wonderful richness of this Arctic country and the rapid strides in material prosperity which it is making, are attracting the attention of the whole world, and since the completion of the Northern transcontinental railway lines Sitka is as easily reached as Paris. Every one wants to go to Alaska, and for those who can make the journey Mr. Hallock's volume,

OUR NEW ALASKA,

is indispensable. To those who want to go, but cannot, this volume with its graphic pen pictures gives a clear idea of the interesting conditions of life in the far North. Price $1.50. Sent post free by the

TENTS AND CAMPING

Is the subject of a new book called

Gypsy Tents and How to Use Them.

It gives a vast amount of information about how to live out of doors. Besides tents, how to make and put them up, it tells of camp fires, camps, pack saddles, cooking utensils, bedding and clothing, and the joys and sorrows of camping. All outers need it. Fully illustrated. Price $1.25.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

Scientific Education of Dogs
FOR THE GUN.

A new work by an English writer, "H. H."

The instructions here given are the result of the author's amateur practical experience of thirty-seven years. A review in FOREST AND STREAM says:

"This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study. The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings."

Price $2.50, postpaid, by the
FOREST AND STREAM PUBLISHING CO.

Teufel the Terrier;

A Wonderful Crimper.
The New Handy Closer No. 3.

It will make a round or square crimp on any shell regardless of thickness or make, and is the only closer that will crimp every shell alike. The reversible pins for making either round or square crimp are made of hardened steel. It has an automatic follower and burnisher, which seats wad firmly and makes interior of shell as smooth as a gun barrel.
This closer will outlast ten of other make.
For sale everywhere, or sent express prepaid on receipt of $2.50.
Send for our Illustrated Catalogue.

Book and Boy.

The visitor from New Jersey came in and said his wife wanted to give a book to a boy friend—a manly boy, blessed with a taste for *Forest and Stream* subjects; the book must be a manly book, and one to encourage these tastes. We named it—"Nessmuk's Woodcraft;" and the suggestion carried conviction. The boy has doubtless by this time read his book through three times at least, and has found something in the third reading that he missed in the first. And if he retains his sportsman's tastes he will read the book when he shall be old.

The Man and the Book.

For Read this note from Gen. D. H. Bruce, of Syracuse, in praise of "Woodcraft:" "Good old Nessmuk. I could have known him for years. What a delightful book. How every page rivets the attention of the woodsman, by its happy language in dealing with practical, every-day things, and imparting hints of originality in respect to many things. I took up the book one evening, and could not sleep until I had read every page and looked several times at the quaint portrait of the veteran. I like such men."

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:
The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abijah Jarvis. The Coon Hunt. In the Sugar Camp. Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

Supt. Westminster Kennel Club.
Babylon, L. I.

BLACK WONDER.

No. 23,557. Whelped Jan. 30, 1890.

King of black pointers, and was the king of all colors at the United States field trials held at Bicknell, Ind., 1891, winning the Derby and All-Age Stake. He is a dog that knows how to hunt and not afraid of briers. Fee $35.

JOHN A. HUNTER, Sandborn, Indiana.

YORKSHIRE TOY TERRIER.

Champion Bradford Harry, described in show reports as "best Yorkshire in America." Pedigree and winnings free, photos 50 cents. A limited number of his puppies for sale. P. H. COOMBS, 1 Exchange Block, Bangor, Me.

Forest and Stream File Binders. Price $1.

In the Stud.

Chestnut Hill Kennels'
COLLIES AT STUD.

Christopher, - - $50.

Wellesbourne Charlie, $50.

30 per cent. off to members of Collie Club.

IRISH TERRIERS.

Breda Bill, - - $20.

Puppies and grown stock for sale. Dogs of all breeds taken to board, conditioned for shows, kept at stud and sold on commission.

Address
CHESTNUT HILL KENNELS,
Chestnut Hill, Philadelphia.

STUD POINTER.

Champion Pommery Sec

(Ch. Graphic ex Lady Vinnie).

For stud fee, list of winnings, etc., address
WM. H. HYLAND, North Tarrytown, N. Y.

BLUE ROCK.

The dog for Elcho bitches. A first prize show winner and winner of more field trial prizes than any Irish setter dog in America. Perfect in color. Fee $25. ELCHO KENNELS, Claremont, N. H.

The Collie or Sheep Dog

A HISTORY AND DESCRIPTION OF THE BREED.

By RAWDON B. LEE.

Demy 8vo., 157 pages, printed on plate paper with illustrations. Price $1.50. For sale by FOREST AND STREAM PUBLISHING CO.
318 Broadway, New York.

The Kennel.

NO ONE is better known as a trainer and handler of dogs used for shooting, whether in field trials or by the every-day sportsman, who loves to roam through the coverts or over the prairies for grouse, quail, woodcock or snipe, than Mr.

B. Waters

He had great success as a handler, but besides knowing how to train a dog and to use a shotgun, he possesses the art of writing of these topics in a plain and practical way. He has produced a comprehensive work on the training, care and management of field dogs. This should be in every sportsman's library. Every man who has Hammond's "Training vs. Breaking" ought to have also Waters' "Modern Training." The two books written by two men, each of whom was very successful as a trainer, are entirely different, and it is interesting to see how the same end is attained by such diverse methods. The book contains 373 pages, is bound in cloth and sells for $2.50. It can be had of

Forest and Stream Pub. Co.,
318 Broadway, New York.

FOXHOUNDS.

My entire pack of twenty-one dogs and bitches. Extra fine fast-running foxhounds. Few well trained rabbit dogs and bitches. No fancy price. Must sell. Write to

J. H. MILLER, Christiana, Pa.

$15. $15. $15.

I will sell for $15 each if taken at once four of the handsomest and best bred pointer pups in the country. Stock direct from Beaufort, Mainspring, Bow, Sensation, etc. Better blood than this cannot be found. Age 2 mos. L. A. PARKHURST, Canandaigua, N. Y.

Several Well Bred Pugs For Sale.

Brood bitches in whelp and pups.
THOS. I. BALLANTINE,
601 Ellis st., Peoria, Ill.

St. Bernards

A grand litter ready to ship. Also collies and bull-terriers. H. F. LITTLEFIELD,
Lake View, Worcester, Mass.

SPRATTS PATENT

MEAT FIBRINE DOG CAKES (WITH BEETROOT)

BLUE RIDGE KENNELS.
IN THE STUD.

The celebrated champion stake winner GATH'S MARK, GATH'S HOPE and DAN GLADSTONE. The Blue Ridge Kennel has now opened its book for the fall season of 1891 and spring of 1892 for Gath's Mark and Dan Gladstone, limited to fifty services each. $2,000 is given away in premiums to the get of the above dogs, which win different Derby Stakes in 1892 or after. Particulars on application.

FOR THE CONSIDERATION OF PILGRIMS.

THE Pilgrim is very likely a nice boy, quiet, well-bred, kindly—in short, a gentleman. He is intelligent, too, pleasant in conversation; modest, yet eager for information about all the strange things that he sees in the mountains. The plants, the birds, the beasts and the fishes all interest him, and he is delighted to listen to the stories of the oldtimers, and to get them to answer his questions. Besides all this he is willing to do his share of the work, is anxious to help the others when camp is made at night, and to lend a hand at the packing in the morning. So you can see that he is a charming fellow, and yet he sometimes makes himself a thorn in the side of his companions because of his anxiety to be of assistance. This makes him suggestive, and a suggestive man, unless his suggestions are backed by the wisdom born of experience, is a nuisance.

A small pack-train is traveling through an unknown country—forest-clad. Trail there is none; the way is obstructed here by extensive tracts of down timber, there by ledges, up or down, which horses cannot climb, or, again by miry swamps, which are impassable. The timber grows thick, so that one can see only a few yards in any direction, no sun shines from the gray sky to give the points of the compass, there is doubt about the watershed. On this divide head streams which run in two directions.

The leader rides ahead of the train, endeavoring to pilot the party through the tangled forest and to a good camp, by a route which shall be at once the shortest practicable and at the same time the easiest for the horses. His mind is intent on the difficulties of the way, he is constantly watching for the slightest sign which shall help him to decide the question as to which way he shall next go, whether it will be better to turn to the right or to the left or to keep straight on, to bear away from the watercourse or to cross it.

To him, keenly observant and pondering these questions, comes the Pilgrim with his suggestions: Are we going right, should we not turn more to the right, or to the left, with much talk and many reasons, which bother and distract his listener, just as a lively conversation might confuse a mathematician who was considering a difficult problem in calculus.

The leader is a good-natured man. He knows that the boy means well and that it is only his inexperience, which leads him to think that he can give advice which will straighten out the difficulties which are puzzling heads much older than his. He does not speak sharply to the young man but tries to dismiss him with a word; or if his temper is short, perhaps he is a little caustic and asks the boy to take the lead, being willing to teach a lesson even if at some cost to the whole party.

It is astonishing to see how easily a little gratuitous advice of this kind can make the pleasantest young man unpopular. It is almost as bad as grumbling, which is perhaps the most serious fault that a camp companion can exhibit.

There are many ways in which the Pilgrim can make himself obnoxious to the Old Timer, but none, we believe, so certain and so speedy as by proffering unasked for advice about matters of which he knows nothing, but which are a part of the daily life and practice of the men of the mountains. We have heard a Pilgrim, who until the day before had never seen a mule carrying a pack, trying to teach the packers how to throw the diamond hitch. Others, not less self confident—though perhaps now for the first time in the mountains—will direct the guide how to take his pack train along a difficult mountain side or through bad down timber, as if the guide were new to the business and they had been cargadors all their lives. And yet these same gentlemen would think it strange if a minister of the gospel should try to teach a lawyer how to draw up his briefs or a stock broker should attempt to write sermons for a priest.

Ne sutor ultra crepidam, let the cobbler stick to his last. The Pilgrim should remember that he is a pilgrim. If he has hired a guide, let that guide do the work he is paid to perform. What is required of him may be clearly explained and all matters may be thoroughly discussed in advance; but, while he is at work doing his best to accomplish what is very likely a difficult task, do not bother him with your suggestions and advice, which are much more likely to hinder than to help him. By as much as his experience is greater than yours, by so much is his judgment better and his advice more worth following.

DEATH OF HERR VON BEHR.

ON Jan. 13, Herr von Behr, one of the most famous fish-culturists of Europe, died at his home in Schmoldow, Germany. Herr von Behr was President of the Deutscher Fischerei Verein, one of the most powerful organizations of its kind in Europe, and was greatly interested in fish-culture both in European countries and the United States. He had numerous correspondents among prominent fishculturists in this country, among them the United States Commissioners of Fisheries, and Mr. E. G. Blackford, of New York. It is to Herr von Behr that we owe the successful introduction of the brown trout into this country, an achievement of which he was very proud. From the original stock received from Herr von Behr and sent to Caledonia Creek, Monroe Green, a few weeks ago, caught a brown trout weighing over 10lbs. This growth was obtained in the seven years which have passed since its introduction.

Herr von Behr was the author of a very valuable German work on fishculture, entitled "Fischzucht." One of his favorite methods of popularizing American fishes among his countrymen was the issuing of small pamphlets describing the fish and containing illustrations of them. Commissioner McDonald, in recognition of Herr von Behr's services in the introduction of the brown trout, has attached to it Von Behr's name, and at all of the stations of the U. S. Fish Commission the fish is called Von Behr trout.

YACHT RACING IN 1892.

AS the beginning of the season draws near, the prospects of new yachts in any of the larger classes are rapidly disappearing, the time being short for turning out even a 46-footer in time for the earlier races. With two notable exceptions, the new craft will be of the smaller sizes, most of them very small. The two exceptions are the Smith and Gardner schooners, which are likely to give a needed boom to the class, and with Volunteer, Mayflower and Merlin to make some fine racing.

Unfortunately the new fleet of 65ft. schooners and 53ft. cutters which is promised each fall, is as far away as ever, and Quickstep must sail alone again in her class, while Clara and Cinderella will continue to represent the 53ft. singlestickers.

The 70ft. class is to all appearances dead; with Shamrock, Bedouin and Katrina, and in all probability Titania, out of the racing, this fine class will hardly be represented in the races of the year.

The chief figure in the 46ft. class is the new Wasp. Mr. Rogers' Bristol boat, but the question naturally arises as to what she will race against. A certain amount of interest attaches to her first meetings with Gloriana, but it now seems probable that the two will have the field to themselves. The 40-footers and the 30-footers are practically extinct, and it is safe to assume that none of the old 35-footers will dare to start against the new Morgan fin-keel. If she should be raced, the new Gardner boat now building should make a good mate for the Morgan boat, but it is not certain now that they will come together at all.

In the East, racing is likely to be hot and exciting only in the 21ft. class, for which half a dozen full-fledged racers are now building, and there is still time for others. About New York the same state of affairs prevails, and such racing as there is will be mainly in the 25ft. S. L. class, between Needle, Smuggler, Nameless and the new Gardner and Herreshoff boats for Messrs. Sanderson and Kersey, with possibly some other new ones.

Outside then of the largest and smallest classes, the only interest is likely to be in such handicaps and cruising trim races as the clubs may arrange, and from the number of fast but outbuilt yachts now in commission, these races should be generally popular, both with owners and spectators.

MILITARY RIFLES.

A COMPLAINT from General Ordway, of the District of Columbia team, at the last meeting of the Directors of the National Rifle Association, led to a rather novel suggestion. The letter called attention to the manner of loading the Remington State arm used by the Twenty-third New York Regiment team. The bullet was not seated in the shell to a depth sufficient to stand heavy travel.

There was some basis of fact for the complaint, but not sufficient to explain the defeat. To simplify matters one director suggested that in all future interstate matches Springfield rifles with factory ammunition be required.

This crude idea was of course rejected. The very object of Creedmoor and all such ranges is to give a large number of men a chance to see what there is in an arm, to work it over into improvements, and to push forward the whole science and art of shooting. Take New York State for instance; its official arm is not a model weapon according to our later expert notions. It has a big caliber and a light barrel; yet by constant study of the why and wherefore of every detail of shooting the better class of shooters have secured nearly perfect results from it. Even though laboring with an inferior tool they have developed into skilled workmen. They have added brains to the official arm. Let every association do the same. Factory ammunition is not perfect, or if this be not claimed, then the only other possible explanation is that the mover of the one arm idea wished to reduce everybody to the same low level of mediocrity. That is retrogression, not progress.

SNAP SHOTS.

TUESDAY, Feb. 23, has been set as the date of trial of Delmonico, of this city, charged with having served woodcock out of season in the summer of 1890. This case has been made notorious from New York to California by the mysterious unwillingness of the prosecuting attorneys, Platt of Westchester and Nicoll of New York, to try it. The offense with which Delmonico is charged is clearly defined in the statute and is one for which numerous smaller fry have paid the penalty; Protector Kidd's evidence is said to be fireproof; and now it only remains for Assistant District Attorney Townsend, who has the case in charge, to prepare and present it in his customary able manner.

The proposed change in the Massachusetts trout law, to permit in the close season the sale of artificially raised fish, is meeting with decided opposition by the fish commissioners and the Massachusets Fish and Game Association. It is the opinion of those most experienced in the work of enforcing the market provisions of the fish and game laws that the change asked for would render the due protection of wild trout more difficult than ever.

The notes on the tench, printed last week, were originally prepared at the request of Mr. E. G. Blackford, by whose courtesy we were given the opportunity to present them in the FOREST AND STREAM.

The petition requesting the Canadian Minister of Fisheries to grant the salmon rivers more immunity from netting is being extensively signed. Copies of the petition for signature may be had at this office.

We shall have a full report of the Syracuse convention; the interest in the movement is not confined to the limits of the State.

The Sportsman Tourist.

THE ADIRONDACKS.—II.

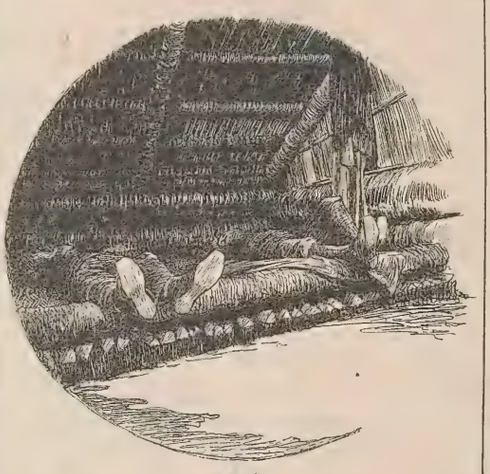
Recollections and Sketches of the Great Forest.

BY. GEN. D. H. BRUCE.

THIS chapter will be composed of a medley of subjects and a general jingle of anecdote and observation, together with some brief notes on the birds of the great forest. The matter will be thrown together in a chatty manner, hoping that it will entertain readers of FOREST AND STREAM even on a winter's evening, though the general subject has reference to quite another season of the year. But we all find pleasure in reviewing the experiences of the last outing and in anticipating the one which we hope is to come; so what follows will refresh recollections and sharpen determinations for the future.

A chapter might be written on the doings and sayings of Adirondack guides and their knowledge of natural history, acquired mainly by observation, partly by listening to the conversation of gentlemen who have made it more or less a study. Many of these woodsmen are not only close but also very intelligent observers, and have been possessed of much valuable information not found in books, which often positively and undeniably contradict statements made by professional writers. They turn their knowledge to good account in being better able than the more ignorant guides to give their employers good success in hunting and fishing, thus making reputations for themselves which render their services specially desired. Such an one was Sim, at Loon Lake. But he was prone to mingle some fiction with much fact as he would sit by the campfire and relate experiences and tell stories. Speaking at one time of the habits and intelligence of animals, he illustrated the sagacity of a bear which he once trapped and which escaped in a peculiar manner. The bear, according to Sim, dragged the trap to the trunk of a large tree up which it crawled with its forefeet until it could rest its free hind foot upon the heavy spring of the trap, but bruin was surprised to find that his weight was not sufficient to work the spring, "and under such circumstances what do you suppose that fellow did?" said Sim, answering his own question by saying: "He actually stuck his claws into the bark of the tree and pushed downward hard enough to supply the needed power to open the trap, and if you don't believe it come with me and I'll show you the marks he made."

To illustrate how an observing guide draws conclusions from his surroundings, this incident may be related of John Hitchcock, a guide at Number Four. He was carelessly shot near the hotel one rainy day by a man from Springfield, Mass., who was practicing with a pistol. The ball struck Hitchcock on one side of his neck, passed through his windpipe and lodged against the inner side of his jaw. Of course much excitement followed and most of the people lost their heads. The writer of this and his wife came to his assistance, however, and he was laid upon a bed, his wet clothing changed and his condition made as comfortable as possible, while a messenger was sent post-haste for a surgeon, twenty miles away. After Hitchcock had somewhat recovered from the shock he whispered quite assuringly, "Don't be afraid this will kill me; I've shot deer many a time through the neck and it never seemed to hurt 'em much." In the course of a week he walked to his home in Lowville.



The habits of panthers are not fully understood even by the most observing hunters. They are so exceedingly stealthy that they are difficult to study. Hence, they are not easy to capture, and then, too, their habits change according to their appetites. When suffering from hunger they will shun a human being as quickly as when well fed; but they become much bolder among the animals upon which they feed. A lean and hungry panther will jump from a considerable height in a tree to the back of a deer, while one better fed will lie secluded in the bush near a trail and await the passage of a deer. It is remarkable, too, with what speed they can pass from tree to tree where the forest is dense. When they spring upon the back of a deer and fix their teeth in its throat there is no escape; but if such a hold cannot be secured until the deer can run under a fallen tree resting a little distance from the ground, then the panther is likely to be disappointed in his hopes. I have killed deer whose skins have shown the scars of wounds made by panther's claws, extending from the shoulders to the tail. In passing under the log, the deer would literally tear its enemy from its back. Did you ever read Headley's exciting tale of the race between a deer and panther? And did you recall the fact that having very small lungs, the panther, like a cat, can run rapidly but little distance?

I know from observation that frogs are cannibals. I once rescued an unfortunate specimen from the jaws of death, and later I demonstrated the fact that a frog can live under water only about ten minutes. But I have never believed the story of a fisherman catching bullheads which he threw on the grass upon the bank, that he was victimized by a frog which took pity on the fish and adroitly rolled them back into the water.

To fully know the habits of trout is worth more than the best of tackle to the angler, and Warren Bullock proved this one day at Cranberry Lake. A dozen of the "sons of Izaak" had spent all day in almost fruitless endeavors to fill their creels, and returned home quite empty-handed. They were much chagrined to find that Bullock had spent an hour with a "chalk line" half a mile away about sundown, and had taken a dozen pounds in a small number of fish. They were caught at the "dam," the conditions being exactly right, for none like them were taken afterward, though plenty of effort was made. It is altogether probable, too, that Bullock was the only man who could beguile them when he did. He is a thorough woodsman, and is well versed in the habits of fishes and animals.

A professor of Cornell University and his brother-in-law were once engaged in studying natural history at Squire's, near Loon Lake, when a strange animal which they had no time to study came unexpectedly upon them and they took to trees. Then they compared notes and concluded they had been chased by a bull, which with gleaming eyes, erect tail and bellowing throat undertook to throw dust in their eyes; but they were not deceived, an hour later they were rescued, and to this day they wonder whence the animal came.

In some respects deer are very cunning, in others they are wanting in that degree of animal intelligence which would protect them from harm under most circumstances. When their trail is followed, and one is at rest, it will always be "looking backward." They have been known to double their trail to confuse a hunter. Their sense of smell is keen, and when to the leeward of a person they will detect him when a long way off and speedily make their escape. They are also keen of sight, but do not seem always to have understanding. Motion seems to be their principal warning of danger. Any woodsman knows how easily you can drift in a boat very close to them, if you remain motionless. So in the night time they seem dazed by the light of the night hunter and will suffer him to approach very near, often within a boat's length and even closer. When a deer is run by dogs, the hounds and deer may pass very near to one standing by the course they are running, and it will stand perfectly still and witness the race. They will visit the same place almost daily for food and water, thus exposing themselves as no other animal that I think of will do. But wisdom increases with age; these statements apply more particularly to deer less than five or six years of age. An "old buck" is a most difficult subject to kill. Experience has taught him that the chances are against him and he will contribute little or nothing in aid of his own destruction. He is familiar with every device and trick of the hunter, and only seldom is it that his judgment is at fault and he suffers the penalty. During the mating season, however, when nobody cares for the flesh of a buck, he becomes half idiotic and risks his life in the most reckless manner.

WHY?

Deer are of a very domestic nature. They can scarcely be driven permanently from the homes of their selection, not even by dogs. Their greatest enemy is the panther, and where panthers are the most plentiful the most deer are usually to be found. Nothing will startle them more than the scream of a panther. It is surprising that many fawns escape these beasts, for they are utterly without protection further than that which their weak and slender legs supply. It is a curious fact that while dogs can readily scent a deer's trail, a panther cannot do so, but must watch his opportunity to spring upon his victim. The liquid which oozes from the little opening just above the hoofs of the hind legs gives the scent which so often leads to their destruction. It is commonly supposed that this scent was given to deer to enable them to seek the whereabouts of each other; but this supposition was long ago proven untrue. The purpose of it seems to be no better understood than are the functions of the spleen in human beings. The agility of this animal is wonderful. With a foreleg broken, a deer will outrun a dog, and is almost equally agile with a hind leg disabled. This fact gives some idea of how nimble they may be when not disabled. I have heard guides declare "upon their honor" that they have known of deer jumping thirty feet into the air, and making leaps covering fifty feet of ground, but I am strongly inclined to discredit such statements. No thicket seems to offer any obstruction to their passage; they will scramble over floating logs in water so deep that their feet cannot touch the bottom, with amazing speed. The greatest and almost only hindrance to their speed is a crust upon snow through which their small hoofs break and make them easy prey to panthers. If the State would offer a large bounty for dead panthers, deer would multiply with great rapidity. What is more handsome than a fawn? What is more innocent? Many times I have come upon one of them in the spring or early summer while passing through the woods or fishing along the banks of a stream. So tame and gentle were they that they seemed inclined to make my acquaintance. They are beautiful animals, their spotted coats being more interesting than that which Joseph wore.

I believe that trout, like the deer, prefer a particular home, from which they do not often roam. Indeed, I am convinced that, except under extraordinary circumstances, they confine themselves almost to one spot, and then wait for their food to come to them, either on the surface, in the water, or on the bottom. You may cast your flies all over a pool without a "strike," except at one place near a rock, a log or a treetop. Then you instantly find "luck" and perhaps send several fine fish to creel. Your flies must drop in the same place every time, else no electric shock comes to you through your line and rod. Fish the same pool as often as you please, but only in this particular place will you catch a fish. This, I think, is equally true of fly or bait. Yet, there are times when nowhere in the pool can you get a "rise." But I must disagree with all who declare that the direction of the wind has anything to do with their inactivity. Doubtless the cause may many times be found in the fact that the trout are already gorged, sometimes in the perfect smoothness of the water they can be witnesses to the would-be attack upon them; sometimes by great changes in atmospheric pressure, which throws them out of their normal condition. The explanation of an old angler was eminently practical, even if it did not shed any scientific light on the subject, "There are times when they don't want to bite and that's the most I know about it." Certainly his reason is not to be disputed. Trout feed whenever they desire food, be it day or night, and we all know that if the water affords a plentiful supply of food they will only lazily attack our hooks, if at all. We know too that they are not dainty feeders, that when their appetites are keen they will eat almost anything which comes in their way.

It is disgusting sometimes to hear a man clad in an outfit embracing everything which human ingenuity can devise to empty his purse, tell of the many times and with what persistency he changed his flies before he could "get a rise." The remark at once reveals his inexperience, if his outfit has not already done so. There is no doubt that certain flies are best adapted to different seasons, times of day, and conditions of weather; but a dozen flies of different names will fully answer all of these requirements. An angler's flies resemble nothing when cast upon the water. They are simply a something which attracts the trout. Color has more allurement than form, and as there are not so many colors there is no use for many flies. The general rule is for light flies on dark days, and dark or darkish flies on light days. Sizes are more to be considered than form and mixture in make up. A large trout wants something worth his making an effort to secure. It is doubtless true that an arbitrary cast of flies cannot be made up which will be adapted to all waters. It is also true that there is much difference in the trout of different waters of the Adirondacks, a difference which, I suppose, cannot wholly be explained. I have in mind a lake in which the trout are very broad, with short heads, like bass, with only darkish coloring and very bright spots. Not far away is a lake in which the trout are quite different, being long and slender, with black coloring and faint spots. There are other waters in which quite as notable differences in other ways are found. It is also certain that there is much difference in the feed of various lakes and streams which must be studied, and hooks and flies adapted from absolute knowledge of conditions. There is vastly more skill to be exercised in approaching and fishing a fishing ground than in making up a cast. The boy with the "chalk line and bean pole" knows this to be true. The habits and surroundings of the fish we would capture must be known and understood if we would succeed in taking them. It certainly is folly to suppose that there is any one of the hundred flies displayed in sportsmen's shops that will take a trout against his will. They are of quick, keen sight, and hear readily in some manner (eminent authorities to the contrary), and these facts must be remembered. Their taste is not at all acute and their appetites variable. Digestion is rapid and they feed almost constantly if possible, unless there is such an abundance of food that they become gorged. They are a very wary fish generally, ready to take fly or bait when they are certain that no danger lurks in their way. Unless you can be quite hidden from their sight, either by position or a ripple upon the water, large trout will not often come to your creel.

It is commonly supposed that there is but little bird-life in the forest, because so few birds are seen or heard. But this is not the fact. A large number of families are represented, though not many songsters waste their sweetness in the solitude. The forest is so dense and the undergrowth so thick, that the smaller birds easily hide themselves from sight, and if they utter a beguiling note or two, you will look for them in vain. To study them one must choose proper localities and wait patiently for opportunities. One class of birds will be found in the thickets, another in the clearings, others in the evergreens and hard wood, near streams and on and about lakes. The casual observer will see the eagle, and the loon, but will fail to notice the shy grosbeak or the indigo bunting. The raven, too, keeps well out of sight, except in the fall, when he will loiter in the vicinity of a hunter's camp. Though he breeds in the North, he is somewhat rare. He resembles the common crow, but has a much more glossy plumage and makes a cleaner selection of food, such as grain, grubs, berries, etc., and especially enjoys a bit of fresh meat. The bluejay is a beautiful bird, and is seen singly or in pairs in secluded places. It is as mischievous as it is elegant; it will not hesitate to rob the nests of other birds of both eggs and young, and has been known to appropriate nests to its own uses. Sweet soft nests, tender insects and carrion alike pleases its sense of taste. The Canada jay is related to the bluejay; is of leaden gray color with white markings, a little smaller than its cousin, and having its habits. It is most often seen in the Saranac region, I think. The pine bulfinch is also a pretty bird, red, with wings and tail dark brown. It is most often seen in autumn and winter, and is said to be most plentiful in Maine, where it breeds. It subsists on seeds, berries, buds, etc. The oriole is sometimes mistaken for it. Its eggs are pure white. The white-throated sparrow is a lively and rather pretty bird, most noted for its peculiar, somewhat plaintive notes, nearly on one key, except that a flat and a sharp are introduced to vary the tones of the five or six notes which it repeats at intervals.

Most of the many woodpeckers are seen, particularly where evergreens are interspersed with hard wood, for in such places grubs, their principal subsistence, are thickest. The white-winged crossbill is well known to every person who has camped in spring time. They are very familiar morning visitors, sometimes disturbing the sleeper by their chippering when they appear in considerable numbers. They take their name from the action of their bills. They are carmine-reddish in color, with wings and tail very dark brown or black. They feed on seeds and buds and are specially fond of camp crumbs. The American crossbill is much the same in color and habits as its cousin and also often frequents spring camps in search of delicacies. In the summer months a linnet is occasionally seen in the clearings, but not often. During a month spent at Cranberry Lake last summer I saw but two. Owls and hawks are seen in most of their kind, that is, those habituated to the North. They perform excellent service in destroying vermin, and are the worst enemies of the bird creation. Whippoorwills are

occasionally heard, but very seldom seen, for they remain close in the thickets by day. They are not of remarkably handsome plumage, and are most noted for their three notes. They are about 9in. in length, of variegated coloring. They nest upon the ground, laying two or three bluish-white eggs. They feed almost exclusively upon insects on the wing, and inhabit thick brush. The kingfisher is familiar to everybody and is found in almost every woodman's collection. The black-cap titmouse, or chickadee, is a friendly little bird.

Several of the thrushes are seen here and there, particularly the hermit, which comes from the South in May, and the olive-backed thrush is sometimes mistaken for it. I do not know that any of the warblers—some twenty in number—are seen in the depths of the forest. The Lapland and white snowbirds are seen during most of the winter, I am told. It is said that they breed in the northern counties, but I have never seen anybody who could verify the statement They much resemble English sparrows in their habits, except that they nest upon the ground. The ruffed grouse, or partridge, is found everywhere, and in the fall in considerable numbers. It nests upon the ground, and to protect its young will stay in their vicinity, manifesting an instinct to mislead the person or animal which may have caused the disturbance. The young, usually from ten to fifteen in a nest, are able to fly and mainly take care of themselves in about two weeks or twenty days from the time of being hatched. They leave the nest immediately on coming from the shell. If the nest of eggs should be destroyed another "setting" will be made; otherwise there is but one nesting a year. A most interesting sight is that of a young brood surprised, when the birds at once dip their heads under leaves, leaving their bodies exposed to view, the hen meantime in a great fluster and seeking to divert attention. Since the nests are built upon the ground, it is surprising that they are not all destroyed by vermin. They are usually out of the reach of the eye of the owl and hawk. The spruce grouse is of the same family, but not much sought for. Its flesh is usually, particularly in late fall and winter, of bad flavor, tainted with spruce buds, of which the bird is fond when other food is difficult to obtain.

The great blue heron comes early and returns south in the autumn. It feeds mainly on fish, snakes, crabs and other water food, and being of nocturnal habits it has been surmised that the down upon its breast is phosphorescent to attract fish by night. It is certain that it will wade in water at night as well as by day, and its purpose must be to secure food. It is said to breed in this State, laying from two to three eggs. The little blue heron, very like the one above mentioned though smaller, is occasionally seen during August and September. It comes north late and returns early. The heron and bittern family is large. The crested grebe is another water bird, better known as the dipper or hell-diver, though there is a distinct bird knownas the diver. They are very much alike however. They are late comers, usually late in July and remain until ice closes the lakes. The great loon is also a familiar object upon almost all the lakes. It spends its winters on the sea coast. They are difficult to kill with a gun, because of their quick sight and action. When they observe the smoke of a gun, they can dive before the shot or ball has time to reach them. They soon become accustomed to the ways of sportsmen and thereafter keep well out of their way; but when smokeless powder is used they are more frequently captured. The red-throated loon is occasionally seen in some waters, particularly Raquette Lake, but not often. The gull family is large, but the common American gull is perhaps the only one known to the forest. On some of the lakes, either wood or black ducks are seen during the entire summer. They breed in many places, but the greater part of their young are devoured by water animals. Their flesh is delicious. Ducks of other kinds make stops at many lakes during their fall flight, but for want of food they soon take their departure. Unquestionably there are other birds belonging to the forest with which I am not familiar, or which I do not recall; but those above mentioned constitute at least nearly all that the naturalist can discover. There are birds common to the clearings and the margin of the forest which have not been spoken of, but they belong to the State at large—such as the barn swallow, several of the flycatchers, the cowbird, the yellowbird, bluebird, robin and several of the sparrows and others quite as familiar to most people, and how out of their sphere they seem to be. They are birds that seem to love the company of human beings, willing to leave solitude for the enjoyment of their sisters, cousins and aunts of various names and appearances. They belong to the class of domestic birds and carry their habits with them wherever they go. Space forbids an extended description of the birds I have mentioned and their habits; the reader who has special interest in their identification can readily find books that will assist him. It is delightful divertisement for a woodsman to watch his little visitors and be able to call them by name, when he sits upon the bank of a stream or in his shaded boat waiting for a "bite". Indeed, what pleasure there must be to him who can also read the grasses and stones which surround him and learn of them secrets hidden to most people. What a field for the study of nature the Adirondacks afford. Why should not all of our public schools have a prescribed and thorough course of natural history?

SYRACUSE, N. Y.

Words of Appreciation.

THE new FOREST AND STREAM possesses all of the desirable qualities of a sportsman's (not sporting) journal. It has a certain magnetism about it that is irresistible. The amount of good such a paper as the FOREST AND STREAM does the sportsmen of this country can never be justly estimated. It has created a reputation that is unsurpassed—it is original, does not imitate. I have taken the FOREST AND STREAM for ten years, and have never missed reading every week's issue since then. I have taken (and do take) other sportsman's journals, but the FOREST AND STREAM "fills the bill." I owe (not subscriptions) the FOREST AND STREAM much, as every true sportsman in the country does. Your kennel columns as conducted by friends Lacy and Waters, and the trap columns by C. H. Townsend, cannot be excelled; in fact, every department has a writer who knows what the sportsmen need—a clean, sprightly, up to the times journal. Long may it flourish.—A. C. COLLINS, President Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish (Hartford, Conn.).

There are some things I can do without, but FOREST AND STREAM is not one of them.—W. H. HYLAND (Peekskill, N. Y.).

Natural History.

THE EUROPEAN BISON.—II.

BY R. WALDECK.

[*Continued from Page 99.*]

IN summer the bison lives in the lower and damper parts of the wood, hidden in thickets and underbrush; but in winter he moves up to higher and drier parts of the forest. Old bulls live for the most part by themselves, but the younger ones congregate in troops of from fifteen to twenty in summer and from forty to fifty in winter. Each troop resorts daily to the same place for rest. Up to the month of August these animals live peacefully among themselves, but when two bands live in adjacent parts of the forest, they often fight if they come together, and the smaller band usually avoids the larger one.

The bison sleeps only a few hours each day. He feeds during the day or at night, but his favorite time for pasturing is in the evening and in the early morning hours. If grass and weeds fail him he peels off the bark of trees for food. He also rides down small trees by his weight and feeds upon the leaves and smaller branches. His favorite browse seems to be the ash tree. The pine, of course, is not eaten. The foresters of the Bialowitz woods bring hay from a distance and put it in stacks, protected by roofs, on which the bison can feed in winter. Sometimes the bison break into the enclosures of the small farms near the woods and destroy the property of the farmers, eating the hay and crops which he has saved for his own cattle.

Though the movements of this animal seem to be heavy and ponderous, it is really quite active. Its gallop is as fast as that of a horse and it can go over ground which a horse would hesitate to traverse at a good rate of speed. When the bison is galloping his head is held close to the ground and his tail stretched out straight behind him. He is a good swimmer and easily wades through marshy soil. The sense of smell possessed by this animal is very keen, but he does not seem to see and hear so well. In many of its actions and habits it resembles our common cattle. Their habits change with age. The younger animals are lively and playful and quite good natured, though they could not be called gentle or docile. Still they are not at all savage. The old bulls, on the other hand, seem morose, savage, and very irritable. As a rule, however, even the old bulls will permit a man to pass by without attacking him, but they are subject to unaccountable fits of passion, and light-colored objects or clothes seem always to invite an attack. In summer the bison generally avoid men, but in winter they avoid nothing and will not move out of the way of a passer by. A main road passes through the woods of Bialowitza and in winter it frequently happens that men and teams have to wait for hours until some bison, which is standing across the road, sees fit to move a little to let them pass. Very often the bison follows sledges crossing the forests and if he scents any hay and the driver does not throw it out to him at once, he will upset the sledge and break it to pieces. When angry the bison stretches his blue-red tongue well out of his mouth and without delay attacks the object of his anger. Horses are usually afraid of a bison and try to run away as soon as they smell him.

The time of the rut comes usually late in the month of August and lasts for three weeks. During this time the bulls are in their best condition, fat and strong. At this time serious fights often take place between the males, and now, too, it seems to be a favorite pastime of the bulls to uproot moderate-sized trees, digging round them with their horns and feet. Often it is seen that a bison having overturned such a tree, cannot get rid of it at once, the roots being twisted about his horns. This makes the bull furious, and one has been known to run about for hours carrying this singular and enormous headdress. In fighting, they attack each other head on, charging from a distance, and come together with such enormous violence that occasionally a horn is broken off. At this time also the old bulls, which are accustomed to live by themselves and apart from the bands, rejoin the others. Frequently the fighting is so serious that it may cause the death of younger bulls.

As soon as the time of pairing is over, the old bulls leave the troops and go back to their quiet, lonely life in the higher parts of the forests and mountains. The calves are born generally at the end of May or early in June. Two or three weeks before this, the cow looks out for a lonely place, where she retires until the calf is a few days old. A few days after birth the calf follows its mother everywhere and is treated by her with the utmost affection. If it is too weak to walk easily, she pushes it forward with her head. If its coat is dirty she licks it clean. When she gives suck she stands on three legs, in order to make it easier for the young one to reach the udder, and while the calf is sleeping the cow watches to see that no harm comes near it. In case of danger the mother fights with great courage, and is furious for her young one. If left alone the calf lies down, pressing itself to the ground, and not moving until its mother has returned to its side. At this time it is dangerous for man or animal to come near the calf, as the cow at once attacks the enemy, overthrows him and tears him to pieces with her horns.

The calves are pretty creatures. They grow very slowly and seldom attain full size before they are eight or nine years.

The bison lives to an age of from 30 to 50 years, the bull being more long-lived than the cow. When they grow very old both bull and cow become blind and lose their teeth, so that they cannot provide themselves with sufficient food, and finally dwindle away and die.

In comparison with other kinds of cattle the bison breed very slowly. In the forest of Bialowitza experience shows that the cows produce a calf only every three years and that as they grow older the interval increases sometimes to four, five and six years. In the year 1829 from 258 cows only 93 calves were produced. This is probably the reason that the bison is slowly dying out.

This species has few natural enemies to fear, and against those which attack him he defends himself with great force and courage. Bears and wolves are dangerous only to calves when by some accident the mother has lost her life and the young one is unprotected. Sometimes, however, when the snow is very deep, it may happen that three or four wolves by attacking the bison singly one after another so tire him out that they are able to kill him.

In Europe the chase of the bison is over, but in ancient days this sport was a favorite pursuit. Cæsar writes that it is a great glory and honor to kill the bison, and many old Latin songs praise the hero who has killed bison and aurochs. Of course two thousand years ago the hunt of this species was different from what it has been of late years, while in the middle ages, from 1200 to 1300 A.D., the old German heroes used to hunt the bison on horseback, using only a spear, their men fighting on foot. It was the duty of some of the footmen to attract the attention of the bison by swinging red clothes before him while others tried to pierce him with their spears. Often in these hunts great dogs were used.

In Hungary, and Transylvania as well, the chase of the bison was a favorite pursuit with the kings and princes and nobles of ancient times, and the killing of a bison bull was looked upon as a heroic deed. They did not always, however, kill him in fair fight as was done in Germany. Frequently great pitfalls were dug in the runways of the bison and the helpless bull, who had fallen into one of these, was killed with a spear from above.

Old literature is full of references of chases of this beast, and many a book has been written of the great hunts of Hungarian kings and nobles. In a volume written in 1534 we read that a great troop of bison had made its appearance in the mountains and forests of Szeklerland, and that they did much harm to the Zeckeln (the people of Szeklerland) by wasting their grain and killing men and women. The sovereign of the country, Majlath Istvan, arranged a great hunt in which many hundreds of the peasants were forced to assist, for each house owner in every village was obliged to appear at the royal hunt and to assist in driving the bison together. Again, a hundred years later, George Rakovzy I., Prince of Transylvania, wrote to his friend, the noble Paul Bornemisser, in 1643, in which he tells of a great hunt which he had arranged.

One of the most brilliant, and also one of the last hunts held, took place in the reign of August III., in 1753. A monument was erected and great books written in German and Russian languages to commemorate this great event. In one day 42 bison, 13 elk and 2 deer were killed. The Queen alone shot 20 bison without missing one, and still found time during the hunt to read a novel. Long before the day appointed for the hunt about 3,000 peasants were occupied in looking for the game and driving it into an open space surrounded by an inclosure. On the hunting day it was driven out of this inclosure through a narrow passage, on both sides of which galleries had been erected in order to give the hunters a perfectly secure position. From their seats they killed the game as it passed by. This hunt took place in the Bialowitza woods, which at that time were much larger than they are to-day.

In the year 1860 the Emperor of Russia took part in a hunt in this forest. The Emperor himself killed 6 bison bulls and a calf, 2 elk and 6 deer, 3 roes, 4 wolves, 1 badger, 2 foxes and a hare. The Duke of Weimar and the Princes Charles and Albert of Prussia killed together 8 bison. A volume describing this hunt is written in Russian.

[TO BE CONTINUED.]

MORE ABOUT SHARKS.

IN the New York *Sun* for Dec. 20 was a notice of a monograph on the habits of sharks with extracts written by Com. G. P. Griffin, giving his observations in various oceans. His conclusion is that sharks are not man-eaters; moreover, that they prey only on dead matter, never eating living creatures; that they are, in fact, merely the scavengers of the ocean. The stories of living men devoured by sharks Com. Griffin thinks are without foundation, and he believes that when human beings are taken off in the water in some mysterious way the seizure is due to alligators. Perhaps the evil deeds of the sharks have been exaggerated, but enough seems to remain in trustworthy history to allow some of these things to be charged to their account, and many disappearances of men while swimming are related to have taken place in regions where no alligators exist.

As to the statement that sharks subsist entirely on dead matter, I think the experience of most fishermen and anglers is to the contrary. In Florida waters I myself have several times had a channel bass of large size taken from my hook when I was playing it, the fish being in rapid motion, by a shark, bitten in two, leaving only the head upon the hook, and this in clear water where the robber was plainly visible. Any fisherman on that coast will testify how the sharks tear up his nets and carry off the living fishes from them.

In those bays and inlets many large sting rays are captured by anglers, and the boatman, after extracting the hook alongside the boat, often cut and stab the ray so as to draw blood freely, and then turn the ray loose. Like the shark, the ray is tenacious of life, and will swim away easily with many wounds, but it seldom can go 100yds. without being attacked and devoured by the sharks, which appear to be very fond of their cousins, the rays, and when a shark is cut open the weapon of the ray is often found in its stomach. Like other carnivora, sharks differ in their boldness and ferocity in different places and circumstances. Where war is waged upon them they become wary. Where they only have to deal with naked and poorly armed savages they are bold and dangerous. There are many species of sharks, and those in northern seas differ in many ways from the southern species. These last are so sensitive to the cold that many are found dead in the Florida inlets and bays after a heavy norther, while those of high latitudes flourish among the ice.

Com. Griffin states that in spite of the legend he has never seen a shark turn over to seize its food, which agrees with my own experience. He is of opinion that sharks are as numerous in the northern waters as in the south, and believes that more of them are to be found on the coast of New Jersey, between Sandy Hook and Barnegat, than on any equal stretch of southern coast.

For myself, I have angled on the coasts of New Jersey, Rhode Island, Massachusetts and Maine, as well as those of Florida, and I have seen more sharks in one day in the latter waters than in a month at the North. At the North I was never molested by a shark, while in Florida I have not only been robbed or my fish by them, but have found them when in numbers so aggressive that my boatman thought it prudent to leave the place.

The long experience and observations of Com. Griffin entitle his opinions to great weight, but like most other questions this one appears to have two sides, both supported by testimony.

In FOREST AND STREAM, Jan. 28, is an account of a man being carried off in the jaw of a sperm whale, but without stating when it happened. It occurred in 1766 to Tully Clark, son of Scotts Clark, who commanded the whaler off George's Bank. Capt. Clark was of my family, being a cousin of my great grandfather. Scotts Clark had a family of fourteen children, eleven boys and three girls, and it is related by a descendant that when the youngest child was born, a girl, her father expressed great disappointment because he lacked one boy to make up the crews of two whale boats.

Many instances are related of the fighting qualities of the sperm whale. A notable one was the case of the whaler Essex, which in the early part of the century was attacked and stove by a bull sperm whale, the crew having barely time to take to their boats, in which they suffered dreadful hardships before they were picked up.

To attack such a dangerous monster in an open boat would seem to require courage of the highest quality, and it was in that school that American sailors were trained one hundred years ago, the men who in the war of 1812 humbled the pride of the mistress of the ocean.

S. C. CLARKE.

MARIETTA, Ga.

THE KILLING OF A SNAKE.

Editor Forest and Stream:

That you may know the experiences of a ransacker are not always of the pleasantest nature, perpend: In ransacking a corner of my dominion yesterday I came upon a rattlesnake. This, you may murmur, was not a very extraordinary occurrence. But it was a very thick, bad-looking snake, and I came upon him unexpectedly, suddenly and while I was pondering; I was much startled. If you have seen these reptiles, you may know that the sudden sight of one at close quarters thrills the observer with something very like an ague, and he is likely to be nervous for some moments after. "If this it is, to fear," then most people I have observed are subject to such dread upon occasion. Well, as I was about to step upon this snake he attracted my attention by squirming forward and away, as fast as he could, after his best style of locomotion, and by the time I had secured a stick with which to attack him he had got into a pile of loose rock, with the exception of a section of his tail.

Here I would like to pause to reflect again upon a snake's tail. I have given this subject some thought, and for the life of me, as Mr. Robinson says, I can come to no satisfactory result. Whether a snake is all tail but his head, only half tail, or whether a correct writer ought to refer to a snake's tail at all, is one of the topics that bewilder me.

For the sake of getting on I will say that the snake was all in the rocks except about a foot of his latter extremity. When, however, I began hostilities by pressing the stick firmly on the part of the snake exposed, his former extremity came out and got to the rear of his latter extremity; you see I will have to revert to head and tail, or I may become confusing.

[*Note.*—A man told me yesterday, when we were talking about snakes, that his uncle's brother, who lives in Humboldt county, found some snakes that travel both ways over there. These snakes, he said, travel just as fast one way as the other without turning or reversing, and a man can never say for sure which end of them the head is on.]

You see, it is a little obscure, to say the least, to refer to extremities of snakes by denominating the ends of them as former or latter, and so I shall adopt heads or tails. In case of those Humboldt snakes, if they are different, then, of course, they are otherwise; but I am dealing with ordinary every-once-in-a-while rattlesnakes.

When this snake found himself fast he commenced that rapid vibration of his tail peculiar to his species. He had not sounded his rattles until then, or shown inclination to fight. Now the buzzing of his tail was quickly followed by the appearance of his dart-shaped head which shot from one, then another of the crevices of the rocks, his tongue flashing and his eyes standing out like beads. He was writhing to free himself, and I was obliged to press with considerable strength upon the stick to prevent his escape. The rattles buzzed at frequent intervals, but I noticed that he always ceased rattling just before striking, also that the action of the muscles which vibrated the rattles was perfect, notwithstanding the fact that the pressure of the stick almost severed them from the main portion of the body. The snake was now furious, and struck repeatedly at the stick which tortured him, and I was not sure, but thought he struck his fangs into his tail.

Anxious to kill him and so end his torture, I had nothing at hand but the stick, which if moved would allow him to get into the rocks. Suddenly, however, he freed himself, and got where he might have escaped, but he evidently was prepared for vengeance. Instead of withdrawing into the rocks he protruded himself in various directions and allowed me to strike at his head a number of times until he received the blow that settled his career forever. With the stick I then drew him from the rocks and found him to be the largest I have encountered. He would have measured nearly four feet and was near, if not quite, three inches in diameter. Of rattles he had fourteen, but some had been broken or worn away. He was a remarkably active and prettily marked reptile of his kind.

After securing the rattles as a trophy I fell to wondering why the dozen fatal wounds he had received had not driven all the life from his body; but he still writhed and twisted, and then I remembered that "snakes' tails never die until the sun goes down."

Then I began to feel a sort of sympathy for the old fellow from the fact that every man's hand is against him, and fell again to wondering why he was created; then as to whether there is anything in the world that man has the right or reason to condemn to wanton death and destruction. If our all-wise Creator has fashioned any superfluous thing, deserving our wanton persecution, it must be the rattlesnake; but there are some things we don't fully understand to this day.

C. L. P.

A DEER PARK of 2,000 acres is now in course of preparation on the New Jersey side of the Delaware Water Gap.

A PRAIRIE BIRD.—Dublin, Erath County, Texas.—*Editor Forest and Stream:* I inclose the head and neck of a bird which is exceedingly abundant in this country now. I have lived in Texas 35 years, but I never saw this sparrow until this year. If I have seen him before, he had not then the peculiar markings on the head and neck which he now wears. Some call him here the "wheat-bird," but he is not the wheat-bird that I have known before—which has not the black markings that this bird has. Some call him the "prairie bird," but I find him both on the prairie and in the woods. In the woods, however, he is scattered all around; in the prairie he is found in such large flocks that it is easy to kill from 20 to 30 at a fire with a shotgun. They are fat and make delicious pies. Please name us this bird in FOREST AND STREAM. Some say here that he is a specimen of the lark, but I think not.—N. A. T. [The bird is a shore lark (*Otocoris alpestris*). This species in one or other of its races or subspecies is distributed over much of the North American continent, and is especially common as a bird of the Western plains. The specimen sent may belong to the subspecies known to ornithologists as *leucolœma*, but the fragment sent is too small to enable us to positively determine as to this.]

GAMBEL'S QUAIL WANTED.—Several years ago I noticed an advertisement regarding Gambel's quail. I answered it and put myself in the possession of a pair, as I was anxious to have them breed in confinement. This was accomplished, but the results after the eggs were hatched were not successful owing to unfavorable conditions of the place where they were inclosed. I can now make very favorable arrangements and am desirous to get several of these quails for the purpose of breeding. Can you put me in communication with some party who could furnish me with the same species? I know of no better avenue than your valuable and widely read paper to make this want known and reach parties interested in these matters. —HENRY F. ATEN, M.D. (84 Hanson Place, Brooklyn, N. Y.).

"HORNADAY'S TAXIDERMY."—Grand Forks, N. D., Jan. 23.—The first time FOREST AND STREAM made mention of the work after it was printed I ordered a copy at once, and can say that it is the most complete work I ever saw. In my collection of different works on taxidermy, containing seven volumes, I think more of that one than all the rest. When I learned the trade it cost me $100, but I have learned more out of that book in four months than the professor taught me for my money. It is simply perfect: cannot find a fault with it.—TAXIS.

PRESERVING SPECIMENS—Mr. Haly, Curator of the Colombo Museum, has discovered that carbolized oil is one of the most perfect preservatives of the colors of fish and other animal specimens. The most delicate frogs, snakes, and geckoes retain their evanescent tints when kept in it. Spiders, crustacea, centipedes, and so on, are also preserved in it, but so far Mr. Haly has not succeeded with marine invertebrates. The oil is cocoanut, which mixes with carbolic acid in all proportions.—*Evening Post.*—

A LARGE SEAL MIGRATION.—The bay fishing in Essex county, Mass., has been so seriously injured by the alleged depredations of seals that the authorities offered a bounty of one dollar each for killing them. During 1891 the fishermen killed 44 on the coast and in the rivers of the county.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS.—Purchased—One cape buffalo (*Bufelus caffer*) ♂, two singsing antelopes (*Kobus sing-sing*) ♂ and ♀, one wildcat (*Lynx rufus*), two gray foxes (*Canis virginianus*), two Japanese pheasants (*Phasianus versicolor*) ♂ and ♀, one horned screamer (*Palamedea cornuta*) ♂, four pied manakins, one bald eagle (*Haliaëtus leucocephalus*), and one red-tailed buzzard (*Buteo borealis*). Presented—One common macaque (*Macacus cynomolgus*), two common marmosets (*Hopale jacchus*), one skunk (*Mephitis mephitica*), one raccoon (*Procyon lotor*), one barred owl (*Syrnium nebulosum*), one screech owl (*Scops asio*), one red-tailed buzzard (*Buteo borealis*), one snapping turtle (*Chelydra serpentina*), two diamond-backed terrapins (*Malaclemmys palustris*), one Florida terrapin (*Pseudemys rugosa*), twenty salamanders, two tree frogs (*Hylo versicolor*), and five bullfrogs (*Rana catesbiana*). Born—Seven water snakes. Exchanged —Two cinereus sea eagles (*Haliaëtus albicilla*).

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 15 cents. Woodcraft. By 'Nessmuk.' Price $1. Trajectories of Hunting Rifles. Price 50 cents Wild Fowl Shooting; see advertisement.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

GUIDES AND GUIDED.

Editor Forest and Stream:

As a member of the Bald Knob hunting party I feel compelled to say something in our defense. My usual phlegmatic laziness might prevent any reply to our guide, but for the fact that the editor of FOREST AND STREAM has taken advantage of the occasion to point a sermon with our shortcomings. Having, therefore, stalked the room a few times in an attempt to get up a feeling of mild indignation toward guides and editors generally, I will now proceed with our side of the story.

Something over a year ago a series of articles were printed descriptive of hunting in Arkansas. Mr. H. Heithaus, of St. Louis, was so unfortunate as to read these, and found all his latent deer and bear killing inclinations wildly aroused thereby. Deer passed before his waking vision with graceful bound or lay still in death with a big express ball square through the heart; and in his sleep, after a supper of mince pie, great black bears fell squarely on him from the tops of tall water oaks. At last he received a promise from me to accompany him in the fall of '91, while I in turn brought Mr. Weaver into the party.

Mr. H. now wrote to the author of these Arkansaw yarns, S. D. Barnes, now of Denver, Col., and secured his services as guide. Before the date set for hunt, however, Mr. Barnes made such business arrangements that he could not guide us, so he turned us over to an old hunting companion of his, Harry Esslinger. We agreed to go anywhere (distance no object), provided only game was plentiful. Finally Bald Knob was selected by the guide as our destination. We reached there Nov. 30, confident of being in the best hunting grounds Arkansaw afforded.

Judging us by Mr. Esslinger's report, the editor has not unnaturally termed us novices; so a few words descriptive of our hunting party may not be amiss. Budd Weaver is a sportsman or nothing. He is one of the best if not the best field shot in St. Louis, and has spent two to four months hunting and shooting every year for nearly twenty years. He is apparently tireless as a walker, with a nerve that nothing ever disturbed until Schultze powder kicked his favorite gun into the middle of next week. I believe he has killed one or more deer every year for the past dozen years, and the great Ozark region of Missouri is to him like the streets of his native city. Whether shooting to hounds on the far famed Gasconade, following the slow trailer through the Current river valley, or still-hunting in the Irish wilderness, Bud Weaver is equally at home.

Heithaus is a good wing shot, and the hardest worker I ever saw afield; indeed I have always held that he spoils sport by turning it into downright hard work. He does not pretend to any knowledge of still-hunting but is perfectly willing to follow the instructions of any one more experienced. He styles himself a meat hunter, and went to Arkansas with the dogged determination of killing a deer.

The writer has killed a few deer, and is not particularly fond of the sport. The first driven deer he ever killed the thought occurred to him as he raised his gun, "it is as easy to hit as a big calf;" and it was. He pretends only to considerable skill with the hunting rifle, a skill sufficient to cut down a flying quail with a single ball, as was demonstrated on this trip.

The afternoon of our arrival in Bald Knob found us located in a little cabin eight miles east of that village, and near the swamps of White River. We expected to find a few bear, plenty of deer, and turkeys by the hundred.

The first evening Weaver and I hunted; result, nothing, not even a sight of game. The next day all hunted, every one hopeful and each secretly certain of being able to report a kill at nightfall. It was decided that Heithaus should accompany the guide as we wished him to have every opportunity. We hunted, not as the editor intimated, cracking and crashing, walking and talking, but slowly and carefully, looking for sign, looking for a movement or a patch of color. The squirrels chattered about us undisturbed as we moved at a gait of little over a mile an hour.

The writer was first in camp and had seen nothing but signs of a couple of deer, not fresh. Weaver came in shortly afterwards with a like report. Heithaus and guide came later. They had walked much further and faster. Heithaus had seen and shot at one deer running; he said at 100yds., guide said 60yds. Our guide had seen more deer.

The following day we prospected for game, covering more ground, looking for sign and running game. Weaver saw a fawn; later he and I caught glimpses of two deer running at 200yds., and fired with no expectation of hitting. We covered a good deal of ground this day, saw few signs of deer and none of turkey except one wing-broken bird, which was killed. The next day was densely clouded and raining hard all day. Weaver and the writer visited a new location six miles off and deeper in the swamp, seeing little to encourage us; plenty of hunters and dogs; a few deer tracks, no turkey. Prospects did not seem bright. A local hunter in whom we had confidence said, "Some deer here, but very few and wild."

Weaver and I put in the next few days prospecting, sometimes on foot, sometimes on horseback. Heithaus and the guide hunted as best they could. Heithaus saw a few deer, the guide claimed to have seen many more. They got close enough to one deer to have killed, but neither Heithaus nor the guide could hit it, though one tried four and the other five times.

By this time we had made up our minds to a few things. The guide ought to have known before we came, first, that there were very few deer within hunting distance of our camp, and no turkeys at all, and no more sign of bear than of elephants.

Let me describe our hunting grounds by way of justifying this opinion. As before stated we were eight miles east of Bald Knob, and two miles east of our shanty the swamplands proper began. Two or three miles west and south of us ran Mingo Creek, while six miles north of us was the Memphis & Bald Knob Railroad. In the scope of country lying between the Mingo on the west and south, the swamps on the east and railroad to the north we were instructed to hunt. This embraced a territory of perhaps thirty square miles. In it was one large plantation and a good many cabins. It was cut up with numbers of old roads, as it had once been the scene of active woodchopping operations, which industry is still carried on to some extent. The whole country I have described is full of hogs, and the main industry of the native Arkansan is hog hunting with gun, dog and pony.

By occasional glimpses of deer, and by thoroughly exploring our territory and carefully noting tracks we became convinced that our grounds were occupied by at least four deer, perhaps six. A big buck, a smaller one, a doe and a fawn, we became quite well acquainted with all things considered. As an excuse for not knowing them better, it may be explained—don't smile—that those deer were unnaturally shy of strangers, and they had good reason to be of stranger or native either. The average was one party a day in those woods with horses and hounds during our stay, and in addition the hog hunters were continually in the woods ready to give chase should their dogs jump a deer. Only the extreme wariness of the game, the near proximity of heavy cane, where dogs could not follow; the fact of the deer having no certain passes, and the very indifferent shooting of the natives saved our deer from becoming extinct in a single week.

Remember those six deer occupied some thirty square miles of range and were liable to be in any part of it perhaps in bunches of two or three. Hunting in good still-hunting style, covering but a few miles a day, the chances were as ten to one that you would never see a deer. On

the other hand, walk 15 to 20 miles, and you would probably see one running at a distance. Our guide adopted the latter method, his efforts being apparently to show us game, not to get us a killing shot. Our guide informed us that a careful, persistent young fellow hunted those woods twenty days one year, getting one deer; another year he hunted twenty-three days, getting nothing. I think that to be about the average of what a good man could do down there. Really, do you consider the prospects encouraging for three novices? I am willing to hunt two days for one shot, but not twenty for a single deer and then not get it.

Having proven the scarcity of game in our present locality, Weaver and I desired to change our base to the interior of the White River swamp, where game cannot be hounded and is little disturbed by hunters. This swamp is the home of the black bear, wolf, deer and turkeys, in fact, every kind of game to be found in Arkansas. Esslinger objected to the change, telling us that while perfectly dry now, "high water" might come and catch us in there.

We afterward learned that the water usually came up in February. Your correspondent Mr. Childress, who tells of killing 14 bears in this swamp, shows what we missed through our guide's ignorance.

On the last day of our prospecting we met an old hunter who told us of a locality, twelve miles from our camp, that hear rappings under the table, but a superior person who could actually see spirits. They were not the spirits of departed forefathers, however, but of deer killed perhaps in ante-bellum days. To him, poor fellow, they were not spirits, but creatures of real horns, and hair, and flesh and blood. As a basis for his suspicions our friend describes the guide's action as follows:

"Going through the woods the guide's eyes would suddenly shine, and a fierce whisper would come, 'See that deer?' The ready Winchester would come up bang! bang! then the guide would say, 'Big fellow—five spikes—must have hit him, though he was pretty far off.'" Our friend had seen nothing, but ascribed that to his bad eyes. Going to where the deer had been, lo! a wonderful thing had happened. The deer had disappeared forever, leaving in earth, air, mud or water not a trace behind. This happened so often that our friend's suspicions became moral certainties.

Imagine our guide riding through the wood at "break-neck speed," before him fly four spirit deer going the wrong direction: frantically he rides and turns them through the stands. The hounds erstwhile so noisy now follow silent at heel; even nose so subtle as theirs cannot detect the presence of spirit deer. On they come through the stands, not a man there. Full of silent wrath and mute despair the guide rides into camp.

A word more about what Mr. Weaver expects of guides. He expects the guide to locate the game before his party gets there. Then the guide shall prove to them that the game is there, after which he will receive his pay in full with a jug thrown in and be free to return to the village store and congenial companions. Mr. W. will take care of the game or be satisfied to leave it in the woods.

CHAS. ASKINS.

MARION, Illinois.

AMONG THE WILDFOWL.—XVII.

THE ALERT SPRIGTAIL.—"WHAT DO YOU SEE, SISTER ANNE?"

missed with the second barrel. We have marked the birds down and move on to the thicket to pick up the singles.

But the hounds are coming nearer. Now we can easily distinguish the eager voice of each dog, and the excited tonguing shows that the track is hot and the scenting perfect. I stand listening. "Come on, come on Brad, my dog has got a point" cries George. I go on. The birds flush on my side, and I fire and make a disgraceful miss. The boys laugh, but I bear their ridicule well, knowing that I shall not have to wait long to see them do equally poor shooting. But the black and tans are now within a mile. I can stand it no longer. "Boys, I'm going for that fox." "Well go on, we'll see to-night who's had the most fun." I call Boz to heel and start off on the run. As I go by the house I chain up my setter, and then rush for the little mill where the fox is sure to cross the plash brook. But I am too late; as I come within sight of the stone bridge, the fox flashes across and waves his brush at me in derision.

Panting, I sit on a fallen tree and wait for the hounds. They are about ten minutes behind the fox, and what a picture they make as they come down the old wood road. All four perfectly matched, well packed and running at a terrific pace, carrying the scent breast high, while their deep tuneful voices echo under the over-arching trees. Who would not forfeit a week's quail shooting to look on one such scene? On they go across the open fields and into the pines. I know that the fox will soon turn and probably cross above me. Once more I am on the run, and this time I reach my intended hiding place before the fox breaks cover. With every nerve tingling I await him. But he crosses the road above me, well out of gun shot, and leads off to the west toward Hyannis. The hounds are nearer to him than they were, and their voices sound fiercer as they dash on.

Straight away goes the quarry, fainter and fainter sound the voices of the hounds till they die away in the distance. But I am unwilling to give it up. I must see those dogs again, and so for an hour or more I follow in the direction taken by the chase, stopping every few moments to listen. As I come to the great cedar swamp I think I hear them, and sit down to wait. Can it be imagination? No, they are certainly coming. There is no mistaking those voices, but the chorus is not so strong as it was. The hounds come nearer rapidly, and now the fox is in the cedars trying to throw off the dogs. He dodges, doubles and turns, now coming near me, then going to the further side of the swamp a half-mile away.

But those eager dogs are not easily checked and at last the fox breaks cover about a hundred yards away and crosses an open field. Can that be the gay red of the early morning, running now with brush lowered and tongue out? The hounds are not more than four minutes behind, but there are only two on his track now. The terrible pace has been too fast for the young dogs and they are out of the race. The fox is running for his life and the short, fierce cries of the black and tans are close upon him. He is thinking only of a refuge and seems to have lost his cunning. Up the main street of the little village he runs, turns from it sharply and enters the school yard, crawls under the fence at the rear and makes for the cherry swamp. He doubles there, but it is all in vain. His last refuge has failed him, there is no escape, his heart is broken. Once more he sullenly takes to the open fields, runs to the beach and follows the shore on the sand for a half mile, then turns to the upland and heads again for the cedar swamp.

But the hounds are constantly gaining. As he crosses a knoll they catch sight of him, and with greater speed jump forward. Now they are running to kill and running mute. Straining every muscle they draw nearer

THE EVENT OF THE SEASON.

THE December morning dawned clear and cool. Every twig and spear of grass was covered with heavy white frost and sparkled in the sunlight as if incrusted with jewels. The air was perfectly still, and in that peculiar condition when distant sounds come to one so distinctly that they seem close at hand. I could hear the shouts of the sailors and the creaking of the blocks as a distant schooner slowly hoisted her mainsail, and the honking of a flock of geese sitting in safety on a sandbar a half mile from shore was so distinct that I grasped my gun and looked overhead for a shot. It was a perfect hunting morning. With my Irish setter Boz at heel I left home soon after sunrise, and a short brisk walk brought me to the appointed rendezvous, where I met a couple of friends, one with a large, heavily-built Gordon setter, the other with a small, stylish pointer, which showed his fine breeding in every motion. It took but a moment to plan our campaign against the quail, and dividing the large stubble field between us we were soon at work. The dogs were eager for the hunt and quartered the ground at great speed and in beautiful style.

As we follow slowly on, George cries "Hark!" We listen, and far in the distance, so far that it seems miles away, we hear the music of the hounds. Like a faint echo it comes to us, and though the dogs are so distant I know at once that they are the Yarmouth black and tans—four strong, well built, native hounds, unequalled on the Cape for endurance and speed.

While we listen the setters are at work and Boz makes game; a pretty cast or two and he nails his birds; the Gordon and the pointer back him finely and the picture is complete. Walking quietly and quickly up we flush the quail and do some very poor shooting, and simultaneously we give three excellent excuses for having

where deer were fairly plenty and turkeys by the hundred. Some of us wished to go there, and the guide was willing; but Heithaus, utterly sick of the hunt, had determined to go home. From our point of view it looked as though, through the ignorance of our guide, we had been kept hunting for a few "buckshot-scarred veterans," while game was plenty in a few hours' journey from camp. In justice to our guide, it must be stated that he is not a native of that country and only reached Bald Knob from Missouri a few days before we did. He therefore knew little of the range of game except what he had learned in other years. This, however, does not relieve him from the charge of incompetence in so far as we were concerned. Understand, I have not the least ill-feeling toward Esslinger; on the other hand, I believe he will become a good guide if he remains in the country long enough to get acquainted with it.

As there is an apparent discrepancy between the statements of Mr. Esslinger and myself I must notice his communication somewhat in detail. Let me acknowledge to begin with that we did the unsportsmanlike thing of target shooting in camp, and that I was chief offender myself. I do not believe, however, that it had any effect on the game, since the ducks were being bombarded nearly every day on the creek anyhow. Shooting squirrels was a necessity if we got any fresh meat at all, and was done after the morning hunt.

Surely Mr. Weaver is entitled to "some ideas of his own" on deer hunting, to which our guide seems to object. "Hunting in the grass expecting to jump them like rabbits" really means that Mr. Weaver was examining the cornfields of the large plantation mentioned looking for tracks of deer or turkey. The fact that not a sign of game was to be found there did much to discourage us with the neighborhood.

No doubt twenty shots were fired, as the guide says, four of them by Weaver, and as stated before, with hardly a possibility of touching anything. Of the remaining sixteen shots seven or eight were fired by Heithaus in an attempt to kill two running deer, the balance by Esslinger in a desperate attempt to show us that deer could be killed in that country. But Mr. Esslinger is mistaken; deer were not sighted by the party, but by the guide. One of the party persisted in the belief that our guide was a spiritualist. Not one of the ordinary kind

and nearer. The fox sees that it is all up with him, but he is game to the end. Fiercely he faces his pursuers and savagely bites the leading hound. It is a battle royal, but the odds are too great, and in a moment as fine a fox as ever raced over the sand of Cape Cod lies dead on the grass.

The gallant hounds are exhausted by their long chase. They curl up beside their prey and fall asleep. Well do they deserve their rest, for they have accomplished a deed seldom equalled in New England. They have run down and killed on the ground after a fair race a full grown red fox. It is a deed worthy of record, and the story of the run has been told here just as it was seen. I take the pelt and on the way home meet the boys with a good bag of quail. "Well, what have you got?" 'A fox skin that all the quail you have seen to-day couldn't purchase. I've had the greatest run on record—the event of a dozen seasons." BRADLEY.

A MOONLIGHT EXPEDITION.

SOME seasons ago I was a factor in the population of Elko county, Nevada, and helped, to the best of my ability, to represent civilization in a small community in the valley of the Humboldt. A great many people travel through this valley yearly in the Pullman and tourist cars of the Central Pacific Railroad, but few of them stop off in Humboldt county, and fewer still by riding through it know much of Humboldt Valley. All that appears to the eye on either side of the track for fifty or sixty miles is sage brush, and a kind of rye grass, spots entirely bare, where the soil is impregnated with alkali, and occasionally a glimpse of a sluggish and crooked creek called Humboldt River. In summer the landscape is rather monotonous, and in winter most dreary and forbidding. In reality, however, there are a great many things in Humboldt Valley—besides some people. There are Indians almost as wild as you care to have them, lots of coyotes, some deer, sage hens, rabbits, and the very finest trout in the stream that I ever encountered—at the table at least. And then in the spring the mosquitoes come along in large multitudes, and bring their bills along. Just at the time the fishing is the best the mosquitoes are the most plentiful and industrious. Late in the summer they disappear. Then in the fall a great many ducks come, and I killed some of the largest and fattest mallard drakes there that I ever saw.

One evening after supper the idea occurred to me that I might shoot some ducks by moonlight. Forthwith I got my gun, called my Irish setter, Humboldt, and started out. The moon shone very brightly, and I followed the gleaming rails of the railroad for about a mile from the station, and then turned off to some ponds near the river, where I could hear mallards quacking as though they were holding a convention. Why these ducks should do so much quacking is a mystery. It was light enough for me to see them on the water, when they were not in the shadow of the banks or the willows, and I could have got near enough to those I saw if some that I didn't see had kept still. As it was I stumbled across a small mud-hole that was in a shadow, and about a dozen mallards arose, making all the noise and creating all the alarm they could, which was a great deal.

I stopped one with two shots and scared up all the ducks around there. I never heard such an excitement among poultry as there was then. You see, those birds were not accustomed to being stirred up very often in daytime, and they evidently had never been interviewed by a shotgun by moonlight. The mallards all quacked, and the widgeon and teal whistled, the geese honked, and some cranes sent in a varied assortment of melody, and every thing with wings flapped the waters or hurtled through the air, and quacked, and whistled, and did everything it knew how to do to creat a hub-bub. Then some Shoshone Indian yelled, up the river, and coyotes kiyied all around until I thought I had never made such a disturbance in my life. My dog got excited, and after retrieving the duck I shot tried to retrieve all that I didn't shoot, and she managed to be everywhere and keep the birds going. I could hear them in myriads, but they flew so low I could nearly see them except an occasional glint of wings. I tried a couple of shots but heard nothing drop. When my dog Humboldt finally came along it was a coyote, and I didn't find it out soon enough to shoot. Then Humboldt did come, and so did the coyote, and I never in my life saw such a sociable coyote as he was, and by moonlight he looked big enough for a buffalo, and he had a playful way of snapping his teeth and dodging around. Then he would hide and then prance out right where I didn't expect to see him. Finally I got a fair shot and that coyote must have thought for a single instant that something exploded. During this time I mired down in all the mud there was in the vicinity. When I got home I had one duck, a coyote, a bad cold and this much experience. C. L. P.

WORCESTER'S SNOW HUNT.

WORCESTER, Mass., Feb. 5.—The annual "snow" hunt of the Worcester Fur Company was held on Feb. 2, and Purgatory and the Breakneck country was the ground selected for the day's sport. No snow, however, greeted the hunters on that morning.

Many of the enthusiasts had gathered at that famous hostelry of John White's, in Millbury, the night before and laid out the plans for the day's run. At daylight the first squad arrived from Worcester in teams and a start was made. The party separated and put out their flyers in the most likely places, but the following was difficult and but little could be done by the hounds until the sun had warmed things up a little. Later several sharp drives were started, but the hunters were well placed and it was almost impossible for a red to stay ahead of a pack for more than a few minutes play. Three foxes were killed during the day, all of them after short, but hot, drives. The lucky hunters were John M. White, John R. Thayer and G. J. Rugg. A supper at John White's followed, at which about thirty club members and friends sat down. The hunt was marred by an unpleasant and serious accident resulting from a loaded gun being laid on the ground with the muzzle pointing toward George Bates, of Whitinsville, the calf of whose leg now harbors the bulk of a charge of No. 1s. Some one hit the gun in stepping over it and another accident is added to the already too long hit of the "Didn't think it was loaded" series. HAL.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., Feb. 6.—To show the persistence of wildfowl in hanging around open water in the North even late in winter, I may mention the fact that on the 31st day of December of this winter, Frank Woods, keeper of Swan Lake Club, killed 3 geese and 40 ducks at an open bit of water on Swan Lake. The fowl had kept this hole open long after very heavy ice had formed in all the country round.

Mr. P. F. Stone starts for Horicon, Wis., on Monday next, to defend an injunction suit brought against Horicon Club for building a dam on the marsh of that name. This suit is spite work of market-shooters and not landowners, as no dam in that marsh can be built which will damage any land by flooding.

Mr. Patrick Quigley, of Jacksonville, Ill., is a brilliant man. He killed 142 rabbits, 13 squirrels and 7 crows, and brought them in and made affidavit that he did the whole butchering in 8 hours. The St. Louis *Chronicle* pleased him by publishing the facts. Now, will some sportsman in Jacksonville interview Mr. Quigley about the squirrels? Our game warden thinks the Illinois State Sportsmen's Association should take up this case. The association has members at Jacksonville. They come up every June to the tournament. Why not let them see the brilliant Mr. Quigley?

Mr. C. D. Gammon, the only big-game hunter of Chicago, has gone down to the Cumberland marshes after a rabbit.

The following paragraph appears in one of the journals which mold public opinion: "Judge Botkin, the Kansas jurist, whose life has been threatened, is a dead shot and holds court with his rifle within easy reach. He is said to unerringly pick a 10-cent piece off a fence at 100yds."

If Judge Botkin can unerringly even see a 10-cent piece on or off a fence at 100yds., he has a lot better eyes than any man I ever saw. I think "10 cent piece" is a misprint for "10-quart jug." In Kansas, that can be seen further.

These wars in which Botkin has lately figured around Hugoton, Springfield and a lot of those impossible Kansas towns which are relics of the boom of 1886, show how wrong things may go sometimes. These towns will never be towns, but they spoil a big strip of the finest antelope country in the world, country which in our time never will be good for anything but antelope and coyotes. It is to be wished that Judge Botkin, his unerring rifle, his friends and enemies, would move out of there, fight over something more worth while, and give the antelope a chance again. E. HOUGH.

THE CONNECTICUT LAKES REGION.

LANCASTER, N. H., Feb. 5.—*Editor Forest and Stream:* The winter thus far in this section has been very favorable for the protection of the large game. We had no snow until Jan. 15, and since that time about two and one-half to three feet has fallen, but it is, of course, light and dry with no thaw to form a crust.

No lumbering is being done in the Connecticut Lake region this winter, so game will not be disturbed there, although I doubt if there is a like section of the country where the fish and game laws are so well observed as in northern New Hampshire, and it is certain that no State is favored with more efficient fish and game commissioners than is our own, and as a result there probably has been no time during the past twenty-five years when deer has been as plentiful in the State as at present. It was almost an every day occurrence during the past two years for fishermen to report seeing one or more deer, while out for a day's fishing, especially at the Connecticut Lakes and the Diamond Ponds, and the past open season furnished more deer than any season for years.

There is a growing sentiment among the guides and sportsmen in this part of the State in favor of a non-hounding law, and the experience of the past season, under the new law shortening the hounding season to six weeks (from Sept. 15 to Nov. 1) has much to do with it. There were as many, if not more, deer taken during the first fifteen days of September than in any fifteen consecutive days after dogging was legal. From my personal observation I am satisfied this is the case in Coos county, and I am told that such was the result in other parts of the State.

It is to be hoped that a law prohibiting dogging entirely will be passed by our next Legislature. ROB.

NOTES FROM THE GAME FIELDS.

Editor Forest and Stream:

Mr. and Mrs. W. McK. Pardee are spending the winter here, and are devoting the greater part of their time to shooting. Mrs. Pardee is as ardent a sportsman as her husband, and equally as good a shot, with both rifle and shotgun, and as hundreds of sportsmen who know Mr. Pardee will understand, this is giving her a good record. I drove them out two miles from town the other evening to hunt jack rabbits. Mrs. Pardee used a .32cal. Winchester rifle and killed eight jack rabbits at distances varying from 80 to 200yds. At other times when I have been with her she has used a 16-gauge Parker, with which she bags ducks and quail on the wing as skillfully as the best shots in the country. Our blue quail run like greyhounds, and it requires a great deal of walking or running to get shots at them. We never hunt them with dogs here, as they are nearly always on open ground, and we follow them either on foot or on horseback, flushing them ourselves and then shooting them.

Several antelope have been killed lately, within two to ten miles from town. Mr. W. P. Bonbright, of Philadelphia, killed one, Judge Hawkins, of this place, two; Geo. W. Patton, of Chicago, one, and Dr. Canfield, of St. Louis, one. The antelope are tame here, and some of these shots have been made at less than 100yds.

My recent communication to FOREST AND STREAM regarding the opportunities this country offers for home seekers, has brought me letters from nearly every State and Territory in the Union, and one from New Brunswick, showing the wide circulation your paper enjoys. I have not had time to answer all of these letters as yet, but beg to say, for the information of all who are interested, that the Government land in this valley is being rapidly taken up, and that any one who desires to get any of it must be here very soon. Several of my correspondents have expressed an intention to come here and do some hunting. To these brethren I desire to extend all the hospitality that I can command, and to say that if more of them come than I can show over the country myself, I will place them in charge of ranchmen, who are good hunters, who will gladly show them around, and who make no charge for their services in this direction. G. O. SHIELDS.

EDDY, N. M., Jan. 28.

Editor Forest and Stream:

The Hunting Club, of South Boston, Va., is a regularly organized association, and has for its objects not only sport of superior character, but to foster and protect game of all kind and to publish to the world the peculiar advantages this section of the State of Virginia has for this kind of sport. The club has 15 members, owns a boat, tent, etc., in fact everything necessary to its comfort when an extended trip is taken.

The last hunt was along the waters of the Noble Dan, thence into Roanoke River as low down as what is termed "Hundred Islands"—camping in tents along the banks of these streams and shooting on both sides. A first-class cook was carried, and everything else that would add comfort and pleasure to the club. In addition to a number of well-trained bird dogs, we had opossum and deer dogs, so that at night sport of a different character might be indulged in. Partridges, wild turkeys, ducks, geese, deer, hares, squirrels, etc., abound in this section, and when the shades of night came on and the different squads of huntsmen returned, it was indeed a sight to behold the variety and quantity of game brought into camp. Wild geese, ducks, wild turkeys, hares, squirrels, partridges, etc., consisted the diet of every day. During the last few days of the hunt all game that was not consumed was brought back for the home folks. Besides the game, the bass and jack were among the delightful fish caught and placed upon bill of fare each day. The hunt lasted 10 days, and never more pleasure was afforded a company than this occasion furnished. H. J. W.

SOUTH BOSTON, Va., Jan. 30.

Editor Forest and Stream:

Probably this part of California is unsurpassed for wildfowl shooting by any section in the United States. We have had very little rain this season, therefore our open waters are literally alive with geese and ducks. Geese are so numerous they have to be "herded" off of the grain. But it is not so easy to kill them as one may imagine, as this part of the country is an almost geometrical plane. Three constituted the best bag I have made. We have the Canada, Hutchins's, speckle-bellied, snow and brant geese and almost every variety of ducks. In the fall and early winter we had good plover and curlew shooting. Robins collect in vast numbers at this season of the year. I heard a rancher complaining some time ago of them eating his winter hog food (berries of the laurel). I also know of a party of men and boys who butchered ninety dozen at their roost a few years ago.

YOLO COUNTY, Cal., January. BARTLEY.

Editor Forest and Stream:

Quail have been very plentiful this year throughout the State of Texas, and in company with two others on Dec. 5 I managed to get quite a large bag. The birds were old and strong and flew far and wide, giving the dogs a good chance to show their skill. I was surprised to find birds so plentiful so near to town (Denison). We had scarcely driven three miles when we struck our first covey, and every cornfield held one or two bunches. Swamp rabbits and cottontails were numerous, and a tramp along the bed of the Red River was rewarded by one solitary mallard. W. A. D., JR.

Editor Forest and Stream:

On the last day of 1891 a friend and myself went out and bagged nine woodcock, which I suppose will be considered a small number for two men in a day's shooting, yet it is a great many for our country. I have been shooting over the same ground for twenty-five years (after quail) and have never seen more than two or three in a day. The same party who accompanied me had bagged ten on the same ground two days before. The birds were in fine condition. Where did they come from? A. S. R.

WINDSOR, N. C., Jan. 11.

PROGRESS IN KENTUCKY.

Editor Forest and Stream:

Kentucky is at last moving with energy in the purpose to protect fish and game before both shall have disappeared utterly from her borders. The membership of the Kentucky Fish and Game Club, with headquarters at Louisville, is increasing rapidly, and recently an adjunct club has been organized in this city, with more than fifty active workers in the cause. Before a fortnight the latter club will embrace at least 100 members, as the interest grows and applications for membership are daily offering. The new organization is the Franklin County Fish and Game Club, with Sam R. Smith President; Richard Morris, Vice-President; Henry C. Murray, Recording Secretary; M. P. Gray, Corresponding Secretary; A. W. Overton, Treasurer.

The lower branch of the Kentucky Legislature, under the efforts of the two organizations named, has just passed by a vote of more than two to one, a stringent fish bill, prohibiting netting, seining, dynamiting and brush drags, and providing for fishways at dams that obstruct the passage of fish. We have every assurance that the Senate will approve the bill.

The vigor and earnestness given to the movement and the strong legislative support is something new in Kentucky, as heretofore every effort to protect fish and game by suitable laws has been met with obstruction, limitations, restrictions to specific localities, and other burdens, until such bills as went through the Legislature were so crippled as to be ineffective.

The Fish and Game clubs propose to move with energy upon the works of violators of the law, should the bill pass. They will offer suitable rewards and employ such legal assistance as may be necessary. ANGLER.

FRANKFORT, Ky., Feb. 6.

"THE SOLITARY STAG" is one of the paintings which are the artistic fruits of Mr. W. Holberton's last trip to Newfoundland. This, with another, "October Snow on the Marsh," is now on exhibition at Abbey & Imbrie's, 18 Vesey street, this city.

MONROE SPORTSMEN'S ASSOCIATION.

ROCHESTER, Feb. 8.—It seems as if sportsmen in this city and vicinity are really waking up. The annual meeting of the Monroe Sportsmen's Association last Wednesday was well attended and much interest was evinced by those present in the plans of the directors for the propagation and protection of game and fish.

It was the unanimous opinion of those present that the State ought to appropriate money for the propagation of game birds just as it does for fish, and the committee who will represent the association at the Syracuse convention were instructed to bring this matter up and push it before that body.

It was voted to pay $25 to any person furnishing evidence sufficient for the conviction of any person shooting game out of season. The matter of purchasing 1,000 more quail for distribution among land owners who will agree to feed and look after them, was left with the Board of Directors with full power to act. The following were the officers elected for 1892: President, W. S. Kimball; Vice-President, J. R. Fanning; Treasurer, F. B. Bishop; Secretary, Edmund Redmond; Board of Directors—J. H. Brown, J. W. Oothout and J. K. Beckwith; Delegates to the Syracuse Convention, Friday, Feb. 12—E. O. Sage, C. C. Morse, Dr. M. L. Mallory.

Last Thursday evening a new sportsmen's club was organized in this city, to be known as the "Forest and Stream" Rod and Gun Club. The organization starts out well, having a membership of thirty, with a half century limit. It has nicely furnished rooms and will hold semi-monthly shoots at the Driving Park.

The officers elect are: President, George J. Zimmer; First Vice-President, J. F. Hafner; Second Vice-President, M. D. Tarba; Third Vice-President, W. L. Romley; Secretary and Financier, P. H. Kelly; Corresponding Secretary, W. O. La Force; Shooting Master, E. B. Meyers; Assistant Shooting Master, Geo. Burr; Fishing Master, B. F. Bryant; Assistant Fishing Master, T. J. Williams.

Now, in regard to the late departures by this journal, every one here speaks in the highest praise of all of them but one, and that is the color of the cover, and if there are as many disaffected readers in other cities as there are here, and you fellows who run the paper will give us a chance to vote as to whether the color shall be white or the old green we all love so well (and would again if we had the chance), it is ten to one that green she'd be. Jacobstaff I am with you, and I am sure we are in good company. O. S. BEE.

CALIFORNIA NOTES.

AUBURN, Cal., Jan. 15.—To-day, as I was riding along under a genial sky, with the green grass and springing vegetation on all sides, and the quail whirring up from the roadside and the boom of the hunter's gun sounding from the hills and cañons, my memory carried me back to my experience of January days in my old Eastern home, and I could but congratulate myself upon my present fortune.

We who have lived upon this coast for many years have become indifferent to and thoughtless about our many blessings and privileges, and simply take them as a matter of course.

But I can remember well the sensations experienced in my first winter in California and the novel adventures it yielded. And I think these memories have been awakened, and my commiseration for the lot of the Eastern sportsman in these January days has been aroused by a little incident that occurred the other day.

All the world knows (or at least ought to know) that the great annual Citrus Fair for northern California is now being held in this little city. On Wednesday last (the 13th) the excursion train of the International Press Club arrived here, bearing the great Eastern lights of that association on a visit to our State. The excursionists made their first halt in the State at this place, that they might visit the fair and view our oranges and lemons in all their golden beauty, as arranged in walls, arches, pyramids, temples, pagodas, lighthouses, pillars, horns of plenty, and all other imaginable forms of beauty that could be constructed out of the tempting fruit.

The train arrived just after sunrise, with its platforms, brakebeams, etc., dripping with the melting snow, some of which it had probably brought with it from its starting point in New York city.

As the train came to a standstill one of the members of the club came out upon the platform, sleepily rubbing his eyes, and as he turned to descend the steps of the car the level rays of the glorious sun struck him fairly in the face. He stopped, with his foot in midair, gazed an instant upon the grand scene of mountain, cañon and valley glowing in the genial rays of the risen sun, and then, taking off his hat, he made a low obeisance to that royal luminary and exclaimed, "Good day, sir. How do you do. I have not seen your blessed face before for ten days." Then, turning, he called back to his fellow travelers: "Hurry up, gentlemen, hurry up! Here's the sun, and God's green earth once more!"

The scene reminded me forcibly that we, who live here among these favored surroundings, forget our blessings, and fail to be grateful for our privileges.

While the New England sportsman has no opportunity of giving his gun an airing unless by braving the wintry winds after "Br'er Fox," our guns are kept smoking every day if so desired. The law-abiding deer hunter's rifle is laid aside here for two years, as deer are absolutely protected for that length of time, owing to so many having perished in their mountain feeding grounds by the heavy snows of the winter of '89 and '90, and also to their rapid decimation by the despicable "skin butcher."

But the quail—two varieties—the *pièce de résistance* of the California gunner, is with us always for our delight and sport. Of course in the two great valleys (practically one) of the Sacramento and San Joaquin geese and ducks form the staple sport. But I speak for the State at large when I claim the quail to be our leading game. And they will always be with us. In our State is a vast territory of mountainous lands, covered with a dense growth of chapparal, which never will be, and never can be, cultivated. Within these safe recesses *Orortyx* and *Lophortyx* will live, multiply and grow fat, until present conditions of soil and climate shall be no more.

Brothers of the gun, you who dwell amid the snowy fields and ice-covered streams of the North, come and sit down with me to this dish of good things! All the year around we will keep our guns and rifles in practice upon the hare and the spermophile—both destructive creatures, and without friends—which yield a fair amount of sport, as it requires skill to compass their capture.

Then, in accordance with whether it is the "open" or "close" season, we can for nine months in the year enjoy prime sport after the choicest game our country affords. In June the dove season opens; then comes the deer—the years 1891 and 1892 excepted—in September the quail, grouse, ducks and snipes (the geese inaugurate their own close season) occupy our attention till close time comes again. Is this not a feast of fat things? But I do not want you all to come to it at once, for if you do our combined efforts would soon "terminate the career of the anserine producer of the auriferous ovæ."

Then, again, we have a lot of other fun sandwiched in between. We have coons (just the same old coons that broke up the "school meetin'" at Danvis), gray foxes, wild pigeons and, greatest of all, bears. Why, some summers ago, I got fairly rooted out of my blankets by a bear while sleeping in a sheep camp in the high sierra—but that's another story.

Yes, gentlemen, our shooting, like our roses, can be enjoyed throughout every month in the year.

Of course this is a trite subject to many, and needed no words; but to many others, even among our California gunners, the difference that climate causes to sport is never realized. AREFAR.

NEW YORK ASSOCIATION.—New York, Feb. 9.—The regular monthly meeting of the New York Association for the Protection of Game was held last evening at the Gerlach. Nineteen members sat down to a very handsomely arranged round table in the center of which was a superb bank of tulips, evidently in honor of President Roosevelt. After discussing an elegant dinner the club adjourned to the reception room to attend to the regular business of the association. Among the many communications read was one from Angelo Murillo offering to settle with the club for the sum of $150. This offer was accepted, as was also one from a Mr. Kaiser, on West street, who offered to pay $25 and costs for selling quail out of season. The secretary complained that he was served with game out of season at Proctor's restaurant and furnished proofs of same. The counsel was instructed to commence a suit for $125, the penalty for five birds so served. The counsel was requested to caution Mr. Sherry, the famous Fifth avenue caterer, who served pinnated grouse at the New York Rowing Club's dinner lately. After appointing delegates to the State convention to be held on the 12th inst. and electing one new member, the association adjourned.—W. HOLBERTON, Sec'y.

ST. LOUIS NOTES.—Feb. 6.—The St. Louis Gun Club has elected the following officers: Pres., Wm. Fisher; Vice-Pres., Geo. Robinson; Sec'y, L. Smith; Treas., Wm. Bottle. The Swifton Hunting and Fishing Club has been recently organized and has purchased a tract of land on the St. Francis River near Big Lake, where a club house will be erected next summer. The Keeners Gun Club is a new organization and it has purchased a tract of land in Arkansas on the Black River. The officers are: Pres., W. S. Wade; Vice-Pres., L. B. Ennis; Sec'y, H. Miller, and Treas., H. Griffin. The U. S. Fish Commission has sent a car from the Neosho hatchery to Chilton on the Current River, where 2,500 tench and 1,500 rainbow trout will be turned loose. The Current River is one of the best fishing streams in this State.—ABERDEEN.

SLEEPING BAGS.—I bought 5yds. of unbleached cotton cloth and made it into a bag 3ft. wide by 7ft. long, dipped it in boiled oil and hung it up to dry. I then took a heavy double blanket, folded it twice and sewed it along the side and one end, making a bag with four compartments. In warm summer nights I crawl into the top compartment, with one thickness over me and three thicknesses under me, and then draw the oiled bag on over. In winter I sleep with three blankets over and one under and have never had a cold or wet bed, though having slept with it on the beach in a cold east rain. So far as economy is concerned I think my bag perfect. I hope to hear more of sleeping bags through the FOREST AND STREAM.—C. W. H.

ASHLAND, Pa., Feb. 8.—The initial step for the formation of a game and fish protective association was taken on Tuesday night by about a dozen of our sportsmen who met at the American Hose house. The next meeting will be held at the Americus Club rooms on Tuesday evening next at 7:30 o'clock. Sportsmen from anywhere in the county are cordially invited to be present and join.—T. F. B.

CAPT. GALLUP.—The venerable Captain E. B. Gallup, who has been acting as a policeman for the Taylor's Island Ducking Club, has served out his term and has returned to his home in Havre de Grace. Captain Gallup was a brave and efficient officer and will be missed from the neighborhood.

SMALL CALIBERS.—I have been much interested in the articles on small-bores, and can add a *bona fide* testimony to the killing powers of a little .22. Two deer were killed in this vicinity by the first shot each. One was a buck, shot through the shoulder at 100yds., the other in the neck at less distance by a .22 long.—STRAIGHT.

THE NEW JERSEY BILL to permit landowners to kill game from Sept. 1 to March 1 has been killed.

Camp-Fire Flickerings.

"That reminds me."

I WENT 800 miles to catch my first trout. It was on Sunday. My guide and friend would not desecrate the day, but seeing my eagerness agreed to show me "how it was done." Flies were not much used then. The bait was angleworms, carried the whole distance in boxes. It did not take me long to capture my first one, but on seeking to arrange bait I discovered I had the "buck ague" so bad I could not hold the hook in my hand. JAP.

TROUTING IN THE CASCADES.—IX.

THE MOLALLA COUNTRY.

THE evening of the second day of August found me at Moody's, on the bank of the Molalla, with the same crew and cargo. Again the women were sipping their tea; again Ira and Billy were spinning yarns, and again Fay and I were out in the yard looking at the mountains and laying our plans for a cruise into the Cascades.

For a month the sky had been cloudless and blue, as only the Oregon sky can be, and the mellowing influence of the calm summer was perceptible on every hand. The bright steely green of the grass and leaves of early June had sobered into those yellow tints suggestive of the swiftly approaching autumn.

"The spring's gay promise melted in thee,
Fair summer, and thy gentle reign is here."

The pure stratified air bore to our ears the sighs of sorrowing nature and decrepit summer yawned drowsily.

Again we listened to Ira's stories of frontier life; again we slept the innocent sleep of the angler sandwiched between the flea-infested sheets; awoke, dressed and ate our breakfast, and again Fay and I were standing on the bank at the upper crossing of the Molalla.

The mad torrent of June was no more. The hot breath of the dying summer had bidden the mountain's troubled pulse "peace, be still!" and only the peevish fretting of the weary waters greeted our ears. "The shallows murmured, but the deeps were dumb."

More than a month after our departure the remains of poor Voorhes had been found half buried in the drifting sand a mile below the scene of the accident. A fractured skull accounted in a measure for his bewildered actions at the time he was drowned. Evidently when his horse fell his head had struck a boulder, which rendered him half unconscious and an easy victim for the voracious torrent.

I desired to pitch camp again at Hall's, on Milk Creek, for the sweet memories of the early June would not down. I hungered after the same scenes and thrills of pleasure which were pictured and embalmed in memory's abode.

Moody hitched up the same team to the same wagon and took us over the same road to the old camp ground, but there was a laziness about the Milk Creek Rapids and a listlessness about the camp that was dispiriting, and I requested Ira to come up the next afternoon, as I might wish to move camp. Few trout responded to my casts, and they in a dreprecating sort of way that modified the emblazoned memories of June.

Pleasantly enough we spent the evening around the same old camp-fire with the Halls, but there was not the same ring to the laughter, not the same pithiness to the stories, not the same snap and crackle to the camp-fire. Frank was away in the Willamette Valley at work in the harvest fields, and I wished for the morrow and Moody to come.

Impatiently I awaited the coming of the grays and spring wagon next day, for I had planned, and laid my plan well for a new departure.

I reasoned that the trout had deserted these smaller streams for deeper waters, and that the Molalla itself would make amends for the shattered idols and mental anguish of my second camp on Milk Creek.

I shouldered my shotgun, and strolled out for wild pigeons. The woods were full of them, for they were feeding on berries now ripened. I bagged a dozen or so besides three blue grouse and a brace of pheasants. Less than a mile from camp I got lost and wandered around for an hour before I found any familiar landmarks that enabled me to get my bearings. I am not much of a woodsman, and without a creek to follow, it is almost unsafe for me to go into the deep woods. Probably this is but a natural result of a rearing on the wide prairies of Iowa.

In a dark cañon which seemed wrapped in the dreary solitude and stillness of the grave, I discovered a beautiful spring. Sitting down, I drank my fill of its sparkling nectar and then proceeded on down its miry outlet, for I knew it must be running down hill and into Bull's Creek or Milk Creek or the Molalla. The inter-woven sal-lal and vine-maple formed an almost impregnable abatis, but I pushed my way through at the expense of torn clothes, and the loss of considerable epidermis.

The mire was full of the tracks of wild animals. There was the track of the stealthy cat, the stupid bear and the timid deer, all intermingled, and I imagined that I must be lost in some dark hidden fastness of the deep mountains. I was about to beat a retreat from the impenetrable jungle, when with a last frantic effort I burst out into the open about 200yds. from Hall's house. I had been duly and properly lost less than half a mile from my own camp.

The grays were standing down by the camp sleeping, thrashing flies, and Billy and my wife were lazily whipcing Bull's Creek. As I approached, my wife peevishly threw her rod on her shoulder and started for the house, while Billy laughed outright. It seems that she had hooked a young Chinook salmon, about the size of a girl's little finger, which Billy had unhooked and thrown back. No sooner did she cast again than the same fingerling attacked with a vehemence that indicated his firm determination to swallow the whole business, or die in the attempt. The greediness of the Chinook fingerlings is almost phenomenal. Such being the case I cannot understand why it is that when full grown he never takes the fly.

We lounged around in the shade until three o'clock, then loaded up and started for the Molalla. We would go back to Moody's for the night, and next day pitch our camp as near the junction as we could get. It was about five o'clock in the afternoon when the horses stopped to

drink in the sweet waters of the Molalla. It was truly a beautiful stream, and there was a tinkling melody in the laughing rapid below the ford that tempted me. It seemed to say:

A merry old trout is hiding here,
Come cast your fly and see.

The horses drank slowly at the fount of bliss as if to delay their departure from this horse heaven as long as possible. Ira had tightened the reins to move on when the siren in the rapid again whispered in my ear:

A merry old trout is hiding here,
Close under the alder tree.

"Ira," said I, "hold on a minute, I am going to try that pool below the rapid." Ira laughed and remarked, "All right, try it if ye want to, for we've got lots o' time and to spare, but you won't ketch any feesh," and then added, "Nobody never catches any right in the Molalla, it's too big a stream, you'd better wait till ye git to Trout Creek or Pine Creek." "Never you mind, old boy," said I, "I'll show you a trick worth two of Trout Creek." So the horses were stopped on the stony bank, and I proceeded to put my heaviest split-bamboo together and tie on a whip of No. 4 flies, while Billy lay back on the folded tents for a snooze and my wife drew a long sigh.

Ira crossed his legs, lit his pipe, and looked over his shoulder at me with a "you'll find that the old man knows best" sort of an air. Nothing daunted, I stepped down to the foot of the rapid where it noisily threw itself into the embrace of the sleepy pool, shaded from the western sun by drooping water willows and leafy alders. Taking a position that gave me good command of the pool, I made a long cast to the further side of the rapid and anxiously watched my flies as they danced merrily down into the swirl.

Spat! Bang! Whir-r-r-r! And away went two big fellows well hooked on the white-miller and royal-coachman respectively; and, with a pride and joy that could only find vent in a regular Apache war whoop, I let them go.

My yell of delight startled the drowsy occupants of the wagon. Instantly Ira's pipe was out of his mouth and he was staring at me in astonishment; my wife twisted around on the seat to see what was going on; and Billy was standing flat-flooted on the back seat, while Mike, the old dog, leaped out of his corner in the wagon and hurried to my assistance.

"Bring the landing net, Billy," I yelled; and in a twinkling Billy had the net and was out of the wagon ready for business. For fully ten minutes I exercised my knowledge of the art of fly-fishing to the fullest degree, but finally successfully landed both. Oh, but they were beauties! Two-pounders and no mistake!

With a pride and rapture known only to the successful angler, I surveyed my capture as they lay there on the polished stones, gasping and dripping in their jeweled loveliness.

"That settles it," said Billy, and in a jiffy his rod, landing net and creel were out of the wagon and down by the pool.

"Wal," said Ira, "I reckon as how you uns is goin' to stop awhile, so I will take the woman on up home and you fellows can walk up when ye git tired, for it's only 'bout a mile."

Yes, "we uns were undoubtedly going to stop awhile," whether he drove up home or clear on to Oregon City. So away over the wide bottom of the Molalla rattled the wagon, and Billy and I were alone in our glory.

Two hours of precious daylight were at our disposal, and we started in at once to utilize them. The entire extent of the stream fished by us that evening could not have exceeded a hundred rods. Forty-two trout, all big fellows, repaid our pleasing toil, and no two happier anglers ever sauntered up the twilight trail than Billy and I as we recounted the proud rises and graceful curves, the vicious tugs and bold leaps of the spotted denizens of the Molalla that had surrendered to our victorious rods.

S. H. Greene.

Portland, Oregon.

LARGE-MOUTH AND SMALL-MOUTH.

Editor Forest and Stream:

In your issue of Jan. 28 "Old Sam" concludes his article entitled "Bass and Butterfly" by saying: "No big-mouthed bass there; no dull, heavy splash and dead weight to pull in; but only the trim, eager, active, gallant and dauntless small-mouth bass, fighting like a hero and game to the last. The Creator made the white man and the Indian, so he made the big-mouth and the small-mouth bass; but the one is no more alike than the other in staying qualities."

I heartily approve of his description of the gaminess of the small-mouth bass, but with all due respect for his opinion (which I doubt not was honestly formed from his own experience as well as from the experience of others), I feel it my duty to the large-mouth bass of this locality to take exception to his comparison. An Indian in his natural state, I believe, is very much the same wherever he is found. Not so with the large-mouth bass. Its gaminess and staying qualities depend very much upon where we meet it. The fighting qualities of the large-mouth bass found in the small inland lakes and sluggish streams is no more to be compared to that of his brother found in the cold water of large lakes and the clear running water of rivers, than the fighting tactics of the grass pike (Northern pickerel) is to be compared to that of the trout. In his "Book of the Black Bass," Dr. Henshall says: "Fish inhabiting swiftly running streams are always more vigorous and 'gamy' than those in still waters, and it is probable that, where the large-mouth exists alone in very shallow and sluggish waters, of high temperature and thickly grown with algæ, it will exhibit less combative qualities, consequent on the enervating influence of its surroundings; but where both species inhabit the same waters and are subject to the same conditions, I am convinced that no angler can tell whether he has hooked a large or small-mouth bass from their resistance and mode of fighting, provided they are of equal weight, until he has the ocular evidence."

My experience leads me to believe that Dr. Henshall's conclusion is very nearly correct. I am well aware that most anglers will agree with "Old Sam" as the general reputation of the large-mouth bass has suffered on account of its being found in nearly all the small inland lakes and sluggish streams, the waters of which are generally warm and often muddy, and where few, if any, small-mouth bass exist, and there I think is where most anglers have made his acquaintance, and under such conditions have they judged them; in other words, its reputation for gameness has been injured by its ability to adjust itself to circumstances and live and thrive in almost any waters. I am inclined to believe that if "Old Sam" could forget his past experience and, perhaps I might respectfully say, his prejudices, and meet the large-mouth bass on the same "ground" with its small-mouth competitor, in the clear water of the St. Clair Flats, in any of the channels that carry the water of the St. Clair River to the lake, he would not find it a dull, dead weight to pull in, but something with life, activity, bone, muscle and endurance, worthy of his skill; and that he would return home with at least a better opinion of the large-mouth bass—with no apology for having it on his string (we don't use creels), as he certainly would need none for placing it on his table. Too many times have I hooked the fish, and contested with it for every inch of a long line, to doubt its gameness, under favorable circumstances; and while I believe the small-mouth bass is entitled to the reputation he has so nobly won, I firmly believe that the large-mouth bass is greatly underestimated as a game fish. I do not doubt that in some inland lakes and ponds he may, when pressed by hunger, devour snakes, but for all that he is no "Injin."

Detroit, Mich. J. W. S.

A GREEN HAND AMONG THE SALMON.

"COME up with me next June and catch you a salmon," quoth my friend E. W. Davis. "I have lots of water there and a pleasant place to stop." This to a not over-ardent fisherman, whose highest ambition has always been to catch a tautog of over 10lbs., and who in thirty years' fishing has never done so, and to whom the hand line and not the rod has been most familiar—seemed a preposterous proposition. I had never cast a fly in my life, and the lordly salmon I thought was very safe from me, and so I told my friend. "But," he said, "come along; everybody has to catch his first salmon, and so must you." So all ignorant and without hope I went.

The Grand Cascapedia is in the Province of Quebec and flows into the Bay Chaleur from the north. A drive of twelve miles from the mouth of it over a good road brought us to the pleasant farmhouse, within a stone's throw of the river, which was to be our headquarters for the month. Here my friend had assembled a small army of helpers, for each fisherman requires two to man his boat. The boats are built on the canoe model, and are very able with the weight of three men in them. It was late on Saturday when I arrived, and as no fishing is allowed on Sunday I devoted that day to learning the rudiments of fly-casting. My friend put a beautiful rod into my hands with the remark that if I smashed it there were plenty more; and as he reeled off the line and cast 70 or 80ft. with it, it seemed easy enough. Under his coaching I worked all day. My first efforts were dismal failures. The fly would persist in going in every direction except the right one, to the great edification and amusement of the numerous helpers, who are all of them more or less skillful at casting; but at last I began to get the hang of it to a small extent, though an intelligent cow would have been less of a chump than I was at first.

Monday morning found us in our boats and off down the river to the pools allotted to each of the party. Mr. Davis owns about four miles of the river, including some of the very best pools; the coming season he will acquire more by lease and purchase from the riparian owners. These fishing privileges are most carefully guarded, and this comparatively remote stream is as strictly preserved as if it flowed through a private estate.

It has a swift current, broken now and then by rapids where it narrows; and slows up a little at the deeper spots, where the fish like to rest. Coming to one of these deeper reaches of the river, the helper in the after part of the boat dropped over an iron weight shod with lead; this is to prevent any noise when in strikes the stones on the bottom, the water in these deeper pools being some 6 to 10ft. deep. The angler now stands up amidship and begins to cast, the current takes his fly down stream as soon as it touches the water. After a few casts right and left he unreels a few feet more line, and continues to do so until he has as much line out as he can conveniently manage. Then he reels up short; the weight is lifted, and the boat drops down 30 or 40ft.; and the casting is renewed until the whole length of the pool is fished. My only victim that first day was a kelt.

A kelt is a salmon that, for some reason best known to itself, has not migrated to salt water the previous season, or perhaps for a longer time. He is long and lank and dark in color, is only eaten by Indians or used to bait a bear trap, and very rarely jumps out of water when hooked.

This one took the fly with a rush and a splash, and away he went. The reel screamed, the rod bent double, and the two helpers shouted all sorts of directions in a breath. I had been instructed to let the reel alone on the first rush of the fish, and to keep the tip well back and give him the butt. This I did, and some very strong "naval language" to the helpers made them dumb, the anchor was taken in in a jiffy, and down the stream we went in grand procession. Keeping the line taut and reeling in when opportunity offered, we soon got the fish to a gravelly beach, where the water shoaled, and here I soon exhausted him; and when he turned up his side one of the men waded in and, grasping his tail, drew him out. We unhooked him and after a brief examination gave him his liberty, and he slowly swam off into deeper water none the worse for his encounter. His weight was about 25lbs., and he was not a handsome fish to look at. Kelt are never counted by fishermen and are voted a nuisance, as their capture disturbs the pool and frightens good fish off.

It was several days before I landed a fresh-run fish, though every day I caught a kelt or two, and only had one break away by the leader getting round a hidden snag. At last one afternoon a fresh-run fish jumped two or three times near the boat; then after a few casts took the fly, a silver-doctor, and the sensation at my end was very like hooking the Chicago limited. He jumped half a dozen times out of water, and each time I forgot to lower my tip, as I had been told was the proper caper; in fact in his first rush he seemed to me to be out of water most of the time. He ran across the pool, which was a hundred yards wide there, and we got below him and made him fight up stream, and after half an hour worked him up to the boat, and one of the helpers took him into the boat very neatly with the gaff. Knocking him on the head, we paddled ashore, and laying him on the grass I smoked a pipe over him in great content.

At last I had caught a legitimate fresh-run salmon all by my own unaided efforts, which was about the very last thing I had ever expected to accomplish in this world or any other, and my long coming 10lbs. tautog might forever go uncaught for all me, I thought (he has not arrived as yet, by the way); and I will write a letter to Forest and Stream, I said to myself, for the encouragement of greenhorns and the glorious fraternity of hand-line fishermen, of which noble band I am an humble brother.

My fish weighed 26lbs.—not a large salmon for the Cascapedia, where 40-pounders and upward are not rare. Mrs. Davis took one the same day, which weighed 36lbs., and to be beaten by her was an added pleasure. I took three others during my stay, the largest 28lbs., and I lost none save the kelt that fouled the unseen snag, we judged it to be a kelt, for we never saw him during the hour I had him on.

It was a poor year for fish, everybody said, but it seemed to me it was a very good year for the subscriber, and to those of your readers who by virtue of their modesty, lack the ambition to tackle the salmon, and to whom fly-casting is a bugbear and a mystery, made tenfold so by the average writer on the subject, I say go and try as I did and you will be astonished at the result. Not but what the skilled angler will catch fish where you won't, and play and land them in quarter the time you will, but you never need begrudge the time you occupy in playing a fish, and to a modest man one fish a day is glory enough. All you need is unlimited patience, skill enough to get your fly out fifty feet in as good form as is allowed you to do (a salmon hooks himself), and coolness enough to play and tire out your fish, in doing which a wise green hand will take plenty of time.

I saw Mr. Davis land a 36-pound fish in ten minutes after he took the fly, while I worked one day an hour and twenty minutes over a big kelt as it proved to be, which we thought might be a fresh run fish, and so I was over careful, but that was a very short hour. That is the difference between a good fisherman and a poor one. I know of some skilled salmon killers who will laugh at this my screed, but I write of things as I found them, and to encourage others to go and do likewise. Privileges can be hired by the month, or more or less as the need requires, of the owners or lessees of water; and the amateur can try for himself, and I am very sure success will attend him.

I must not close without a word about the trout in the Cascapedia. All through June little fellows of 3 or 4oz. in weight would occasionally take the fly and make a bother, how such small fry could take such a large mouthful was always a mystery to me. I was told that in July the large trout would run up from the sea. Near the end of June one day while casting for salmon without success I saw several large trout break water, and putting on a small dark fly I caught in a short time twelve that weighed 32lbs., the largest 5½lbs. I had great sport and thought I could do it the next day, but I didn't. It seems they run up the river in schools, and I happened to strike a school that day. All through July they are very abundant, and finer fish on the table I never saw. N. D.

BOSTON NOTES.

AMONG the Boston fishermen who have gone South within the last week to try the tarpon fishing off the Florida coast may be mentioned Mr. W. S. Hills. Although this gentleman has recently become totally blind, he does not give up his angling pleasures. Last spring at the Rangeleys Mr. Hills had remarkably good luck, and succeeded in capturing a number of large fish. He is very persevering and patient, and his friends earnestly hope that he will be successful in landing a fine specimen of the noble tarpon on his present trip.

Mr. S. A. Carleton, of Boston, will shortly go South to try the Florida fishing.

Mr. T. C. Felton, one of the Hub's angling devotees, will start for the Pacific coast about March 10. He will visit a brother who is located at Santa Barbara, Cal., and goes fully prepared to enjoy the fishing which abounds in that locality. His description of the sport to be obtained there, by casting off the rocks, or in trolling from a boat off the shore, is quite thrilling. Bonito and baricouta are the principal fish hooked, and always give very rare sport.

The Massachusetts Fish and Game Protective Association have issued cards for a regular monthly meeting and dinner, to be held at the American House, in Boston, on the evening of Feb. 11. The constantly growing membership of this organization—so important to the interests of sportsmen, is a source of wonder and gratification to all lovers of the rod and gun.

The petition which is being circulated among New England salmon anglers interested in the Canadian salmon fishing, asking that all salmon nets shall be raised during three successive days and nights of each week, is receiving many signatures. This rule, if enforced, would add materially to the value of the privileges owned by Americans. Wm. R. Scott.

ANGLING NOTES.

MR J. HERBERT JOHNSTON and an angling companion had a peculiar and rather uncomfortable experience last September. They were fishing in the Gaspé district and decided to try the water on the Island of Anticosti in the Gulf of St. Lawrence. After considerable difficulty they managed to find a fishing schooner to take them over to the island. As it is a rough and dangerous passage, and there are no harbors in which shelter can be found, they had to wait several days for a fair wind. Finally they arrived safely with all their traps, including tent and provisions, and dismissed their captain, who promised to return for them on a certain day. They enjoyed the best of sport there and caught trout until they were tired of fishing. In one large pool they saw six salmon, but as these were out of season they did not disturb them. The great trouble was that the small trout were so plentiful in the pools that they would not give the big fellows a chance, but would seize the flies the moment they touched the water, and every fly on the leader would land a fish at every cast.

At the appointed time they returned to the coast but no schooner appeared. Their provisions were about used up, and they dared not return to the interior to shoot or fish for fear that the boat would come during their ab-

sence. So they waited as patiently as they could for nine days, and were getting desperate, when they managed by aid of a fire to attract the notice of the Labrador mail boat, which took them off, and after much coaxing the captain returned with them to Gaspé, when they were able to communicate with their families once more and notify them that they were still in the land of the living.

As we have stated before in these columns, there are a great many of the salt-water fishes along the Florida coast that take the fly. Among them are the tarpon, particularly the young fish, that are quite plentiful along the bays and estuaries in the spring, but while these small tarpon running in weight from five to fifty pounds, rise very freely to the fly, they are, owing to the peculiar formation of the mouth, very hard to hook. Those that are brought to gaff are generally hooked foul and fight all the harder for that reason. It seems as if these fish were appearing earlier than usual this season judging from the number that have already been taken.

One of the best table fish now to be had in the market is the white perch. They are in their prime, fat and delicious. A fresh white perch, fried and served with cream, makes a most appetizing breakfast dish. They should weigh about one to one and a half pounds each. How any one can prefer frozen salmon or Florida shad is beyond my comprehension. SCARLET-IBIS.

FROM A PULLMAN CAR.

SWIFTLY the train slips down the long winding grade, lurching to right and to left with so little noise that the well-loved roar of the trout streams almost penetrates the cars. A pair of eager eyes watch the shifting scenes and drink in the beauties of mountain and valley, kindling with keener interest as the track parallels a wild stream. "What a pool! And there's another! Surely they must be there. Oh, for five minutes at that rock flume! See that white water! What joy! What life it must be to them to dash into it! Ah, must we part? Good-bye, then, sweet stream. You're a heedless sort of savage, but I like you."

And the eyes flit from place to place in search of another glimpse of the molten crystal.

Ahead there and to the right—what is that break in the green of the growth that slopes toward the mighty Delaware? We move so steadily now that the motion seems all to belong to the landscape, and the break where the water is looked for advances. Psss-eour-ou-ou-ooo go the air brakes. We are slowing down. Yes, sir, there is water through the trees there. It heads directly from the track. But why are we stopping; no wrecks ahead I hope. Ah, the engineer "pulls her out" a little, that's hopeful.

Here is the creek, and we must cross it. They are repairing the bridge, which explains why we are running carefully. Such a gem of a stream! Good for pound fish without a dou— "By Jove, there! Cast again in the sa—, that's it! Now you've—" but the cruel woods intervene, and when the owner of those eyes comes to his normal senses he apologizes to the astounded young lady in the opposite chair for having disturbed her, and offers in mitigation a wholly unsatisfactory and inadequate word picture of the creek, a gravelly shoal opposite a hollow bank, and an angler, who, casting from the shoal, misses the first rise of a lusty fellow, but fastens at the second appearance of the living rainbow. O.

Fisheulture.

A GOOD STOCK OF TROUT.

SUPERINTENDENT WILLIAM BULLER, of the Corry Station of the Pennsylvania Fish Commission, has taken the following numbers of trout eggs:

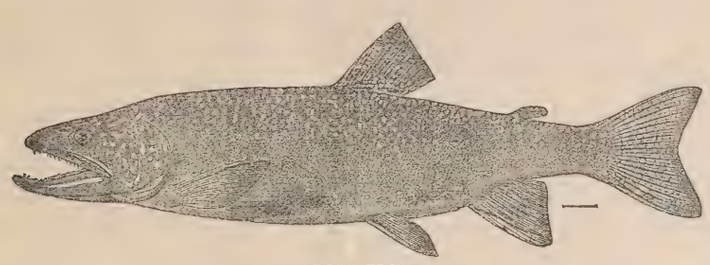
Brook trout	850,000
Lake trout	250,000
Brown trout	100,000
Hybrid (lake and brook)	120,000
	1,320,000

The rainbows have not yet begun to spawn, but judging from the number and size of the females they will yield 300,000 eggs, bringing the total to more than sixteen hundred thousand. This will be good news to Pennsylvania anglers. Mr. Buller now has four troughs of brook trout feeding, and thus far the eggs and fry have done well. Last season he reserved a large lot of fry and in the course of another year the spawners will be very largely increased in numbers at this station. The work of enlarging and improving the establishment is steadily progressing; last fall four fine large ponds were built and five more are to be constructed in the early part of the coming summer. The hatchery building was enlarged last summer, an acre of land was added to the extensive grounds, and to-day this station may be justly considered one of the very finest trout-breeding stations in the country, and Mr. Buller is one of the most capable superintendents to be found anywhere.

MENHADEN AND MACKEREL FISHERIES.

IN the Senate of the United States, Jan. 26, 1892, Mr. Aldrich introduced the following bill, which was read twice and referred to the Committee on Fisheries:

A bill to regulate the fisheries and for other purposes.



Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any citizen of the United States may at all times take menhaden and mackerel with purse seines along the sea coasts and shores of the United States, and along the shores of the several islands thereunto adjacent, and in the bays, harbors, and estuaries of the said sea coasts and shores of the United States and of the said islands, and in all waters under the maritime jurisdiction of the United States where the tide ebbs and flows, subject only to such control or restriction as Congress may prescribe from time to time, any law, custom or usage of any State to the contrary notwithstanding.

SEC. 2. That the Commissioner of Fish and Fisheries is hereby directed to make such inquiries and investigations as may be necessary for ascertaining to what extent, if any, there has been diminution in the abundance of fishes of commercial importance along the coasts of the United States and in the Great Lakes, and to report to Congress the result of these investigations, together with recommendations, if in his opinion any are necessary, as to the proper measures to be adopted for the preservation of the fisheries and the continuance of an ample supply of fish.

[Section 3 relates to licenses.]

HYBRID TROUT IN COLORADO.

THE new fish hatchery at Wellington Lake, situated in the Rocky Mountains about fifty miles west of Denver, Col., has received through Mr. John Gay 6,000 hybrid trout eggs (lake trout and brook trout). The eggs received in good condition about the middle of January, and nearly all were hatched in a day or two after being placed in the troughs. These hybrids attain a large growth, some having been caught in Pennsylvania streams weighing from 4 to 5lbs. each, and no doubt they will thrive in Colorado waters. The hatchery referred to is owned by a club formed of Denver gentlemen, H. M. Orahood, Esq., the railroad attorney, being a prominent member.

LAKE AND BROOK TROUT HYBRID.

[The beautiful and excellent hybrid above referred to was described in this journal Jan. 17 and figured May 9, 1889. We reprint the illustration. In Pennsylvania the cross is regarded as a very fine fish for the table; it has the additional advantage of fertility.]

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

FIXTURES.

DOG SHOWS.

Feb. 16 to 19.—Second Annual Show of the Central City Kennel, Jackson, Mich. Chas. H. Ruhl, Sec'y.

Feb. 23 to 26.—Sixteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Supt.

March 1 to 4.—First Dog Show of the Keystone Kennel Club at Philadelphia, Pa.

March 8 to 11.—Washington City Kennel Club, Washington, D. C. Fred. S. Webster, Sec'y, 738 Broadway, New York.

March 15 to 18.—Second Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Sec'y.

April 6 to 9.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Sec'y.

April 13 to 16.—Third Annual Dog Show of the Continental Kennel Club, at Denver, Col. R. W. Isenthal, Sec'y.

April 20 to 23.—Fourth Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.

May 4 to 7.—Annual Dog Show of the California Kennel Club, at San Francisco Cal. Frank J. Silvey, Sec'y.

THE SOUTHERN FIELD TRIALS.

THE field trials of the Southern Field Trial Club, which began on Monday, Feb. 1, and ended on the following Thursday, were the best of the field trial season, the excellence and uniformity of the work considered, and, in this respect probably the best that the club ever held. A rare lot of good dogs competed in each stake, the Derby and All-Aged, the former in the high class of work done, ranking with the best of all-age stakes. After the winners had been declared in each stake, there were still a number of dogs left in which had done a higher class of uniform work than that of the average field trial winner.

A most noticeable feature of the work throughout the competition was the almost entire absence of pottering, loafing or aimless running about. Each dog in most cases hunted with a purpose, and the greater number were exceptionally intelligent in conducting their efforts. Another feature, one which should be more cultivated and one which has been more or less ignored, was the better training of the dogs as shown by their steadier and more orderly field work. In the effort to develop the natural qualities of the dogs, the old theory of considering a dog in his thoroughly trained form was departed from so far that the extreme of considering nothing but natural qualities came in vogue in a great measure, and matters of training were not considered. Experience has demonstrated that many dogs which will hunt well in dashing style when half broken, will when broken and thus deprived of the pleasure of exercising their own selfish interests will not hunt with dash or industry and sometimes not at all. The good training displayed at these trials should be more thoroughly insisted on at all trials, and dogs not so trained should suffer the penalty of not being properly prepared for exhibiting them in proper form for judgment, although mere matters of training should not have a competitive value.

Several ladies graced the trials by their presence on the last three days, and the number of sportsmen present was remarkably large each day, and their interest did not flag a moment from the beginning to the end of the trials. They were orderly and well behaved, but sometimes in their eagerness to see the work they pressed too closely on the judges and annoyed them.

Lunch was served each day at the home of Mr. W. G. Bias in the open air, and it was one of the enjoyable features of the trials.

The work was somewhat impaired by hunting over the same grounds day after day. The club, it was rumored, would sow some peas and sorghum about their grounds in different fields, furnishing in this manner a food supply for the birds.

Among the prominent sportsmen present Messrs. Edward O'Neil and W. S. Bell, of Pittsburgh, Pa.; John M. Tracy, New York, A. F. Holmes and James F. Slocum, Detroit; C. M. Rounds, San Antonio, Texas; Col. James Gordon, Pontotoc, Miss.; Will Wilson, Atlanta, Ga.; F. S. Ward, Oxmoor, Ala.; J. C. Duncan, Knoxville, Tenn.; Lee Taylor, Mason, Tenn.; F. R. King, Manchester, Tenn.; W. G. Pilkington, Richmond, Tenn.; W. J. Baughn, Indiana; Dr. M. F. Rogers, New Albany, Miss.; Geo. La Rue, New York; Richard Merrill, Milwaukee; Col. P. H. O'Bannon, Sperryville, Va.; Mr. Tom Lilly, Chesterville, Miss.; Mr. W. N. Wallingford, Cincinnati; John S. Foster, Jasper, Ala., and a large number of others whose names I cannot now recall.

The club held a meeting on Wednesday night, at which Messrs. Richard Merrill, W. N. Wallingford and John S. Foster were elected members. The treasurer's report showed the club to be in a good financial condition. The stakes for next year will be the same as this; that is, in the Derby, for all setters and pointers whelped on or after Jan. 1, 1891, first $400, second $250, third $200. The All-Age Stake, open to all setters and pointers which have never won first prize in any all-age stake in America, first $300 second $200, third $150. The Derby entries close Aug. 1, the All-Age Stake entries close Nov. 1.

Both Mr. W. W. Titus and Mr. J. M. Avent were prevented from attending by illness in their families.

THE DERBY.

Twenty-one starters made an excellent showing so far as numbers are concerned, and the character of the dogs' qualities was very much higher than is commonly seen in a Derby; in fact, it was the best Derby seen in many years. There was but little poor work done, while there was a large part which rated high.

There were about six dogs, however, and no more, which should have been in the second series; for, while the others which were taken into that series were good dogs, they showed no capabilities that would give them consideration for a place. In fact, a part of the ones selected ran inferior races.

Each heat was run forty-five minutes, according to the requirements of the rules, which entailed a loss of time in working the dogs in some heats a longer time than was necessary merely to fit a rule. A time limit is one of those absurdities which crop up in field trials, and are perpetuated without any reason and are retained in spite of every reason against them. It originated in the advocacy of a few, and promised something as an experiment in the way of giving more satisfaction to the owners of dogs, presumably the poor dogs, as good ones would not need to be so favored. Practical application has clearly proven its inefficacy in every way, and it's plain that it obstructs the progress of the trials.

Wun Lung, the winner of first, is a well-known competitor and winner. He showed his characteristic dash and industry, but his pace and range were not well sustained throughout the running, he falling off in respect to these in one of his heats. The class of his work is inferior to that of Count Anteo and Hope's Mark.

Count Anteo, winner of second, displayed work of an exceptionally fine character. He worked fast, ranged wide, beat out his ground excellently well, displaying a high degree of what is popularly called bird sense. He found and worked on bevies well, and his work on scattered birds was quick and precise, rarely making a mistake in scoring a true, accurate point.

Hope's Mark displayed fine pace and range, found birds well and showed excellent work on single birds, pointing in a dashing way, and was very accurate, his worst fault being a hesitancy in working where scattered birds were plentiful, it bordering on over caution and a disposition sometimes to point on the foot scent.

First and second easily lay between Count Anteo and Hope's Mark. If either had won first it would have been difficult to raise any objection, the preference on the work done, however, being in favor of Count Anteo. Wun Lung and Miss Ruby could have made a good third.

The judges were Mr. P. H. Bryson, Memphis; Mr. F. I. Stone, Chattanooga, and Mr. Whyte Bedford, of Blythe, Miss. Capt. Pat Henry could not attend.

It will be a long while, probably, before such good, uniform work is seen again in a Derby.

The judges conducted their work skilfully, giving the dogs full opportunity to display their qualities.

Birds were not plentiful and were not downright scarce, but the finding of them put the finding qualities to a most thorough test, and the results were admirable.

MONDAY.

It was a delightfully pleasant day, clear and pleasant, with a gentle wind from the south. Toward midday it was too warm for the dogs to do their best work and birds were harder to find in those hours.

The drawing, which took place on the previous night, was as follows:

Graphic Kennels' liver and white pointer dog Ridgeview Donald (Beppo III.—Lady Norrish II.)
with
H. S. Bevan's black, white and tan setter bitch Belle Noble Gladstone (Count Noble—Florence Gladstone).

Harry Northwood's lemon and white setter bitch Amy Robsart (Dad Wilson—Bohemian Girl)
with
Dr. J. N. Maclin's black, white and tan setter bitch Little Miss (Vanguard—Rhet).

J. Shelly Hudson's lemon and white setter bitch Arline (Dad Wilson—Bohemian Girl)
with
P. Lorillard, Jr.'s black, white and tan setter bitch Lora (Gladstone's Boy—Ruby D.).

R. P. McCargo's blue-ticked setter dog Spurgeon (Gladstone's Boy—Lady May) *with*
Paston & Burdell's black, white and tan setter bitch Latonia II. (Paul Gladstone—Latonia).

H. J. Smith's black, white and tan setter bitch Firenzi (Gath's Mark—Flame Gladstone)
with
Omer Villere's black and white setter dog The Ghost (Bob McCargo—Winnie D.).

B. M. Stephenson's black, white and tan setter dog Tennessee Axtel (Roderigo—Pet Gladstone)
with
P. Lorillard, Jr.'s orange and white setter dog Count Anteo (Count Noble—Gladstone Girl).

P. Lorillard, Jr.'s orange and white setter bitch Miss Ruby (Gladstone's Boy—Ruby D.)
with
J. W. Renfroe's black, white and tan setter bitch Picciola (Roi d'Or—Miss Nellie Y.).

Norvin T. Harris's black and white setter dog Wun Lung (Capt. Bethel—Enid) *with*
H. J. Smith's black, white and tan setter bitch Ruby Gladstone II. (Gladstone's Boy—Murnan's Diamond).

Blue Ridge Kennels' black, white and tan setter dog Hope's Mark (Gath's Hope—Lady May)

with

E. H. Hyde's black, white and tan setter bitch Nancy Dill (Gleam—Tube Rose).

J. M. Vaughn's liver and white pointer dog Donovan (Crop—Peach) *with*

F. S. Ward's black, white and tan setter dog Rod Roi (Roi d'Or—Miss Nellie Y.).

Blue Ridge Kennels' chestnut and white setter dog Bob Cooper (Roi d'Or—Miss Nellie Y.) *a bye.*

First Series.

RIDGEVIEW DONALD—BELLE NOBLE GLADSTONE.—They were started in open sedge at 8:06. Both worked industriously, but their range and speed were only fairly good. Don started his range wider, but so soon as birds were found Belle showed more interest and ranged wider and faster than Donald. The first find was a bevy which was scattered about feeding, and some were flushed by the handlers; the birds flushed one or two at a time, the dogs securing no points. Don made a short cast out into some weeds, turned back down wind and flushed a single. In open sedge he pointed a single bird well. Belle then took a cast about 200yds. into sedge grass and pointed a bevy nicely. Both were steady to shot. Following the scattered birds, Donald pointed a bevy and held his point staunchly as the birds flushed one and two at a time. Belle next pointed and was well backed; she roaded on but found nothing, Don was next to point without finding. A cast was made through a large field which was drawn blank and the heat ended. Down 45m. The pointer was handled by H. M. Avent and Belle was handled by H. S. Bevan.

AMY ROBSART—LITTLE MISS.—They were cast off at 9:01 in open sedge. Both showed good speed and made fairly wide casts, but they ran together almost continuously, apparently being quite as much interested in keeping each other company as in hunting. The disinclination to work independently impaired their work a great deal in every respect. Amy opened the work on birds by drawing prettily to a point on a bevy in the open near the edge of woods; both were steady to shot. Searching for the scattered birds Miss pointed but Poindexter failed to flush. The birds were fully 100yds ahead. Sent on, Amy roaded and pointed the bevy. The scattered birds were followed. Amy pointed, and a moment afterward Miss pointed the same scattered birds in heavy sedge. H. M. Short handled Amy and T. H. Poindexter handled Little Miss. Down 45m.

ARLINE—LORA.—This was a very one-sided heat, Lora outworking Arline in every respect. The latter, however, was strange to her handler, Mr. Short, who had her but two or three days before the trials began. She was in Mr. W. W. Titus's charge to be run in the trials, but severe illness in his family prevented him from attending them, hence she was put in Mr. Short's charge. The heat began at 9:55 in open, and it was about 25m. before birds were found, Lora pointing a bevy nicely. Hunting for the scattered birds, Lora secured a good point on them. Next she flushed a single. Sent on, she pointed a bird in sedge. C. Tucker who was handling Lora, picked up the bird in front of her. It apparently was uninjured in any way, and if it was unhurt, the circumstance was a most remarkable one. The heat ended at 10:31.

SPURGEON—LATONIA II.—The former was handled by Captain R. P. McCargo, the latter by Frank Richards. The heat began at 10:44. Spurgeon had much the better of it. He took a cast on ground from which the grass had been burnt off, and pointed a bevy well. Latonia backed nicely. On the scattered birds, Spurgeon stopped to a flush. Latonia went through the scattered birds but did not detect their presence. Going up, she flushed a single. Sent on, Spurgeon made a good point in the open, standing up and pointing steadily. Latonia came in on one side about 30yds. away, roaded carefully and dropped to a point on a close-lying bevy in a cornfield, she being quite in the midst of the birds, a feat that would have ended in a flush instead of a point, in the greater number of instances. It was the same bevy which Spurgeon had found and pointed. Both did some indifferent work on the scattered birds, each making a point which lacked precision and sharpness. Some work was then attemped on a bevy marked down by spectators, but without success. Spurgeon next pointed a bird in sedge, and Latonia stopped to a point as a single bird flushed. Both were deficient in style in motion, Latonia the more so of the two. Both searched diligently, showed good speed. Up at the end of 45m.

FIRENZI—THE GHOST.—T. H. Poindexter handled the former, Capt. R. P. McCargo handled the latter. They were started in an open cotton field at 11:47. They worked thirty-five minutes before birds were found, The Ghost then finding and pointing a bevy in open sedge; Firenzi went in ahead, flushed and chased it. On the scattered birds, Firenzi pointed, probably on foot scent. Next she pointed near where a bird flushed; she then drew on, and a bird flushed to one side near a ditch. Near the road both pointed at the same time and nothing was found. The heat was a poor one and neither did work to get in the next series.

The running was then suspended while the party went to lunch.

TENNESSEE AXTEL—COUNT ANTEO.—They were started at 1:10 in the open. B. M. Stephenson handled Axtel, C. Tucker handled Count Anteo. The temperature had been warm during the previous two hours but was then about the warmest of the day. Axtel made his worst error soon after starting; he flushed a bevy while going across wind. Anteo soon afterward dropped to point about forty feet from where the bevy had flushed. On the scattered birds, Axtel pointed a single undecidedly. Anteo near by made a good point. Next, each flushed. At the edge of woods Anteo made a good point and was well backed. Next Anteo pointed a rabbit and chased it vigorously. The work was finished on birds by Axtel pointing a bevy near a branch. Both were steady to wing at all times. Anteo had some advantage in range and speed, although, having a longer stride, he apparently was slower.

BOB COOPER, under the supervision of Mr. T. M. Brumby, ran a bye, beginning at 1:10 and running while the heat between the two last mentioned was run. He ran much below his best form. He secured one point on a wounded bird and flushed a bevy while going down wind, an error which was excusable under the circumstances. He was handled by D. E. Rose.

MISS RUBY—PICCIOLA.—They started at 1:58 in the open field, C. Tucker handling the former, H. S. Bevan the latter, which did the better work on birds and beat out her ground with better judgment. Ruby flushed a single outlying bird of a bevy, then pointed, turned around on point and the bevy flushed. On the scattered birds Picciola picked up four good points in rapid succession in open sedge field, and behaved well to wing. Ruby pointed a bevy on bare ground and was backed prettily by Picciola. The latter made another point on a single bird. The heat ended in 45m. Ruby had some advantage in range. Both were diligent. Up at 2:41.

WUN LUNG—RUBY GLADSTONE.—They began their heat in the open at 2:44, D. E. Rose handling Wun Lung, T. H. Poindexter handling Ruby. Wun was first to point, he standing prettily. As Rose walked by him to flush he moved on; nothing was found. A short 200yds. further on he pointed a bevy; at the same time Ruby, about 30yds. ahead of Wun and the bevy, pointed, but nothing was found to her point. Both were steady to shot. The birds were followed, Ruby pointed near the edge of some high grass, but nothing was found at the time. Afterward two birds flushed near where she pointed, and she got a point on a single near the same place. Another point on a single ended the work on birds in this heat They were ordered up at 3:30. Wun Lung was far superior in speed, dash and range.

HOPE'S MARK—NANCY DILL.—D. E. Rose handled the former, while E. H. Hyde handled the latter. They started at 3:37 in open sedge. Soon Hope took a fairly long cast and pointed a bevy. Dill called up to back pointed the same bevy. When Rose shot Mark was steady and Dill stopped to order. While following the scattered birds Mark took a cast about 200yds. away and pointed another bevy. He secured another point on the scattered birds, and was backed well each time by Dill. Sent on to work the scattered birds Mark showed a little over-caution, pointed on foot scent or before he had the bird located well. Dill roaded to a flush. Mark at the same time pointed; ordered on he roaded and the scattered birds flushed wild. Sent on Mark took a cast in a cornfield and dropped to a point on a bevy on bare ground. Rose flushed it about 40yds. ahead of his dog. Dill backed nicely. Dill pointed a bevy in the open and Mark backed her well. Dill chased when the bevy was flushed, and Mark broke in badly but stopped to order. Dill was an October puppy of 1891, hence was young and puppyish in her ways but showed merit. The heat ended at 4:19.

DONOVAN—ROD ROI.—D. E. Rose handled the pointer Donovan and H. M. Short handled Rod Roi. Roi was sick with a bowel trouble and ran in poor form. Donovan ranged about in an average manner. A bevy was marked down by spectators; Roi flushed a single of it. Rose sent Don in and he pointed as the bevy flushed. The work on birds was poor. They were ordered up at 5 and put down again in another field at 5:21 to complete their 45m., which they did without finding.

TUESDAY.

The morning was slightly cloudy, but as the sun rose higher the clouds disappeared and the trials were favored with a delightfully pleasant day. A mild pleasant wind blew from the south. A large party followed the running from start to finish, displaying the keenest interest. The quality of the work was exceptionally high and would rank with the best work of aged dogs. Some of it was almost brilliant and many of the dogs showed a uniform excellence in their performance. Birds were not found in plentiful numbers, but by diligent searching enough were found to meet the requirements of the trials.

Second Series.

There were thirteen dogs left in this series, about seven more than there was any need of selecting, although they were all dogs of real merit. Still they were entirely outclassed by such dogs as Count Anteo, Hope's Mark, Wun Lung, etc., and further running only made the difference more palpable. It is a mistake for judges to take so many dogs into the second series when there are five or six dogs so superior that the remaining dogs have no chance to win. To take dogs in merely to gratify owners by giving their dogs an extra run, thereby implying a closer competition and more difficulty in a decision, is too transparent to the onlookers, creates more dissatisfaction to the owners or handlers when their dogs are finally cast out and, what is more important, adds nothing whatever to the true purposes of the trials: that is, in determining which are the best dogs. On the contrary it is an obstruction, since it consumes unnecessary time, imposes a large amount of unnecessary detail in the minds of the judges and causes a great deal of unnecessary running of the good dogs. The Derby was finished on this day. The decision of the judges was not received with approbation, as is mentioned hereinafter. The judges gave a half hour to each heat in this and subsequent series of the Derby.

THE GHOST—COUNT ANTEO.—Cast off at 8:00 in an open field. Count from the start showed a great superiority in range, speed and judgment in beating out his ground. He pointed a bevy in high weeds. The Ghost called to back pointed the same bevy. Both were steady to shot. In woods on the scattered birds Count wheeled prettily to a good point on a single. Sent on he again wheeled prettily to an accurate point on a single bird, which flushed wild. Count excelled in speed, range and exhibited a high class performance, doing some exceptionally sharp, good work on birds.

SPURGEON—TENNESSEE AXTEL.—The heat began at 8:34 in the open field. A bevy was seen to rise 75yds. away in open sedge and was followed to woods. The judges flushed some of the scattered birds, and both dogs pointed on the footscent. Spurgeon got two points on single birds. They were again sent off to find a bevy, but at the end of thirty minutes there was none found, when the heat ended. Axtel had shown better form in his previous heat. Spurgeon had the better range and speed.

MISS RUBY—WUN LUNG.—At 9.13 they started in open sedge, Ruby opened the work on birds by pointing, then roading on about 50yds, after Tucker had failed to flush the bevy, and pointed it. The birds had scattered and flushed here and there about here. Searching for the scattered birds Miss pointed a single nicely in the sedge, and was steady to shot. Wun was next to point, he making three points on singles in succession, and was steady to shot. Wun started in indifferent form, but gradually improved his pace and work till the finish. Ruby started well, but shortened her range toward the end of the heat. Both showed good quality.

Latonia, while the above-mentioned heat was in progress ran a bye, Mr. T. M. Brumby being the judge.

PICCIOLA—HOPE'S MARK.—They were started at 9:47. Mark pointed a bevy well in the open sedge: Picciola went close in and backed or pointed, then broke in and flushed, but stopped promptly to order. Along the edge of woods in sedge Mark pointed one of the scattered birds. He was ranging well at good speed, and doing excellent hunting. Each, about 50yds. apart, got points on single birds. Mark pointed twice, apparently on foot scent. Mark beat out his ground with fine judgment, maintained his speed well and his work on birds was good. Picciola showed good training, but she made no showing in the competition with Mark, her work being commonplace.

AMY ROBSART—LORA.—They were started at 10:21. Lora ran a very ordinary race, showing very little of the high form of her first work. She false pointed and was backed. Sent on, her next work was a point on a bevy in sedge on a side hill in woods. Amy secured a point on one of the single birds in a wet place in woods. The heat ended when the allotted 30m. expired. Amy had the better pace, but ranged very irregularly.

LITTLE MISS—BOB COOPER.—They began their heat at 10:59. Bob pointed a bevy in sedge, Miss coming up and pointing the same bevy. Miss next made a point on three birds in the same sedge. Moving on about 10yds., she got a point on a single bird. Next, Bob pointed a bevy in a burnt place in sumac and bushes; Miss backed. The point was not accurate and was made somewhat indifferently. Both were steady to shot. Bob showed speed and range, but he could have beaten his ground with better judgment.

Third Series.

Again more dogs were brought in than a proper selection on the work done would warrant, for out of the thirteen selected to run in the second series, eight were called to run again. There were only about four of the eight which were making a formidable competion which outclassed all the others.

COUNT ANTEO—WUN LUNG.—After lunch, at 1, they were started. Count made a point on a rabbit. Wun in sedge pointed a bevy nicely, Count backing well and promptly. Both were steady to shot. The scattered birds were followed. Count pointed, but Tucker failed to flush; Count drew on and Wun joined in the roading on the running birds; the latter pointed, but nothing being found he was ordered on and roaded to a flush. He next made a point on a single bird, Count roading at the same time. Count pointed a single bird and was backed. Both were steady to shot. Wun next scored a flush in sedge. Count had the better range and had a slight advantage in speed, and the quality of his work on birds was better. The heat was a good one in the display of a high class of work.

HOPE'S MARK—MISS RUBY.—At 1:35 they were started in their heat. The temperature was quite warm and birds were hard to find. Both worked diligently and made a good showing. Mark pointed a bevy in the open and was backed. Both were steady to shot. Next he pointed and roaded, but nothing was found. He was first to find and point another bevy, which took a long flight to woods and was not followed. Both ranged and worked industriously.

AMY ROBSART—BOB COOPER.—They began the heat at 2:31. Bob in woods flusbed a bird and chased it. Next he pointed a bevy, moved on and re-established his point in open sedge, and Amy backed. On the scattered birds, Amy pointed a single bird, the rest of the scattered birds then flushing wild. Bob made a half point on some remaining birds. Bob showed much self-will. His speed and range were the better.

LORA—LATONIA II.—They began the heat at 3:08 in open field. There was little use in running them, as they had no show to win. Lora pointed two bevies and a single bird. Latonia pointed a single and some scattered birds, and flushed a single bird and backed to caution.

Fourth Series.

At last the four dogs which had shown superiority over their competitors were selected, with two more in reserve in case there was need to call them.

COUNT ANTEO—HOPE'S MARK.—At 3:58 the heat began which proved most interesting and was thoroughly contested from start to finish. Both dogs performed with great skill and did remarkably good work. Count Anteo had some advantage in the way of having run more uniform and better previous heats than Mark, but the contest between themselves was of a high order. On a bevy marked down in sedge, Count pointed, after searching for it skillfully. He was steady to shot. Working for the scattered birds, Count pointed a bevy and Mark backed. Mark made three points on singles. Antonio pointed one single and flushed one on bare ground. The judges dismounted, crossed the fence. Mark pointed in sedge, moved on and roaded and drew to a flush on a single. Sent on, Mark pointed part of a bevy after roading and drawing where it had scattered and run. Count next pointed in sedge by the edge of the woods, Mark backed; nothing found. Sent on in the open, Mark pointed a bevy in the open and Count backed. Both ranged well, showing excellent speed, style, wide range and skillful class of work on birds was unusually uniform and high class.

WUN LUNG—MISS RUBY.—At 4:55 they were started. Ruby pointed a bevy in woods and was a bit unsteady to shot. Wun secured a good point on a single, Ruby backed. Wun then turned around and pointed a remaining bird. Sent on, Wun drew to a point on a bevy in weeds, doing a good piece of work. The heat ended at 5:25. Wun had the better range and speed.

The work for the day ended and the party went to town.

The judges gave their decision in the evening as follows: Wun Lung first, Count Anteo second, Hope's Mark and Miss Ruby divided third.

While these dogs were the best ones in the stake, they were not placed in their proper positions. Count Anteo or Hope's Mark should have been first, with the balance in favor of Count, owing to the excellent work he had done throughout the stake. Whichever one was first, the other should have had second, and Wun Lung should have been third or divided third with Miss Ruby. Both Count Anteo and Hope's Mark beat out their ground with better judgment, were quicker in getting to their birds after scenting them, and worked with more confidence and did sharper work among scattered birds. Their work also was uniformly high class and well sustained throughout the stake, while that of Wun Lung was not, he running one heat very indifferently in comparison.

First, Wun Lung.
Second, Count Anteo.
Divided third, Hope's Mark and Miss Ruby.

THE ALL-AGED STAKE.

The All-Aged Stake began on Wednesday morning. There were twenty-one starters, the same number as that of the Derby.

The judges were Mr. T. M. Brumby, Marietta, Ga.; Mr. A. M. Young, Manchester, Tenn., and Major J. W. Renfroe, Atlanta, Ga. They conducted the competition skillfully and made excellent selections in picking out the best dogs, not an easy task considering the number of good dogs in the stake and the closeness of the competition. They placed the winners with admirable precision.

Fannie M. displayed a uniform quality of field work, her range, speed, bird sense and work on bevies and single birds all being of a high order. She made a good showing in each heat and won first in a most formidable competition.

Paul Bo, second, showed speed far superior to any dog in the stake, and there were many fast dogs in it. His dash and range, combined with great speed and his good work on birds, had placed him above all others when his final heat began, but he failed to take advantage of several opportunities to do some work on birds, and thus lost the first prize.

Tremont, a most promising youngster of seventeen months of age, made a most admirable competition and won his place well in the divided third.

Whyte B. also made an excellent showing, doing good all round work.

Eugene T. distinguished himself by quick, accurate execution in pointing birds and by his industry and range in searching for them.

Following is the order of drawing and running:

Geo. P. Jones's black and white setter dog Sam R. (Dash Bryson—Daisy Hope) *with*
W. L. Taylor's liver and white setter dog Mark's Mark (Gath's Mark—Georgia Belle.

Chas. F. Loudon's black, white and tan setter dog Dan Tucker (Gladstone's Boy—Flame) *with*
F. J. Stone's black and white setter dog Dave B. (Startle—Clio).

C. M. Round's black, white and tan setter dog June (The Corsair—Tchula) *with*
H. S. Bevan's black, white and tan setter bitch Andromeda (Count Noble—Moonstone).

Blue Ridge Kennels' black, white and tan setter bitch Fannie M. (Gladstone's Boy—Flame) *with*
H. S. Bevan's black, white and tan dog Laddie (Roderigo—Bo-Peep).

Robt. B. Parker's black, white and tan setter dog Glen (Captain Bethel—Enid) *with*
P. H. Bryson's black, white and tan setter dog Whyte B. (Roderigo—Florence Gladstone).

Richard Merrill's black, white and tan setter dog Paul Bo (Paul Gladstone—Bohemian Girl)
with
G. W. Amory's liver and white pointer dog Bounce (Bob—Sall).

P. Lorillard, Jr.'s black, white and tan setter dog Blade (Toledo Blade- Sula C.) *with*
J. Shelley Hudson's black, white and tan setter dog Dad Wilson Jr. (Dad Wilson—Lit).

Black, white and tan setter bitch Bonnie Bondhu (Gus Bondhu-- ——) *with*
Whyte Bedford's black, white and tan setter dog Tremont (Gladstone's Boy--Speckle Gown).

A. P. Gillam's black, white and tan setter dog Eugene Tucker (Count Noble—Ruby's Girl)
with
P. Lorillard, Jr.'s white and liver bitch Antevolo (Count Noble—Trinket II.).

B. M. Stephenson's black, white and tan setter dog Top Mark (Gath's Mark—Burd Helen)
with
Bert Crane's black, white and tan setter bitch Natalie II. (King Noble—Natalie).

J. Shelley Hudson's black, white and tan setter bitch Dolly Hill (Ben Hill—Dolly S.) *a bye.*

WEDNESDAY.

The weather again was clear and pleasant. During the midday hours it was quite warm and birds were at that time difficult to find. Birds were, in parts of the grounds, found in great abundance, while in other parts long searches were necessary to find even moderate numbers. There was a large attendance of spectators. They were remarkably well behaved but sometimes pressed too close from eagerness to see all the work. Good work was the rule throughout the day, although there was none which could be called brilliant. Indeed, there was better work done in the Derby, but that circumstance is not remarkable, as many of the dogs in the Derby could hardly be classed as puppies.

First Series.

SAM R.—MARK'S MARK.—The heat commenced at 8. D. E. Rose handled the former and T. H. Poindexter the latter. Mark pointed a single bird. Sent on, he pointed a bird indifferently. Next he pointed just as the bird flushed. He pointed and nothing was found, and next he made a good point at a bird which was shot at and missed. Both dogs were steady. They were then worked in the open field where Mark made three or four flushes wilfully on some birds of a bevy, then came in; the rest of the bevy flushed wild. Mark next false pointed. Sam next pointed; Rose failed to flush; Sam to a short circle came back and flushed the bird. At the same time Mark, about thirty yards away, pointed a bird, the bevy apparently being scattered about feeding. While beating about, Sam, going down wind, flushed a single excusably, after which he made another flush; this on a short space of ground which had been walked over repeatedly, the birds lying very close. Sam's nose apparently was not at its best. Mark pointed a single bird well. Sam pointed by the edge of woods, moved on and roaded but failed to find. They were ordered up at 8:45. Both ranged moderately. Mark showed indifferent style on point. Sam had been injured recently and had an abscess which undoubtedly interfered with his work.

DAVE B.—DAN TUCKER.—They started almost immediately upon the ending of the previous heat. J. A. McCargo handled Dave B., B. M. Stephenson handled Dan Tucker. Dan took a circle and roaded to a point down wind. Stephenson flushed the bevy behind his dog, shot and killed, and the bird fell close to Dave as he came in; he immediately picked it up and retrieved it without delay, an excusable act under the circumstances. The scattered birds were followed. Dan in woods pointed one and was backed; both were steady to shot. Dan held his point and another bird was flushed. Next Dave pointed what apparently was foot-scent. Dan backed. Dave pointed a bird in a brush pile in woods, and was backed. Dave next flushed a single. Dave pointed a bird near the same brush pile and was steady to shot. They were then worked into the open field. Dave pointed, but nothing was found. They were ordered on. Both roaded down wind in the sedge. Dave should have been allowed to locate his birds without competition. Both roaded about 30yds. and pointed some birds; both were steady to shot. Moved on in open sedge; Dan pointed and Dave backed. Dan had not located; he drew on and Dave was allowed to locate the birds with him, contrary to the rules, which were violated in a similar manner in other heats. Dan drew up wind of the bevy, which flushed wild behind him. No work on the scattered birds was scored. Both dogs pointed a bevy. Dan pointed a single and retrieved it indifferently to Stephenson's kill. They were ordered up at 9:31. Dan showed good speed, range and work on birds. Dave improved in speed and range as the heat progressed.

JUNE—ANDROMEDA.—The former, handled by B. M. Stephenson, and the latter handled by H. S. Bevan, were started at 9:48. A search of about 20m. ensued, before a find was made, Andromeda roading and pointing a bevy in good style. June had from another direction gone in and pointed the same bevy after June began roading. Sent on, June wheeled to a point as a bird flushed, and shortly afterward she repeated the same act. Andromeda pointed a woodcock at the edge of a ravine. The grounds hunted on during the heat were poor and unfavorable for birds or good work. Sent on, Andromeda next found and pointed a bevy. Up at 10:33. In speed and range they were nearly equal, Andromeda beating out the ground with better judgment.

At the same time, Dolly Hill ran a bye, Dr. Rodgers being the judge. She worked diligently, showed good speed and range. The grounds hunted were very poor, and no birds were found.

FANNIE M.—LADDIE.—The former was handled by D. E. Rose; the latter by H. S. Bevan. They were started at 10:41. Fannie had the speed and range, beating out her ground with judgment. She pointed a bevy and was backed. On the scattered birds, she made three points in succession, and scored a retrieve. Laddie false-pointed once. Fannie pointed another bevy. Up at 11:27.

The party went to lunch at Mr. Bias's place.

GLEN—WHYTE B.— Captain R. P. McCargo handled Glen; A. P. Gilliam handled Whyte B. Glen's first work was a false point in the open, Whyte honoring it with a back. Sent on, Whyte dropped to a point on a bevy; Gilliam killed and the bird fell in a bad place for a good retrieve. Whyte made an ordinary retrieve, he being slow to find the dead bird. On the scattered birds, Whyte dropped to a point; nothing found; Whyte moved on, came back to the same place, and pointed a single bird and was steady to wing. Sent on, Whyte pointed a bevy. He pointed one of the scattered birds in sedge in a thicket. He held his point, and Gilliam flushed another bird to it. A point by Glen on a single closed the work on birds in the heat. Up at 1:13. Both ranged wide and fast, beat out their ground well, and their work on birds was very good.

PAUL BO—BOUNCE.—The former was handled by Frank Richards, the latter by T. H. Poindexter. Paul ranged at high speed and hunted diligently. The handlers flushed a bevy which was followed. Paul dropped to a point on a single in sedge; Bounce coming in from the side came in ahead and pointed the same bird. Paul, sent on, flushed down wind on remaining bird. The heat ended at 2:01. At the same moment the judge ordered the dogs up, Poindexter called out a point for Bounce, which proved to be on a large bevy. Paul had the advantage in every way. He showed high speed and range. There were but few opportunities to work on birds.

BLADE—DAD WILSON, JR.—They started at 2:06. Blade pointed in a hollow in sedge up wind of a bevy; Dad backed. They were up wind of a bevy which flushed wild. Dad, going down wind, flushed a single bird. At a plum thicket Tucker claimed a point for Blade, but the bird flushed before the judges could get near enough to see it. Both dogs pointed, then roaded to a point in sedge. Dad retrieved to Short's kill. Both ranged wide and fast. Up at 2:54.

BONNIE BONDHU—TREMONT.—They started at 3:02. G. R. Howse handled Bonnie, Capt. R. P. McCargo handled Tremont. Tremont flushed going down wind. Bonnie took a cast and pointed a bevy well in weeds. The birds were followed to woods. They each secured three points on the scattered birds. Tremont pointed a crippled bird which he retrieved indifferently. Each pointed a bevy, or parts of same bevy, about 30yds. apart. Sent on, Bonnie pointed scattered birds in sedge; Bonnie refused to retrieve. Tremont dropped to a point on a single; good work. Bonnie next pointed a single and Tremont backed well about 20yds. away. Both ranged well, Tremont a trifle the better. There was a great deal of excellent work done.

EUGENE T.—ANTEVOLO.—A. P. Gilliam handled the former, C. Tucker the latter. Both took very long casts at the start. Antevolo pointed in weeds. She took a circle and came back to same place and pointed up wind of the bevy, which Tucker failed to flush. She moved on down wind and flushed the bevy. In the open she flushed and chased. Eugene wheeled nicely to a point on a single in sedge; Antevolo backed; Eugene retrieved. He next dropped to a point on a single in sedge; the bird flushed wild. Both ranged wide and fast, but were not working the ground intelligently, and seemed more in the humor for a good run than a good hunt. The work on birds, considering numerous opportunities offered, was inferior.

TOP MARK—NATALIE II.—H. M. Short handled the former, N. B. Nesbitt the latter. Natalie pointed in sedge; standing about 40yds. behind, Top backed well. Nesbitt failed to flush, the bevy being quite a distance from the dog. Moved on both dogs roaded and pointed a large bevy, and were steady to wing. In woods on the scattered birds Natalie made two points on singles, Top made four and a retrieve, making a point while searching for the dead bird. Top, with his head up, drew nicely in the open quite a distance to a point; Natalie backed. The dogs got up wind of the birds; both cast back down wind and Natalie pointed the bevy. The heat ended at 5:21. The heat was a good one, both dogs performing well in the work on birds and in searching for them.

THURSDAY.

The morning showed signs of rain, the sky being overcast with clouds. Gradually it cleared up and turned cooler Toward noon the clouds gathered and again rain threatened. A light sprinkle fell for about an hour, when the weather turned clear and warm. The change in the weather had an unpleasant effect on the trials, as the birds had sought the protection of cover and were extremely difficult to find, causing long searches and light work in the heats. There were an unusual number of spectators in attendance on the last day, following with as much interest as at first. Considering the unfavorable weather and scarcity of birds, the work was of a high order. The judges spotted the dogs excellently well in this series.

Second Series.

FANNIE M.—WHYTE B.—They began their heat in the open at 8:15. Both ranged fast, Fannie M. the faster and wider in range, and she beat out her ground with greater judgment. Whyte was first to point, he being up wind of the bevy in open sedge, he moved on but took the wrong direction and failed to locate. Fannie moved on down wind on the bevy and flushed an outlying single, the remainder then flushed. They were followed into woods. Fannie pointed a single and was steady to shot. Whyte pointed and was backed nicely, but nothing was found to the point. Both pointed and roaded about but failed to find anything. A bevy was flushed by horsemen, and marked down and followed. In open sedge Fannie made two good points on single birds and retrieved well to Rose's kill. Whyte backed. Both points were quick and accurate. The heat ended at 9:13. The work on birds was limited in amount; but it was largely in favor of Fannie.

PAUL BO—ANDROMEDA.—At 9:18 they started in the open. A great deal of ground was worked over and but few birds found. Paul pointed a woodcock on wet ground in woods, and nicely retrieved it to Richards's kill. A bevy was flushed and marked down by spectators, and the dogs were worked to find the scattered birds. Paul took a cast about 150yds. away and pointed a single bird by a branch in thick brush; Andromeda backed staunchly and well. Andromeda dropped to a point in the open; nothing found. She moved on and pottered some on the footscent. The heat ended at 9:51. Paul showed great speed and range, and sharper and more accurate work on birds.

Dave B. at the same time ran his bye in charge of Mr. Foster, but as the work had no bearing on the competition, the bye dog being taken in again regardless of the quality of his work, the work in detail is of no consequence. The heat was a poor one.

DAN TUCKER—DOLLY HILL.—At 10:06 they started in woods, and soon were worked into the open sedge field, where Dolly pointed. She was held on her point an unreasonably long while. Dan was brought up to back. Dan took the point. Short killed and Dolly retrieved well. On the scattered birds no work was done. Working in the open for a bevy, both pointed a few yards apart, close on a bevy, and it was impossible to determine which had the point. The birds were flushed a few feet from their noses. The heat ended at 10:36. Dan had wider range and was slightly better in speed. There was but little work on birds.

DAD WILSON, JR.—BONNIE BONDHU.—In an open field at 10:38 they were started. Dad was out of sight in sedge for an instant, going down wind, and a bevy was seen to flush near him. Sent on to find another bevy, Bonnie was first to point in sedge; Dad coming in joined in the point. Nothing was found, but some of the spectators had seen the bevy flush some distance away in the bare cotton patch close by, before the judges rode up. The birds were marked down and followed into woods, where each got a point on single birds. They were then taken up and cast off on other grounds, twenty minutes being taken up in making the transfer. Dad found and pointed a bevy in sedge. Next he flushed a bird, but it was excusable, it being done down wind. They were ordered up at 11:55. Both ranged well and at good speed.

TREMONT—BLADE.—They started at 12 M. In open sedge Blade flushed three birds, then pointed and Tremont backed, nothing found; the point probably was on foot-scent. Blade flushed a single and was doing rather ordinary work otherwise. Tremont pointed a single, and Blade coming up, joined in the point. Tucker claimed a point and shot at the bird when it flushed; neither the point nor the right to shoot was his. Blade flushed a bevy. Tremont had the advantage in every way. Up at 12:38.

The party went to lunch.

Third Series.

Six dogs were selected to run in the third series, and the judges selected them with rare skill and judgment.

FANNIE M.—DAVE B.—At 1:25, in open sedge, the heat began. Dave pointed a bevy in open sedge, held his point well for a few seconds, then flushed the bevy and chased it. The birds were followed to a small island of trees. Fannie dropped to a point on a single and Dave backed. Rose ran about, finally flushing a close-lying bird. The heat was all one-sided, ending in favor of Fannie at 1:46.

PAUL BO—JUNE.—They began at 1:49. June flushed a single, then another flushed wild immediately, in an open sedge field near the edge of woods. Paul came in to where June pointed, turned and moved out a few feet and flushed a single. The ground was beaten out, but no birds were found. Moved on in the open sedge field. Paul turned into the woods close by and pointed a single bird, and was steady to shot. Paul's next work was a point on a rabbit, and soon thereafter a point on a bevy in sedge, in the open. On the scattered birds of this bevy in woods Paul pointed a single and June backed nicely. Both were steady to shot. Up at 2:18. Both showed great speed and ranged very wide. June showed exceptional ranging qualities, and had he been competing with a dog which possessed less than the phenomenal speed of Paul Bo he would undoubtedly have made a most excellent showing.

TREMONT—NATALIE.—At 2:40 they began their heat in the open fields. Tremont pointed a bevy and Natalie came in a moment afterward and pointed the same bevy. The scattered birds were followed but no work was done on them. Tremont pointed a bevy and Natalie backed, in open sedge on wet ground. At 3:01 the heat ended. Tremont had the greater speed and range. Natalie would dwell at times in her ranging.

Fourth Series.

Four dogs were left in in this series and the judges selected the best dogs with commendable judgment and precision. They were following the running of the dogs closely and were approaching the finals with the best dogs.

EUGENE T.—WHYTE B.—They started at 3:15. Whyte pointed a bevy in the weeds. Eugene, called in to back, pointed the same bevy. The birds were followed. Eugene pointed a single bird well and Whyte backed. Sent on, Whyte jumped into a point; Eugene backed, but gave up the backing of his competitor and watched the gun as the handler went forward to flush. The dogs were ordered on to locate: Eugene took the point on the single and Whyte backed. Both were steady to wing. Sent on, Eugene pointed two birds in heavy weeds and Whyte backed. Sent on, Eugene pointed and Whyte backed. The heat ended at 3:40 with the class of work in favor of Eugene.

FANNIE M.—PAUL BO.—In a weed field, the final heat for first and second began at 3:47. Both dogs ranged at very high speed, took wide casts and beat out their ground with judgment. They worked diligently and covered wide areas of ground. Fannie pointed a rabbit. Sent on, in open ground in sedge she made a point. Paul was called to back, and as he came in he caught scent and pointed about 30yds. ahead, and the bevy was flushed close by him. The credit of the find was Fannie's, as Paul simply was called in to back and pointed birds already found. Some birds were flushed close to where Fannie pointed after she had been sent on. Fannie pointed two singles in sedge. Fannie pointed in heavy weeds. Rose beat about but failed to flush. Fannie, with painstaking care, roaded down wind through the weeds, pointing betimes. While she was roading straight to the bevy, Paul pointed. The scattered birds were followed into a thicket. The scattered birds flushed wild. They were followed. Paul pointed and moved on, and the scattered birds flushed wild. Fannie moved on and pointed the bevy where the birds had flushed. The heat and trials ended at 4:31. Both dogs showed great pace and range. Paul did not show the execution in working on birds that he did in previous heats. He had fallen off some in range, but was far from quitting, as some seemed to think he would do. He runs at phenomenal speed, and if the heat is too long, he slows down some, but he is no quitter. His pluck is as great as his speed. His heat of four hours, which he completed at the Central trials, demonstrated that. Fannie ran a very even good heat and beat Paul on the work done.

The judges announced the winners after they arrived in town, as follows: First, Fannie M.; second, Paul Bo; equal third, Tremont, Whyte B. and Eugene T.

Col. P. H. O'Bannon negotiated the purchase of the celebrated field trial winner Antonio for the Blue Ridge Kennels, paying $2,000 for this dog. He will be a great addition to this already very strong kennel. B. WATERS.

RE THE NAME PSOVOI VS. BARZOI.

WITH a view to procuring further expression of opinion as to the correct name of the Russian wolfhound, we sent the Russian Consul General a copy of FOREST AND STREAM containing the letters on the question and a request for information as to which was which and who was right. He invited us to call on him and then gave us every information in his power and sends the following letter:

Editor Forest and Stream:

I omitted to tell you that the breed Borzie is divided into several denominations. The dogs in general used for coursing are termed Borzie Sobaki. These are divided into ten different breeds named as follows: Psovie Borzie or Gustopsovie Borzie, Tchistopsovie Borzie, Krimskie (Crimean) Borzie, Moldovanskia (Moldaw) Borzie, Gorskie (Mountain) Borzie, Tazyi Borzie (Turcoman or Persian), Hivinskie Borzie (Khiva), Kirgiskie Borzie (Kirghis), Horty Borzie and Brondastye Borzie.

I will in order explain their characteristics:

The Psovie Borzie is an essentially Russian breed, the old Gustopsovie breed is now a rarity, but through the efforts of several breeders the breed is being reproduced, are called Psovie Borzie and thus are more than likely the dogs that are now being imported to this country under the erroneous name of "Barzois" or "Russian wolfhound." Psovie is, however, the correct name. In height they are from 26 to 30in. Their descriptions as given in the Russian Encyclopedia, says they have a long narrow head, muzzle fine and long and flat, not curved, lower jaw shorter than the upper, dark colored nose, ears small and thrown back till they almost meet at the back of the head, eye of good size and with few exceptions always dark, neck long and the sides flat, chest broad between the elbows, but narrow in front, shoulders heavy and powerful, legs straight and well muscled, feet turn out a little, with compact toes, though one is more open than the others, like a thumb; back, *in the male* slightly arched, but *in female straight*; ribs well developed and loin well tucked up, hindlegs nearly straight and set wide apart, hindquarters well muscled and the veins well developed, hindfeet like a hare, tail thin and curved, with feather hanging, coat wavy, silky and not very thick, color white, black, gray and a mixture of these colors, any other color shows that there is some cross in the strain. They are swift and powerful, quick in their movements, and the "fling" or mode of throwing themselves at the game is a characteristic of the breed. This breed is the most highly prized in Russia.

The Tchistopsovie Borzie was a cross between the Psovie Borzie and the Horty Psovie (European greyhound). The breed is, however, extinct, as no good resulted from it.

The Krimskie Borzie (Crimean) partakes of the form of the Psovie, but ears are small, pendant and covered with orange-yellowy hair; chest well developed; back hollow behind the shoulders and quarters drop suddenly, making almost a point at the hip; tail curled, and must be of one color from root to tip. In height 34½ to 26½in., or 14 to 15 verskoks. Color, black, red and white, and if spotted the color runs in not distinct,

The Moldovanskia Borzie is found principally in Bessarabia and Roumania, and is derived from a cross of the Krimskie and Horty Borzie. This breed is short-haired and not very swift, but is good for long distances, as it is able to run seven to nine miles in a course without fatigue. It is used principally in the steppes for long chases. In points it is like the Krimskie Borzie, excepting that it is short-haired.

The Gorskie Borzie is used in the mountains. The principal points of difference are long, narrow forehead and long, thin muzzle, giving it a very delicate and handsome appearance; ears thin and long and hanging; long, straight neck; legs straight, but comiug together almost near the feet, which are like the Psovies; tail short, with a little feather; coat smooth and silky; predominant color, black with tan markings, or red with black markings; has remarkable speed and strength for long distances, but not so long as the Crimean dogs, and their "fling" is very characteristic.

Tazyi Borzie (Turcoman or Persian) is very graceful and remarkably proportionate in all points, though small sized; head long, both forehead and muzzle; deep dark eyes, long triangular-shaped ears, graceful swanlike neck, loin well tucked up, rather flat-sided, straight back, tail long, thin and curled at the end, coat straight and silky in texture, with feather on legs and tail; color bright red, with tips of the hair black, and feathering is also black, though other colors do not disqualify; that named is the predominant one. The dog is very swift and very long-winded.

The Hivinskie Borzie (Khiva) is larger than the Persian hound, and more fleshy; ears large, heavy and pendant. These dogs are not so swift as the Tazyi Borzie, but are highly prized for their great stamina and staying powers. In other points they resemble the Crimean dogs.

The Kirgiskie Borzie are entirely confined to the steppes. They are straight-backed, legs thick and coarse, head and neck thick, tail rough, ears triangular and pendant, carried close to the side of the head; hair rough and thick on tail, ears and legs; tail curves; predominant color is muddy, but other colors are found. It is a dog that is not at all thought of outside of its district.

The Horty Borzie is the name given to all of the smooth-coated European greyhounds, and was extensively used at one time to cross with other Russian breeds.

The Brondastye Borzie is the name given to the Crimean, the mountain, the Persian, the Khiva and Kirghis dogs. When crossed with the Russian sheepdog, the characteristic of the hound body and head formation they retain, but the hair is like the sheepdog's. In color gray—light or dark—or a mixture of red, black and white. These dogs are again subdivided into the Courland breed and the Clock breed.

The Courland breed have long, coarse hair on head and ears, but the Clock tribe have silky hair, long and hanging, like an Angora goat, with a thick mustache on muzzle and goatee on lower jaw. These dogs are very savage and not at all favorites with the sportsmen, as they are not very swift or strong. They are generally used when there are plenty of wolves.

This gives an idea of the different kinds of Borzie, and shows at once that the dogs that are coming over here are the Psovie; the old Gustopsovies being almost extinct, they are called simply Psovie, or Psovie Borzie. The term Borzie alone signifies simply the whole family of greyhounds used for coursing, and cannot be used to designate any one breed.

A. E. Olawosky, H. I. Russian M's Consul General.

New York City, Feb. 1.

CANADIAN KENNEL CLUB RULES.

Editor Forest and Stream:

I have just read the letter sent you by Mr. P. G. Keyes and published in your issue of Jan. 28. Divested of its verbiage, Mr. Keyes's communication is an attempted defense of the absurd rules lately passed by the executive committee of the Canadian Kennel Club, to which I (in common with many other breeders and exhibitors) very strongly object. It is worth mentioning in passing that Mr. Keyes is himself an officer of the C. K. C., and for this reason, perhaps, may consider himself bound to defend any action, however injudicious, which emanates from the executive committee of the club.

After carefully reading and re-reading Mr. Keyes's communication I am still unconverted, and still insist that the rules referred to are absurd and not by any means in the best interests of Canadian breeders. Mr. Keyes very cleverly draws a herring across the scent and endeavors to belittle my objections by ridiculing me: but I submit that your readers are in no way interested in reading Mr. Keyes's opinion of me and his allusion to my "eccentricities," my "lofty rhetoric," my "sublime logic" and the fact that I am "the embodiment of all canine wisdom" has nothing whatever to do with the question at issue. Mr. Keyes has been fair enough and manly enough to write his letter over his own signature, for which I respect him, but let me suggest to him the advisability of sticking to his text in the future instead of leaving the field to take shots at outside game.

I take the ground that it is both unfair and unwise to make the championship honors won by a dog depend upon the number of animals entered at a show. There might be some shadow of an excuse for fixing a numerical standard for entries in particular classes or breeds—although even this would be difficult of attainment—but I have not yet heard, nor I fancy shall I ever hear, any good reason advanced for making a dog's winnings in his own particular class depend upon the number of other dogs of different breeds which happen to be exhibited in other classes at the same time.

A 500 dog show may contain a better lot of animals than a show which has only 300 entries, but then again it may not. And then again it may happen that the fox-terrier or bull-dog classes at the smaller show may be stronger, larger, and better all the way through, than those found at the larger one. This is not a quibble but a fact, and one which must be apparent, I think, to any one who will give the matter careful thought.

I agree with Mr. Keyes that the title of champion should not be lightly won, and I would be glad to see the number of wins to make a champion largely increased; but when I am asked to agree to a rule which makes the honor depend upon the total number of entries at a show, without any reference whatever to the particular class in which the dog is shown, I must emphatically object.

As the rule which allows English prize winners to be exhibited under C. K. C. rules in the novice classes, I have again to say, even at the risk of offending Mr. Keyes, that I think it "idiotic" and wholly indefensible.

I find in the dictionary that a "novice" is described as a "beginner," or "one who is new at any business," and it was for just such dogs as were beginners, and new to the judging ring, that the novice classes were formed. Prior to the passage of the new rule no dog that had won a prize was supposed to be entered in the novice class, and in this way breeders had a chance to show their young stock unhandicapped, and encouragement was lent them to try and produce first-class animals. Now, however, by the rule which I characterized as "idiotic," but which Mr. Keyes attempts to defend, all this is changed, and breeders are informed that in future their young and untried dogs are at the mercy of any well-known prize winner that may be imported from across the water. If this is not "idiotic" what is? The fact remains that a dog which has once won a prize, is not, and never can again be a novice, and no amount of argument on the part of Mr. Keyes or any other living man however clever, or however anxious to defend an absurdity, can change it.

Let us suppose a case, by way of illustration. Under the new rule I can send to England and buy the famous rough-coated collie champion Metchley Wonder, or the magnificent bulldog champion British Monarch, and then show them here in the novice classes in the Canadian circuit as untried dogs. If this is not absurd, what is it?

Whether the A. K. C. and the C. K. C. should recognize wins from the bench shows held in Great Britain under E. K. C. rules is another matter, and one which it might possibly be well to consider in the near future.

I may say before closing, that my reference to Mr. Donovan, the efficient secretary of the C. K. C., was not made from jealous motives, as Mr. Keyes, who is no doubt in the habit of judging others by himself, is generous enough to insinuate, but I think that the gentleman referred to occupies a disastrous position in being the paid secretary of the C. K. C. and therefore bound to second and carry out all the rules of its executive committee, and at the same time the editor of the only dog paper published in Canada. As a supporter of the executive committee one day, Mr. Donovan cannot very welt attack its methods the day after, and thus the paper which should be a teacher, and whose columns should be a breakwater between the breeder on the one side, and all that is injurious to him on the other, is rendered useless and comparatively valueless.

I have to apologize for the length of this letter, but the subject is an important one and this must be my excuse.

A. D. Stewart, President Hamilton K. C.

Hamilton, Ont., Feb. 1.

POINTS AND FLUSHES.

I PRESENT the readers of Forest and Stream some extracts from a private letter from the well-known trainer, handler and writer Mr. A. J. Gleason, Alma, Kan., on the subjects of a dog's field training, the qualities of a dog in respect to hunting and field trials, and all these in relation to the rules and to each other, and *vice versa*.

There are some very good points taken in his argument, but he does not go into detail sufficiently at length to make all the parts clear to any person other than those fairly conversant on the subject. The pertinent extracts are as follows:

"The fact really is that not one man in one hundred, who poses as a sportsman and who pretends to know all worth knowing about field dogs and their use, knows the first principles of field shooting as it should be conducted. One man and one dog can go afield and slaughter a bag of birds without much system. Birds are what he is after, and if successful he labors under the impression that he has enjoyed an extraordinary good time. But when several men and dogs go afield, they generally do have one extraordinary time, in the absence of a system strictly observed from start to finish.

"Now, at a public competition, where two handlers, with a dog each, and three judges, all engaged in the same pursuit, they cannot perform the part allotted them in the absence of rules defining the requirements and duty of each participant in the undertaking.

"We all have our particular ideas and fancies of what constitutes a field dog and the proper manner in which he should be managed, but, in the absence of harmony of action and an accepted standard of field excellence, an attempted trial becomes a mob. The result of a field trial is the mere preference of judges at the time acting, subject to reverse the next day under another set of judges. This fact was proved this season and has always been so. You know this better than any one else, because you have seen more of such work.

"I do not accuse any one of dishonesty or incompetency. Such an act would be the height of foolishness. But I do positively condemn a system, or want of system, that places unbridled power in the hands of any individuals engaged in the performance of a duty so important in its results as field trials are to the sportsmen of this country.

"Now, I am engaged in training dogs, and consequently have to suffer to a certain extent for many of the foolish decisions rendered heretofore. The dogs who have won because the judge said so and many times have exhibited qualities undesirable in a dog intended for breeding purposes, have, on the strength of their record, been extensively bred to; and consequently the market is flooded with a lot of pedigreed curs with a field trial record as long as your arm.

"My candid opinion is that the qualities most essential in a field dog cannot be exhibited until that dog is trained for the purpose for which he is intended; for this reason there should be strict rules defining the term 'training,' and no dog should be eligible for a place until he is trained. Some people think that some of the rank brutes, that are now ranked as 'high class,' can be broken and still show the brilliant work exhibited by bolters and chasers. Some of them, perhaps, can be placed under control. Possibly so—if so, make the trainers do it or keep them in their kennels. Their disposition will not admit of it. As long as they can have their own way they are 'brilliant,' but when they are crossed they quit the game and become 'plug shooting dogs.'

"Now, I am an admirer of great speed, dash, style, and every other desirable quality in a field dog, but I want all of these qualities under control; and I am positive that field trials are the proper places to prove that such qualities are under control. I believe that you and I fully agree on technical terms in common use. I believe that pointing is a voluntary act and backing identical to it. A dog that drops on his belly in either act is not assuming a pointing attitude. He drops all right, but what proof have we that de drops at scent or sight, or through fear of being knocked down with a club.

"The same rule applies to steadiness. I believe the act should result from previous training rather than a bat with a club or a loud yell at every occurrence. In short, I believe a field trial should be a place to exhibit the manner of handling trained dogs rather than the exhibition of dog training."

There is no question but that better training should be insisted upon at field trials; not that it should have any competitive value, but that the dogs cannot exhibit properly their abilities or compete in a fair manner without.

It is also true that many dogs will work with great dash and earnestness while working to suit their own inclination, but if under the restraints necessary in working to the gun they become indifferent or partially so and sink to the very ordinary. Many of the dogs which apparently do not "train on" in their second or later years are generally of this kind. It is not that they do not train on so much as that they were never trained or not broken in their first working year or were very imperfectly broken, and in their second or later years, when the training is more thorough, the dog, being unable to indulge his hunting inclination to his own selfish purposes, drops from the grade designated by that much-abused and perverted term "high class" to the level of the mediocre.

By some inexplicable growth in field trial sentiment, a dog with a lively set of legs, and powers to gallop long stretches here and there, is almost certain to be foisted on the sporting public, if possible, as a high class dog. He may be hard-headed, a blunderer on his birds, a self-hunter in part, erratic in disposition or flighty in head, and with poor judgment in his work and perfect disobedience; yet all these parts apparently are ignored or lightly considered.

A well-broken dog is hopelessly handicapped at a field trial as conducted at present. The continuous blowing of whistles and loud interminable orders will balk such dog so constantly as to bewilder him or at least so mar his work as to place him outside of any chances to win.

There are rules enough to amply cover all these points. the endeavor should not be for more rules, where sufficient exist already, but to endeavor to reform the manner of conducting the trials. More consideration is sometimes paid to the consideration of whether a man will run his dog again the year following, than to whether a dog should be cast out on his inferiority sufficiently demonstrated, or to let him remain in to encourage his owner.

The time limit is simply a compromise of this kind. When a dog is beaten or demonstrates his inferiority, or superiority, the purposes of a field trial are accomplished, whether it is done in five minutes or five hours, more or less; yet the stock argument to sustain this unreasonable position is that an owner who pays his entry fee is entitled in some vague manner to more than the principles of the competition. In effect, the owner has a title to a certain amount of time regardless of the competition. This results in an incident peculiar to field trials in this country, and one often witnessed; that is, the judges sending the dogs here and there and around and around aimlessly for the sole purpose of killing time till the time limit governing the heat expires.

The professional trainers feel that there is a great deal of room for improvement in conducting field trials, and there is no doubt but what there is such room.

I notice Mr. Tracy's comments on the impossibility of conducting a four-hour race under the present system so as to maintain anything like uniformity of work or conditions. This is directly sustaining the position I took some weeks ago, that to run a four-hour race on even terms, each series of heats would have to be run all at the same time. A race of this kind can not be run on any other basis without favoring some and working a hardship to others. B. Waters.

NOTES AND NOTIONS.

FANCIERS are strangely oblivious to a very important fact as to breeding. "Properties" are rated at values varying with the breed, "the fashion of the day and the breeder's own private notions," but a vital consideration is invariably overlooked in the question whether a certain defect is congenital? The standard of some certain breed stipulates dark eyes and bent hocks, yet breeders will breed to animals notorious for transmitting both these defects with great virulence. How self-condemnatory such a course is.

In an anatomical point of view, hardly any fault can be greater than the shockingly straight hocks that are so characteristic of the St. Bernards to-day, and to a rather less degree of mastiffs, and no characteristic has stronger heredity. In an artistic view, nothing can be more repulsive than the horrible light eyes so common in mastiffs: many mastiffs send a shudder down one's spine when taking a face view of them. Yet oddly enough, in both breeds color is a weighty consideration. The color in a St. Bernard seems a determining consideration, and I cannot believe that a black and white St. Bernard could win a place in a show were he a Plinlimmon arisen from his honored grave in all bodily properties, and a Dudley front in a mastiff is held a great defect by a majority of fanciers.

* * *

Then there are serious defects for show purposes that are not at all congenial. Cowhocks are a somewhat common defect in large breeds, yet authorities hold, and apparently with abundant ground, that this defect is entirely a result of rearing, proceeding from confinement and insufficient exercise, and it is asserted with an air of great sincerity that a badly cow-hocked animal may be brought to a proper conformation by abundant exercise and care while immature.

Breeders and fanciers always have been, and always will be, more interested in the whirly gust of the hour than in permanent, solid improvement of the breed they fancy. This seems unavoidable, by reason of the quick way beginners constantly break out into fanciers, and the astonishing rapidity with which they come to know more than the fathers of the breed. I can count on the fingers of my two hands the men in the fancy to-day who were interested in it seven or eight years since. "We came yesterday and rule to-day" applies to many other domains than politics.

The Onlooker.

HAMILTON KENNEL CLUB MEETING.

THE second annual meeting of the Hamilton Kennel Club was held on Thursday evening, Feb. 4, in the Forester's Hall on James street. There was a large attendance of members, and the proceedings throughout were most harmonious and enjoyable. Mr. A. D. Stewart was in the chair as president of the club, and reviewed the work done during the year, paying high compliment to his brother officers, who had labored unceasingly to bring the club to its present state of usefulness. Mr. Stewart intimated that he intended to resign his office as president, as he thought that honors such as this should go round, and he knew that there were many present from whom a capable and industrious chief officer could be chosen. The treasurer's report showed that there were 242 members in good standing on the club roll, and a balance on hand to the credit of the club of $25, and no debts outstanding. The report was adopted unanimously, and a vote of thanks was then passed to the president and officers for their efficient work during the year.

It was decided to ask the new executive committee to devise ways and means at an early date by which the guarantors who had subscribed $700 to pay off the loss accruing from the late bench show might be paid off.

It was decided to hold a bench show in September just before the Toronto, fixture and the secretary was instructed to claim the necessary dates without delay. It was also decided to hold a one night local show during the month of March, open to members of the club only.

A motion to increase the annual membership fee from $1 to $2 was voted on and carried.

The rules lately passed by the executive committee of the C. K. C., relating to "champion" and "novice classes," were discussed at length, and it was the unanimous opinion of the meeting that a great mistake had been made and that the rules referred to should be reconsidered, as they were in no way beneficial to Canadian breeders or exhibitors.

The secretary was instructed to write to the secretary of the C. K. C. to this effect and to ask for the coöperation of other Canadian kennel clubs in the matter.

The election of officers resulted as follows: Patron, Wm. Hendrie; Pres., Andrew Murdoch; First Vice-Pres., Dr. Griffin; Second Vice-Pres., E. Tinsley; Treas., C. W. Tinling; Sec'y, A. D. Stewart; Fin. Sec'y, H. P. Breay; Vet. Surg., Dr. Mole. Committee, John Hackett, G. C. Hore, F. R. Close, R. B. Harris and W. McDonald.

BAITINGS.

Editor Forest and Stream:

May I inquire why you put rabbit coursing, "barzoi" coursing and rat pitting on a level? (vide your page 85) I never attended a display of either pastime, but can see where some palliation can be pleaded for rat pitting, the terrier has to fight for his skin, as a rat in a corner can fight like all possessed. Pray what is the palliation for either of the other "sports"? Any kind of curs can catch and kill a coyote in a two acre field, and pretty much anything that wears hair can kill a rabbit. You puzzle me. W. Wade.

Hulton, Pa.

[The rat in a pit has less chance to escape than even the coyote or the rabbit, and his death is only a matter of seconds.]

DOG CHAT.

THE assertion by such an experienced field trial follower as Mr. Waters that "a well-broken dog is hopelessly handicapped at a field trial as conducted at present," is one worthy of profound thought. The whistling from some of the handlers must be bewildering. It struck the writer very forcibly at the late trials that this whistling is much of a habit. A man with a whistle in his mouth is apt to give a blast on the slightest impulse. It strikes us the whistle should be hung behind and not in front. The string of whistles some men have reminds one of the strings of teeth the Zulus hang round their necks.

The first number of the new English kennel paper, the *British Fancier*, was to be issued Jan. 29, and on the front page will appear a colored plate of the collie Westwood Wonder, Mr. Megson's latest purchase, and the picture is a beautiful one. Among the fixtures pertaining to kennel will be "Our Canine Companions," anecdotes of the dog, etc.; "Kennel News," reports, etc.: "Barks and Bites," kennel gossip, etc.; the "Dog School and Live Stock Academy," for promoting intelligence of animals, etc.; "In Darkest Dogdom," a novel feature devoted to exposing the faker's art. Numerous other departments will be provided; and if it only carries out half its promises it bids fair to make an interesting addition to our live stock literature.

We are apt to open our eyes when we hear of a kennel of 70 or 100 collies, but it remains for a Russian to beat all records. It is said he owns more than a million sheep and 34,000 sheep dogs.

At the Liverpool (Eng.) show that was held Jan. 26 there were 1,567 entries. Collies numbered 324, Irish terriers 147, and fox-terriers 180.

The show was a great success, and later advices say that collies, Irish and fox-terriers were extraordinarily good. In St. Bernards Young Bute was counted the best, and his owner brought out a novice dog, Monte Mirando, by Scottish Prince—Hepsey that, though his hindlegs are faulty, and has not sufficient depth of muzzle, yet is said to be the handsomest young dog that has been benched for some time. Mastiffs were rather poor generally. The field trial pointer Busy Bee won the cup for best in that breed. Portington Beauty won the cup for best in the show in collies, and is described in the London *Field* as a good one. This win is particularly meritorious when Westwood Wonder and Stacathro Ralph were on hand, and the other classes filled with a "record" entry. In bull-terriers Greenhill Wonder and Greenhill Empress scored again. Bulldogs were not well represented. Fox-terriers as usual at this show had some of the best in the country out for the prizes. The same paper speaks of the challenge and special cup winner as the peer of any terrier in the country, or to be "an all round, tip top terrier, not excelled by any of his variety to-day." Deputy won from Wokem in open dogs, and a new one belonging to Messrs. Vicary came out in bitches, Victorina, by Milnrow Process, a good one and likely to improve with age. In Irish terriers the judge went for natural ears in every case, with the exception of old champion Brickbat, who won in the challenge class and also took the champion cup, but Mr. "Billy" Graham showed a good young bitch, Breda Chippie, that won the junior challenge cup and pressed the old dog for the higher honor. Mr. Lacy's Rhodes Oban's rich color and good markings placed him well ahead of Strangeway's Colonel in the other class, also winning the cup for the best in show, champion Pearl winning the challenge prize. Derby Bess won again in open bitches. Lola beat Confidence in the pug challenge class, and Mayor of Leeds, as usual, found nothing better than himself in the open dog class.

Mr. Pim's businesslike way of judging the grand lot of Irish terriers was much admired, even by the disappointed exhibitors, one of whom, according to *Fanciers' Gazette*, remarked, "He wants more than a well made 'un, for it must also have the brogue," meaning, probably, that Mr. Pim wanted Irish "character" in his winners.

The owner of the collie Blue Ruin has acquired another crack bitch, Mr. Panmure Gordon's Ormskirk Dolly, and this will make the West quite strong in collie bitches, a strength that we hope will lead to good results.

The Venetian youths, like their cousins in Rome, are fond of dogs, and the uglier and more forbidding the dog so much the more it seems to be admired. This has a very odd result. The gentlemen wear their boots long in the sole and curved upward, a mode which does not improve their personal appearance. When very exquisite indeed, they further attire themselves in tall silk hats, lemon-colored kid gloves, and collars that rise almost to their lips. Then, with a dapper cane, and a poodle shaven so brutally clean that no lock of wool is left upon it, save at the tip of its tail, the gentleman considers himself complete for promenade. Up and down he goes, bowing zealously to the right hand and to the left, ever and anon stopping to caress the tips of the fingers of a lady, and ever and anon pausing to unwind the chain of his poodle from his elegant legs. He is an expert at expletives; but the poodle is used to them, and bears without one whine of objection all the abuse it excites.—*All the Year Round.*

In the late Derby show the usual competition for the best dog in sporting and non-sporting divisions gave rise to keen rivalry and much talk. The English setter, Mabel of Coleshill, the winner in the former competition was not by any means the general favorite, but she got the votes of the judges, though the bloodhound Simon of Sudbury or the retriever Barkwith Lady, in the opinion of many, were better dogs. In non-sporting classes Mrs. Foster's little Yorkshire ch. Ted again proved his unapproachable merit by gaining the largest number of judges' votes, though his more sturdy rival, the bulldog British Monarch, ran him very close, and, in fact, has beaten him in similar competition four times before.

The English Bulldog Club, from late advices, seems is in a turmoil over the election of officers. Their secretary, Mr. Sprague, for reasons of his own, is *non est*, though from what we can make out the club seems to have no ground of complaint against him. Mr. Sprague was a hustler and he must have worked hard for the club during his short incumbency, as proved by the many noveltics in get up in catalogues, etc. Singularly enough, the American Bulldog Club owes a great deal of its standing to the hustling abilities of its secretary, Mr. C. D. Cugle.

As the weather has precluded all chance of indulging in fox-hunting in England, sportsmen in the vicinity of the Quorn hunt have had good fun riding after two bloodhounds who were put on the trail of a youth on foot. The end of the run seems to have been a surprise to the chronicler, as instead of attempting to tear the fugitive to death, the hounds evinced their delight by springing up to him and trying to lick his face.

We understand that Mr. James Mortimer will judge at San Francisco, Cal., next May. Messrs. J. Otis Fellows, James Watson, C. H. Mason and H. W. Lacy were also written to for terms to judge both the Los Angeles and San Francisco shows. Mr. Mortimer is the lucky man, for the trip is bound to be an enjoyable one, and the dog men there will give him every opportunity to extend his knowledge of the Pacific coast. Speaking of these two shows, we wonder some enterprising handler does not take a trip out there with an Eastern team. Depend upon it, if he took out good dogs, there would be little likelihood of bringing any back with him, as they could probably all be disposed of.

At the meeting of the Canadian Kennel Club, Feb. 1, at Toronto, there were present T. G. Davey, J. S. Williams, C. A. Stone, T. G. Mitchenor, W. B. Palmer, and Secretary H. B. Donovan. A letter was read from Capt. C. Greville Harstone, president of the Ontario Collie Club, stating that the club had a stud book, which it would hand over to the C. K. C. to preserve as a part of the latter's stud book if the C. K. C. would admit to registration free of charge those dogs which had not been registered with the C. K. C. The offer was accepted. In the matter of the World's Fair dogs registered in the C. K. C. will be accepted and certificates will be given the same as the A. K. C. is doing. Secretary Vredenburgh, of the American Kennel Club, sent notice that Mr. C. M. Nelles, of Brantford, had been disqualified on account of a transaction with Mr. E. A. Wilson, of Philadelphia. Mr. Nelles sent a protest against this action of the A. K. C. on the ground that he was a resident of Canada, and was supported by a telegram from Mr. Wilson to the effect that he had withdrawn his complaint. Mr. Nelles was anxious that some action be taken in order that he could make entries for the New York show. It was decided that as the C. K. C. maintains reciprocal relations with the A. K. C., and as the matter was expected to come up again, the club could do nothing pending further action by the American Kennel Club. Owing to the illness of Mr. Mercer the charge that he entered a dog at the Ottawa show without the consent of the owner was further postponed. In the case of the St. Bernard, Sir John, owned by Mr. George Bell, and entered at the Toronto show as by champion Sir Charles, an incorrect pedigree, a couple of communications were read from Mr. James Watson, secretary of the A. K. C. Stud Book Committee. Mr. Watson wrote that the dog was Apolio, by Schamyl—Robina, and was whelped in October, 1890. The case will be heard at the meeting of the A. K. C. during the New York show. President Davey will represent the C. K. C.

We have received an advance proof of the premium list of the Keystone Kennel Club show, which takes place at Philadelphia on March 1 to 4. Mr. Watson, the secretary, writes us that the club had abandoned all idea of a show until April, the Chesapeake Bay Dog Club having claimed March 1 to 4, while the Keystone Kennel Club people were waiting for the Philadelpia K. C. to formally decide not to hold a show. The time is short to stir up interest in Philadelphia, but it deserves, and we hope it will receive, handsome support, following as it does so soon after New York. The secretary asks us to particularly mention that every accommodation will be afforded those coming from New York and who wish to fully rest their dogs. The building—Philadelphia Tattersalls—has a range of 500 horse stalls shut off in divisions, and there dogs can be kept and fully rested before the show opens. Exhibitors wishing to have the same accommodations during the show can make arrangements with Tattersalls. The premium list of about $2,000 is carefully arranged with prizes running from $15 to $3, and with such judges as Geo. Raper, Edward Dudley, Dr. Cryer, W. Tallman, W. Stewart Diffenderffer and others yet to be secured it is easy to see that the Keystone Club is being started right. Entries close on Feb. 19. The premium list does not give the name of the spaniel judge. Since it was issued Mr. Wm. West, of Philadelphia, has reconsidered his decision, and accepted the position.

We notice a new feature in the Keystone classification—a local class for the more prominent breeds, the conditions being that the dogs must be owned by *bona fide* residents of the city of Philadelphia, and previous cash prize winners are barred. This ought to be a popular class, especially as the fee is but $2, that for all other classes being $3. The entries close Friday, Feb. 19.

Mr. Farley states in another column his side of the case *re* the breeding, feeding and care of the dogs at Albany dog show. Mr. Farley also incloses a copy of the resolution adopted by the dogmen present, thanking him for his work in their behalf. This is signed by Messrs. E. B. Elliott, H. E. Twiford, German Hopkins, H. L. Kreuder, J. L. Winchell, A. W. Pearsall, R. R. Harris, George Jarvis, F. B. Hawkins, O. Jenkins, Edward Booth, E. E. Baschall, Geo. Thomas, F. F. Dole, W. H. Pierce and H. W. Lacy.

The Psovie Argos, Mr. Huntington informs us, was to arrive last Saturday or Monday. As this dog is acknowledged to be one of the best yet shown in Russia or England, the admirers of this breed are all anxious to get a look at him, and no doubt they will be gratified at the coming New York show.

Mr. T. J. Fitzsimmons will show his fox-terrier puppy Pewter, by Pitcher—Elora Tatton, at New York, for Mr. J E. Thayer's $100 special for best get of Pitcher. The Canadian contingent will, as usual, be a formidable one at the New York show, and some of the sporting spaniel prizes will of course find their way northward, while Mr. Davey will make a big bid for some pointer and setter honors.

There is a movement on foot to organize a kennel club in Maine. Breeders round Bangor are agitating the question. Some good dogs are owned in the Pine Tree State. Several good cockers that have appeared at our shows are owned in Portland, Me. Then Mr. C. D. Roberts is the proprietor of the Shebor Pointer Kennels, of Dexter, Me. He owns the pointers Meteor's Flirt and Rose Graphic among others. Mr. Winthrop, of Bangor, also owns the pointers Boski, Belle Vernon and Tim, and those will be at the New York show. He also owns Onawa, a dog by Trinket's Bang, sire of Spotted Boy. Mr. W. Ledyard, of Portland, is another prominent breeder of pointers and beagles. There are also several well-known fox-terrier kennels in the State. Altogether there are many enthusiastic dog men up there. It is expected they will form a club within a few weeks and hold a show next fall.

The story of "Old Bluch," on page 107 of our last issue, should have had the signature of "Old Sam," who is one of the famous "Kingfishers."

Communications on the "Ironclad Coursing Rule," from Messrs. Bartels and Flower, are crowded over to next week.

The Bulldog Club of America will hold its annual meeting at Madison Square Garden, New York, Feb. 23, at 8 P. M. Chas. D. Cugle, secretary, Box 602, Baltimore, Md.

We understand that Mr. W. Wade is not concerned with Mr. Huntington in the purchase of Argos, and never was, although he had made a standing offer for the dog (at a lower price than Mr. Huntington offered) if the latter did not take him, which offer was entirely independent of Mr. Huntington, although known to him when first made.

Col. Ruppert's show team of St. Bernards has been further strengthened by the arrival of Lady Gladwin and Baroness Cardiff on the S.S. Runic, Feb. 5. The dogs were in good shape after their long voyage and will be shown at the W. K. C. show. We have already given the particulars of this importation.

There are rumors that Mr. August Belmont is tiring of the duties of president of the A. K. C. and does not care much for re-election. Mr. Thos. H. Terry also has an idea that business engagements will not allow of his taking an active part as an officer of the club to the extent that he has done. In regard to the last named gentleman, one of our oldest dog breeders and exhibitors, we are afraid he is forsaking the "legitimate" for fresh fields and pastures new, as we notice that he has just been elected president of the League of American Poultrymen, that was organized during the poultry show last week. From what we know of poultry exhibitors and fancy breeders, the duties that will accrue to that position would be sufficient reason for Mr. Terry to abandon both the A. K. C. and his legitimate business enterprises. When it comes to downright kicking, the chicken men can make more fuss over a few feathers than the dog men over a whole bench full of dogs.

The result of the election of officers and delegates of the associate members was reached last Saturday morning by the tellers who opened the mail votes. We are pleased to see that, notwithstanding his determination not to serve, Dr. Perry received the greatest number of votes, but as he had already declined the honor, the next highest vote fell to Mr. W. C. Reick, owner of the New York St. Bernard Kennels, and no better choice could have been made, as he is sure to make a hard-working and dependable president. Vice-President, Mr. W. J. Bryson, of Chicago, Ill., will represent the West, is also a good choice. Secretary, Mr. C. D. Bernheimer. Delegates: Messrs. Jas. L. Anthony, C. D. Bernheimer and Dr. H. T. Foote; all three are New Yorkers and men that can be depended upon to attend the meetings of the club. This reminds us of the agitation that has been going on about the Western members not being adequately represented by delegates. What is the use of electing delegates who will not attend the meetings. The dog men do not want mere figureheads. Take the Western delegate Mr. L. F. Whitman, for instance. Elected last spring, he came on to the annual meeting and incidentally attended the New York show, charging $36 toward expenses from the fund set apart for associate delegates. This is the last and only meeting he has attended. Until the A.K.C. is divided into sections, there seems to be no better plan than to elect New York men, and that the dog men, as a whole, think the same is proven by the result of the election.

The Albany Kennel Club is once more a member of the A. K. C. in good standing. The prize won by Mr. A. W. Smith, of Buffalo, N. Y., at the last show held by the Albany Kennel Club in 1889, has been paid into the A. K. C. The non-payment of this money, $10, was the reason of their disqualification, and in consideration of its payment the said disqualification has been removed under the resolution adopted at the time of the disqualification, directing Mr. Vredenburgh to remove the same immediately on the payment of said money. It is therefore more than likely that the next show held in Albany will be under the auspices of this club. The question naturally arises on reading the above, why could not this money have been paid before and thus have saved all subsequent annoyance and bother?

Messrs. L. and W. Rutherfurd announce a sale of fox-terriers at the American Horse Exchange, in this city, Feb. 26. The list comprises 48 numbers, and among them there will be sure to be found some bargains.

Among the new kennel advertisements this week we note the following: For sale—Fox-terriers, L. & W. Rutherfurd; St. Bernards, G. W. Patterson, H. F. Littlefield; bull-terriers, C. Penin Lawshe; greyhounds, Fancier; foxhounds, C. F. Kent; mastiffs, J. Gordon; Chesapeake retrievers, Box 310. Richard Merrill offers the setter Paul Bo and H. Northwood offers the fox-terrier Painter and the setter Benzine at stud. The Keystone Kennel Club advertises its first annual dog show.

ALBANY DOG SHOW.

Editor Forest and Stream:

I have seen a letter in your last week's paper written by Mr. Rockenstyre to Mr. Dole. I did Mr. Dole and others a great many favors in the last Albany dog show, but this is the way I generally get paid back. They would not have got one dollar of their prize money the last night of the show, if it had not been for me. I had to fairly beg Mr. Rockenstyre to pay them. Mr. Dole asked me if I would not try and help them get their money, and after I explained how those men had to pay hotel expenses and shipping expenses, Mr. C. H. Barber, who is the whole club, started out and raised money enough on checks to pay them. Now they say that I was paid to bench, feed and take care of the dogs. Now if the readers of your paper will say that I get paid for this work, I will leave it for them to decide. Rockenstyre came to me when the show was in bad shape, and asked me if I would rent them my kennels; I told him no, but I would donate them if they would pay for the lumber, and putting up and taking down of them. They wanted to know how much that would be, and I told them about 50 cents a stall or $100 the whole thing. They told me to do it, and they would give 50 cents for each stall. I furnished all the kennels; paid for all the lumber, ten dozen feed cans, rings and staples, 50 wire benches for small dogs, and paid a carpenter to stay there during the show to take care of them. Took care of 17 dogs from Saturday till Tuesday, paid a watchman the first night, and paid to have the place cleaned up the first day of the show, and gave them 5 entries. Also furnished the feed and built the ring, and cleaned the rink out the last day of the show, and all they paid me was $100. Every word you said about the Albany show in the FOREST AND STREAM was correct, and I have witnesses to that effect.

T. J. FARLEY.

NATIONAL BEAGLE CLUB MEETING.

Editor Forest and Stream:

An executive meeting of the National Beagle Club was held at 266 Washington street, Boston, Mass., Feb. 6, 1892. President Chapman called the meeting to order at 8 P. M. Present, President Chapman, Vice-President W. T. Clark, C. W. Brooking, W. A. Power and H. V. Jamieson.

Secretary was instructed to thank Mr. Bateman for suggestions on behalf of executive committee.

Moved and carried that Mr. Turpin be appointed to audit the accounts of the treasurer up to Jan. 1, 1892.

Moved and carried to offer following specials at Duquesne Kennel Club Bench Show: Five dollars for best dog and bitch. To be competed for by members only.

Resolved, That secretary be instructed to correspond with all bench show committees at which N. B. C. offers special, that said show committee provide a 15in. and under and 13in. and under; instead of 15in. and 13in.

Resolved, That the club invite suggestions and proposals in regard to holding the next field trials.

Resolved, That the club donate $25 in any class run in the field trials having ten or more entries.

Resolved, That Class C be divided if twelve or more entries are secured.

Resolved, That prizes in all classes, except absolute winner, be 40, 30, and 20 per cent. of entry money.

H. V. JAMIESON, Sec'y.

THE CHICAGO SHOW.

[Special to Forest and Stream.]

CHICAGO, Ill., Feb. 9.—The Mascoutah Club show opened this morning with a greater attendance than ever: but the show itself was at sixes and sevens owing to a carload of Spratts benching having gone astray. Many of the dogs are not benched yet, owing to lack of facility. This delayed the judging till 1 P. M. Visiting dogmen present are W. C. Reick, Dr. Sauveur, Frank Dole, S. L. Boggs, John Moorehead, Geo. Bell, W. B. Wells, Major Taylor, V. Haldeman, E. B. Sears, Ed Booth, Henry Jarrett and all the judges already named, Dr. Glover, J. W. Newman, Steadman Hanks, J. F. Pritchard, Ben Lewis, E. B. Elliott, George Thomas, etc.

The class of dogs, on the whole, is excellent. Pointers and setters very good; great entries by Ben Lewis, E. B. Elliott, George Thomas and others. Great show of Psovies, Mr. Hanks showing a wonder in Leekhoi. Greyhounds are well represented and so are the terriers, especially fox-terriers. Collie classes contain the best. At present the show is not running smoothly, but to-morrow will be better, as three more rings will be ready. The awards made to-day follow:

MASTIFFS.—CHALLENGE—1st, Bunn's Ormonde; 2d, Wyoming Kennels' Sears' Monarch.—OPEN—*Dogs:* 1st, Kimball's Elkson; 2d, Ayres's Wellington; 3d, Flour City Kennels' Cardinal Beaufort; 4th, Powell's Edric. *Bitches:* 1st, 2d and 3d, Bunn's Sinaloa, Ilford Cameo and Matello; 4th, Wyeth's Mai Chancellor.—PUPPIES—*Dogs:* 1st, McLean's Sirosha; 2d, Holcomb's Prince Cola; 3d, Owens's Ilford Dates. *Bitches:* 1st and 2d, Bunn's Sinaloa and Matello; 3d, Wyeth's Mai Chancellor.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—*Dogs:* 1st, Wyoming Kennels' Plinlimmon, Jr. *Bitches:* 1st, Wyoming Kennels' Nanon.—OPEN—*Dogs:* 1st, Ruppert's Aristocrat; 2d, Wyoming Kennels' Jim Blaine; 3d, Poag's Beausire; 4th, Hickox's Fernwood Bruce. *Bitches:* 1st, Wyoming Kennels' Hepsey; 2d, Tobey's Guess Noble; 3d, Ruppert's Altonetter 4th, Wyoming Kennels' Lady Adelaide.—PUPPIES—*Dogs:* 1st, Sauerering's Lord of Richmond; 2d, Kennedy's Mike Norkett; 3d, Hansen's Fernwood Victor. *Bitches:* 1st, Hauschildt's Heber Spence; 2d, Robbins's Effie of Lemont; 3d, Roach's Christmas Eve.—NOVICE—*Dogs:* 1st, Poag's Beausire; 2d, Kennedy's Mike Norkett; 3d, Hansen's Fernwood Victor.

ST. BERNARDS.—SMOOTH-COATED—CHALLENGE—*Dogs:* 1st, Lewis's Lord Hector. *Bitches:* 1st, Ruppert's Empress of Contoocook.—OPEN—*Dogs:* 1st, Lackman's Mascot Royal; 2d, Lewis's Ben L. and Shegnoquon Kennels' Ibo II.; 3d, Birnsrill's St. Michael. *Bitches:* 1st, Lewis's Fernwood Goldy; 2d, Williams's Mascot; 3d, Nellie Kramer's Lady Gladstone; 4th, Blaricom's Dell.—PUPPIES—*Dogs:* 1st, Poag's Rex Watch; 2d, Fulgham and Johnson's Lord Milton; 3d, Haley's St. Michael II. *Bitches:* 1st, Ruppert's Bellegarde; 2d, Williams's Mascot; 3d, Nellie Kramer's Lady Gladstone.—NOVICE—1st, Poag's Rex Watch; Shegnoquon Kennels' Ibo II.; 3d, Fulgham and Johnson's Lord Milton.

NEWFOUNDLANDS.—1st and 2d, Marshal's Prince Hal and New York Lass; 3d, Symons's Rock.

POINTERS.—HEAVY—CHALLENGE—*Dogs:* 1st, Pabst's Trinket's Chief; 2d, Lovell's Pontiac.—OPEN—*Dogs:* 1st, Daniels's Count Graphic; 2d, Davey's Western Star; 3d, Drake Ferguson's Prince Regent; 4th, Shuttleworth's Dude N. *Bitches:* 1st and 2d, Davey's Revelation and Highfield Madge; 3d, Madison & McGuffin's Pickwick; 4th, Ferguson's Princess Marguerita.

ENGLISH SETTERS.—CHALLENGE—*Dogs:* 1st, Dager's Cincinnatus; 2d, Boggs & Lewis's Paul Gladstone. *Bitches:* 1st, Wells's Cambrian; 2d, Hartman's Albert's Nellie.—OPEN—*Dogs:* 1st, Taylor's Breeze Gladstone; 2d, Dager's Toledo Blade; 3d, Merrill's Paul Boy; 4th, Wells's Malone. *Bitches:* 1st, Northwood's Amy Rohsart; 2d, Jones's Sue II.; 3d, Wells's Daphne; 4th, Northwood's Lady Dudley.—PUPPIES—*Dogs:* 1st, Sidler's Best Tonic; 2d and 3d, Donoghue's Pembroke's Blue Grouse and Pembroke's Blue Druid. *Bitches:* 1st and 2d, Blue Ridge Kennels' Misfortune and Esmeralda; 3d, Warnf's American Dart.

COLLIES.—CHALLENGE—*Dogs:* 1st, Seminole Kennels' Roslyn Wilkes; 2d, Carlowrie's Maney Trefoil. *Bitches:* 1st, Hawkes's Roslyn Clara; 2d, Seminole Kennels' Metchley Surprise.—OPEN—*Dogs:* 1st, Hawkes's Sir Walter Scott; 2d, McEwen & Gibson's Metchley Wonder II.; 3d, Davis's Moray; 4th, Seminole Kennels' Roslin Conway. *Bitches:* 1st, McEwen & Gibson's Daylight; 2d, Carlowrie Kennels' Heather Twig; 3d, Long's Scotch Rose; 4th, Anderson's Highland Flossie.—PUPPIES—*Dogs:* 1st and 2d, McEwen & Gibson's Strathern and Cumming; 3d, Nonpareil Kennels' Lord Errick. *Bitches:* 1st, McEwen & Gibson's Mistletoe; 2d, Argyle Kennels' Maud Marion; 3d, Dickinson's Highland Lass.—NOVICE—*Dogs:* 1st, Strathern; 2d, Maple Grove Kennels' Metchley Wonder, Jr. *Bitches:* 1st, McEwen & Gibson's Huckleberry Girl; 2d, Dickinson's Highland Lass. Best dog in novice class, McEwen & Gibson's Strathern; best bitch, McEwen & Gibson's Daylight; best kennel, Chestnut Hill; best collie pup, McEwen & Gibson's Mistletoe.

POODLES.—CHALLENGE—1st, Purbeck's Dexter.—OPEN—*Dogs:* 1st, Arrick's Pidi; 2d, Thatcher's Parisian. *Bitches:* 1st withheld; 2d and 3d, Badger's Beauty and Mousey.

YORKSHIRE TERRIERS.—CHALLENGE—*Dogs:* 1st, Toon & Symond's Toon's Royal. *Bitches:* 1st, Toon & Symond's Venus.—OPEN—*Dogs:* 1st, Oliver's Dick; 2d, Starly's Damfino. *Bitches:* 1st, Oliver's Minnie York.

PUGS.—CHALLENGE.—*Dogs:* 1st, Mohawk Kennels' Sprake; 2d, Howard Kennels' Penrice. *Bitches:* 1st, Howard Kennels' Sateen, 2d, Pitt's Beauty III.—OPEN—*Dogs:* 1st, Pitt's Bonsor; 2d, Connor's Dircie; 2d, Sidler's Lord Fauntleroy. *Bitches:* 1st, Howard Kennels' Diamond Nellie; 2d, Mohawk Kennels' Toodie; 3d, Schnaitman's Midget.—PUPPIES—*Dogs:* 1st, Howard Kennels' Penrice Boy. *Bitches:* 1st, Mohawk Kennels' Maud; 2d, Howard Kennels' Diamond Bessie.

KING CHARLES SPANIELS.—*Dogs:* 1st, Sidler's Royal Duke; 2d, Holmes's Young Milwaukee. *Bitches:* 1st, Farshaw's Topsey; 2d, Holmes's Mollie Darling. *Puppies:* 1st and 2d, Holmes's Young Milwaukee and Mollie Darling.

BLENHEIM SPANIELS.—*Dogs:* 1st, Jansen's Young Duke; 2d, Warren's Bob W. *Bitches:* 1st, Warren's Little Girl.

ITALIAN GREYHOUNDS.—*Dogs:* 1st, Washington Kennels' Lewis Spring; 2d, Englehart's Prince and Rick. *Bitches:* 1st, Washington Kennels' Lewis Star; 2d and 3d, Englehart's Victoria and Psyche. *Puppies:* 1st and 2d, Osbourne's Zela and Heather Twig.

CHICAGO, Ill., Feb. 10.—Champion Treasure died last Saturday. Steadman Hanks refused $1,000 for Psovie Seekhoi. Messrs. Dager and Osthaus have consolidated their English setter kennels. Mr. Reick purchased the St. Bernard Guess Noble, second in open bitches. Mr. Reick, when informed of his election as president, Associate Members, declined the honor, considering the voting not valid as long as Dr. Perry was the choice. Voters for Dr. Perry should vote again. Jackson show has 175 entries.

Wednesday Noon.—Judging progresses slowly. No tables or chairs and management poor. Floors and rings not kept clean. A third of the dogs not on their right benches. Attendance excellent. Weather bad; snowing hard. Awards up to noon:

RUSSIAN WOLFHOUNDS.—*Dogs:* 1st, Hanks's Leekhoi; 2d, Hacke's Ordoff and Osmaday. *Bitches:* 1st, Hanks's Flooeyka and Svoka; 2d, Hacke's Zanoza.

GREYHOUNDS.—CHALLENGE—*Dogs:* 1st, Purbeck's Gem of the Season.—OPEN—*Dogs:* 1st, Lowe's Lord Neverstill; 2d, Purbeck's Ornatus; 3d, Brown's Surplus. Reserve, Purbeck's Pious Pembroke.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st and 2d, Fowler's Kildare and Seminole. *Bitches:* 1st, Seminole Kennels' Laura B.; 2d, Mills's Elfreda.—OPEN—*Dogs:* 1st, Fowler's Duke Elcho; 2d, 3d and 4th, Perry's Pride of Patsey, Rex and Rancho. *Bitches:* 1st, Fowler's Edna H.; 2d, Miller's Nellie M.; 3d, Hare's Kildare Rosali; 4th, Fowler's Kildare Doris. *Puppies:* 1st, Carmichael's Gerald; 2d and 3d, Hoffman's Don Carlo and Don Pedro.

GORDON SETTERS.—CHALLENGE—*Dogs:* 1st and 2d, Dixon's Ivanhoe and Leo B. *Bitches:* 1st and 2d, Dixon's Duchess of Waverly and Lady Waverly.—OPEN—*Dogs:* 1st, Reardon's Nabob; 2d, Hendee's Reginald II.; 3d, Fleming's Wallace.

FOX-TERRIERS.—CHALLENGE—*Dogs:* 1st, Thayer's Raby Mixer; 2d, Woodale Kennels' Starden's Jack. *Bitches:* 1st, Thayer's Dona.—OPEN—*Dogs:* 1st, Woodale Kennels' Bobbin; 2d, Fishburn's Glendon Spark; 3d, Thayer's Brockenhurst Tyke. *Bitches:* 1st, Thayer's Miss Dollar; 2d, Woodale Kennels' Woodale Regina; 3d, Washington Kennels' Rowton Safety. Reserve, Woodale Kennels' Refusal.—PUPPIES—*Dogs:* 1st, Morehead's Howard; 2d, Hank's Slacroft Bourbon; 3d, Woodale Kennels' Woodale Dandy.

H. W. L.

THE T. K. C. MEMBERS' SHOW.

RICHMOND HALL was filled the evening of Feb. 5 when the Toronto Kennel Club held a competition for members' dogs. Many ladies were in attendance. The awards were made by President R. W. Boyle, Vice-President J. S. Williams and Secretary C. A. Stone, as follows:

GREAT DANES.—2d, S. Stewart's Don.

GORDON SETTERS.—2d, R. Wright's Victor.

IRISH SETTERS.—2d, J. G. Mitchener's Kitty O'Shea.

BULL-TERRIERS.—1st, W. Elder's Surprise.

BEAGLES.—*Dogs:* 1st, J. G. Mitchener's Guy; 2d, W. Vassey's Chimer; 3d, C. Campion's Duke. *Bitches:* 2d and 3d, C. Campion's Judy and Queenie.

GREYHOUNDS.—*Dogs:* 1st and 2d, F. Habart's Dick and Jim. *Bitches:* Equal 1st, H. P. Thompson's Bed of Stone and F. Harbart's Glen; 2d, C. Campion's Beatrice; 3d, J. F. Scholes's Harmony.

COCKER SPANIELS.—*Dogs:* 1st, J. G. Mitchener's Dono. *Bitches:* 1st, P. J. Keatinge's Jennie. *Puppies:* 1st, P. J. Keatinge's Zero; 2d and 3d, G. B. Sweetman's Nip and Tuck.

COLLIES.—1st, C. Campion's Heather Bell; 2d, J. G. Mitchener's Scottie.

FOX-TERRIERS.—2d, J. G. Mitchener's Carlton Vic.

TOY TERRIERS.—2d, S. Stewart's Tiny.

SMOOTH-HAIRED TOYS.—1st, H. P. Thompson's Queenie.

IRISH TERRIERS.—*Bitches:* 1st, P. Brown's Peggy. *Puppies:* 2d, P. Brown's Betsy.

SCOTCH TERRIERS.—1st, J. F. Scholes's Beau.

FOXHOUNDS.—2d, C. Campion's Hunter.

TOY SPANIELS.—1st and 2d, R. P. Forshaw's Topsy and Royal Rose.

THE ST. BERNARD CLUB AND ITS PRIZES.—*Editor Forest and Stream:* Please notify your readers that the prizes offered by the St. Bernard Club of America are for dogs owned by members of the club only. We expect to be represented at all the shows and we cordially invite all breeders, exhibitors and lovers of the breed to join our club at once. The prizes are offered exclusively for American bred dogs, thus preventing the high-priced imported animals from winning everything, and at the same time encouraging the breeding and exhibiting of home products. The initiation fee is $10 and includes dues for the current year, and our annual dues are $5. Application forms and copies of constitution can be had of me.—W. H. JOECKEL, JR. (Bloomfield, N. J.).

MESSRS. NELLES AND WILSON.—Brantford, Ont., Feb. 6.—*Editor Forest and Stream:* In connection with the complaint lately lodged against me by Ed. A. Wilson, of Philadelphia, with the A. K. C. and C. K. C., kindly publish the inclosed copy of a letter from Mr. Wilson to the C. K. C., a copy of which I have just received from Mr. Wilson.—CHAS. M. NELLES. "PHILADELPHIA, Feb. 3.—*Canadian Kennel Club*—Gentlemen: I have this day received a perfectly satisfactory settlement from Mr. Chas. M. Nelles, and do withdraw my charge against him. Mr. Nelles's settlement is more than fair to me.—ED. A. WILSON."

MASTIFF CLUB JUDGES.—The American Mastiff Club, Secretary's Office, Lake Waccabuc, N. Y., Feb. 5.—*Editor Forest and Stream:* The following named gentlemen have, by vote of the members of the American Mastiff Club, been elected judges: Dr. Richard H. Derby, James Mortimer, Dr. J. Sidney Turner, W. K. Taunton, Edward Dudley, J. L. Winchell, C. C. Marshall, Herbert Mead. The annual meeting of the club will be held at the Madison Square Garden at 3 o'clock P. M., Feb. 24.—HERBERT MEAD.

NEW YORK DOG SHOW.—New York, Feb. 2.—*Editor Forest and Stream:* Please make known to my enemies and friends that an English journal has arranged with me for a complete report of the New York dog show. My criticism on this show will appear in the best dog paper in the world—the *Stock-Keeper*.—CHARLES H. MASON.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Ticonderoga, Hidalgo, Pauline Hall, Question and Peril. By Woodhaven Kennels, Woodhaven, L. I., for white, tan on head fox-terriers, two dogs and three bitches, whelped Feb. 5, 1892, by Mouche (Splauger—Miss Tullie) out of Lady Bacchanal (Bacchanal—Miss Tullie).

Plunger. By Woodhaven Kennels, Woodhaven, L.I., for white, tan on head and tail, fox-terrier dog, whelped Feb. 5, 13?2, by Mouche (Splauger—Miss Tullie) out of Lady Bacchanal (Bacchanal—Miss Tullie).

Speculation. By Woodhaven Kennels, Woodhaven, L. I., for white, tan on head and rump, fox-terrier bitch, whelped Feb. 5, 1892, by Mouche (Splauger—Miss Tullie) out of Lady Bacchanal (Bacchanal—Miss Tullie).

BRED.

☞ **Prepared Blanks sent free on application.**

Queen Bess—Barney's Sport. Silver Spray Kennels' (Clay City, Ill.) Irish setter bitch Queen Bess to B. A. Saun's Barney's Sport (Heumore Shamrock—Daisy). Jan. 15.

Dora—Stormy. G. Laick's (Tarrytown, N. Y.) beagle bitch Dora (Ringwood—Birdie) to his Stormy (Royal Krueger—Pussie). Jan. 17.

Flirt—Stormy. W. H. Woods's (Glenville, N. Y.) beagle bitch Flirt (Little Duke, Jr.—Snap) to G. Laick's Stormy (Royal Krueger—Pussie). Jan. 31.

Lady Victoria—Eberhart's Cashier. W. T. Garton's (Des Moines, Ia.) pug bitch Lady Victoria (Lord Clover—Girlie) to Eberhart Pug Kennels' Eberhart's Cashier (champion Kash—Lady Thora). Jan. 25.

English Lady. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch English Lady, Feb. 3, six (two dogs), by their Broomfield Sultan.

Beechgrove Jessie II. Dr. W. C. Johnson's (Frederick, Md.) Irish terrier bitch Beechgrove Jessie II. (Buckler—Brickie), Jan. 25, ten (four dogs), by Anglo-American Kennels' Jack Briggs (Irish Ambassador—Bridget).

Lady Bacchanal. Woodhaven Kennels' (Woodhaven, L. I.) fox-terrier bitch Lady Bacchanal (Bacchanal—Miss Tullie), Feb. 5, seven (three dogs), by their Mouche (Splauger—Miss Tullie).

Pearl. G. Laick's (Tarrytown, N.Y.) beagle bitch Pearl (Trailer II.—Spot), Oct. 17, four (two dogs), by Nanuet Kennels' Roy K. (Rattler III.—Laick's Dora).

Maud Torrington. A. L. Page's (Stanley, N. J.) greyhound bitch Maud Torrington, Jan. 27, ten (eight dogs), by A. W. Purbeck's Gem of the Season (Ivanhoe—Fly II.).

SALES.

☞ **Prepared Blanks sent free on application.**

Thistle. Brown cocker spaniel dog, whelped Oct. 6, 1891, by Brantford Red Jacket out of Brownie S., by Swiss Mountain Kennels, Germantown, Pa., to F. S. Smith, Pittsburgh, Pa.

Blush. Orange, correct white markings, rough St. Bernard bitch, whelped December, 1888, by Leo out of Nell, by Swiss Mountain Kennels, Germantown, Pa., to Mr. Hurle, Philadelphia, Pa.

Major Gladson. Black, white and tan English setter dog, whelped June 10, 1891, by Breeze Gladstone out of Lily Bondhu, by G. N. Beinhauer to A. J. Weber, Pamrapo, N. J.

Wordsley Bill. Black, white and ticked English setter dog, whelped July 15, 1891, by Soapy Sponge out of Sinful Pride, by H. Northwood, Martin's Ferry, O., to Mr. Naylor, Niles, O.

Duchess. Black, white and tan English setter bitch, whelped July 24, 1891, by Benzine out of Maud Dido, by H. Northwood, Martin's Ferry, O., to T. Dugan, same place.

Hustler. Silver fawn pug dog, whelped Aug. 5, 1890, by Spokane out of Lady Verne, by Eberhart Pug Kennels, Cincinnati, O., to E. J. Frey, Ottumwa, Ia.

Dixie. White, black and tan head, fox-terrier bitch, whelped May 12, 1891, by I Reckon out of Gip, by Lansdowne Kennels, Lansdowne, Pa., to Dr. J. A. Woodward, Philadelphia, Pa.

Laick's Rattler—Music whelps. Black, white and tan beagles, whelped July 5, 1891, by G. Laick, Tarrytown, N. Y., a dog each to P. M. Carman, Wrightsville, Pa., and E. L. Smith, Perry, N. Y., and a bitch to Wm. Brown, Oswego Falls, N. Y.

Hero—Keno whelp. Orange St. Bernard bitch, whelped July 29, 1891, by W. H. Dixon, Jamestown, N. Y., to I. Ingraham, Cleveland, O.

Brock. White, tan on head, fox-terrier dog, whelped May 5, 1891, by Mouche out of Lady Bacchanal, by Woodhaven Kennels, Woodhaven, N. Y., to C. Drake, New York city.

Derango. Black and tan greyhound dog, whelped May 2, 1891, by champion Balkis out of Dell, by Woodhaven Kennels, Woodhaven, L. I., to Miss Eugenie Gray, Greensborough, N. C.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

J. A., Carbondale, Pa.—We cannot furnish them.

C. M. K., New York City.—Vol. 8 of the A. K. C. S. B. is not out yet; write to A. P. Vredenburgh, 44 Broadway, New York.

MADISON, N. J.—Does white ever appear on a pure-blooded Irish setter? Ans. Yes; sometimes on chest, muzzle or feet.

C. T. B., New Bedford, Mass.—Please give pedigree of Gordon setter bitch Mr. Atkin's Nellie Horton. Ans. Nellie Horton, by Munn's imported Duke of Gordon out of Tilley's Dream, by Jerome's Shot out of his Mab, by imported Ranger out of imported Juno. This is the only bitch of that name we can find.

J. C. M., Sunshine, Wash.—I bought a terrier dog about one year old for a ratter. He finds them all right and is keen and anxious, but does not seem to know how to kill them, as he takes them in his mouth and lets them go again, sometimes taking fifteen minutes to kill. How shall I train him to kill them when he takes hold of them first. Ans. We know of no remedy unless you could get some smart terrier to show him how a few times. Like a cat he may take pleasure in the victim's misery.

H. R., Greenfield, Mass.—1. Should a rough-coated and smooth-coated St. Bernard dog be marked alike to be prize dogs, and should they be marked alike to score the highest number of points possible to either? 2. Are rough and smooth-coa ed St. Bernards bred alike? Ans. 1. The coat is the only difference between them. 2. St. Bernards of either kind when bred together will often produce some pups rough and some smooth in the same litter. Roughs and smooths are frequently bred together.

B. D. T., Fairfield, Conn.—What is the matter with my hound pup, and what shall I do for him? He woke me up last night, and when I came down stairs he staggered toward me, and his hindparts seemed weak. He got over it in a little while and appeared all right. I have never noticed anything the matter with him before, with the exception of a kind of choking noise, as if he had something in his head or throat. Yesterday he scratched his nose and fussed considerably. Ans. Probably had a fit. Treat for worms, and give cod liver oil and hypo-phosphates. If necessary to write again give a more full description of symptoms, age, etc. We presume the puppy has not had distemper.

P., New York.—My setter bitch, two years old, has some kind of skin disease, causing her to scratch the hair off. Have been using lotions I got from a dog doctor, but got no benefit from them. Is there anything I can do to stop the itching and make the hair grow again? Ans. Treat for worms and apply the following dressing all over every other day for a fortnight, then wash off and repeat in a day or two if necessary: Kerosene, 30oz.; oil of tar, 4oz.; sublimed sulphur, 8oz; cottonseed oil, 46oz; mix together. Also give the following mixture:

Liq. arsenicalis kali	1dr.
Pot. bicarb	1dr.
Water	3oz.

Give one dessertspoonful twice a day.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $10. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

THE first installment of the promised vindication and explanation of the new deed of gift by its Boston correspondent appears in the last issue of *The Yachtsman*, and though the matter is treated at considerable length, there is nothing at all new, or that we have not discussed in detail over four years since. Everyone knows that the second deed was far from perfect, and that the altered conditions of yacht racing since 1857 called for some supplementary provisions to the liberal and generous, but too briefly worded deed of the five donors; but there was nothing even in the Mayflower—Arrow controversy or the old Rule 8 prohibiting centerboards, to justify the secret and hasty adoption of a document that violates in every way the fair and manly spirit that stands out in every word of the original and genuine deed. The first change, in 1881, was in all probability illegal, and certainly insufficient and unsatisfactory, but it conformed to a certain extent to the original deed, and had none of the conspicuously unfair provisions of the last change.

It is useless to go over the threadbare points of this last attempt at a defense; we have pointed out time and again, that the new deed shuts out all existing yachts, or any new yacht under 90ft., that the mutual agreement which was the chief feature of the original deed is a trivial detail in the new one, that the dimension clause cannot be "waived," but it must form the basis of a challenge; that the inside course was far worse for Volunteer and Mayflower with 22ft. under them than the Thistle or Galatea with 13ft., and that British yachtsmen have given in nearly every case from ten to twelve months notice, which the New York Y. C. has declined to recognize or accept.

We have not forgotten, too, that this last apologist for a part of the new deed was for the first two years a firm defender of the same dimension clause which he now condemns, and that he called on all the commodores of Boston to witness its fair and generous spirit.

The new deed has killed international racing, not alone through the dimension clause, but through the narrow, selfish and illiberal spirit which controlled its whole inception and production, a spirit which is evident even in those clauses which are not in themselves objectionable, and which has not hesitated to sacrifice the rights and interests of American yachts and American yachtsmen in order to retain possession of the America's cup.

THE feature of the season's racing in the East promises to be the new 21ft. class, the removal of the restrictions on over all length, and the general adoption of the Seawanhaka rule by the clubs chiefly interested in these small flyers having given a great impetus to building. Half a dozen new boats, including one or two from Herreshoffs', are now under way, and will be racing off Marblehead in two or three months.

THE regatta committee of the New York Y. C. has voluntarily taken up a very troublesome task in discussing as fully as it has done the nature of a mark. While they have handled the question ably, it is to be regretted that they have regarded it mainly from a secondary point of view, and that the vital point of the dispute at Tuxedo over a year ago, as well as of the Volunteer-Gracie foul, is subordinated to a different issue. It is evident that the remarks of the committee were called forth mainly by the two unfortunate circumstances attending the Gracie's part of the collision; in the first place, the hail from her for Volunteer to *tack*, and in the second place, the calling into question in her behalf of Section 16, relating to piers, rocks, shoals and similar obstructions other than marks of the course.

It is conceded by those who have from the first taken the side of the yacht in the assumed position of the Gracie—just able to clear the mark by a "pilot's luff," but without filling away on the other tack—that the Gracie had no right to hail Volunteer to tack, but only a right, under these supposed conditions, to hail for room to execute the maneuver which she believed would be possible. So far as we have heard, in both cases, the contention that the inner yacht has a right to cause another to tack in order to give her room at the mark, is confined to the protest of the Gracie. On this point, the rule and the custom are so clear that the question should never have arisen, and the elaborate opinion of the regatta committee should not have been necessary.

The vital point of the matter may be stated thus: Supposing, in this case, that the Gracie had reason to believe that she could weather the mark boat without filling away on the other tack, was she not entitled to all necessary room to perform this maneuver, and, if she hailed in due season, should not the Volunteer have given her that room, and failing to give it, was not Volunteer in the wrong? As in most cases, the evidence is very conflicting, and it would require a close inquiry into the position of each yacht before a fair decision could be made; but the claims of the Gracie, made immediately after the race, serve as an excellent illustration. The case is exactly the same as the very trivial one at Tuxedo over which so much discussion arose some months previously. Important as it is, this point has received but little attention from the regatta committee, and though, from the mention of it under the head of "Hailing and Fouling," the committee is apparently of the opinion that a yacht has the right to luff as far as she possibly can in order to clear, there is still lacking a plain and authoritative statement of the rights of the inner yacht and the obligations of the outer one.

THE question of adopting a rule to cover the case of two yachts on parallel courses converging, similar to that adopted by the Seawanhaka C. Y. C. in 1887, has lately been agitated in England, and the objection is made that the proposed rule, if adopted, will conflict with the rule relating to passing and rounding marks. We had occasion nearly a year ago to point out that the rules of racing may be divided into two classes, those relating to yachts sailing in the open and those relating to the vicinity of marks of the course. The converging rule is of the former class and, like some existing rules, may be superseded entirely by another rule as soon as the yachts come within such distance of the mark that they are obliged to take immediate consideration of it. The objection that a dispute might possibly arise over the jurisdiction of the two rules is one that might be made over other rules that are necessary and have proved satisfactory in practice. The rule was adopted here only after a very careful discussion and thus far, after five seasons, has given no trouble.

THE clever skit which we reproduce from the *Rudder* has a certain foundation of fact in the extreme care now exercised by designers over their new productions; and soaped windows and caulked keyholes are not entirely unknown, even on this side of the Atlantic, though as a rule admission is readily obtained to the leading shops and yards. Lawley's, Piepgrass' and Wintringham's yards are open at all times to any visitor, and though the new yachts at Herreshoffs were lately pictured in a New York paper as guarded by machine guns and mantraps, yachtsmen are always courteously received at the works. In our own experience in the quest of news, the most carefully guarded yard is not on the dark and barbarous Clyde, but close to free and enlightened New York, the gate being guarded by a descendant of the kings of Ireland, armed with something much resembling the tradi ional weapon of his country, and gruffly refusing either to admit a visitor or to send a card to the office within the gates.

THE CHARACTER OF A MARK.

AS a supplement to their decision in the case of the notable collision between Volunteer and Gracie in the Goelet Cup race last summer, the Regatta Committee of the New York Y. C. in its annual report included the following elaborate and comprehensive review of the subject of marks in yacht racing:

"It has been made evident to us by questions about a mark that some regard it as an 'obstruction to sea room.' In our opinion it cannot be so regarded. The point is of great importance, and we therefore establish the character of a mark according to the rules, as we construe them. We then discuss the conditions under which a yacht's obligations to a mark vary, and answer other questions asked in connection with the general subject of 'Passing and Rounding.' In this way the principles which we think should govern will be laid before the club for approval or correction, and thus in either case a guide will be furnished for our successors.

AN OBSTRUCTION.

"An obstruction in a course is an object which has sea room on one side only. An isolated rock, for instance, or a vessel* at anchor, is not an obstruction, for it offers a choice of sides for passing. And so a moving vessel cannot establish an obstruction, for her approach can be calculated and allowed for. On the other hand, a pier—or a reef or shoal or shore stretching away from a point that must be cleared, and too close to admit a free and safe passage between—is an obstruction, for there is no choice of sides existing. But a rock, vessel or any other formidable object becomes an obstruction when the question of safety enters. For danger confers the right of way over any other vessel not in similar peril.

A MARK IS NOT AN OBSTRUCTION.

"The subject of Section 14, in Rule 17, is 'Passing and Rounding Marks.' Section 15 defines a mark as 'any vessel, boat or buoy, or any other object used to indicate the course,' and adds that it 'does not in the preceding section involve any question of sea room;' and this is equivalent to saying that 'in the preceding section sea room is not to be considered as obstructed.' These two sections, then, which must be construed together, mean that a mark, when being 'passed or rounded,' is not to be regarded as an obstruction to sea room. It is not an obstruction, for it can be passed on either side. Indeed, it is somewhat in the nature of a point, with position, but without magnitude. And, to reduce its character to an idiom, a mark is not a lee shore.

RECOGNITION OF DISTINCTION.

"The rules recognize this distinction by giving widely different instructions in regard to the contrasted objects. A mark is not an obstruction. Therefore 'passing or rounding' is considered a maneuver lacking the element of danger. For this reason Section 14 calls on an outside yacht to give an inside yacht room to 'pass clear' with a luff, but without tacking; and then the rules pass to Section 16 and consider conditions into which the element of danger enters. And here a yacht, hindered by another yacht from clearing on one side, is in 'danger' of 'touching a rock, pier, or other obstruction,' or of 'running ashore' if forced on the other side where there is no sea room existing. Having no choice of sides her safety is endangered. And therefore to enable her to clear, an outside yacht is called on not only to luff, but also to 'tack or bear away' if necessary.

REASON FOR DISTINCTION.

"When an inside yacht, then, finds that she cannot luff around a mark, she must wear or pass to leeward; and either may be hazardous on a crowded turn. But she must calculate such chances, and if the turn be crowded should wear at a safe distance from it. For it must be remembered on the other hand that the preambles to the rules state that 'all attempts to win a race by other means than fair sailing and superior speed and skill are to be discouraged.' It must also be remembered that the proper time to tack in order to wind a mark often involves the nicest calculation. And if, between two yachts, one stands on long enough to clear on a required side, and one tacks short and having to tack again could force the other round, then 'superior skill' would be penalized. And it is to avoid the imposition of such a penalty that the rules thus broadly distinguish a mark from an obstruction.

EXCEPTION.

"The general rule, then, governing 'passing and rounding marks' is established by Sections 14 and 15. But there is one exception. It is made when the mark is a vessel or other formidable object and a yacht is in peril of fouling it under dangerous conditions. Here the mark is treated as an obstruction through the crisis, or, in other words, when and while the question of danger enters. It is true that being a mark there must be sea room on both sides. And therefore a yacht is responsible for the damage if, erring in judging her ability to clear on one side, she has blundered on so far that she can no longer pass on the other. From this responsibility a shift of wind, or a rise or fall or faint of wind, or an unexpected trend or force of tide, would not relieve her. But no matter what the cause—or whether she was within the rules or not—the fact exists that there is danger of wrecking. And therefore Section 16 comes to her relief, and gives her the right of way, as would the Federal sailing rules and regulations by which, of necessity, all club rules would be superseded. But if, in taking her right of way, she interferes with an outside yacht, she may be disqualified, and if, for any reason, the committee should order the race resailed, it would be competent for them to refuse her entry.

ACCIDENT TO MARK.

"A mark may drift or be destroyed or forced from its position. But no matter what the nature of the accident, the fact of its occurrence does not make resailing mandatory. The question is left with the committee; but a race should not be sailed again unless the chances of a yacht not responsible for the accident have been affected adversely.

"In the race for the Goelet cups, for illustration, Gloriana was the leading yacht and turned the mark in its proper position. Gracie and Volunteer came next, and in consequence of their getting into difficulties the mark veered over eight fathoms of cable. Gloriana was an easy winner, but if she had lost to any other sloop she might have raised successfully the points that the shift of the mark was to leeward. The course was not altered enough to affect time allowance perceptibly, and as all other yachts were advantaged in the leeward drift they have nothing to complain of.

HAILING AND FOULING.

"If two yachts on the starboard tack are nearing a mark with the intention of turning it, and the inside yacht hails for room to tack, or calls on the outside yacht to tack, she should be refused; and a fair inference from the hail would be her inability to clear according to the rules. She is entitled to a luff, and in this she should be accommodated, whether she calls for room or not. But a luff without warning, resulting in a foul, might afford ground for disqualification. When a yacht alters her course in answer to a hail, the hailing yacht must follow her as soon as she can do so safely. This applies not only in avoiding an obstruction (Section 16), but on all occasions. For a yacht must be held responsible for her hail. Otherwise a hail to tack might be made a cover for a luff, which, with all other forms of jockeying, the rules discourage in their preambles. If a yacht fails in an attempt to clear and fouls another yacht or fouls the mark, the possibilities are not left to her own estimate. It is for the committee to decide, should any question rise under Section 14, as to her ability to have cleared if unhindered. And so, too, if a mark veers cable and a yacht turns it in its new position, they must decide, if the point comes up, whether or not she could have cleared had the mark remained stationary.

"PRECEDING."

"The word 'preceding' in Section 15 demands attention, for some maintain that in consequence of its use marks are included in Section 16 by the words, 'or other obstruction.' The point is not well taken. Undoubtedly, as has been said, marks are treated as obstructions when and while the question of danger enters. This is the exception to the rule. But if this claim for 'preceding' was allowed, a mark would be an obstruction even if it were a small float or keg resting on a placid sea, and the whole question of sea room as applied to marks would be obliterated from the rules, for Section 15, apart from the definition, would be deprived of all possible force and meaning. The rules do not intend such an illogical contradiction, but as stress has been laid upon this point, we show, somewhat in detail, that the influence of 'preceding' has been overrated.

"It is evident that the only period in a race when a yacht takes any interest in a mark is when she is passing or rounding it. Therefore, to no other portion of the rules than Section 14 is Section 15 material. Again, sea room has nothing whatever to do with either of the other rules where marks are mentioned; one (Rule 14) authorizing the resailing of a race when they are moved; the other (Rule 18) imposing penalties for the infraction of rules already stated. Thus the limitation to Section 14, of the question of sea room as treated in Section 15, is established without any aid from 'preceding,' and, therefore, its use in Section 15 is superfluous.

"Again, the rules take up, in order, the essential points of racing, and having finished one turn to the consideration of another. Thus, in due time Sections 14 and 15 consider 'Passing and Rounding Marks' and 'Definition of a Mark' under their respective titles, and inform us, as has been stated, that when a mark is being passed or rounded sea room is not to be considered as obstructed. And with this the entire subject of sea room as applied to marks is exhausted. The next point in logical sequence would be sea room when it is obstructed—or 'obstruction to sea room'—and this we find is the title of the following section. From this section (16) all mention of a mark is omitted. Now, we are not entitled to assume, in a matter of such importance, that the omission was accidental, and when we look for the reason we find it in the distinction the rules draw between an obstruction and a mark. An obstruction involves the question of sea room; a mark does not involve it. Each, therefore, demands a separate treatment and each receives it. The omission, then, was intentional, and this claim for 'preceding' is not tenable.

"And indeed, quite apart from all other reasons a mark has just been mentioned in Section 15, in connection with sea room for the first and only time; and it is there mentioned in connection with sea room when it is not obstructed. Clearly, it would be illogical to assume its anonymous inclusion in a succeeding section, of which 'obstruction to sea room' is the title.

"Other clubs here, at home, using the parenthesis as explanatory, have inserted (not a mark) after the words 'or other obstruction' in sections closely following the phraseology of our Section 16. And the rule of the British Yacht Racing Association reads: 'If two yachts are standing to be so sore or more, shoal, or toward any buoy, boat, or vessel, and the yacht to leeward is likely to run aground or foul of such buoy, boat, or vessel (a mark vessel excepted), then;' etc. There are other ways of declaring that marks are not obstructions. And, in addition, they recognize the exception to which we have called attention, for otherwise a yacht could have no relief from the rules, no matter how formidable the mark or how dangerous a yacht's stress in turning it. Under our rules, which cannot, in our opinion, bear any other construction than the one which we have given, the character of a mark appears obscure to some, and it would be well to make it clear to all. If, therefore, a mark is not to be considered as an 'obstruction to sea room,' we advise the insertion of 'not a mark' after 'or other obstruction' in Section 16. If, on the other hand, a mark is to be so regarded, then Section 15 should state it clearly. And in either case 'preceding' should disappear as being in both superfluous and misleading.

"As to the relative merits of the two propositions, it is evident that it would greatly simplify 'passing and rounding' to treat a mark as an obstruction. But it would destroy, as we have shown, a valuable and important test of nautical skill and judgment."

S. NICHOLSON KANE,
IRVING GRINNELL,
CHESTER GRISWOLD,
} Regatta Committee.

*So held by the committe in 1850 in a foul between the Ultra and Maria.

The annual meeting of the Quincy Y. C. was held on Feb. 6, the following officers being elected: Com., John Shaw; Vice-Com., Wm. H. Shaw; Sec'y and Treas., Henry F. Faxon; Meas., Wm. E. Waterhouse; Regatta Com., Edward L. Davis, George E. Pfaffman, H. L. Rice, W. P. Whitmarsh; House Com., Henry Dean, John S. Murray, W. L. Dewson, Walter B. Wilson, Arthur J. Shaw, Chas. A. Price, Henry L. Edwards.

The annual meeting of the Corinthian Mosquito Fleet was held on Feb. 8, the following officers being elected: Com., Harold S. Forwood, sloop Apache; Vice-Com., A. Bryan Alley, sloop Cruiser; Sec'y, F. P. Sherwood; Treas., J. A. Stow; Executive Com., Messrs. Oswald Sanderson, Thornton Smith and W. P. Stephens. The annual dues were raised from $3 to $5.

Capt. G. H. Clark, of the Boston Yacht Agency, will continue the business of the firm of Clark & Borden, recently dissolved.

NEW YORK YACHT RACING ASSOCIATION.

THE third annual meeting of the New York Racing Association was held in New York on Feb. 3, with the president, A. J. Prime, presiding. Delegates from the following fifteen clubs were present: Brooklyn, Canarsie, Columbia, Harlem, Hudson River, Indian Harbor, Jersey City, Kill von Kull, New Jersey, Pavonia, Sing Sing, Staten Island Athletic, Tappan Zee, Williamsburgh and Yonkers Corinthian yacht clubs.

The reports of the various officers were read; that of the Secretary, Mr. Parkhill, told what the association had done in the preceding year, and how it had increased in membership from seventeen clubs at the beginning to a membership of twenty at the present time.

The treasurer, Com. R. K. McMurray, submitted his report that contained an itemized account of the receipts and disbursements for the year just passed, setting forth the amount the club started the year with and the amount now in the club treasury, which showed a flattering increase.

The regatta committee, through Mr. Gartland, their chairman, submitted their final report of the distribution of prizes. On the acceptance of the report the committee was discharged with the thanks of the association.

Tuesday, March 1, 1892, was fixed as the date of the annual dinner, and the preliminary arrangements were left to a committee composed of Com. Benson of the Jersey City, Vice-President Gartland of the New Jersey and Mr. Griffiths of the Harlem yacht clubs. In the discussion that occurred preceding the fixing of the date of the dinner, ex-Congressman Daniel O'Reilly of the delegates from the Brooklyn Y. C., spoke at length of his club, as to his being one of the delegates when the association was formed, and of the mistake they made in resigning from such an organization as this association and of the great pleasure it was to them all to be again back in the fold. Mr. O'Reilly also spoke of the great success of the recent dinner of the Brooklyn Y. C. held at the Montauk club house in Brooklyn, and thought it a wise move on the part of the association to give this annual dinner, affording, as it did, a chance for the members of the various clubs to meet socially and advance their different views. Mr. O'Reilly's remarks met with much applause.

Mr. A. F. Rowe, of the Jersey City Y. C., gave notice that he would move as an amendment to Rule 1 of the racing rules relating to classification, the addition between Classes C and I of Class H, yawl-rigged cabin yachts.

The date of the fourth annual regatta was fixed for Labor Day, Monday, Sept. 5, and the secretary was instructed to procure a steamer.

After some other miscellaneous business had been transacted, an election of officers for the current year was had with the following result: President, Alanson J. Prime, Yonkers Y. C.; Vice-President, George E. Gartland, New Jersey Y. C.; Secretary, George Parkhill, Columbia Y. C.; Treasurer, R. K. McMurray, Staten Island Athletic club. Executive Committee: C. H. Benson, Jersey City Y. C.; Daniel O'Reilly, Brooklyn Y. C.; W. A. Smith, Pavonia Y. C.; A. M. Bacon, Harlem Y. C., and I. F. Fisher, Canarsie Y. C.

In accepting the office of president for the fourth time Com. Prime said that he had made up his mind to accept all the honors offered him now, as the greatest honors came unsought, and that by wishing the office was the only way by which he would eventually cease to be able to obtain it. His remarks caused much amusement.

ICE YACHTING.

AFTER long waiting the patience of the ice yachtsmen has been at length rewarded, and on Feb. 5 a fine race was sailed for the challenge pennant of America, the course being between two flags 2½ miles apart off Roosevelt Point, on the Hudson River, five rounds, 25 miles. The wind was strong from the north throughout the race, but all the yachts carried full sail.

The starters were: Icicle, John A. Roosevelt, Capt. Wm. Smith sailing master; Blitzen, A. Rogers, sailed by owner; Dragon, N. L. Wright, sailed by owner; Scud, Capt. Weaver, of the Shrewsbury Club, the challenger for the pennant, sailed by owner, and Haze, R. L. Knight, also of the Shrewsbury Club, and sailed by owner.

Each carried one man beside the helmsman. The start was made at 3:57 P. M., the five being ranged in line, head to wind, with skipper standing on the ice beside the helm. Icicle had the best start, but Blitzen overtook and passed her on the first leg. Haze carried too much sail and was forced to withdraw on the second leg. On the third leg, while still in the lead, Blitzen parted her peak halliards and withdrew. By means of a peak purchase Icicle was able to lower her peak at each jibe, and she steadily increased her lead, finally winning easily. The full times are as follows:

FIRST TURN.

Blitzen	4 05 20	Scud	4 07 50
Icicle	4 05 52	Haze	Withdrew.
Dragon	4 05 39		

SECOND TURN.

Icicle	4 14 34	Scud	4 18 37
Dragon	4 16 55	Blitzen	Withdrew.

THIRD TURN.

Icicle	4 23 45	Scud	4 29 04
Dragon	4 26 46		

FOURTH TURN.

Icicle	4 33 22	Scud	4 40 26
Dragon	4 36 22		

Time of race—Icicle 46m. 19s., Dragon 48m. 55s.

The race was managed by Mr. Guy C. Bayley and Thos. Ransom.

On the same day two of the series of five races of the Orange Lake L. Y. C., of Newburg, were sailed in a good breeze over a 10 mile course. The first race, for the Jackson punch bowl, to be won three times, was won by Cold Wave, Com. Higginson, with Take Care, G. C. Trumble, second; time 41.7. The second race, for the championship pennant, was won by Windward, with Cold Wave second; time, 38.2. On Feb. 4 at Low Point, the lateen-rigged Ranger ran away with no one on board and collided with the North Star, both being wrecked.

NEW YORK Y. C.

THE annual meeting of the New York Y. C. was held on Feb. 4, with Com. Gerry presiding. The regular nominees for vice and rear commodore, Messrs. Sturgis and Rogers, requested the withdrawal of their names, and the entire board of officers was re-elected, as follows:

Com., Elbridge T. Gerry; Vice-Com., Edwin D. Morgan; Rear Com., W. Butler Duncan; Sec'y, J. V. S. Oddie; Treas., F. W. J. Hurst; Meas., John Hyslop; Fleet Surgeon, Morris J. Asch, M. D.

The committees elected were as follows: Regatta Committee—S. Nicholson Kane, Chester Griswold and Irving Grinnell. Committee on Admissions—Edward M. Brown, W. L. Brooks, James C. Bergen, Frank T. Robinson and D. T. Worden. House Committee—R. P. Lounsbery, John M. Wilson, Robert S. Browne and Edmund C. Stanton. Library Committee—J. M. Woodbury, Sandford B. Pomeroy and J. Schuyler Crosby.

The following new members were elected: William A. Harper, H. R. Harper, E. R. Coleman, E. C. Lainard, F. L. Anthony, W. R. Garrison, John H. Adams, James Arden Harriman, S. T. Cushing, Newberry D. Thorne, Robert Dunlap, W. S. Hutchins, Henry F. Lippitt, R. Lincoln Lippitt, Henry M. Anthony, Ballard Smith, Richard W. Comstock, Robert B. Roosevelt, J. W. Mackay, Jr., Albert G. McDonald, Jefferson Hogan, David Dows, Edward Dudley, Henry D. Polhemus, John T. Lord, George P. Butler, Charles R. Miller, W. H. Coombs and George L. Tyson.

A suggestion was made that a suitable piece of silver be presented to the new United States cruiser New York, and Messrs. Adrian Iselin, Frank Robinson and Nicholson Kane were appointed a committee to select the gift.

The annual regatta will be held on June 9.

PHILADELPHIA Y. C.

Editor Forest and Stream:

The annual meeting of the Philadelphia Y. C. was held in the new rooms of the club, No. 1,715 Chestnut street, on Feb. 3. There was a large and enthusiastic attendance.

The club was never in a more prosperous condition and the prospects for 1892 could not be better. The new steam yacht Gretchen of Hon. John E. Reyburn, the club's Vice-Commodore, was enrolled. Several yachts are in process of construction, notably a Gardner 35-footer for Mr. Thomas S. Manning. The following officers were elected: Com., Francis S. Brown; Vice-Com., Hon. John E. Reyburn; Rear-Com., M. Richards Muckle; Trustees, George D. Gideon, Thomas S. Manning, Samuel B. S. Barth, John S. Muckle; Secretary, George T. Gwilliam; Harbor Master, Charles L. Wilson; Measurer, Samuel A. Word; Regatta Committee, T. Carpenter Smith, John A. Lehman, Robert C. Clarkson.

Many improvements will be made in the club's river house and anchorage at Tulcum. The annual regatta will be held June 4.

GEORGE T. GWILLIAM, Sec'y.

Messrs. Stewart & Binney have received an order for a three-masted schooner similar to the coaster John A. Buttrick, designed by Mr. Burgess, a very successful vessel. Wintringham is at work on a 24ft. 6in. l.w.l. catboat of handsome model for a member of the Atlantic Y. C., from designs by H. J. Gielow.

LOOKING FORWARD.

THE following items were taken from the *Morning Fabricator*, Jan. 10, 1902:

It is claimed by the builders that the lines published by our contemporary, the *Daily Bun*, are faked; that the two experts employed by that enterprising sheet, Slippery Mike and Billy the Buster, although they succeeded in blowing open the nickle door of the shop, failed to secure a photograph of Mr. Plunger's new boat, as the noise of the explosion attracted the attention of the sentries, and the two burglarious reporters were driven off by the fire of the machine guns before they could work their cameras.

Our Boston correspondent was informed yesterday that the 97-footer to be built for a well-known Newport yachtsmen will be constructed upon one of the Pacific islands. The materials for the yacht will be taken out in a steamer, whose owners, captain and crew will be ignorant of the destination until the vessel has cleared from port; while the construction of the yacht is going on, the coast will be protected by a guard of torpedo boats, and nobody will be allowed to land or leave the island during the time. It is expected that by this means the model of this new crack will be kept a secret until she toes the mark in her maiden race. The workmen who have been engaged to construct the vessel were yesterday put under oath, and a bond of $5,000, not to furnish any information during the time they are on the island or after leaving it.

The well-known designer, Mr. T-square found himself in a most unfortunate predicament one day last week. The combination lock on the door of his designing vault in some unaccountable manner got out of gear, and Mr. T-square, who was within making the working drawings for the racer that is to appear next May, was unable to get out. As the walls of the vault were three feet thick, and built of the hardest steel, it was impossible for him to have any communication with the outside. He was imprisoned for three days, during which time he managed to sustain life by devouring all the old rubbers and fragments of lead pencils that were on the office desks. Yesterday afternoon the experts from Herring's succeeded in opening the door, and Mr. T-square was brought out in a very dilapidated condition and removed to the hospital.

Mr. Algeron Giltedge has decided to have the fin keel cast in gold for his 20-rater. The specific gravity of gold being almost twice that of lead, it will reduce the wetted surface considerably with the same amount of weight.

The lines for the new 40-rater to be built at Strawley's yard were taken from the office of the architect to the builder's office under an escort of three policemen. The reporters, who had planned an attack on the messenger for the purpose of stealing the lines, were foiled Such actions on the part of our contemporaries are a disgrace to journalism.—*Rudder, Sail and Paddle.*

THE MEASUREMENT OF SMALL YACHTS.

THE question of measuring the waterline of small yachts has been in dispute for some time in England; many of the small craft being of such a form that the waterline is greatly changed by the presence or absence of a crew of four or five men. Thus far the boats have been measured with no one on board, greatly to the advantage of those depending solely on live ballast as against those with fixed keels.

At the last meeting of the council of the Y. R. A., Mr. W. Baden-Powell proposed and Mr. A. Manning seconded that the following addition to Rule 3 be recommended for adoption at the annual general meeting, Feb. 25:

After the words "six inches of the water level," add as follows: "A yacht of or under 10-rating shall, when being measured for length of the load waterline, have on board her, and placed as near midlength as practicable, men in number equal to the maximum number of persons her owner may specify to the secretary or measurer he intends ever to carry in her in a race. Such number shall be indorsed on the certificate of rating, and shall not be exceeded in any race under such certificate." (Rules 14 and 33-35 being also amended agreeably with the foregoing.)

5. To receive notices of motion, etc.

NEWS NOTES.

The Marine and Field Club has selected June 4 as the date for its fourth annual regatta.

Wasp will be the name of the new Rogers 46-footer. The Gardner 90ft. schooner will be named Aleeae.

On Feb. 3 Namouna, steam yacht, Mr. James Gordon Bennett, was at Suakim, Egypt. On the same day Alva, Mr. W. K. Vanderbilt, sailed from Nice for Genoa, Leghorn and Naples.

A new yacht club is being organized under the name of the New York Catboat Club, for catboats only. Applicants should send their names to Paul E. Vollum, Act. Sec'y, 39 Whitehall street, New York city.

Messrs. Wilson & Griffin, the yacht sailmakers, have sent out to their customers a handsome photo of a brigantine under full sail, a reproduction of a spirited painting by Mr. Gilbert H. Wilson, the senior member of the firm.

We have received from Mr. V. D. Bacou, of the Cape Cod Yacht Agency, the new catalogue for 1892, containing a list of nearly one hundred catboats of all sizes for sale. Mr. Bacon is prepared to furnish designs for building elsewhere, or to superintend building on the Cape.

The special edition of Part V. of Peabody's "Representative American Yachts," makes a most artistic and valuable record of the 46ft. class, containing views of all the yachts. The large picture of Gloriana is a particularly fine one. This part is bound in cloth and sold separately.

The steam yacht building at Poillon's yard, from designs by H. J. Gielow, for Gustavus Sidenburg, was launched on Feb. 7, being christened Theresa by Mrs. Sidenburg. Her dimensions are: Length over all, 95ft.; l.w.l., 78ft.; beam, 15ft.; draft, 6ft. J. W. Sullivan will furnish the engines.

One of the handsomest catalogues we have ever met with is that of the Gas Engine and Power Co., of Morris Dock, New York, for 1892. The illustrations, which are numerous and beautifully executed, show the naphtha launch in all stages of construction, and of all sizes. Apart from its value to those in search of a yacht for all purposes of hunting, fishing or pleasure cruising, the book is most interesting to every yachtsman.

The Volunteer Sailing Club, of New Haven, Conn., was recently organized with the following officers: Com., Lewis F. Conklin; Vice-Com., George W. Verwbolt; Sec'y, John W. E. Johnson, 49 Collis street, New Haven, Conn.; Treas., Webster H. Mathis; Fleet Capt., Lawrence M. Cooney. The purpose of the club is to encourage sailing and racing in sharpies, six of which are already enrolled in the fleet. A regatta will be held on July 4 and another on Labor Day.

The annual meeting of the Hull Corinthian Y. C. was held on Feb. 6, the following officers being elected: Com., Herbert O. Stetson; Vice-Com., H. W. Lincoln; Sec'y, F. H. Smith, Jr.; Treas., G. W. Bouve; Meas., S. S. Harrington; Executive committee, commodore, vice-commodore, secretary and treasurer, *ex-officiis*, E. R. Field. R. McIntyre, C. V. Souther; Membership Committee, commodore, vice-commodore and secretary, *ex-officiis*, G. C. Colburn and H. B. Wilson.

The annual meeting of the Atlantic Y. C. was held on Feb. 8, with Com. Lawson in the chair. The following officers were elected: Com., David Banks, schr. Water Witch; Vice-Com., Wm. L. Moore, str. Kanapoka; Rear-Com., Jas. Wier, Jr., sip. Tigress; Meas., Henry J. Gielow; Regatta Committee, Geo. B. McNulty, G. B. Frisbie; Treas., H. C. Wintringham; Sec'y, Geo. H. Church; Trustees, J. P. Howell, J. R. Maxwell, E. B. Havens, Thos. L. Arnold, W. W. Keayon, and P. G. Sanford; Membership Committee, Henry A. Gouge, J. C. Seely, and H. W. Banks, Jr. Changes were made in the club courses.

The annual meeting of the Cooper's Point Y. C. occurred on Feb. 2, the following officers being elected: Com., Robert Lutes, cabin sloop Comfort; Vice Com., W. Kinsey; Fleet Captain, A. Bell; Meas., Geo. Reinbold; Treas., Wm. G. Cook; Sec'y., A. Tiarks. Regatta committee to be elected. Four new 16ft. cats, exactly alike in detail, are in course of construction by James Collins for the club. The time has not yet been definitely fixed for the sixth annual Reedy Island race. It will be a hard fight between the open cats and cabin sloops for first place over the course. New members and boats are joining the club every meeting night.

Robert Murray Whiting, formerly commodore of the Brooklyn Y. C., died on Feb. 4 at 391 Ninth street, Brooklyn, in his 77th year. He was attacked with paralysis, which affected the entire right side of his body, after his return from one of his frequent long voyages in an open boat. Mr. Whiting was a noted yachtsman and oarsman, and for many years was the most familiar figure in these waters. Until a few years ago he was devoted to aquatic sports. He was born in this city. When he was 20 years old he built a pair of boats exactly alike, and with a friend rowed on Sunday morning from Bay Ridge to Whitestone and back again on the same day, about thirty miles. He made as many as 150 trips to Red Bank from Bay Ridge, the quickest being made in four hours and ten minutes. He once rowed from Bay Ridge to Sandy Hook in one hour and fifty minutes. He had many adventures, and has been at sea for twenty-four hours several times in an open boat. When the Fanny beat the Gracie nine years ago, Mr. Whiting rowed over the entire course, keeping up with the yachts during the race. He was a good pedestrian as well as an oarsman, and it was not until the paralytic attack last summer that he gave up his favorite sports. He joined the Monmouth Boat Club of Red Bank fifteen years ago and was its commodore for several years. He was the fourth commodore of the Brooklyn Yacht Club, and was also a member of the Varuna Boat Club. He owned the Ida, Gussie, Sadie and other outriggers. He was a man of a fine physique with a weather-beaten face. His daughter Laura, who survives him, is also an expert at the oars, and has won several medals in rowing contests.

The annual meeting of the Riverside Y. C. was held on Feb. 4, with Com. Tyson presiding. The following officers were elected: Com., George I. Tyson; Vice-Com., Charles T. Pierce; Sec., John G. Porter; Treas., Joseph E. Peck; Meas., E. Frank Lockwood; Trustees—Luke A. Lockwood, W. A. Hamilton, P. S. Schutt, F. Beltz, E. D. Hurlbut, G. Potter, G. G. Potter, G. G. Tyson and Joseph E. Peck; Membership Committee—G. Potter, E. B. Hart, Jr., and J. A. Oatwill; Regatta Committee—Dr. S. Franklin, Frederick Hubbard and John H. Boswell. The club has 134 members. The annual regatta will be held on July 9.

The annual meeting of the New Rochelle Y. C. was held on Feb. 1, with 83 members present, Vice-Com. Hausling presiding. The following officers were elected: Com., Gov. Leon Abbett, of New Jersey; Vice-Com., F. M. Hausling; Rear Com., Jabez Harris; Sec., R. Condit Eddy; Treas., Walter Large; Meas., C. G. Miller; Trustees, Class 1894—John F. Black and E. T. Smythe; Membership Committee—Charles Chamberlain, E. E. Lamden and Henry Thompson; Regatta Committee—P. J. Krackel, F. W. Schoonmaker and Edward H. Sturgis. Law Committee—J. F. Lamden and Chas. W. Voltz. A proposal was made to appoint a committee to revise the measurement rule, but the club decided to adhere to its present measurement of mean length. The annual regatta will be held on July 2.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $2.00. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

MORE BEAM IN CANOES.—A few weeks ago we quoted and commented on a proposal made by the *Field* to enlarge the limits of beam in a canoe. We quote this week the same suggestion in fuller detail, from which it appears that the interests of the 30in. canoes are to be fully conserved. While it is possible that little harm may result, it seems to us best for the good of canoeing that the admission of a totally different type of craft to all canoe uses should be discouraged.

DOWN THE MISSISSIPPI.—III.

A Canoe Cruise in 1883.

BY COMMODORE GEO. W. GARDNER AND WM. H. ECKMAN.

[*Concluded from Page* 109.]

AT 8 o'clock we turned out. The wind had ceased entirely. The cold was as vigorous as it had been. The skipper proceeded immediately to build a monster camp fire whereby to warm the exterior, and the cook prepared chicken soup, fried bacon, hard tack and coffee. By 10 o'clock a good steady sailing breeze had sprung up and, to our great rejoicing, from the right point. All sail was spread and at 10:15 we were away. Scarcely had we got under way, however, when the ring of the skipper's mainsail snapped and the canvas went overboard; the damage was beyond repair and, to remedy as far as possible the disaster, the two canoes were again lashed together and the bulging sails of the Cuyahoga carried the twin craft booming over the waters. Sailing thus, we passed New Madrid without stopping, simply answering the greetings of the several knots of citizens on shore by long blasts on our horns. The wind died away and the paddles were resumed. It grew colder as the day advanced and paddling was largely more conducive to comfort than sailing, if anything approaching comfort could be said to exist in such an atmosphere. Two miles below New Madrid, tied to the bank, lay a very small sternwheel steamboat, the Richmond. The canoes were headed for the steamboat. A short parley with the captain, and at 1:30 P. M. the canoes were housed on the main deck and the cruisers were toasting their shins before a hot stove in the cabin. We remained on the Richmond five days.

Shortly after noon on Sunday our steamboat holiday came to an end at Vicksburg. The afternoon and Monday were given to doing the town, and Monday evening, Christmas eve, was "dun given" up to such an orgie of noise as would put to shame a northern Fourth of July. The amount of noise in the ordinary small boy is an unknown quanity, but the Vicksburg small boy—he is largely colored boy—is in point of noise no ordinary boy, and he remains a "boy" until he is well along in years, his noise-producing propensities developing with his years. The noises produced and dispensed with characteristic liberality, were of no particular kind or quality. Each individual boy seemed to have a job lot. Where he stored it all was a mystery, for this boy is, as a rule, a thin, underfed starveling—a sunburned cadaver in rags. Noise was king and the boy was the power behind the throne.

The sun came up in a cloudless sky and once again it was the sunny South. The change was as welcome as it was sudden. The newly varnished canoes were put into the water. A few moments were devoted to parting words with our friends, and we were off with every inch of canvas set and the miniature colors flying.

That Christmas night was passed in the cabin of Ben Coleman, a freedman, three miles above St. Joseph, La. Ben Coleman, our host, was born a slave. Emancipation came to him in his early manhood, and found him, as it found nearly all of his class, ignorant and penniless—too ignorant to realize the gift of freedom, too poor to get away from the scene of bondage, with all its repressive influences, and in the great majority of cases, be it said in all kindness, too lazy and shiftless to care. To the last rule Ben Coleman was an exception. By dint of struggle he had mastered the art of reading and was now schoolmaster to the little community, old and young, on the plantation. Whether it was a trait or had been developed with his acquired knowledge I know not, but a quiet force and dignity, quite unusual in his kind, characterized the man and had in some measure been reflected in his buxom and much younger wife. His simple story was simply told, and in plainest phrase he set forth the features of the new thraldom that had replaced the slavery of his youth. I tell the story not in the broad rich dialect so universal with whites as well as blacks.

"I rent as much land as I can work myself with my mule and cart, for my pay I get half the crop of cotton. What I eat and wear I must buy of my own landlord." "And does it pay, Ben?" "Why no, sir. You see, sir, last season was a pretty fair one, but at the end I was in debt to the boss; this season the crop is a failure, and you see I couldn't go away if I wanted to. I must stay and work out my debt, which grows all the time."

"But how is it, Ben, that you get in debt. Don't you get a good price for your cotton?" "Taint that, sir, but I guess we pay big for all we eat and wear." "And what do you pay?" "Well, sir, we pay thirty dollars a barrel for pork, seven dollars a barrel for corn meal, and everything else in proportion. Now you see, sir, I have my wife and myself and three babies."

It was quite enough. No calculation was needed to show how hopeless was the outlook. His cabin was of logs, the roof and floor of slabs, such a shed as the Northern farmer builds for his cows, a single room 20ft. square with a lean-to shed. The furniture, a poor bedstead, a rocking cradle, both poorly dressed, a bench, two backless chairs, a deal table, a tin paneled cupboard. This was all, and all was worn and in poor repair. A common Dutch oven and a wooden bread bowl constituted the visible culinary equipment. The cruisers' outfit was needed to furnish the table. Bacon, hoecake, and coffee was the bill of fare prepared by "Aunty." Our stores furnished the dessert. Besides father and mother there was a four-year-old son, a two-year-old daughter and a three-months piccaninny. The confidence of the innocents was soon won, and we learned that Santa Claus had overlooked these lowly babes of this son of toil. The little stockings were hung up that night and were not empty in the morning. Wrapped in our blankets we slept before the fire soundly and well.

The morning was cold, raw, damp and cheerless—breakfast, a visit to Ben's traps, which yielded a fine fat possum, and repacking the canoes occupied until 10:30. A twenty-five mile paddling bout, through a light but damp fog which shut out whatever of scenery might have presented itself, was followed by a very tidy beam wind which dispersed the fog, retired the paddles and raised the spirits of the cruisers at one and the same time. Sawing around a sharp bend in the stream, a scene presented itself so unusual as to not only claim our attention but invite a halt. On the high Mississippi bank was congregated a large party of colored people of both sexes and all ages, dressed in holiday garb. Here's a picnic, we will land, join in the hilarity, shake out the dampness and get some milk and what other luxuries and condiments may be had.

The company was a goodly one in point of numbers, but there was a seriousness, and an entire absence of mirth or jollity that surprised us, as much as did the lack of curiosity or interest at our advent among them. These people had come together here, many of them walking ten miles, in holiday attire, and this was done on every Wednesday, the sole object of the pilgrimage being "to see the packet come in." She came. The steamboat Natchez made a landing and was off again in less than ten minutes; but in that time the bar had been most liberally patronized by the pilgrims, the male portion carrying their spoils under their vests, and the female, young and old, armed with long, gaudily colored sticks of candy. The departure of the steamboat was a signal for dispersion. As a preliminary to the homeward march boys and girls, men and women pulled off their shoes and stockings, or rolled up their pants, tucked up their skirts, as the case demanded, and very soon the two hundred or more of shining calves and ankles were lost among the thin and bare trees that closed in the landing on three sides.

Whether it is that the mirth and music died out of the negro when his shackles were broken, whether the preconceived notion of song and breakdown born of story and legend of the Sunny South is but a myth, or whether our presence chilled the mirth, I know not, but we ever found the colored man, if not serious and thoughtful, very far from frolicsome and gay. Such songs as he sings on shore or afloat are without melody or rhythm, and pitched in a minor key. In good truth, as we drifted down this wide, silent, gloomy waste of waters we were impressed with the conviction that every visible thing, the handiwork of man as well as nature, was tuneless.

We were at Cole's Landing. Back some rods from the bank stood the warehouse, a small affair of logs; beyond, "the store," and opposite that the residence of Mr. Bennett, store-keeper, warehouseman, steamboat agent and planter. We were pleasantly entertained with Southern hospitality and varied information relative to present conditions in the South. The plantation store is a store peculiar to itself, located at a "landing" or at a cross road more generally than otherwise. Far removed from any residence, it presents no single feature in itself to commend itself. The loafing place feature is noticeable for its absence.

An easy run of 29 miles, occupying about five hours, brought us to Natchez the next day, where we spent the afternoon and night. The approach to the city presents the finest view on the river. With alternating warm and cold weather we paddled and sailed on, passing out of the cotton belt below Baton Rouge and into the region of sugar cane. The levees began to impart a new character to the scenery as viewed from the canoes; the planters' mansions grew more pretentious, palmetto trees were in view. Camping at times in the fields or taking up quarters upon a roof, we continued on our journey. Incidents were plentiful, accidents and mishaps occasional, but I have given you enough. On the last day of December we broke camp about half a mile above Hard Times Landing, La. We realized that our cruise was approaching a finish, but had made no particular plans for the day. A fruit lugger hove in sight, beating her way down stream. These luggers are single-masted craft, carrying an immense lug sail and a jib, owned and manned by Italians and engaged in the fruit trade, mostly bananas, which they bring from New Orleans as high up as Baton Rogue, crying their wares as do the venders in our streets. "Buy de banan, de sweet banan." Pulling alongside we chatted with the master of the craft, one of three constituting the crew, a short parley and we were aboard. The bronzed sons of Italy were unstinted in their hospitality and refused all compensation therefor. We remained on board, sleeping in the hold until 11 o'clock the following morning, embarked in the canoes at Nine Mile Point and entered upon the final pull. The air was raw, chilly, damp and uncomfortable. At half past one we stepped out of the canoes at the harbor police station, at the foot of Canal street, New Orleans, the cruise was finished. Four days later we were steaming through the beautiful blue waters of the Gulf of Mexico.

A. C. A. REGATTA, 1892.

BELOW we print the programme as finally adopted:

REGULAR EVENTS.

No. 1. Paddling and sailing combined, half miles alternately, total three miles. Time limit 1½ hours.

No. 2. Paddling, half-mile, straightaway.

No. 3. Sailing, four and one-half miles, same rig and ballast as in race No. 1. Time limit 2 hours.

These three races to constitute the record races.

No. 4. Trophy paddling, one mile, straightaway. Exempt from one-man-one-canoe rule.

No. 5. Paddling, open canoes, not under 55lbs. weight, single blade paddles, one-half mile straightaway.

No. 6. Unlimited sailing race. No limits to rig or ballast, six miles. Time limit 2½ hours. Starters in the trophy race to be selected from this race. See Rule 5.

No. 7. Trophy sailing. No limit to rig or ballast, nine miles. Time limit 3½ hours. Starters to be selected as by Rule 5.

No. 8. Novice sailing race. No limit to rig or ballast, distance three miles. Time limit 1½ hours. Open only to men who have not sailed a canoe prior to Sept. 1, 1891.

No. 9. Sailing, the Pecowsic Cup. Four and one-half miles, no limit to rig or ballast. Time limit 2 hours. Winner of trophy barred.

No. 10. Sailing club race, distance four and one-half miles. Time limit 2 hours. First three members of any one club to count. No club can be represented unless it enters at least three men; all men entered must have become members of the club they represent before the first day of the A. C. A. meet.

No 11. Cruising race. Open to "general purpose" or "cruising" canoes, sailing and paddling combined, one-half miles alternately. Distance three miles. Time limit 1½ hours.

OTHER EVENTS.

No. 12. Paddling war canoe race. Details will be posted.

No. 13. Paddling tandem, half mile straightaway.

No. 14. Paddling club fours, half mile straightaway.

No. 15. Sailing upset and maneuvering, no special appliances, no limit to ballast, at signal throw over astern and recover paddle; second signal, canoe to be heeled over until top of foremast touches the water; canoes to be righted and cross finish line under sail. Time limit ½ hour.

No. 16. Paddling upset, usual conditions, no special appliances.

No. 17. Hurry-scurry, run, swim and paddle, short distances.

No. 18. Gymnastics.

The regatta committee will arrange for a division race of war canoes, if required, and will also arrange races for any special prizes offered by individuals.

The regatta committee appeals to every canoe club for a prize flag or a subscription of $5 for the purchase of same.

The following circular has been sent out. If it fails to reach any club their consideration of it is hereby invited.

ROBERT SHAW OLIVER,
H. LANSING QUICK,
FORD JONES,
E. H. BARNEY,
R. W. GIBSON, Chairman, 18 Wall Street.

CIRCULAR TO CANOE CLUBS.

The A. C. A. regatta for 1892, at Willsborough Point, Lake Champlain, N. Y., will be held commencing Monday, Aug. 15, according to the programme published under this date in the official organs.

The regatta committee appeals to each canoe club for one prize flag. There will be about 55 flags required. The regatta committee will obtain the flag on behalf of any club desiring to contribute $5 for that purpose, instead of the flag itself, and all flags obtained by the committee will be according to a regular system and color.

The return of the subjoined blank at an early date is urgently asked.

ROBERT SHAW OLIVER,
H. LANSING QUICK,
FORD JONES,
E. H. BARNEY,
R. W. GIBSON, Chairman, 18 Wall Street.

The .....agrees to contribute..... prize flag for the A. C. A. regatta, 1892, and will forward the same to the regatta committee on..... ...1892

(Signed.).....

Or the following if preferred:

The .....agrees to contribute five dollars ($5) for the purchase of a prize flag on its behalf, and incloses....., herewith,

(Signed),.....

SINGLE-HANDERS.

Editor Forest and Stream:

I notice "Cayuga" is out again with a rejoinder to my letter. Far be it from me to have even the ghost of an ill-natured difference with so enthusiastic and veteran a sportsman and cruiser—he is both of these, while I am cruiser only—hence the difference in our ideas and boats.

I willingly concede the good points of his "spoonbill." The red rag he hung out was his not being able to see the advantage of the "spoontail" over the square stern, and his holding that there was some extra difficulty in handling the last, which I cannot admit. I hope to range alongside of "Cayuga" some day, outsail him and reach camp happy. He will haul his boat ashore and pitch his camp while I have to remain afloat or ask his assistance, which will make him in his turn happy, and each will retire to sleep in the full conviction which every well-regulated sailor man should have, that his own is the snuggest, handiest craft that floats or (in his case) lies on the beach. HENRY K. WICKSTEED.

COBOURG, Feb. 1.

JERSEY CITY C. C.

AT the annual meeting, on Feb. 3, of the Crescent C. C., of Greenville, N. J., the name was changed to the Jersey City C. C., and the following officers were elected: Com., W. H. Hillier; Vice-Com., E. W. Edinger; Sec'y-Treas., W. T. Markham, Hudson Co. R. R. Building, Hoboken, N. J. The new club house will be ready in April, and a regatta will be held on May 30. Mr. C. J. Pockman, an amateur builder and member of the club, has decided to take up canoe building as a business, and will open a shop shortly.

BEAM VS. SLIDING SEATS.—Before the autumn meeting of the R.C.C. came on last year we suggested the advisability of allowing an increase of beam to first class canoes, under certain conditions, and with the "advance of time" and the foreshadows of the near future, we are still of the same opinion. The "conditions" appear in several quarters—even in America—not to be clearly hoisted in. We suggested a complete clear out from present minor and vexatious limitations and the introduction of a simple rule of maximum and minimum limitation of length, breadth and depth; a limit of rating (Y.R.A.), and the conditions that sliding deck seats may be used in canoes of or under 30in. beam, the limit of beam where no sliding seat is used may be 36in. Whether 3in. extra beam, per side, without use of a sliding seat, would ever be level with, or superior to, a 30in. beam canoe with a long sliding seat, is a problem which can only be answered by several seasons of experiment. Taking ordinary moderate weather for eight or ten matches, then undoubtedly the 16ft. by 30in. canoe with sliding seat would have the pull. The equally day, or the gale, would give a chance to the 36in. non-slider. If the two concessions, sliding seats to 30in. boats and 6in. extra beam to non-sliders, are of equal value, nobody is harmed and no vested interest is killed. If the extra beam proves of less value for racing than does the sliding seat still less real objection can, or ought to be, raised by racing men to a movement which is in favor of cruising requirements of many men, and which tends to simplify the classification rules.—*Field.*

Rifle Range and Gallery.

AMATEUR REVOLVER CHAMPIONSHIP.

ONE competition in the matches now progressing for the Amateur Revolver Championship of America and the possession of the Winans trophy emblematic thereof, has already been held in Boston, and another has been announced for the shots of the same city.

On the evening of Feb. 5 Mr. Sumner Paine shot in the gallery of the Boston Athletic Association. He is a member of the association, and had been very active in trying to secure a representation of Boston's crack small-arm workers on the roll of competition for championship honors. Owing to the inability of many to be present, another evening was set, and Feb. 17 selected. If Boston gentlemen wishing to compete will communicate with Mr. Paine, at the Athletic Association rooms, on Exeter street, or to Mr. Chas. A. Bramble, of the Boston *Herald*, due provisions will be made for their accommodation on that evening. As Feb. 17 is also the regular pistol and rifle competition day at Walnut Hill Range, it has been proposed to give a chance for those who might prefer to make an open-air score, and Secretary H. S. Harris has promised his hearty co-operation in fixing matters for any who might wish to make a score in this way, on that day. A FOREST AND STREAM representative will be present with targets, etc., sufficient for all comers.

"FOREST AND STREAM" TOURNAMENT

FOR NEW JERSEY RIFLE CLUBS.

SCORES made during the past week are as follows:

Volunteer R. C. vs. Palisade R. C., shot on Volunteer Range, Feb. 1, distance 75yds.:

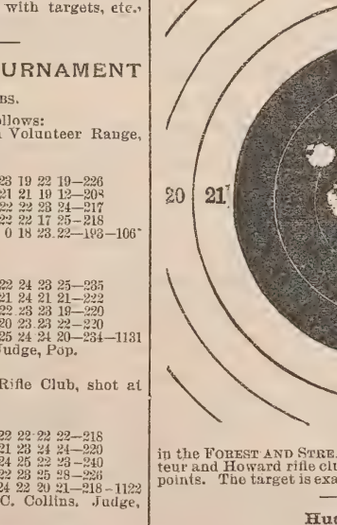
A Fine Looking Target.

The following target showing 248 out of a possible 250 points, was made by John Bauder, of the Our Own Club, at Our Own range, 136 Springfield avenue, Newark, N. J., Feb. 3, distance 25yds. target exact size.



The target was the first of five shot in a team match, the scores of which follow, Bauder and Watts shooting Weigmann and Widman.

J. Bauder	248 246 239 240 242—1215
W. Watts	243 243 244 236 243—1209—2424
G. D. Weigmann	229 229 230 226 210—1124
G. Widman	235 231 236 235 225—1170—2294

Godfrey Snellen's Good Work.

BELOW is a *fac simile* of a target shot by Godfrey Snellen on the Essex range, 256 Bank street, Newark, N. J., on Jan. 28, in a match

in the FOREST AND STREAM tournament between the Essex Amateur and Howard rifle clubs. The score is 248 out of a possible 250 points. The target is exact size.

Hudson vs. Jefsen.

PICKED teams from Hudson and Jefsen Rifle Clubs, shot on 12-ring target, possible 120 points, at Jefsen range, Monday, Feb. 8, distance 25yds.:

Hudson Rifle Club.

J Rebhan 111	S Middleton 81	A Braun, Sr. 109
C E Bird 94	A Malz 106	W Mussehl 85—749
H Boddey 89	J Busch 71	

Scorer, Chas. E. Bird. Judge, Wm. Jefsen.

Jefsen Rifle Club.

F Sessman 95	J Sehmer 90	A Braun, Jr. 93
A Steuber 84	M Hoff 97	J Eberhardt 84—721
W Delgen 99	T A Reynolds 99	

Scorer, T. T. Reynolds. Judge, Wm. Jefsen.

Garden City Rifle Team.

THE Garden City Rifle Team met for their weekly contest Tuesday evening, Feb. 2, at Geo. McCune's shooting gallery, 146 South Halsted street, Chicago. Conditions were: 25yds., 25 shots each, open sights, free off-hand position, Massachusetts paper target, possible 300 points:

H S Burley 250	W J Gibbs 256	R Taylor 248
Mrs L Thornton 250	C A Hankle 254	Jos Horie 245
Thos Ford 259		

Burley won in shoot off of tie, Mrs. Thurston second.

Capt. Gindele's Clean Score.

CINCINNATI, O., Feb. 1.—The following scores were made at the last regular shoot of the Cincinnati Rifle Association, at their range the Four Mile House on Reading Road. Conditions, 10 shots, off-hand, on Standard American targets, 200yds. It will be noticed that Capt. Matt Gindele made a clean score on his second string.

Wurfflein Rifle and Pistol Club.

PHILADELPHIA, Pa., Feb. 5.—A rest shooting match for the month of January, 1892, was terminated on Saturday evening under the following conditions: 25yds. from muzzle rest, 10 shots per score on ½in. ring target, string measurement, three scores to count for prizes of 40, 30, 20, 10 per cent. of entries, unlimited. The result of this contest was very close, and prizes were won as follows:

E Travis ⅞in. ⅝in. ⅝in.—2 in. Mountjoy ⅞in. ⅝in. ⅝in.—2⅜in.
H Meharo ⅝in. ⅘in. ⅞in.—2¼in. Wurfflein ⅞in. ⅞in. ⅝in.—2¾in.

Weekly contests for first place by the members of the Wurfflein Rifle and Pistol Association was completed this evening, and the surprise of this competition was by several scores, notable being 240 by Messrs. Wurfflein and Dillin, and 234 by T. F. Shonert. Mr. Wurfflein's shooting for this week has been remarkable, being well up in the '90s in all of his scores. Several new members were admitted. Below find official scores at 25yds., off-hand, using Wurfflein rifles, 25-ring target:

E Travis	25 24 23 23 24 25 25 22 24 25—240

New Jersey Rifle Shooting.

[*Specially Reported for Forest and Stream.*]

The Miller Rifle Club met at headquarters, 80 Hudson street, Hobokon, Wednesday evening, Feb. 8, and elected the following officers, to serve for a year: Captain, Richard W. Dewey (re-elected); First Lieutenant, Frederick Brandt; Second Lieutenant, Louis Sohl; Orderly Sergeant, August Meyns (re-elected); First Shooting Master, C. Judson; Second Shooting Master, F. Liell; Treasurer, Ernest Fischer (re-elected); Secretary, J. H. Kruse; Financial Secretary, Henry F. Meyer; Trustees, John Meyer, R. W. Dewey and David Miller; Sergeant-at-Arms, Frank Kammel (re-elected). The park committee were discharged with thanks. Capt. Dewey appointed the following committees to have charge of the club's spring shoot and summer night's festival, which takes place at the Union Hill Schuetzen Park, on Decoration Day, May 30: Arrangements—E. Fischer, Charles Judson, L. Sohl, F. Liell, J. Carragher, F. Brandt, H. D. Hencken, R. W. Dewey. Shooting—David Miller, Frederick Brandt, Louis Vogel, Aug. Meyns, J. H. Kruse, C. Judson, J. Meyer, Louis Flach. Reception—Wm. Rogers, Fred. Dunsteadt, D. Peters, J. J. Devitt, F. F. Laudolt, H. Seltenreich, H. Neuman, Robert Zoch, L. Flack, M. Krueger, J. Meyer, J. M. Bach, H. F. Meyer, F. Kammel, Wm. Forkel and Wm. Kornbach. Floor Manager—A. Stadler. Assistants—H. F. Meyer and Fred Kloepping. The club last night decided to give two handsome gold medals to the members selling the most tickets for the coming festival. Frederick Kloepping was elected to membership. It was also decided to enter a team in the coming Zettler Rifle Club's team shoot, on Washington's Birthday. The meeting then adjourned. Refreshments followed.

In the regular weekly shoot for class medals the scores made were: 10 shots, off-hand, 25-ring target, possible 250:

L Vogel	242	A Meyns	234
H Seltenreich	220	D Miller	241
J Carragher	233	W Rogers	218
C Judson	240	A Stadler	231
R Zoch	218	E Fischer	237
J H Kruse	230	H F Meyer	207
F Liell	235	Capt Dewey	228
F Kammel	203	F Laudolt	235
J M Bach	222	F Dunsteadt	203
L Sohl	235	F Kloepping	221

The medal winners in their respective classes were: 1st, L. Vogel, 242; 2d, F. Laudolt, 235; 3d, A. Stadler, 231.

EXCELSIOR RIFLE CLUB, Jersey City, Tuesday, Feb. 2, Captain, L. P. Hansen. The scores made in the shoot for weekly class medals, 10 shots off-hand, 25-ring target, possible 250 were:

L P Hansen	238	C L Pinney	233
Jas Hughes	229	W J Hennessy	236
Thos Hughes	233	Wm Weber	235
C Bauchle	230		

The medal winners were: 1st class, L. P. Hansen, 238; 2d, C. L. Pinney, 233; 3d, Thos. Hughes, 233.

A friendly ten men team match is being arranged between the Greenville Rifle Club, Capt. W. H. Robidoux, and the Excelsior Rifle Club, Capt. L. P. Hansen. The date has as yet not been set. There is a friendly enmity between the clubs, and the match will determine who possesses the best ten men team. Several of the Greenvilles are also members of the Excelsior Club.

The Wm. D. Daly Association hold a dinner parade and target shoot at Pohlman's, Jersey City Heights, on the 22d, inst., Washington's Birthday. Many valuable prizes will be distributed among the marksmen. Their headquarters are situated corner First and Bloomfield streets, Hoboken.

The Hansa Rifle Club, of Hoboken, will inaugurate its medal shooting at headquarters next week. The club has been divided into two classes. Two medals will be shot for in the first class and one in the second.

A 10 men team match is spoken of between the Palisades and Greenvilles. The former were challenged by the latter some time ago, but would not accept, as they had no team at the time worth speaking off. Now the Palisades intend to challenge the Greenvilles, as they have a better team now.

A match between Herman Rosenthal and G. A. Finger, both of the Palisades, took place last Thursday evening. Each fired 6 shots. The scores made were: G. A. Finger 228, 226, 237, 233, 230; total 1,154. H. W. Rosenthal 231, 237, 225, 226, 233; total 1,152. A ten-shot match followed between Rosenthal and W. Newman, which resulted in a victory for the former. The scores made were: Rosenthal 235, Newman 230.

The Greenville Rifle Club's members are now battling for the weekly class medals.

GREENVILLE RIFLE CLUB, Jersey City. Capt. William H. Robidoux. Friday, Feb. 5, the following scores were made in the weekly shoot for the six gold class medals, 10 shots, off-hand, 25-ring target, possible 250:

W H Robidoux	239	J Chavant	235
E Barr	228	C Scheelin	239
C Boag	232	Jas Dodds	226
J Cook	236	W C Collins	230
J Kaiser	225	Geo Purkess	236
J Boag	230	J Hill	221
H Goethardt	235	J Spohn	230

James Boag and Harry Bromley were elected to membership.

Monroe County Germania Schuetzen Bund, Capt. Chris Inteman, of Hoboken, have completed all arrangements for their annual prize shoot, to be held at Maje's Hall on Washington's Birthday.

A fifty shot a man match is being arranged between John Stein of the Standard Rifle Club and Joseph Schauer of Freischütz Co. No. 53, Germania Schuetzen Bund.

The Jefsen Rifle Club has improved its ranges, and they are now in good working order.

John Casper, of the Miller Rifle Club, is still ill at his home on Ogden avenue, Jersey City Heights. He will not recover.

A new rifle club will soon be organized in Secaucus. It will comprise the finest that's in that section. George Berckamp is hustling, and will no doubt have the club in shape in a few weeks.

The Hoboken Independent Schuetzen Corps, Capt. Koellisch, of Hoboken, have completed all arrangements for their annual invitation ball, at Odd Fellows' Hall, on March 8.

It was found utterly impossible to reorganize the Standard Rifle Club, of Hoboken, although quite a number of former members promised to rejoin the club. Exit, Standard.

The Union Hill Schuetzen Corps held its fifteenth annual ball at Ruth's Hall, Union Hill, last Monday evening. Delegates were present from the Hoboken Schuetzen Corps and the Hoboken Independent Schuetzen Corps. A merry time was had.

A ten-men team match is being arranged between the Palisades and the Jefsens for the championship of Jersey City Heights.

Jerry Steuber, of the Jefsens, is a fine orator. Upon being informed that the Greenvilles were defeated by the Palisades, he said that all clubs who visited his club's range hereafter would have to bring their own lamps, as they would turn out the lights just as soon as the opposing club started to shoot. Jerry is a character who can't be beat.

JAY H. KAY.

The Greenville Rifle Club.

THE following official scores were made by the members of the Greenville Rifle Club at their regular weekly shoot at Metropolitan Hall:

*Capt Robidoux	239	*H Gotthardt	235
*Geo Purkess	236	Jos Kaiser	225
W C Collins	230	*Jas Dodds	226
*C Scheeline	239	H Chavant	233
Ed Barr	223	C Boag	232
J Spalm	230	J J Hill	221
*J Cook	236		

*Medal winners in respective classes. It is not generally known that Jas. Dodds, a favorite member of the G. R. C., is also an expert wing shot, and with gun and dog can be seen almost any day (in open season) hunting for his favorite game, rabbits, and countless numbers of them have fallen to his unerring aim.

W. C. COLLINS, Sec'y.

Empire Rifle Club.

THE following scores were made by members of the Empire Rifle Club, on the 2d inst., at their headquarters, 12 St. Mark's place, on the 25-ring target, possible 250 points, distance 100ft.:

W Rosenbaum	234	A Rosenstraus	217
C Zettler, Jr.	231	W Miller	209
H Zettler	229	G Hillmeyer	195

W. MILLER, Sec'y.

The Chicago Rifle Club.

THE Chicago Rifle Club has a comfortable 200yds. range at Colehour, and has organized under a State charter. Its officers are: Nathan H. Warren, President; John Macauley, Captain, and Wm. H. Holden, Secretary and Treasurer, with Wm. H. Gleason and the president and captain as directors. The membership includes Nathan H. Warren, L. M. Hamline, John W. Showalter, Louis C. Jaquish, M. J. Steffens, Edgar M. Snow, Geo. Williams, James D. Wallace, Kennedy R. Owen, John Macauley, Wm. H. Holden, Marvin E. Smith, Wm. H. Gleason, E. L. Brand, John Milton Oliver, Theodore G. Dickinson, Robert D. Gardeu, John S. Woollacott.

At the regular meeting on Feb. 6 the following scores were made on the standard American target, 200yds., off-hand:

Capt J Macauley	66 69 71	W H Gleason	67 67 61
N H Warren	66 74 67	W H Holden	67 68 60

A Close Match.

BROOKLYN, Feb. 2.—There was great excitement at the rifle match between Sergt. Abesser and Bugler Gorman, against Sergt. Langsdorf and Sergt. Holdsworth for $50. Sergt. Abesser shot as usual, and by his coolness pulled his partner and himself out finely. Sergt. Langsdorf's string of 5s had no effect, as the steady shooting of his adversaries was too much for them, winning by 4 points. Following is the score:

	Standing, 100yds.	Kneeling, 200yds.	Standing, 200yds.	Prone, 500yds.
Sergt Abesser	44555	44555	44455	44555—91
Bugler Gorman	45535	45344	55454	44345—85—176
Sergt Langsdorf	45545	55545	55555	44544—93
Sergt Holdsworth	32442	44555	44545	43453—79—172

LOUIS BRETHHAUER, Scorer.

Trap Shooting.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Feb. 10-12.—Forester Gun Club's tournament, Davenport, Ia.

Feb. 11.—Newark Gun Club, monthly prize and open shoot, at live birds, John Erb's, Bloomfield avenue, Newark, N. J.

Feb. 13.—South Side Gun Club, weekly shoot at artificials, Newark, N. J.

Feb. 13.—Amateur Gun Club, weekly shoot at artificials, Newark, N. J.

Feb. 13.—Sewaren Land and Water Club, team and individual contests at artificials, at Sewaren, N. J.

Feb. 13.—John Erb's ground, live bird sweeps, open to all, begin at 1 P. M., Newark, N. J.

Feb. 13.—Team match for supper, Amateur Gun Club grounds, Fifth avenue, Newark, N. J.

Feb. 13.—Boiling Springs Gun Club vs. Union Gun Club, team match and open sweep, at Rutherford, N. J.

Feb. 15.—Dr. Van Ord vs. C. Mohrman, 100 live birds each, at West End, Coney Island.

Feb. 15.—R. J. Sutherland vs. R. J. Dwyer, 50 live birds each, Atlantic Rod and Gun Club grounds. Same day and place, W. A. Weber vs. A. Holzer, 25 live birds each.

Feb. 16.—Ridgewood Gun Club, monthly shoot at live birds, at Ridgewood Park.

Feb. 16.—Inter-State Manufacturers' and Dealers' Association meeting, at Astor House, New York city, 11 A. M.

Feb. 16-17.—Big Four Gun Club tournament, Burlington, Iowa. A. Runge, Sec'y.

Feb. 17.—Team match for a supper at 50 bluerocks each, Roseville Gun Club grounds, Newark, N. J.

Feb. 17.—Freehold, Dayton and Brunswick Gun Clubs, first of a series of trophy matches for teams of twelve men each, at New Brunswick, N. J.

Feb. 18.—Class vs. Lumbreyer, 100 live birds each, for $250 a side, at Dexter Park, L. I.

Feb. 18.—Essex Gun Club, monthly prize shoot, at live birds, for members only, Jersey City Heights Gun Club grounds, Marion, N. J.

Feb. 19-22.—Socorro Gun Club's tournament, Socorro, N. M.

Feb. 20.—East Side—Mutual Gun Club, open sweep at 20 live birds, $15 entry, birds extra, 1 P. M., at Wiedenmayer's Park, Hamburg place, Newark, N. J.

Feb. 22.—Passaic City Rod and Gun Club tournament, Passaic, N. J.

Feb. 22.—Leonia Gun Club tournament, Leonia, N. J.

Feb. 22.—New Haven (Conn.) Gun Club grounds, second contest for State trophy, donated by Standard Keystone Target Co.

Feb. 22.—Cox and Malcolm vs. O. Von Lengerke and Antoine, 50 live birds per team, at Watson's Park, Burnside, Ill.

Feb. 22.—West Side Gun Club, open to all live bird sweeps, and team match and artificials, Grove street, Newark, N. J.

Feb. 22.—John Erb's Old Stone House grounds, 25 live birds, $20 entry, birds included, open to the world, 1 o'clock P. M., Bloomfield avenue, Newark, N. J.

Feb. 23-25.—Oskaloosa Gun Club tournament, at Oskaloosa, Ia.

Feb. 23-26.—Toronto Gun Club tournament, at Toronto, Canada.

Feb. 24.—Glenmore Rod and Gun Club, monthly club shoot, at Dexter Park, Long Island.

Feb. 24-25.—Tournament at Atchison, Kansas.

Feb. 25.—Marion, N. J., live pigeon shoot for a 400lbs. hog, open to all.

Feb. 25.—C. W. Budd vs. Thos. A. Marshall, 100 live birds each, for a $1,000 purse, at Oskaloosa, Iowa.

Feb. 25.—Emerald Gun Club, at Dexter Park.

Feb. 25-28.—Louisiana Gun Club's tournament, New Orleans, La.

April 19-21.—Elk Park Shooting Tournament, two days at artificials, third day at live birds, Royersford, Pa. Address H. E. Buckwalter, Royersford, Pa., or Harry Thurman, Germantown, Pa.

April —.—Ridgewood Gun Club tournament, at Ridgewood, N. J.

May 2-7.—Fifteenth annual tournament of the Missouri State Fish and Game Protective Association, Kansas City, Mo. W. V. Reiger, Sec'y.

May 10-12.—The Ohio trap-shooters' annual tournament, Columbus, O.

May —.—Capital City Gun Club's tournament, Washington, D.C.

May 17-20.—Annual tournament of Kansas City State Sportsmen's Association, at Council Grove. G. W. Cleek, Sec'y.

June 6-11.—Eighteenth annual tourcament of Illinois State Sportsmen's Association, at Chicago. W. L. Shepherd, Sec'y.

June 13-18.—New York State Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.

Aug. 9-12.—Pennsylvania State Sportsmen's Association's annual tournament, Reading, Pa. Walter D. Eller, Sec'y.

Aug. 24-27.—Barnes & Gillman's tournament, Des-chre-shos-ka Island, Detroit, Mich.

Manufacturers' and Dealers' Association tournaments:

Baltimore, Md.—Second week in March.

Staunton, Va.—Second week in April.

Savannah, Ga.—First week in May.

Pittsburgh, Pa.—Second week in May.

Brooklyn, N. Y.—Second week in June.

Watertown, N. Y.—Fourth week in June.

A Narrow Escape.

TOWANDA, Pa., Jan. 30.—During a shoot between Snider and Richerson at the Towanda Rod and Gun Club grounds Mr. Richardson came near having a serious accident. He was using a Daly 10-gauge gun loaded with four drams of E. C. powder, manufactured at Oakland, N. J., when the shell burst with such force as to tear the extension rib off and otherwise damage the gun. This is the second good gun that has been torn to pieces by this same kind of powder; the other was a Parker, which suffered more from the effect of it than did the Daly.

Scores by Snider and Richerson, 25 kingbirds, with gun below elbow:

Snider (16)	1011111111011101111111111—22
Richerson (18)	1000100111011111111110101—17
Snider (16	1111100011111111—12
Richerson (18)	0100101111011110—9

Fifteen birds, back to trap:

Snider (16	1111110110111011—12
Richerson (18)	1100001111111001—9

A. V. R.

Watertown Gun Club.

WATERTOWN, N. Y., Feb. 4.—At a meeting of the South Side Gun Club, of Watertown, N. Y., Jan. 26, it was unanimously resolved to change the name to the "Watertown Gun Club." Other clubs will please note the change. The officers are B. L. Taylor, Pres; W. G. Kingsley, Vice-Pres.; J. C. Ayers, Sec'y and Treas., and W. H. Tallett, Team Captain. The Watertown Gun Club is in a flourishing condition, and the members will take an active part in trap shooting during the coming season. The regular weekly shoots are not discontinued through the winter, but are well attended.—J. C. AYERS, Sec'y.

The Winans Trophy in the West.

MUCH interest has been evinced in pistol circles in the West since the original announcement in the columns of FOREST AND STREAM of the terms of contest for the now celebrated Winans trophy. The liberality and fairness of these terms has to a large extent overcome the usual backwardness of amateurs to engage in any general contest where a superior class of skill is expected to be encountered. The revolver shooters of New York, with their constant practice of years and their formidable records, may fairly be said to have overawed the rest of the country, and the remark has been general that New York had a certainty to win. In spite of this, however, as the matter became more and more talked of, the enthusiasm increased, and as nothing was to be lost in any case, a number at a late date decided to shoot who at first declared their shooting would not warrant an entry. The total result has been very pleasant, and while we perhaps dare not hope that the silver cowboy will come West, there remains at least the cheering thought that the West made a good, hearty try for it, anyway. If all the Western contests are as pleasant as the two which it was my fortune to see, it is certain that the enterprise is to success in more ways than one.

AT CINCINNATI.

The date of the Cincinnati shoot was Saturday, Jan. 23, and the place Ben Mocke's Four Mile House, a road house on the old Reading pike, at which place a covered bowling alley made a very creditable outdoor gallery, although one which in the winter time is by no means so favorable to good shooting as one well warmed. Mr. Louis Endebrook, who kindly took in charge the local arrangements, and did it very nicely too, met the writer early in the morning, and by 9.30 the shooting party was assembled.

It will be remembered that this date was the one on which the body of Al Bandle arrived home from Syracuse, and the excitement attendant upon the preparations for his funeral disarranged many of the arrangements of the pistol shooters, and cut down the attendance from ten or a dozen to five shooters, Mr. Ed Taylor, a revolver shooter of no mean skill, and, by the way, perhaps the very man who really started revolver shooting in Conlin's gallery at New York, as some of the men then present can perhaps attest, expressed regret that matters had not so shaped themselves that he could attend and compete. Others also failed to appear whose presence would have been very pleasant. The five faithful who did appear, however, made up for many delinquencies, and quite sufficed to make a good contest and to make pleasant a very enjoyable day. These were Messrs. Louis Endebrock, Ben Copeland, Chas. Wellinger, Frank Speth and Robt. Weinheimer.

All of the above gentlemen are good pistol and revolver shots, though in the absence of any regular club organization of recent time, their practice has not been so very extended. Mr. Endebrock is a solid, vigorous man, and not in the least to be despised as a revolver shot. Mr. Copeland is well known in that capacity, so well known that Bennett, the professional, would not accept his challenge to compete, on or off the stage, with him, at the time Bennett was showing in Cincinnati. Mr. Wellinger lives over the river, Kentucky side, as does Mr. Copeland. Mr. Wellinger is the smallest of the five, and one would not pick him for a revolver shooter; yet I believe his score will be found to be the best of the five when the measuring is done. Mr. Speth is known not only in this country but in Germany as a shooter, he having received high honors at Berlin, meeting the best of the German shooters in numbers. Mr. Weinheimer has not been shooting so long. The latter, and indeed all of the shooters, did not in the actual contest come up to the average of earlier practice. After the close of the contest shooting, all the gentlemen shot better, particularly Mr. Copeland, who put 10 several close in around the bull in rapid succession. Of course, this "didn't count."

The Smith & Wesson .44 was used by all of the shooters except Mr. Wellinger, who shot a Colt .44. The 246gn. bullseye was selected by all the shooters. After the contest began the work went on steadily, the contest closing before 4 o'clock in the afternoon, with the light still good. As fast as each round of 6 shots was fired, the 6 targets made were tied together and put into a big envelope, together with a record of the arm and ammunition. After a shooter's whole score was in, the envelope was fastened. After all the envelopes were filled, they were tied in one bundle and later expressed to FOREST AND STREAM. It was, of course, impossible to do more than guess at either the absolute or relative string value of a shooter's score. Each shooter shot his 30 shots straight out, the average time being about 40 minutes. All availed themselves of the permission to clean between rounds.

After the close of the contest we had a little shooting on the 200yd. rifle range, cut through the hill back to the house. This range is used by the Cincinnati Rifle Association, and our friends the revolver men are also excellent rifle shots, as I saw proved. The 50yds. open-air pistol range is back of the house and against the hill; a very good range indeed. The road house furnishes very good quarters and localities for the Cincinnati boys, and I do not doubt they have many a pleasant meeting there.

FOREST AND STREAM is in debt to the Cincinnati gentlemen who shot in the Winans contest, for courtesies extended its representative in that city. Among many other pleasant things was a visit to the great house of the Strobridge Lithographing Co., where Mr. Endebrock is engaged. It is not a frequent favor to go from top to bottom of this particular house, but I met it and enjoyed it very much. All the present dramatic stars were present on the walls, and on the shelves were very many stars whose light is now forgotten. A writer on dramatic topics could get a great story out of a visit like this.

It is probable that the old pistol club of Cincinnati will be revived, in consequence of the renewed interest inspired by the Winans Trophy contest there. In this case a very worthy work will have been done in revolver matters. Personally, a pleasanter lot of men one will not meet.

AT CHICAGO.

The trophy contest was set for Chicago, as earlier announced, for Jan. 27, at Geo. McCune's gallery, 146 Halstead street. This gallery is the one patronized by the better class of rifle and pistol shooters of this city, and is, I believe, the only one which has a 25 or 20yds. range clear. The manager of this gallery is to be thanked for his promptness, kindness and efficiency in the matter of preliminary arrangements for the contest. Much of the success of the shoot here depends upon him. Several members of the Garden City Rifle team shot in the contest. It was thought that the entry would be 13, but really 12 actually shot, the entry thus stopping just short of that unlucky number. This makes a very creditable showing for the city by the lakes, for it should be borne in mind that no regular pistol club existed in Chicago at the time of this contest. There has been a prize competition extending back some years to establish the pistol championship of this city. At first this was held by Mr. H. Fuermann, but now is held by Mr. H. Meyers. Mr. Fuerman shot in the contest Wednesday evening, but Mr. Meyers was out of town, and thus Chicago has nothing to show for the man who is held to be her best revolver shot at this time.

The names of the shooters who actually entered are Messrs. C. L. Hobbs, E. P. Martyn, J. O. Hobbs, I. Krieger, J. H. George, H. Fuermann, M. Tator, H. S. Burley, C. A. Hankle, G. L. Cutler, H. A. Parker. Chicago also as usual offers something a little bit different and better than all the rest of the world; in this case a lady amateur contestant, probably the only one who will be written on the rolls of the contestants in any part of the United States. This was Mrs. Lizzie Thornton, a shooter of no mean merit. Mrs. Thornton is in no sense a professional shooter, but shoots for the love of it. Her forte is the rifle, and with it she is exceptionally skillful. In a match contest with Mr. C. A. Hankle, who is the champion rifle shot of Chicago, Mrs. Thornton made 582 points out of 600 to Mr. Hankle's 585, thus crowding him very close. Mr. Hankle does not claim to shoot a revolver in his rifle form, but was persuaded to compete.

When Mrs. Thornton came into the gallery on the second evening of the contest, Thursday, it was only with the intention of looking on, for she has not shot a pistol long, and has not practiced at all of late. It took some persuasion to get her to compete, but at length she consented, and for a time the call was "Bullseye!" with a very pleasing regularity. The long strain with the heavy revolver told toward the close, and the score fell off, but it will be noticed that it is by no means the worst, nor the next to the worst score sent in from here, and for a lady unused to shooting a revolver of late, to go in without practice and shoot so good a score is a repeat feature which no place but Chicago could show. At this gallery Mrs. Thornton is very well known and much respected. She is a comely, hearty figure, jolly as any one. We were all very glad to have her shoot in with the rest.

Of course, so large a number could not shoot off in one evening, and the start on Wednesday, moreover, was not made till 8:35. Shooting continued till 11:25, six contestants then having finished. Mr. C. L. Hobbs, the first at the score, is a young gentleman only 16 years of age, but he shoots remarkably well. Mr. E. P. Martyn, who shot second, did very nice work also, and also did Dr. J. O. Hobbs. Mr. Krieger is much thought of as a revolver shot, but his preliminary practice had not been fortunate, and after he had begun shooting he wished to change his arm and ammunition, which could not be allowed. Nevertheless, he made some brilliant shots. Mr. George then followed, and Mr. Fuermann closed the

evening with a very even score, not a shot going off the disks in the whole 30, which was the best yet.

The ball was opened on Thursday evening promptly at 7 P. M. by Mr. M. Tator, another young shooter, only 17 years of age. He was followed by Mr. H. S. Burley, who only left the disk once, and put up a score which will crowd or pass that of Mr. Fuermann. Mr. Burley has only been shooting a revolver three months they tell me, and he does wonderfully well. Mr. Hankle followed Mr. Burley with a very neat showing also, some of it close, and then Mr. Cutler shot, Mrs. Thornton shot her score, and Dr. Parker then fired the closing shots of the contest shortly after 10 o'clock.

The shooters at Chicago used either the Smith & Wesson .44 or the same make in .32cal. or the .44 frame. This last arm weighs 2lbs. 12oz. Nearly all here chose the 1½in. bullseye.

Everything here seemed very pleasant, and the shooters and their friends in attendance were enjoyable company. It pleased the two representatives of the paper here to hear the system of FOREST AND STREAM highly complimented. As the different rounds were tied up and placed away in the envelopes, a shot to a disk, Mr. Hankle, who stood by, remarked, "This is the fairest and squarest game I ever saw, and the man who got up this system of running the contest could not think of any more accurate or fair way if he tried forever." In this there was general acquiescence.

After the close of the contest those present engaged in rifle shooting for a time, and later fell into a committee of the whole to discuss the question of organizing a revolver club for Chicago. It was at once decided to do this, and the vote would have been put at once except that it was thought best to notify others not on hand, and to hold a meeting of organization later. Revolver shooting here has taken a sudden boom. FOREST AND STREAM did it. In less than two weeks we will have a good, active revolver club here of between twenty and thirty members. This is part of the work which the generosity of Mr. Winans and the thoroughness of FOREST AND STREAM have done for the revolver interests of the country.

The final measuring up is awaited with interest. E. HOUGH.

A New League for Jersey Shooters.

NOW THE SPORT WILL BOOM.

A LITTLE less than a year ago Carl von Lengerke, of the Woodside Gun Club; W. R. Hobart, of the South Side Gun Club, and the writer, all from the classic precincts of Newark, N. J., succeeded, after a deal of hammering and ding-donging at trap shooters, in organizing what was known as the Trap-Shooters' League of Essex County, N. J., which comprised the South Side, East Side-Mutual, Woodside, Roseville and Amateur Gun Clubs, of Newark, and the Maplewood Gun Club. This league held a very successful series of team shoots, first place being won by the Maplewood Gun Club. After this series was ended, it was proposed to enlarge the field and throw the membership open to any club in northern New Jersey. It was found, however, that this was not a popular idea, and in order to suit everybody the projectors finally decided to make the league one for all the clubs in the State. W. R. Hobart took the matter in hand and issued a call for a meeting to be held at the store of Von Lengerke & Detmold, 8 Murray street, on Thursday, Feb. 4, and all clubs in the State were invited to send delegates. In response to the invitation nine clubs were represented, as follows: South Side Gun Club, Newark, W. R. Hobart; Amateur Gun Club, Newark, B. A. Rist; Roseville Gun Club, Newark, B. A. Rist; East Orange Gun Club, H. S. Babbage; New Jersey Shooting Club, Claremont, Elmer Bigoney; Woodside Gun Club, Newark, Carl von Lengerke; Boiling Springs Gun Club, Rutherford, W. H. Hauck; Railway Gun Club, J. R. Lawrence; Passaic City Rod and Gun Club, J. H. Hall.

The meeting was called to order by W. R. Hobart, after which Elmer Bigoney of the New Jersey Shooting Association was elected temporary chairman and Jacob Pentz temporary secretary. The plan of work intended by the projectors of the association was stated by Mr. Hobart as follows: Team contests, open to teams of five men each from each club in the league, to be run each month on the grounds of each of the clubs in order until each has had its turn, each team to shoot at 125 artificial targets, under the five-trap rapid-firing system. Clubs that enter as charter members to pay an entrance fee of $1, all other clubs to pay $2 each. The annual dues to be ten cents for each member on the roll of each club. Messrs. Hobart, Shaw and Von Lengerke were appointed a committee to draft a constitution and by-laws and the meeting adjourned until Monday, Feb. 8, at 1:30 P. M., when the committee was instructed to report.

On the latter date delegates representing eight clubs convened at the above place and perfected the organization of what will hereafter and for all time be known as the New Jersey Trap Shooters' League, the object of which will be to foster and encourage the sport of trap-shooting in the above named Commonwealth by the arranging of team and individual contests among those affiliated. The clubs that were represented were the Independent Gun Club, of Plainfield; Passaic City Rod and Gun Club, of Passaic; Boiling Srings Gun Club, of Rutherford; East Orange Gun Club, Woodside Gun Club, of Newark; New Jersey Shooting Club, of Claremont; South side Gun Club and East Side-Mutual Gun Club, of Newark; Maplewood Gun Club, of Maplewood.

The election of officers resulted in the choice of Elmer Bigoney, N. J. S. C., President; W. R. Hobart, S. S. G. C., Secretary and Treasurer; Neaf Apgar, I. G. C., Manager; A. W. Shaw and W. H. Huck, Executive Committee. The constitution and by-laws were adopted as submitted by the committee. The drawing for choice of clubs to conduct the first tournament resulted in favor of the Woodside Gun Club, of Newark, and the first tournament will be held on their grounds on a date to be decided upon by that club. Their grounds are situated an the banks of the Passaic River, at the foot of Riverside avenue, about fifteen minutes' ride by horsecars from the Market street depot, and are admirably adapted to accommodate a big crowd of shooters.

Lake Shore Shots.

CLEVELAND, O., Feb. 1.—At the monthly shoot for the Sipe & Sigler cup this afternoon the following scores were made:

Richardson	25	Watts	22
Rudolph	26	Murray	23
Elworthy	21	Sterling	20
Brett	25	Joe	15
J F J	21	Dan Fish	25
June	13		
Chestnut	21		
Safold	15		
W Tamblyn	24		
Flick	25		
Bell	24		

Feb. 4.—The regular shoot of the East End Club was held this afternoon and was well attended. The conditions were favorable for good shooting and the results better than usual. The following are the scores made by the contestants:

Case	20	Joe	19
Brockway	21	June	24
Sweetman	20	Ward	24
J I C	22		
Bloom	18		
Dubroy	22		
Crockett	23		

Visitors.

Rudolph	26	Sterling	19
Tamblyn	28		

Rolla O. Heikes, of Chicago, but formerly of Dayton, O., has issued a challenge to shoot five representatives of his State against an equal number representing the State of Ohio, the match to take place at Dayton and to be at 100 single artificial bird each, for $50 a corner, or, in other words, $250 a side. The Ohio gentlemen having the matter in charge will in all probability accept the challenge, but only on condition that the birds are sprung from 5 traps, unknown angles. The Ohio team will likely be picked from the following: Osborne, of Toledo; Taylor, of Cincinnati; Dr. Walters, of Columbus; North, of Cleveland; McDonald, of Dayton; and "Shorty" Bacon, of Miamiville.

Matches at Dexter Park.

THE following matches took place at Dexter Park on Feb. 1:

Fifty live birds each, $50 a side:

E Helgans (30)	42	A Andrews (28)	38

Twenty-five birds each, for $50:

M Fay (25)	21	J Pilkington (25)	21

Ten birds, 28yds. rise, for $50:

J Loorie (25)	6	F Reinaldo	2

Five birds, 25yds. rise, for $10:

W H Brickner	3	G Silberhorn	4

Ten birds, 25yds. rise, for $10:

R J McKone	6	W H Brickner	7

Five birds, 25yds. rise, for $10:

J Loorie (25)	4	P Miller (25)	3

Five birds, for $10:

Geo Silberhorn (25)	4	J Fay (30)	5

Sweepstakes, 10 birds, $10 entry:

M Bickner	8	Geo Silberman	7
W A Bickner	9	Gus Kranick	8

Sweepstakes, 5 birds, 30yds. rise, $5 entry:

J Pilkington	4	P Miller	5
M Fair	4	P McKeon	4
J Fay	2	J Lootie	3
T Renaldo	1		
W R Riker	2		
G W Silberhorn	4		

The Muzzleloader at the Trap.

IN his review of the Dean Richmond Cup history, in our issue of Jan. 21, our correspondent wrote: "Mr. Newell does not tell us what part the muzzleloading gun actually had in these contests. If he, and others who shot or knew shooters in those days, will offer further reminiscences of the old cup, the old style and the old days, the readers of the FOREST AND STREAM will be placed under a debt not easy to discharge."

This brings out the following in the Rochester *Post-Express*:

"It ought not to be difficult for some one who has time to give the reminiscences suggested by Mr. Hough. There are several men in this vicinity who took part in the above contest and in many of those that have since taken place for the second cup. The old times were not much different from the present at a shooting match except in respect of the guns. The art of boring guns to shoot close were not so generally known to gunmakers in 1873 as it is now and cylinder bored guns were in general use. Some men who knew the value of a closely grouped charge of shot, obtained good results by battering in the muzzles of their guns with a light hammer, which made a rim on the inside of the gun barrel and had the effect of giving a closer pattern than with the cylinder bored gun. Most sportsmen at that time were inclined to think that there was something about good shotguns that no fellow could find out, and that it was a matter of accident when a gun shot hard and close. A friend of the present writer was experimenting with an 8-bore, muzzleloading duck gun before 73, and after one boring found his gun to give a marvelous pattern with No. 1 shot. It was a pattern that could scarcely be excelled by the best gun of to-day. But the experimenter was not content to leave good enough alone, and thought that by making certain alterations the gun would be still further improved. The change was made and the big gun was never worth much after that. Probably the barrel had been chokebored by the first process and the choke taken out by the second. But for all that there has been sport with it.

The breechloading gun was in use at the State shoot of 1873, and some of the best shooting was done by men using the new invention. No one who was there is likely to forget the betting that went on around the grounds. Nearly every spectator and shooter laid a wager on the result of every shot, so that a 'dead' or 'lost' bird transferred the ownership of hundreds of dollars. It was soon after the Batavia meeting that open betting was prohibited at the tState shoot. There was one thing about the old style of shooting that those who practiced it are loth to give up for the modern style. That was in the way of holding the gun at the score. The butt of the gun had to be held below the elbow in about the position one holds a gun when in the field. It made trap shooting resemble field shooting more than the present system does. There is one name among the list of shooters that might be overlooked that is worthy of special notice. It is that of one of the men who took part in the shoot at Watertown. If we mistake not one of the Jefferson county representatives now occupies the executive mansion at Albany."

The Auburn Gun Club.

AUBURN, N. Y., Jan. 30.—The shooting year with our club ended Dec. 31 and the class trophies for 1891 were awarded to their respective winners in the four classes as follows: A class, J. J. Carr; B class, Geo. Corning, Jr.; C class, C. W. Brister; D class, T. H. Garrett.

For the new year the club members are divided into three classes and a handsome diamond watch charm, elegantly engraved, one for each class, is sparkling before the eyes of the shooters as a prize for 1892.

In order to prevent any one member from winning the badge several times in succession a handicap has been arranged whereby the winner in any class shall step back two yards at the next contest; if he then win he shall move back one additional yard and so on until some other member shall win, when he shall stand at the original score.

In addition to the inanimate contests our men have arranged for a live bird challenge badge which will be of considerable value and whose ownership will be known at the end of two years, being the property of the person who wins it the greatest number of times. The winner of this badge is entitled to hold it two weeks but must defend it against all comers at the following club shoot. It is believed this will stimulate live bird shooting and develop some good scores.

Below please find scores of the last two inanimate contests, also of the first live bird contest:

Jan. 6.—Kingbird race, 20 singles, unknown angles.

A Class.

Corning	11111111111111111111—20	Tuttle	00111111101111111111—17

C. W. B.

The Union Gun Club.

THE second of the monthly class competitions of the Union Gun Club took place at Springfield, N. J., on Feb. 3, the attendance being very light. In the regular prize event each member shot at 25 Keystone targets, unknown angles, the scores being as below:

Class A.

Miller	1101111111111011111111110—22
Breintnall	1011011101111001011011111—18
Sigler	1011111101011011011111111—21
W Smith	0110111101111010101111111—19
Collins	0101100101100000000110111—11
J L Smith	1111011100101110010011011—16

Class B.

Brantingham	1010111111101111110911110—19
Williams	1010111010011111101101100—16
L T Terry	0110110001001011011010101—14
A A Sickley	1010011100000011010111111—14
Geo Pudney	1110101010000111100111100—14

On the shoot off of tie for third Terry won.

Regular event No. 1, 10 singles, $1 entry, 2 moneys: Sigler 10, Breintnall 9, Miller 9, W. Smith 8, Collins 6.

No. 2, same: Sigler 10, Collins 9, Breintnall 9, W. Smith 8, Miller 7.

No. 3, same: Smith 9, Williams 9, Miller 9, Sigler 8, Breintnall 8, Collins 8.

No. 4, same: W. Smith 9, Breintnall 9, Collins 8, Miller 7, Sigler 6. J. L. Smith 6.

No. 5, same, but 3 moneys: Miller 10, Sigler 9, Breintnall 8, J. L. Smith 8, Collins 7, W. Smith 6, Williams 6.

No. 6, same: W. Smith 9, Collins 9, Breintnall 8, Sigler 8, Miller 7, J. L. Smith 6, Williams 6.

No. 7, same: Collins 10, Breintnall 9, Miller 9, Sigler 7, W. Smith 6, J. L. Smith 5.

No. 8, same: Breintnall 10, Collins 9, Sigler 9, Miller 9, J. L. Smith 8, W. Smith 8.

The Manhattan Gun Club.

REGULAR shoot at Dexter Park, Feb. 3, 7 live birds:

P Neasch	6	W Hornung	2
J A Hofferman	3	M Lichtenberger	6
J Gennerich	5	B Deffer	3
F Lambricht	3	L Roth	2
H Bord	2	J Bayer	2
R Schmitt	5		

Dustin is a Great Shot.

HARRISBURG, Pa., Feb. 4.—Ever since the Brewer-Fulford match at Harrisburg the members of the Harrisburg Shooting Association have been doing a great deal of live bird shooting, but as a good deal of the shooting has been done among friends, scores have been kept so close that it has been almost impossible to get them, and one is almost left to believe that this association is about to spring another champion upon the shooting fraternity. But the writer secured the outcome of a friendly match shot by two members of the association, namely H. A. Bach and J. S. Dustin, at 25 birds to the man, $25 a corner, and for the day and kind of birds the shooting of both was remarkable. A strong northwest wind blew across the traps and the birds went out like rockets. If any advantage on birds Dustin got it, as some of Bach's birds which went out of bounds were simply "clinkers," and the kind most shooters generally miss. Another match is on for Saturday, 25 birds, $35 a side, loser pays all expenses, of which I will obtain a report and forward you if possible. Score of above match:

H A Bach ..... 1211112101221021022202211—21
J S Dustin ..... 2110221112111111111222 1—24

F.

The Trap at Watson's Park.

BURNSIDE, Ill., Feb. 2.—The following is the score made here today in sweepstakes, 10 live pigeons, entrance $5, 60 and 40 per cent., American Association rules:

R O Heikes	9	E M Gardner	9
J W Dukes	7	C B Dicks	8
L M Hamline	8	J E Price	9
J Finn	8	C E Latshaw	8

Five live pigeons, entrance $3, 60 and 40 per cent., A. A. rules:

Heikes	4	Hamline	4
Dukes	5	Dicks	3
Gardner	2	Price	3
Finn	4	Latshaw	5

Hamline won second on shoot-off. Latshaw took second from previous event.

Same day and place, C. B. Dicks vs. J. W. Dukes, 50 live pigeons each, $50 a side, A. A. rules:

C B Dicks	37	J W Dukes	47

Feb. 4.—C. D. Gammon vs. R. O. Heikes, 25 live pigeons each, A. A. rules:

C D Gammon	20	R O Heikes	19

Fifteen live pigeons each, A. A. rules:

Heikes	14	Gammon	12

Twenty-five Peoria blackbirds each:

Heikes	21	Gammon	15

Feb. 5.—Score made here to-day by the Chicago Shooting Club for medal, 20 live pigeons, Illinois State rules:

A J Atwater	18	C E Willard	14
E M Steck	17	M J Eich	18
John Watson	15	*F E Willard	14
L M Hamline	13	G Kleinman	16
*L C Willard	12	R B Wadsworth	17
W P Mussey	16	*C B Dicks	13
W L Shepard	15		

*Guests. Atwater and Eich allowed 1 dead bird each added to their score and Steck 2, tied for medal, and in shoot-off at 5 birds each, Atwater killed straight, Eich lost his last, Steck his second, and Atwater won.

For target medal, 25 Peoria blackbirds each:

Geo Kleinman	17	C E Willard	19
*L C Willard	13	A J Atwater	22
E M Steck	21	*F E Willard	15
M J Eich	19		

*Guests.

RAVELRIGG.

Down in Hunterdon County.

REAVILLE, N. J., Jan. 29.—A live-bird shoot was held here today, the scores in the various events being as appended.

No. 1, 4 live birds, $3 entry, 3 moneys, modified Hurlingham rules:

Case	1111—4	Stout	101o—2
Hort	1211—4	Diltz	o110—2
Henzler	2012—3	Hoffman	0021—2
Millburn	21oo—2	Housel	o100—1
Polhemus	2 20—2		

On the shoot-off for third Diltz and Hoffman div.

No. 2, same as above:

Millburn	1111—4	Van Marter	0112—3
Case	2111—4	Stout	1200—2
Henzler	0112—3	Diltz	1000—1
Hort	1201—3	Hoffman	0200—1

No. 3, same as above:

Millburn	2222 - 4	Stout	0220—2
Hort	1011—3	Hoffman	0202—2
Case	0111—3	Diltz	0001—1
Henzler	1101—3		

In shoot-off for second Hort won.

No. 4, one-barrel, miss and out, $1 entry:

Case	111	Hort	10
Housel	111	Diltz	0
Millburn	110	Stout	0
Henzler	10		

G. E. R.

A Towanda February Shoot.

TOWANDA, Pa., Feb. 7.—A notice in the *Reporter-Journal* that the monthly shoot of the Towanda Rod and Gun Club would take place on Friday, Feb. 5, for club badge, honors, etc., brought out a few of the faithfuls, who, with some visiting sportsmen, made quite an interesting shoot, and heartily enjoyed by all the particon pants. We all missed the smiling countenance of our champiart shot, Mr. F. D. Montanye, who is in Philadelphia studying the our of engraving on metals, and when he returns we expect all ys guns, badges to be finely engraved free of charge. He alwa b faces the traps when at home. Was rather cold outside the clu - house, but frequent visits to the stove made one soon feel come fortable again, and the smashing of crockery would continue. On, person being obliged to act as trap-puller, referee and keep score. things were slightly mixed when the team shoot was decided, Our visitors, Park and Von Wolffrandt, of Athens, Pa., however took the matter good naturedly, and invited the Towanda team to come and see them later. Scores as follows. All events rapid-firing system.

Match 1, 25 single targets, for club badge:

*Park	20	*Richardson	22
Turner	19	Snider	18
Dittrich	23	Turrell	20
Von Wolffrandt	19	Hamaker	10

*Not members. Dittrich wins badge.

Match 2, team shoot between Park and Wolffrandt, of Athens, Pa., and Snider and Richardson, of this place, for price of birds, 50 targets per man:

Park	45	Snider	41
Von Wolffrandt	39—84	Richardson	43—84

Tie to be shot off in the future.

Match 3, sweepstake, 10 singles:

Park	8	Richardson	6
Dittrich	8	Von Wolffrandt	7
Turrell	7	Turner	7
Snider	8		

Dittrich won tie on first; second div.

Match 4, 10 birds, sweep:

Von Wolffrandt	9	Dittrich	7
Hamaker	5	Snider	10
Turrell	8		

W. F. DITTRICH, Sec'y.

The Waverly Gun Club.

THE following scores were made by the Waverly Gun Club at Dexter Park on Feb. 1.

Club shoot, 10 bluerocks per man, handicap rises:

Van Staden (22)	4	M Schmidt (20)	6
W Schumacher (10)	3	G Helmstead (21)	10
C Mohrman (18)	4	F Finkbemer (18)	3
J Goldman (18)	5	H Hermann (18)	6
A Grane (18)	2		

Sweepstake, 3 live birds, miss and out, 25yds. rise:

Schumacher	2	Finkbemer	2
C Mohrman	1	Helmstead	1
Van Staden	1	M Schmidt	1
Hermann	2	A Grane	2

Second sweepstake, 25yds. rise, 3 live birds, then miss and out:

W Schumacher	2	F Finkbemer	1
C Mohrman	2	G Helmstead	3
Van Staden	1	M Schmidt	2
Hermann	2	A Grane	1

G Helmstead won first and H. Hermann second.

Athens Gun Club.

ATHENS, Pa., Feb. 4.—Two members of the Athens Gun Club shot a match on Feb. 3 at 50 kingbirds each, three traps, unknown angles, weather rather cold and windy:

W K Park ..... 11111111111100100101111111111110111111111—42
W Von Wolfradt 11111111011111111110100110001012111110111111111110111—46

ATHENIAN.

Up at Blauveltville.

THE following scores were made at the monthly shoot of the Excelsior Gun Club, 25 bluerock targets per man on Feb. 1.

J D Van Riper	15	W H Jersey	11
J H Blauvelt	16	J J Blauvelt	19

CHICAGO TRAPS.

CHICAGO, Ill., Feb. 5.—In an earlier column in this paper it was predicted that Mr. Fulford had not actually retired. Almost at the same instant Mr. Brelsford was writing the confirmation of the prediction, and now comes Mr. Fulford himself, and in proper person declares that nothing will satisfy him but a match, a match in Chicago, and a match in Chicago with Geo. Kleinman, and Geo. Kleinman shooting a certain gun, to wit, the prize machine gun of historic interest. Mr. Fulford doesn't want to shoot Charlie Budd, or anybody but Geo. Kleinman. And the telephone and trap shooting business being pretty good, he will, if need be, go from $500 to as high as $10,000 with his own money. Well, well, Elijah, honey, will you solemnly swear that you didn't read in last week's FOREST AND STREAM, or earlier, that Geo. Kleinman was clear out of shape, that that particular gun was played out, and that Chicago would not listen to any $5,000 or $10,000 talk?

The fact is, these champions are such easy fellows to understand that it is no trouble every week to have, right along in the next column to them, a pretty accurate statement of what they are going to say. For two or three weeks we haven't been very wide apart on that. Now, if I were disposed to wage large sums, I would bet about three dollars that next week I could make the gentlemen of the effete East take back all they have said about not wanting to shoot Charlie Budd, and then evince a lion-like eagerness to shoot Charlie Budd. The fact is, Charlie Budd is just getting over the grip, which has been so prevalent all through this country. I have just seen a letter from him stating that in a short time he would be willing to shoot either Mr. Fulford or Mr. Brewer. Now, if I could get Charlie real good and sick I wonder if it wouldn't raise a challenge? Unluckily I can't. He is too liable to get right out and hit the trail for Chicago and go to looking for that other fellow. So he likely won't get any challenge.

Mr. Fulford says something about Western talk of "fakes," "hippodromes," "easy birds," etc. He can safely bet his money that if he shoots either Geo. Kleinman or Charlie Budd here he will have no chance to make previous arrangements, and he will have to shoot harder birds than those on which he made his big scores. This is said with due acknowledgment of his certain and absolute ability with a shotgun, which our men admit.

Now, I am just writing this stuff to get my hand in on the championship business. I don't believe in this sort of writing. I don't like it. It would be far better to leave the matter as it was intended to be left, a straight, candid, clean arrangement, leading up to a straight, clean, honorable and pleasant contest of skill. That is what we in the West wanted. We didn't wait to talk and filibuster. We wanted to see that contest. I think the wish was largely grounded also on the wish to see so good a shooter as Mr. Fulford out here, for, backing either Kleinman or Budd, Chicago expected only a fighting show, but still wished to see the race. She still wants to see it. I hope she yet will. I hope Mr. Fulford will come out. Chicago wouldn't give $10,000 to see him. If it were generally thought here that he wasn't a straight shooter and a decent fellow, Chicago wouldn't give ten cents to see him. As it is, she may give $1,000, $500 preferred. Come now, brethren, let us quit monkeying and get together. This championship talk has had a good, long, full showing, according to the ancient rites and customs. We are all "onto it." Now let us talk plain horse sense. Elijah, wilt thou come out and shoot Charlie for $500 apiece?

But wouldn't this East and West talk be a bonanza for an able-bodied space writer? It's good for a couple of columns for several weeks yet, if you look at it that way. I don't believe I do.

I append a letter from another gentleman who has unfortunately become addicted to the championship habit. Champion Mr. J. A. R. Elliott, of Kansas City, who has also heard that Geo. Kleinman is sick and no good, and Andy Thomas, also out of form from his late sickness. Mr. Elliott takes up the old forgotten history of Oct. 30, 1891, in the following manner:

"KANSAS CITY, Mo., Feb. 3.—W. Bruce Massey, Esq., Chicago.—Some time since I answered a communication from you in regard to two matches I had agreed to shoot with Chicago men. I have heard nothing from you as yet, and would be pleased to know whether it is the intention of the parties' backers to withdraw the matches.

"As I am contemplating a trip which may take me from home for some time, I am willing to shoot a match with Thomas next Monday, at 12 noon, $200 or more a side, and on the following day will shoot with Mr. Geo. Kleinman $1,000 to $750, as agreed, in Chicago; or will take the long end of bet and shoot in Kansas City.

"An early answer either accepting these dates or naming an agreeable date would greatly oblige J. A. R. ELLIOTT."

So some fellow called FOREST AND STREAM a "cheap sporting paper." Nothing to get mad about in that. It is a cheap paper, the cheapest, for the value it gives, of any of them. You have only to read it to learn that. But the paper which forgets its own profession and stoops to cheap methods in business rivalry is dear at any price.

I see that champion Dr. Carver, over in Australia, has the influenza, so that he will be unable to shoot the remaining two of his three matches with Mr. L. Clarke, the Australian champion, whom he lately beat 90 to 85. It is observable that these men shot for only £100, less than $500, a side. No champion in America thinks of talking less than $5,000. I presume this is the same Mr. Clarke who shot with champion J. L. Brewer. Funny things may affect a shooting match. In one case influenza, in another influences. These champions, these champions!

This said influenza, or grip, or whatever title suit ye, still has a good hold on this city and many shooters are down with it. Capt. Anson was seriously sick this week. When a Chicago man gets sick he is a great deal sicker than any other kind of a man. Chicago is always ahead.

The scores of another column will show that the shooting around here has not been so very heavy this week. The Chicago Shooting Club shot this afternoon. Last Tuesday there was made probably the best score that has been shot here this winter on live birds. This was in the race between Mr. I. W. Budd and Ben Dicks, 50 birds, Mr. Budd scoring 47 to Mr. Dicks's 37.

At the first of the week a number of the Mak-saw-ba Club went down to the club house to engage in the second club trophy contest for the Haskell opera glasses, which were won the first time by Mr. R. S. Cox, handicap shooting. The scores this week, 20 live birds, were: R. B. Organ 19, C. B. Dicks 19, R. S. Cox 18, W. P. Mussey 17, I. W. Budd 17, J. P. Card 17, Slick Sharp 13, John Watson 14. Others did not enter for trophy. Messrs. Organ and Dicks div. the money on the tie and shot out for the glasses, Mr. Organ winning with 5 straight to Mr. Dicks's 4.

An amusing incident happened on this trip, in which Ben Dicks figured. Ben is something like Flynn, of Virginia; everybody ought to know him. He is a large, portly youth, who never says anything. Of course he must talk sometimes, but I can't say that I ever heard him say a word. They do tell me that Ben spoke once. That was in a poker game, when he raised everybody out of a large jack-pot and raked in the spoils. Curiosity was expressed to see so good a hand as he must have. "What have you got?" they asked him. "Nothin'," said Ben, snuffling, "'ceptin' a bad cold." It might naturally be supposed that a man who would stand on nothing but a bad cold would possess very game proclivities, and it is true that Ben has a leaning to almost any kind of sport.

I know I oughtn't to say a word about "chickens" in these columns, but this can be excused from the game columns. The fact is, when Ben wandered off the train down at the club the other day, he had a couple of fighting cocks in his pockets, though, owing to his silent habit, it is impossible to learn why he had them, where he got them, or what he wanted to do with them. The club never tolerated and chicken fighting, and it is not on record that Ben ever done either. He finally "lowed he'd turn 'em loose in the woods, so's they could grow," and no one contradicting, he did turn them out in the yard.

It so happened that the club keeper, Sam Austin, had a single, solitary, mournful old rooster, of the Plymouth Rock sect. Any chicken fighting being forbidden, Ben explained to the keeper that his chickens would kill the old rooster as soon as they saw him, and that to avoid this, Sam would just better cut the old fellow's head off in advance and serve him up for supper.

"How much is your rooster worth?" asked Ben. "I'll just pay you for him now, and you go right out and kill him."

"Oh," said Sam, "I should think he ought to be worth a quarter, anyhow. He scratches blame near like."

"All right," said Ben, "here's your quarter."

Sam took the quarter, but forgot to go out and kill the rooster, until after Ben had taken the train home in the evening. Then he got the axe, and went out to hunt for his fowl. In the barnyard he found evidences of a struggle. One of Ben's game cocks was lying cold in death, and the other was breathing his last. The old Plymoth Rock, not much the worse for wear, was calmly eating corn. This intelligence was conveyed by mail to Mr. Dicks by the keeper in the following note:

"B. DICKS esq., dear Sir, I went out to Kil my Rooster as you sed soe your roosters would not Kil my Rooster but my Rooster had Kiled both your roosters arready I am sory whot shall I do about thot Quarter yore roosters wus to Small for Him.

Yours truly, SAM."

Our friend B. Dicks goes to Milwaukee next Tuesday to shoot a 50-bird race with Dr. Carmichael, of that city. He will be accompanied by Mr. W. L. Shepard, of this city, secretary of the Illinois State Sportsmen's Association. Mr. Shepard will shoot a 50-bird race with Mr. A. W. Friese, of Milwaukee, who, in the Fort Dearborn massacre at Milwaukee got away with Mr. Shepard's scalp.

Mr. Paul North, of the Cleveland Target Co. and Chamberlin Cartridge Co., has just bought a half interest in the Budd gun cleaner, which will now be manufactured by the firm of Zwart & North, Des Moines, Iowa. About a month ago Mr. Zwart, who is a Des Moines man, bought the cleaner of Mr. Budd, paying him $1 000 cash for it. This handy little device, if I am not mistaken, was originally invented or perfected by "Friday" Eason, of Des Moines, who was a partner with Mr. Budd in handling the article. The new arrangement will not affect Mr. North's former business arrangements in any way.

There were only four men in Chicago who were not reading FOREST AND STREAM, and one of them came in and apologized and gave me his subscription last week. We will get the other three before long. E. HOUGH.

DRIVERS AND TWISTERS.

THE Essex Gun Club will hold its monthly shoot at Marion on Thursday, 18th inst., each man to try his hand at 10 live birds, under club rules, in the prize event.

* * *

On the day of the Class—Lumbreyer match at Marion, the principals consulted the representatives of the sporting press as to the best day for the return match, and on the suggestion of the latter decided to shoot it on Feb. 4, on the grounds of the Central Gun Club, at Branchport, N. J., and it was so announced in the various columns of fixtures. On the above date a FOREST AND STREAM representative railroaded to Branchport, only to find that no one in the place knew of any match to be shot. On returning home in the evening he was informed that the match had been postponed or declared off, no one could say which with certainty. On Saturday he was informed that the two principals had decided to postpone the match until Thursday, Feb. 18, when it would take place at Dexter Park, L. I. He also discovered that the change in time and place had been made early in the week and that the two shooters had had ample opportunity to notify all the papers had they been fair-minded enough to do so. A little courtesy in the form of a timely notice to newspapers costs but little to a shooter, especially when he is desirous of using those papers to assist him in drawing a good "gate."

* * *

On Feb. 1, a quintet of shooters assembled at Claremont, on the grounds of the New Jersey Shooting Club, for the purpose of trying their skill at shooting live pigeons, a sport almost foreign to this place of late years. The conditions of the shoot were 15 birds per man, 28yds. rise, 50yds. boundary, modified Hurlingham rules. The score being as follows:

J A Richmond	111121010121121—13	R Sunderman	100101221010201— 8
F G Moore	112021210112110—12	Provost	011020201011020— 8
E E Bigoney	111020312 — 8		

(Bigoney shot at but ten birds.) The birds were a good lot of flyers.

* * *

Lively sport will be seen at New Brunswick N. J., on Feb. 17, when the first of a series of team matches will take place between teams of twelve men each from the Brunswick, Freehold and Dayton Gun Clubs. Each man will shoot at 20 artificial targets. The prizes for the series will be a $50 trophy and a fine gun.

* * *

On Saturday the return match between teams of twelve men each from the Boiling Spring Gun Club of Rutherford and the Union Gun Club of Springfield, will take place at Rutherford. Each man will shoot at twenty-five artificial targets. Open sweepstake shooting will be in order from 9 A. M.

* * *

R. Aubrey and G. E. Remsen of the Fountain Gun Club shot a match at Woodlawn Park on Feb. 3, each man shooting at 25 live birds, Long Island rules, 30yds. rise, for $50 a side, Remsen killed 17 to Aubrey's 9.

* * *

On Feb. 13 S. Lunn, B. Limpert and B. A. Rist will shoot a race at 50 artificial targets per man against G. Gehring, P. McKeone and W. Huxter, all of the Amateur Gun Club, of Newark, N. J. The match will take place on the club grounds on Fifth avenue and will be followed by sweepstake shooting. The losing team will have to put up suppers for the party.

* * *

Matches galore will take place on the grounds of the Atlantic Rod and Gun Club, at West End, Coney Island, next Monday, when Dr. Van Ord and C. Mohrman will shoot a 100 live birds each for a big stake, R. J. Sutherland will try to beat R. J. Dwyer in a 50-bird race and W. A. Weber and A. Holzer will try conclusions at 25 birds each.

* * *

A sweep at 20 live birds per man, $15 entry, birds extra, will take place at Wiedenmayer's Park, Newark, N. J., on Feb. 20, under the auspices of the East Side—Mutual Gun Club. Too event will begin at 1 P.M. and everybody is invited. There will be plenty of birds for sweepstakes after the big event.

* * *

Firms interested in the Interstate Manufacturers' and Dealers' Association should not fail to attend the meeting to be held at the Astor House, New York city, at 11 o'clock A. M., on Tuesday, Feb. 16, when a number of important matters will be discussed in relation to the coming series of tournaments. Among other questions will be one in regard to the target or targets to be used at the tournaments.

* * *

Eleven members of the Manhattan Gun Club were present at the shoot at Dexter Park on Feb. 3. Each man shot at 7 live birds: M. Lichtenberger (25yds.) winning first prize with a clean score. Other scores were: F. Neisch (25yds.) 6, J. Gennerich (25yds.) 5, R. Schmitt (25yds.) 5, F. Lambricht (24yds.) 2, W. Leffer (25yds.) 3, R. Hofferman (23yds.) 3, J. Bayer (25yds.) 5, W. Hornning (23yds.) 2, L. Roth (23yds.) 3, H. Bord (23yds.) 2. In the shoot-off for second prize J. Gennerich won.

* * *

A meeting of the members of the Inter-State Manufacturers' and Dealers' Association will be held at the Astor House, New York city, on Tuesday, Feb. 16, at 10 o'clock A. M., for the purpose of apprising the members of the advantages they are deriving from being members of such an association, and also setting forth the plans that will be used for protecting and advancing their interests during the coming season.

* * *

The New York German Gun Club at their annual meeting elected the following officers for the ensuing year. J. H. Boessenecker, President; A. Yaeger, Vice-President; J. Wellbrock, Secretary; J. P. Dannefelser, Treasurer; Fred Sauter, Captain.

* * *

The talk that has recently been going the rounds of the press in regard to matches between prominent shooters, particularly that anent matches between E. D. Fulford and George Kleinman, has called forth no end of comment among the lovers of genuine sport. The gist of the comment substantiates what the writer stated in this column a few weeks ago, in effect that if any one issues a challenge for a match, it should be "the under dog." When a man starts out to shoot himself to the top round of the ladder and reaches the said round, it would not be meet for him to stand thereupon and call for "lighter shooters" to come and pull him down. If a man, Kleinman for instance, wishes to shoot a match against a man who is supposed to have reached the top round, he or his friends should keep close-mouthed until it is a certainty that both man and gun are in proper condition for winning work and then come out with a straight forward challenge, accompanied with a proper forfeit.

The trouble seems to be that the friends (so-called) of Mr. Kleinman, began to build castles without first convincing themselves whether the foundations were solid. It is this kind of friendship (!) that causes misunderstandings. If his friends would keep their mouths buttoned up until they know their man is ready for business they would do far better than by going off at a tangent as some of them have been doing. If Geo. Kleinman was not in condition to shoot, or if being in condition he did not have a suitable gun, his name should not have been mentioned in connection with Fulford. The matter of the "alleged" retirement of Fulford (and by the way, *did this paper ever say he had retired?*) has nothing at all to do with the present controversy, which, it will be noticed, did not start until the "retirement" canard was published in the lay press.

So far as Mr. Fulford is concerned, the writer has been intimately acquainted with that gentleman ever since his first appearance in the vicinity of New York, and was the first one to introduce him among the shooters of that vicinity, and knows him to be an honorable, upright sportsman and one who would not stoop to a dirty action. So far as his being a "soft bird shooter" is concerned that is all rot. I have stood by and seen him kill ninety-nine out of a hundred of as hard birds as ever left a trap, and using his second barrel four times only. My candid opinion is, after seeing the man shoot in all his contests, that on hard or soft birds he can defeat any man in Illinois.

So far as the term "champion" is concerned, Mr. Fulford assures me that he has no use for it, and when he shoots a match he tries to kill more birds than his opponent, for the sake of coming out first-best, and not for the sake of securing a title, which is worn on one brow at night and another on the following morning.

In regard to a match between these men (Kleinman and Fulford), but one thing more need be said. Let the man who wants a match write out his challenge, and forward it to the FOREST AND STREAM office, with a substantial forfeit, and if said forfeit is not covered within a given time, let the matter be dropped.

C. H. TOWNSEND.

Down at Wiedenmayer's Park.

THE grounds of the East Side-Mutual Gun Club, at Newark, N. J., were the scene of some hard shooting on Saturday, when over a dozen prominent Jersey live-bird experts were on hand. The day was a perfect one, the air being cool and crisp, with just wind enough to help the birds in their flight. But the latter did not need the help, being as a whole the hardest lot of flyers ever seen in the grounds. The birds were furnished by Cox & Laumbreyer, of West Washington Market, and a part of them were trained English bluerocks, imported by the above firm. The instant the trap was sprung these birds would make a spring and in some instances would be 10 to 20ft. from the trap before they would seem to catch their wings. Their flight was terrific, and for dodging, twisting and carrying shot they would take a premium.

The opening event of the day was a sweep at 4 birds per man, $3 entry, two moneys. The scores:

Hilfers	2211—4	Van Dyke	2110—3
Johns	2221—4	Hollis	2200—2
Kraemer	2120—3		

All ties divided.

No. 2, same conditions, but three moneys:

Hassinger	2221—4	Smith	2102—3
Van Dyke	1122—4	Castle	1102—3
Koegel	1101—3	Hedden	0202—2
Johns	1102—3	Hollis	0021—2
Baar	1102—3	Hilfers	0011—2

All ties divided.

No. 3, same as No. 2:

Hassinger	1212—4	Freche	1210—3
Baar	2212—4	Hedden	0110—2
Van Dyke	2211—4	Koegel	2001—2
Hilfers	1212—4	Johns	0200—1
Castle	1221—4	Bruen	0001—1
Hollis	1011—3	Keuren	1000—1
Smith	1220—3		

All ties divided.

Next came the big sweep, announced for twenty birds each, $15 entry, birds extra, but which on account of a scarcity of birds, was cut down to thirteen birds per man, $10 entry, birds included, four moneys. Hurlingham rules to govern, Louis Gundehl referee, Henry Reinhardt scorer. The result:

H E Smith	1021221121222—12	R Baar	1220011112200— 9
G L Freche	0111111102102—11	W G Hollis	2:00011002112— 8
H C Koegel	2222102212230—10	F Van Dyke	1001201010211— 8
J Riggott	2111e1220210—10	F Hilfers	2o3o012030102— 7
C M Hedden	0111010121101— 9	W Hassinger	2110002012o30— 7
F Perment	1012001222120— 9	S Castle	1o10011013000— 6

Smith took first pot, Freche second, Koegel and Riggott divided third, fourth was split by Hedden, Perment and Baar.

Castle's second bird was hard hit but did not drop until near the fence. When the dog, which was very slow, got to it, the bird made a dying effort and flew over the boundary, falling dead outside.

Hilfer's seventh bird fell and the dog succeeded in getting his mouth on it when the referee decided it a "dead bird." An instant after the bird got away from the dog and yielding to the importunities of other shooters the referee changed his decision to "no bird."

After the shoot the party adjourned to the Park hostelry, where mine host Kraemer served up a pigeon lunch that tickled the palates of all hands.

The Fountain's Monthly Shoot.

THE old Fountain Gun Club held its monthly shoot at Woodlawn Park on Feb. 3, a baker's dozen of members being on hand, as were a large number of spectators. In the regular club event each man shoots at 10 live birds each, handicap rises, for the club medal. The members are divided into three classes. Among those who shot were M. F. Lindsley and Mrs. M. F. Lindsley, "Wanda," Hoboken, both of whom were in good form. The scores of the regular shoot were as follows:

F Boetcher (30yds.)	0221122221—7	C Plate (28yds.)	0220202121—6
J E Lake (25yds.)	1o2121101—8	Schumacher (25yds.)	1121211202—8
L Phister, Jr (27½ds.)	0o1121230—7	C W Wingert (35yds.)	0111210210—8
D Shields (30yds.)	0o1101211—7	M F Lindsley (30yds.)	2200012212—7
R Graves (25yds.)	1020120101—6	"Wanda" (25yds.)	o2212202—6
C Jericho (28yds.)	2012110111—8	Dr Van Ord (30yds.)	2011012202—7
C E Morris (30yds.)	0120221101—7		

Following the above came a sweep at three birds each, $1 entry, in which the following scores were made:

M F Lindsley	222—3	F Boetcher	222—3
C Plate	212—3	C Phister, Jr	221—3
C Jericho	212—3	W Schumacher	101—2
Dr Shields	112—3	"Wanda"	120—2
Dr Van Ord	111—3	J E Lake	101—2
C Graves	121—3	C W Wingert	110—2

Lindsley captured first by grassing 13 straight, second going to Schumacher.

Somerville Gun Club.

SOMERVILLE, N. J., 6 Feb.—A party of gentlemen, lovers of shooting, but with no experience at the traps, determined to organize a gun club in this place, for the protection of game, and the enforcement of the game and fish laws, and the pleasure as well as the advancement of its members in the art of wing shooting. The club has thirty members, and bids fair to more than double its membership in a short time. Officers: President, Dr. E. R. Voorhees; Vice-President, George Schenck; Secretary, E. P. Dickey; Treasurer, John V. L. Ten Eyck; Directors, E. A. Thompson and W. W. Anderson.

The Somerville Gun Club will hold a regular monthly shoot at bluerocks. Feb. 6 they held their first shoot, some of the members never having seen a bluerock up to this time: it was therefore not expected that a large score would be made; but with practice will improve, as they are good field shots. The club expects to erect a club house, and get in first-class working order as soon as it can be done. In fact it will endeavor to be in the front rank. Score of first shoot:

E. R. Voorhees	13	H. H. Hall	9
W. Snyder	5
J. J. Allgair	12	W. Rockafellow	7
C. E. Smith	4
W. D. Bellis	12	E. P. Dickey	6
C. Van Arsdale	3
W. D. Ditts	11	W. E. Dickey	6
G. Schenck	1
J. A. Ellingham	11	E. P. Mount	6
C. J. Smith	1
L. K. Hall	10	J. V. D. Ten Eyck	5
W. W. Dorland	1
E. A. Thompson	9

The Acme Gun Club.

REGULAR club shoot at Dexter Park, Feb. 2, 20 bluerock targets per man:

C Dethloff	2	R Lambert	11
T Short	13
W Vorbach	10	J Rausch	12
F Berger	12
M Enter	9	H Lemoine	13
D Meyers	11
J Link	9	C Merket	11

Five live birds, 25yds. rise:

C Dethloff	3	J Link	3
F Rausch	3
W Vorbach	3	R Lambert	3
H Lemoine	5
T Curley	2		

Three live birds, 25yds. rise:

M Euler	1	R Lambert	2
C Dethloff	2
F Rausch	1	C Wessel	2
D Meyers	3
H Lemoine	3		

New London Gun Club.

THE above club held its monthly shoot on the New London grounds on Feb. 5, the conditions being 25 Keystone targets per man under Keystone rapid-firing rules. The scores:

Penrose	22	Clinton	17
A D Crowell	17
Dunbar	20	Beebee	20
C E Merrill	10
Connor	19	J Ames	10
R E Pratt	14
C Hebbard	21	A Hebbard	19
Strong	19
Bush	17	A W Jones	14

New York German Gun Club.

THE monthly shoot of the New York German Gun Club was held at Dexter Park on Feb. 4. In the club event each man shot at 8 live birds, the scores being as follows:

J Schlicht	4	A Jaeger	3
P Garms	5	J Carwein	4
M Bonden	3	J Fraser	6
H Thomford	4	E Widman	5
G Hoff	5	P Dannefelser	5
F Sauter	4	G Rosenecker	4
A Dienst	4	J Wellbrock	5
P Garms, Jr	5	R Bush	2
J Goelitz	3		

Sweepstakes 3 birds, $1 entrance, 2 moneys:

P J Eppig	2	L Neir	3
E Widman	2	F Sauter	1
R Bush	3	Ties divided.	

Match at 15 live birds, 28yds. rise, $10:

P J Eppig	14	L Neir	12

Match at 10 birds, $10, 25yds. rise, one barrel:

J Fraser	7	G Hoff	6

East Side—Mutual Monthly Shoot.

THE monthly shoot of the East Side—Mutual Gun Club took place at Wiedenmayer's Park, Newark, N. J., on Feb. 4. In the club event, at 25 targets per man, Van Dyke broke 19, Kraemer 16, Young 14, Hollis 13. The following sweeps were also shot, 5 birds, unknown angles, 50 cents entry, 3 moneys:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	No. 6
Koegel	5	2	5	3	4	4
Hedden	5	5	5	5	4	4
Green	2	3	1	5	1	3
Van Dyke	4	5	5	4	5	5
Kramer	3	3	5	4	2	3
Fisher	3	3	3	3	2	2
Bitz	3	3	4	5	2	3
Young	4	2	3	2	5	0
Reach	.	3	1	4	2	.
Waters	.	.	1	.	.	.

No. 7, 10 targets, unknown angles, 2 moneys, $1 entry: Hedden 8, Hassinger 8, Kramer 5, Green 9, Van Dyke 9, Koegel 8.

No. 8, same: Hedden 7, Hassinger 5, Kramer 3, Green 9, Van Dyke 9, Koegel 8.

No. 9, same: Kramer 4, Hassinger 5, Green 9, Koegel 8, Van Dyke 7, Hedden 8.

No Name—No Address.

IF the writers of unsigned letters from Midland, Ont., and Watson, W. Va., will send their names their orders will be filled. If the sender of $4 without name or place (and the postmark undecipherable) will supply particulars his order will be filled. If Mr. John Worth and Mr. T. J. Walsh (P. O. Box 252) will send address their orders will be filled.

THROUGH CARS TO SAN FRANCISCO.—The through car service established by the New York Central & Hudson River Railroad between New York and the Pacific Coast provides the best facilities ever offered trans-continental travel. It is announced that on each Tuesday until further notice a Palace Buffet Sleeping car, containing twelve sections of two double berths each, a drawing room and buffet, will leave New York on the North Shore Limited at 4:30 P. M., and run through to San Francisco on fast overland connection without change or delay at junction points, arriving at destination at 11:45 A. M. the following Sunday. The schedule has been so arranged that the traveler can select any route desired beyond Chicago. Single and round trip tickets sold at regular rates are valid for passage. The cars, which have been built expressly for this service, are planned somewhat on the style of the Wagner private cars, and are fitted with every convenience for an extended rail journey. Meals are served in dining cars, which are attached at convenient points, or may be obtained à la carte from the buffet. For further particulars and copy of illustrated itinerary apply to nearest ticket agent of the New York Central, or address George H. Daniels, General Passenger Agent, New York.—*Adv.*

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will ma free on application a descriptive circular of Mr. Grinnell's boo "Pawnee Hero Stories and Folk-tales," giving a table of conten and specimen illustrations from the volume.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

F. W. S., New York.—The load of 3½drs. and 1¼oz. shot is a perfectly safe one for the arm. The heaviest load it would stand is conjectural; the manufacturers will tell you what it has been tested for.

J. S. B., Shrewsbury, Pa.—When and where can I obtain a copy of the next report of Commissioner of Fisheries containing the report on the fishes of Pennsylvania? Ans. Address Commissioner Henry C. Ford, Philadelphia.

C. M. D.—1. Is the common domestic pigeon properly called a dove? Pigeon here is only applied to wild pigeon. 2. Does the law protect the hare as well as the rabbit, and if so, what is the open season? Ans. 1. Either dove or pigeon. 2. The law makes no distinction between hare and rabbit; New York close season between Feb. 1 and Nov. 1.

B., CALIFORNIA.—Please inform me of something that will keep moth from my stuffed birds. Ans. Make a twenty-five per cent. solution of corrosive sublimate in alcohol and apply with a brush to the feathers so that the solution wets them all. Bill and legs should also be painted with it. Do not get the solution on your hands as it is a violent poison and will make them sore.

I wish you would in your next issue answer the following: A contends that a man standing 1,000yds. away with a Remington rifle could hit a man before he had time to dodge the bullet. B says that knowing he is going to be shot at, and seeing the smoke from the rifle, the man shot at can dodge the bullet before it reaches him. Who is right? Ans. There is ample time for a man seeing the flash or the smoke discharge to dodge a bullet aimed at him from a distance of 1,000yds.

G. M. P., Wakefield, Mass.—At about half-past four o'clock Jan. 27 I saw nearly a dozen wildfowl of some kind flying northwest. The thermometer at that time was about 18° above zero and there was 8in. of ice on the lake. Can you throw any light on the subject? Were they geese or swan or what? They seemed to be about the size of geese and were light gray or white in color. These fowl were flying quite low and in a V-shaped body. Ans. They may have been wild geese, but we cannot tell.

TWELVE GAUGE, Stonehill, N. Y.—Have the supervisors authority to pass a law prohibiting fishing in a pond situated on the farm of a person who owns the land surrounding it? Said pond is made up of small springs and is not used for State purposes. Ans. One provision of S c. 37 (that section which gives the supervisors authority to "further protect") is "that nothing herein contained shall be construed as conferring upon the board of supervisors of any county the right or authority to prohibit the owner or owners, in whole or in part, of lands and waters wholly private, or the lessee or lessees thereof, from angling and taking fish in a lawful manner during the months now allowed by the laws of this State." This, however, applies only to such lands and waters as shall have been set aside for shooting and fishing preserves, in compliance with Sec. 27.

Words of Appreciation.

FOREST AND STREAM for Jan. 7 was a number of special excellence, both in illustrative matter and variety. It deservedly has the confidence of all sportsmen, and is a reliable register of sporting events, records, trials and experiences.—*Sacramento Record-Union.*

FOREST AND STREAM, our good old friend, whose green cover has been seen on the table of every shooting and fishing man for years and years, came to us last week in a white cover and greatly enlarged in size. * * * It has always been on the right side for the preservation of game, and its fight for the preservation of the Yellowstone Park is a matter of record. It has a warm place in every sportsman's heart, and they will certainly join us in wishing FOREST AND STREAM more years of prosperity and such an increase in patronage that it will double in size. It is one of those weeklies that comes like an old friend, and is as much missed when by some accident it fails to make its weekly visit.—*Evansville (Ind.) Tribune.*

A delightful weekly journal devoted to the rod and gun and outdoor life in general is the FOREST AND STREAM. It began the current volume by an enlargement to 32 pages, and labeled its first issue "Our Boyhood Number," because of a number of interesting reminisences of boyhood that it contained from some old fellows whose recollections go back as far as the days of flint-lock guns. One of the most entertaining of these papers is entitled "Cleaning the Old Gun," by Rowland E. Robinson, of Ferrisburg, which has a mellow charm about it worthy of the author of "Uncle Lisha's Shop" and "Sam Lovell's Camps."—*Montpelier (Vt.) Argus and Patriot.*

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The Editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Subscriptions may begin at any time. Terms: For single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain.

Foreign Subscription and Sales Agents—London: Davies & Co.; Brentano's; Sampson Low & Co. Paris: Brentano's. Foreign terms: $5 per year, $2.50 for six months.

ADVERTISEMENTS.

Inside pages, 30 cents per nonpareil line. Special rates for three, six and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices $1.00 per lin Only advertisements of an approved character inserted.

Address all communications:

OVER-THE-COUNTER METHODS

Are not possible with us.

Our business is, and always has been, transacted by mail, secured through the medium of printers' ink; nothing more. We have no opportunity to impress you with the merits of one article or the defects of another. Flowery eloquence, hand-shaking, flattery (you are as susceptible as the rest), patting on the back; none of these are within our reach; we submit everything in cold type—you to choose at your leisure what you want, and as you want it, or not at all; we do not attempt to influence your judgment. We depend entirely upon your intellect for our living—your good sense. If you are impartial, you will say that this is the fairest way to do business.

Montgomery Ward & Co., 111 to 116 Michigan Ave., Chicago

"WITH FLY-ROD AND CAMERA."

By EDWARD A. SAMUELS,

PRESIDENT OF THE MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION.

This superb volume, in the preparation of which author and publishers have been long engaged, is now ready. Of the text, which relates chiefly to salmon fishing on the famous rivers of Canada, it is sufficient to say that it is from the pen of one who is a master of the angler's craft. The vivid pen-pictures of camp life and fisherman's luck are drawn with a firm hand. This is the work of no novice. From the first page to the last it is seen that the chapters have been written out of a full experience.

The illustrations are of a character fittingly to supplement the text. They are full-page reproductions, by a marvelously faithful half-tone photo-engraving process of Mr. Samuels's own invention, from photographic negatives made by the author for this work. They picture all the phases of Canadian salmon and trout fishing, with far-famed scenery and views of the quaint old towns through which fishermen pass on their way to the salmon streams.

The work has been prepared in the most luxurious style, printed on heavy plate paper, and elegantly bound in cloth and gold, with gilt top.

Size of page, 7x9¼in.; 477 pages. Price $5.00. Sent postpaid.

FOREST AND STREAM PUBLISHING CO.,

London: DAVIES & CO., 1 Finch Lane, Cornhill. **318 Broadway. New York.**

The Chubb Eight-Strip Split Bamboo Rods are pronounced by Anglers to be the "King of Rods;" they are unexcelled for quality of material, workmanship, beauty and balance. Printed guarantee goes with each Rod which warrants them for one year. Rods are put up in an elegant case.

Price each, $15.00.

All lengths, weights and styles are described in our New Chubb Catalogue of Fishing Tackle for 1892. The Catalogue also contains elegant Lithographic Plates of Split Bamboo and Lancewood Rods, and over 100 varieties of Artificial Flies in colors, and describes, illustrates and gives prices of Fishing Tackle used by anglers of to-day.

Send 25c. for Catalogue. This may be deducted from first order for goods amounting to One Dollar or more, by enclosing Coupon which accompanies Catalogue.

FEBRUARY DAYS.

IN the blur of storm or under clear skies, the span of daylight stretches further from the fading dusk of dawn to the thickening dusk of evening. Now in the silent downfall of snow, now in the drift and whirl of flakes driven from the sky and tossed from the earth by the shrieking wind, the day's passage is unmarked by shadows. It is but a long twilight, coming upon the world out of one misty gloom, and going from it into another.

Now the stars fade and vanish in the yellow morning sky, the long shadows of the hills, clear cut on the shining fields, swing slowly northward and draw eastward to the netted umbrage of the wood.

So the dazzling day grows and wanes and the attenuated shadows are again stretched to their utmost then dissolve in the flood of shade and the pursued sunlight takes flight from the mountain peaks to the clouds, from cloud to cloud along the darkening sky, and vanishes beyond the blue barrier of the horizon.

There are days of perfect calm and hours of stillness as of sleep, when the lightest wisp of cloud-fleece hangs moveless against the sky and the pine trees forget their song.

But for the white columns of smoke that, unbent in the still air, arise from farmstead chimneys, one might imagine that all affairs of life had been laid aside for a while, for no other sign of them is visible, no sounds of them falls upon the ear. You see the cows and sheep in the sheltered barnyards and their lazy breaths arising in little clouds, but no voice of theirs drifts to you.

No laden team crawls creaking along the highway nor merry jangle of sleigh bells flying into and out of hearing over its smooth course, nor for a space do the tireless pant of engine and roar of train divide earth and sky with a wedge of dissolving vapor.

The broad expanse of the lake is a white plain of snow-covered ice, no dash of angry waves assails its shore still glittering with the trophies of their last assault; no glimmer of bright waters greets the sun; no keel is afloat; the lighthouse, its occupation gone, stares day and night with dull eyes from its lonely rock, upon a silent deserted waste.

In the wood you may hear no sound but your own muffled foot-steps, the crackle of dry twigs and the soft swish of boughs swinging back from your passage, and now and then a tree punctuating the silence with a clear resonant crack of frozen fibers and its faint echo.

You hear no bird nor squirrel nor sound of woodman's axe, nor do you catch the pungent fragrance of his fire nor the subtler one of fresh-cut wood. Indeed, all odors of the forest seem frozen out of the air or locked up in their sources. No perfumed drops from the odor-laden evergreens, only scentless air comes to your nostrils.

One day there comes from the south a warm breath, and with it fleets of white clouds sailing across the blue upper deep, outstripped by their swifter shadows sweeping in blue squadrons along the glistening fields and darkening with brief passage the gray woodlands.

Faster come the clouds out of the south and out of the west, till they crowd the sky, only fragments of its intense azure showing here and there between them, only now and then a gleam of sunlight flashing across the earth. Then the blue sunlit sky is quite shut away behind a low arch of gray, darkening at the horizon with thick watery clouds, and beneath it all the expanse of fields and forest lies in universal shadow.

The south wind is warmer than yesterday's sunshine, the snow softens till your footsteps are sharply moulded as in wax, and in a little space each imprint is flecked thick with restless, swarming myriads of snow fleas.

Rain begins to fall softly on snow-covered roofs, but beating the panes with the familiar patter of summer showers. It becomes a steady downpour that continues till the saturated snow can hold no more, and the hidden brooks begin to show in yellow streaks between white, unstable shores, and glide with a swift whisking rush over the smooth bottom that paves their rough natural bed, and as their yellow currents deepen and divide more widely their banks, the noise of their onflow fills the air like an exaggeration of the murmur of pines, and the song of the pines swells and falls with the varying wind.

After the rain there come, perhaps, some hours of quiet sunshine or starlight, and then out of the north a nipping wind that hardens the surface of the snow into solid crust that delights your feet to walk upon. The rivulets shrink out of sight again, leaving no trace but water-worn furrows in the snow, some frozen fluffs of yellow foam and stranded leaves and twigs, grass and broken weeds. The broad pools have left their shells of unsupported ice, that with frequent sudden crashes shatters down upon their hollow beds.

When the crust has invited you forth, you cannot retrace your way upon it, and the wild snow walkers make no record now of their recent wanderings. But of those who fared abroad before this solid pavement was laid upon the snow, fabulous tales are now inscribed upon it. Reading them without question, you might believe that the well-tamed country had lapsed into the possession of its ancient savage tenants, for the track of the fox is as big as a wolf's, the raccoon's as large as a bear's, the house cat's as broad as the panther's, and those of the muskrat and mink persuade you to believe that the beaver and otter, departed a hundred years ago, have come to their own again. Till the next thaw or snow-fall, they are set as indelibly as primeval footprints in the rocks, and for any scent that tickles the hounds' keen nose might be as old. He sniffs them curiously and contemptuously passes on, yet finds little more promising on footing that retains but for an instant the subtle trace of reynard's unmarked passage.

The delicate curves and circles that the bent weeds etched on the soft snow are widened and deepened in rigid grooves, wherein the point that the fingers of the wind traced them with is frozen fast.

Far and wide from where they fall, all manner of seeds drift across miles of smooth fields, to spring to life and bloom, by and by, in strange, unaccustomed places, and brown leaves voyage to where their like was never known.

The icy knolls shine in the sunlight with dazzling splendor, like golden islands in a white sea that the north wind stirs not, and athwart it the low sun and the waning moon cast their long unrippled glades of gold and silver.

Over all winter again holds sway, but have we not once more heard the sound of rain and running brooks and has there not be given us a promise of spring?

QUICK SHOOTING.

THE Council of the British National Rifle Association have cut out the rapid-firing competitions from the grand aggregate list, so that in future any one wishing to compete for the All-comers and Grand Aggregate prizes will not be required to make scores at the time target.

The change is a concession to the most conservative element in the body of contestants. That element is a majority, and the Council as managers of a great enterprise demanding for its success the good will of its rifle shooting patrons very shrewdly, from a commercial point of view, withdrew this class of test from this section of the prize list.

It has only been in the two last programmes of the association that this prominence has been given to rapid firing. It was placed there because it was felt by the more advanced shooters and military men that the present system of slow shooting at a fixed target was only the first chapter in the training for model riflemen. The military experts were particularly strenuous on this point and properly so. No rifle range can give that practice to the nerves which can simulate even remotely the conditions which prevail when the shooter is at the same time a target as well. This training can only be received in skirmish and battle, but it was one step toward it when quick shooting was demanded by the rules of the matches, and this was secured either by a time limit or by a disappearing target.

The strain was too much for the slow-going volunteer. He wished leisure to arrange his paraphernalia, to potter awhile with his fixings, and then, after duly watching wind and weather for a period, pop away at the patient bit of canvas waiting stretched in the distance. He may be a very accurate rifleman, but off of that range or another like it he is a very useless sort of shot. As a military man he has much to learn and also much to unlearn; and it is better to do this learning on the range at home than in the face of an alert enemy on some foreign fighting field perhaps.

The Council has taken a step backward, under pressure, no doubt. There ought to be some plan of quick-firing and distance-judging in operation on every range where there is any pretense of training soldier shots.

A MAGNIFICENT OPPORTUNITY.

NO sportsmen's organization in this country has ever had a grander opportunity than that which is revealed to the New York State Association by the convention in Syracuse last week. The meeting was made up of representatives from various fish and game clubs throughout the State, gathered in response to a call sent out by President Horace White. The number of those in attendance and the earnest spirit displayed demonstrates that the time is ripe for a rally of the protective forces. Under its present control the State Association has already taken the lead in uniting all these forces. It only remains for President White and his associates to carry out their programme of such changes in the constitution as shall provide for an annual meeting, apart from the trap-shooting tournaments, for the consideration of game protection. When such a change shall have been made, the strong clubs now independent will, we believe, join the State Association, bringing to it strength and prestige. With such an accession of new forces, and controlled by the spirit which pervaded the Syracuse convention, the Association will be a powerful agency for the control of legislation and the enforcement of the protective laws.

SNAP SHOTS.

THE Ontario Fish and Game Commission has presented its report to the Legislature, and we hope to record the prompt adoption of its recommendations. The open season named is from Sept. 15 to Dec. 15, spring shooting being strictly forbidden. The work of the commissioners, Messrs. A. D. Stewart and A. E. Mallock, has been done with thoroughness and intelligence, and a sensible and adequate game law may be looked for.

Dr. James A. Henshall is at Key West, where he has completed arrangements to collect fresh fishes to be forwarded to Washington and there cast for the Fish Commission exhibit at Chicago. On Feb. 6 he shipped upward of thirty kinds of fish, all of which arrived in perfect condition, and among them are some rare and beautiful tropical species for which Key West is famous. By means of fyke nets set on coral reefs, where seining is impossible, the doctor hopes to secure many new fishes hitherto inaccessible to collectors.

Two important events are down for next Tuesday in connection with New York game interests. One is the hearing of the Gould bill before the Assembly Committee at Albany, and the other is the trial of the Delmonico out-of-season woodcock case, which District Attorney Nicoll has promised shall be put through on that day.

An encouraging note comes from our Frankfort, Ky., correspondent, who reports newly awakened interest in game legislation in that State. The Kentucky Fish and Game Club failed to secure the adoption of most desirable measures by the last Legislature, but the agitation of the subject was not without effect. It takes some years of campaigning before the public is prepared for reform.

The Sportsman Tourist.

THE GOLD HUNT.

I HESITATE when I sit down to write this reminiscence, for I know it is in a path that leads away from our everyday world, and treads on the verge of that dread mystery which broods and glimmers like the mirage at the horizon of the vast treeless wastes of the Southwest. I fear that you may doubt that it was or seemed to me as I write it. I cannot explain it; and shall not try to; but you can rest assured that it is exactly as I remember it, and the most important details are burnt into my memory. I don't believe in spirits, and never saw or heard anything before or since that I cannot give a reason for.

In the year 1874 I lived on a stock ranch on Rita Azul, Colorado. You won't find Rita Azul on any map. It is a little stream that dashes down the Raton Mountains, and shortly disappears. A few Mexicans live there, and seldom see a white man. To-day there is no wagon track leading to it, and yet the Mexicans live there, in that out of the way corner, and live and live. I make a pilgrimage there once or twice a year, and always meet the same old faces. They are poor and lazy and happy. I found the place once when I was hunting; moved my cattle up there; built a ranch; and for seven years owned Rita Azul and its inhabitants as much as if I had bought them all and paid for them.

White men stopped with me always, when they came near me, for I was the only American for miles; and O'Neal came past about every three months on his way from Lenhant's ranch to Trinidad, when he "went in," as is the custom with the cowboys, to get clothing, tobacco, mail, etc. One night as it was getting dark the dogs barked as they did only at a stranger. I went out, rifle in hand, and O'Neal rode up leading a pack horse. I had been expecting him for several days on his return trip from Trinidad to his ranch, 50 miles further east in a lonely beautiful cañon at the foot of the Mesa de Mayo. "Hello, Dick, I'm back." "I am glad to see you, Mac. Come here, boys, and take care of Mac's horses." Out came two Mexicans and led the horses to water, and then to the stable, after unsaddling and unpacking. We went into the house, and I made a dash at a few newspapers and my letters that he had brought me, while one could hear the clatter of pots and pans, and the monotonous squeak of the coffee-mill as Taofila prepared our supper.

The house was adobe, and like most of those structures looked on the outside like a mud pile; but inside, with the open fireplaces and the rude but comfortable furniture, the hides of buffalo and wolf on the floor for rugs, the red blankets on the bed, and the walls decorated with guns on hooks of antelope horns, the deer heads and the multitude of spurs and trappings a sporting frontiersman accumulates—it was as cosy a picture as ever gladdened a weary hunter's heart. We soon had supper; and after swapping news about horses, cattle, game and people, we slept.

Before Mac left he made me promise to visit him soon, and about a week afterward I got lonesome and longed for new hunting ground; so I saddled a fast strong horse early one morning, slipped my rifle into the scabbard that hung on the saddle horn, and away we ran over miles and miles of short yellow grass, east as the crow flies straight, without road and not caring for one. Oh, the pleasure of youth, health, a strong horse under one, a boundless prairie and freedom from care as perfect as that of the antelope that danced away as we swept along, with the bay snatching at the bit and trying to go faster the further we went. Across the prairie, skirting the big Mesa de Mayo Mountain, which stands alone like a fortress, and down the West Carisa Valley we swept; and the gallant bay stopped with heaving flank and black with sweat at the end of fifty miles in five hours, but with lots of go left. A stable, a blanket and some dry hay to cool off on for the horse; and Mac and I went into his log cabin, and Nigger Jim, his companion, commenced playing the coffee-mill tune, and we soon had dinner. Beef, bread and coffee—that is the cowman's fare; I believe it's so much meat that makes the cowboy savage. Then came a week of wild delights, watching for the timid antelope at the lonely spring as they came to drink in herds, and killing the fat bucks, running our horses like mad after the fine buffolo that drifted in one day from the east, stealing up the lonely dim cañons by moonlight with the howl of the mountain wolfs as a chorus, to find the roosts of the big old turkeys whose descendants still gobble at daybreak in those savage wilds. Nigger Jim herded the cattle a little, and Mac and I hunted and festooned the outside of the old log cabin with game.

One morning I was awakened by Jim just at daybreak. He said in a low tone, "Get up, boss, and kill the big antelope." I slipped on my pantaloons and stepped to the door, gun in hand. The cabin was in a hollow with its back to the spring, and I could not see more than 30yds. up the slope, for there was a little knoll in front of the house. I walked almost to the top of the knoll and there were about twenty antelope quietly grazing, part at about 50yds. I thought to myself, "I'll hit this antelope exactly where I aim," and taking careful sight pulled trigger. He dropped to the shot as if struck by lightning. The rest ran off and I let them go. When I got to him I found I had put the ball exactly where I aimed. In fifteen minutes he was disemboweled and hung to the end of one of the logs that formed the roof of the cabin, and we were eating breakfast.

After breakfast Mac and I sat down behind the cabin a few minutes to take a smoke, and while we were sitting there seven blacktail deer came around the corner of the hill in single file, not more than half a mile away, and walking up on to a little flat almost on top of the mesa lay down among some rocks and scrubby cedars. Saddling our horses and making a detour of about two miles, we got within 200yds. of them and picketed the ponies above them on the flat top of the mesa. In a moment a careful crawl placed us at the brink. A peep and there they were, not 30yds. below us. Each killed one the first shot before they saw us, killed another as they ran off down the hill and wounded a fourth that crossed the valley and limped slowly up on to the other mesa. We chased her three miles on foot and finally killed her after some twenty shots. I was so worn out, and my heart beat so fast, that I could not hit her at 90yds. in two shots, and I sat down and rested my elbows on my knees. We were till after dark getting the four deer to camp and Jim had supper ready for us.

After supper Jim said, "I was riding round this afternoon and found these, what are they?" He showed us two pear-shaped pieces of yellow metal, one as big as a lima bean, the other a little smaller. Mac laughed and said, "You've found a gold mine, perhaps. Give me this big one." "All right," said Jim, "and you can have the other, Mr. Dick, if you want it." I took the small piece and looking at it a moment slid it into my pocket, and telling Mac that it surely was not gold, for these mountains were too low to have any, I dismissed it from my mind. I remember that Mac asked Jim where he got them, and Jim said, "Oh, while I was riding round after the cattle." I remember also that there was dirt on my piece when I got it.

Before I left home I had requested Senor Miguel Trevinio to follow me down in two weeks with the wagon, and so shortly he came rolling in. The next day we all hunted antelope to give Miguel a taste of sport, for he is an ardent hunter. I crawled a mile after an old buck on almost level prarie, and after I had shot him discovered that I had lost my belt knife. Miguel showed his ability by taking my track from antelope and following it for more than half a mile on hard prairie until he found it. (I want to tell you, boys, Miguel is a real live Mexican, and as good a hunter as ever, right this minute, Jan. 6, 1892; there is lots of game right around the place I am writing of, and you can go there and hunt, too, if you want to, and have him guide you.)

The next morning Miguel, Nigger Jim and I, started for my ranch, and arrived there after an uneventful journey. Jim stopped with us the next day, and helped us skin and fix up the game, and the next day I went to town with a wagon load of deer and antelope hams and turkeys, leaving forequarters for home consumption, and the hides for Miguel to tan Indian fashion. The way he tans hides is a splendid one, and I advise you to remember it. He has his mother-in-law do the work (she is a Navajo Indian), and he bosses the job and smokes cigarettes.

Nigger Jim accompanied me to town and left for the East in a few days. He had quit and been paid off. I never heard of him again. I bathed, shaved, resurrected my town suit of clothes and my hard hat, and staid in town a few days for a change of food and surroundings. I finally went home; my cattle claimed my attention, and I forgot Mac and the West Carisa, until here came Mac one night, big-eyed and bursting with news of solemn import. "Do you know what that yeller stuff Nigger Jim gave us was?" "No," said I, and looked at him curiously, for it flashed through my mind that it was gold after all.

"Gold!" said Mac, pure virgin gold. "I wish I had that nigger, I'd soon make him show me where he got it." Then he quieted down a little and told me his story: He had gone to Trinidad on his usual quarterly journey, and feeling the nugget in his pocket had had it tested by an assayer. It was gold. He told me that he was going right back to the ranch to hunt till he found the mine. He would then come in and tell me, and we would dig out a hundred thousand or so apiece and then cover it up for future reference. He wanted me to come down and hunt, too; but to tell the truth, I didn't believe him.

Not that I thought he would intentionally deceive me, but I didn't believe that if it was gold it came from the Carisa, and then I didn't believe the stuff was gold. Mac left next morning, and I never saw him again. I heard that he quit his job that spring, helped hold up a stage in the Raton Pass, went to Texas, stole a herd of cattle and was pursued and shot in southern New Mexico. *Pax vobiscum.* And time rolled on.

The next fall a young Englishman discovered me through the medium of the *Spirit of the Times* (I corresponded with it occasionally); wrote to me and finally came out and settled down with me in October for a winter's hunt. He was a good fellow, a first-class shot with a shotgun, but couldn't hit a wild animal with a rifle to save his soul—got rattled or something. He did not kill anything bigger than a turkey in the first two weeks, and I knew he would leave me soon unless I could make him kill a deer. I ran one almost over him and he missed it; so finally I talked him into buying an 8-gauge double-barreled shotgun with cylinder bore, 12½lbs. in weight, bored to shoot buckshot well. After we had talked the thing up Al concluded to ride to Trinidad and telegraph to New York for a Parker gun. While we were hunting during the preceding week I had told a good many stories, among them about the Carisa hunt. He had asked to see the nugget, which I still kept in my trunk and had forgotten to take to Trinidad whenever I went. He more than half believed that Mac had found a mine, and advanced the idea that the terrible tale I told of him had been invented by Mac himself to cover his disappearance, and that he was digging away in some lonely cañon of the Carisa or the Mesa de Mayo accumulating the $100,000 he told me he wanted.

The night before Al started for Trinidad I gave him the nugget, and did not see Al nor nugget again for three weeks, when he rode in one afternoon with a broad grin, a new corduroy suit and the 8-bore. And it was a dandy. Lifter-action, of course, for it was long ago, but as good a big gun as I ever saw. We targeted it at once at a soap box about two feet square and put ten buckshot through it at 100 paces with twenty-four buckshot in the load. Al had had the nugget tested, and it was sure enough gold. We talked the matter over that night and decided to go out to Carisa shortly and put in a month or so at the deserted cabin hunting gold, antelope, deer, elk and turkeys, but particularly gold.

Al agreed to hire a cook—Miguel of course—and pay all expenses of the trip. He had two horses, a wagon and harness; and the biggest lot of traps that I ever saw a white man pack around had to accompany us everywhere. He had three sole-leather trunks, four big boxes, a tent, a camp stove and an assortment of liquors that would scare some folks into convulsions. When I wanted a tool to mend a wagon, or a gun, a telescope, or a horse rasp, they were there in those boxes. He always hauled his load separately from mine, but the things were awful handy sometimes. Well, a man with £5,000 a year can afford it, and that, I believe, was Al's income.

So we settled it that we would go with my wagon and his, Miguel to drive Al's wagon, Al to ride an extra horse, and I with three horses—two hitched up and my pet hunting pony led tied to the girth of one of my work horses. We started Miguel to Trinidad in the morning for supplies with a list as long as the moral law directed to my agent in town; and Dearden went up the hill at an early hour with the 8-bore across his saddle. I had to make some arrangements for a responsible man to leave at the ranch, as we intended to be gone two months, and went down to a little Mexican plaza, about four miles from my ranch, and found one who proved to be a little worse than nothing; but I thought he was all right all the time I was gone; and it's all the same at the present writing; but he was neglectful—he let all my cattle go away that wanted to; he sold 10,000lbs. of corn and spent the money for whisky and draw-poker; an old horse that I left him to ride stone he killed dead by overheating it, and I still feel somewhat riled when I think of him.

Al returned home about the same time I did, with a whitetail doe on the saddle and an expression of unutterable contentment on his face. "I have got a big buck up in a tree on the hill as well as this one; killed 'em both on the run at over 60yds. This is the best gun I ever saw." I congratulated him; and it took till 10 o'clock that night to tell me all the incidents of the day. I wish I could write it as he told it, and that you could see him as he drew his pipe from his mouth with his face shining like the full moon as he exclaimed, "And you ought to have seen the beast come down." It is nice, boys; there is no pleasure greater than the first deer.

He told me that he wanted me to come out the next day and see him shoot deer on the wing, so at daybreak next morning we were out and up the mountain side. We had ridden but a few miles when we saw a doe sneak into a copse of scrub oak bushes and lie down; the brush was not more than 4ft. high and perhaps 100yds. in diameter. Al dismounted and walked in with his gun cocked, and as the deer sprung in the air he shot and caught it on the fly. It came down the worst smashed-up deer I ever saw—two legs broken, one hip broken and shot through intestines, heart and lungs. "You've spoilt the hide, Al." "Well, I've got the deer and on the fly, too." We skinned her, cut the meat into quarters and left it till evening, when it was dry enough on the outside to carry well on the saddle. When we got home Miguel had put in his appearance with the wagon loaded to the gunwales; and New York, an old friend of mine, was standing in the door to welcome us. Al hired him at once to drive my wagon and stay with us for the trip; and we sat down to a good supper (cooked partly in American and partly in Mexican style), at peace with the whole world. York could not start for a few days, as he had to go over to the Rabbit Ear Creek in New Mexico with instructions to a shepherd to send their wethers to Granada for shipment; and it was three days' long ride over and back, barring accidents or delays. Miguel concluded to go over into the Cimarron Cañon and get my wagon mended a little, so he and York left at daylight the next morning.

Al and I had resolved not to tell York or Miguel what we were going to Carisa for, but to let them think it was a hunting expedition. While we were talking it over next day Al proposed to go and get Inez, Miguel's mother-in-law, to consult the spirits in regard to our trip. Inez was a Navajo Indian squaw, then about sixty years old, an Indian doctress, doctoring with herbs, and was also somewhat of a witch by reputation. She was as homely an old lady as I ever saw, of the color of an old saddle, straight as an arrow, and spent half her time roaming around alone in the morntains, seeking the roots and herbs which she made medicine of. She does know something about medicine and rude surgery, and is a pretty good woman, though Miguel frowns on her witchcraft, and says that he does not like one of his family to tell fortunes or perform heathenish incantations. The old lady still haunts the lonely Raton Mountains, and seemed as lively as ever last summer when I was out at Miguel's ranch.

Miguel being gone, it was all plain sailing; so we rode up to the ranch and told Inez that we wanted to have her consult the spirits in regard to the success of our expedition. She told me that it would take some little time for her to get into a frame of mind for the spirits to communicate with her freely, that she would like to go at once to a claim cabin on the mountain, about a mile from my house, stay there all that day, over night and the next night, till the dark came very black; and that then, if we heard her drum still beating, we might come up and learn our fate. Al offered her money but she refused it, saying that he could not pay the price it was worth, for the performance would exhaust her much; but that she was a friend of mine and would do what she could as a friend. I told her that Al had about a quart of whisky and that we would be happy to give her that; and she seemed to think that would be all right. We told her that we would go home and send up the whisky; and if Miguel came home too soon we would fix things up with him, so that he would not be angry with her. The Indian charm or *tombe* (pronounced toombay) is a home-made affair made of a circular box, like a fig box, with a rawhide head; and is beaten on with one stick, the music generally accompanied by song, shrill yells, a noise like a coyote, and other curious sounds. Inside of two hours we could see smoke coming out of the chimney of the jacal far above us up the mountain side; and by listening intently could hear the steady monotonous beat of the drum. Al had sent her the whisky, and the spirits of the air were being summoned.

That night we got up several times and listened, but the tombe never stopped. "I believe the old woman will be tired by to-morrow night," said Al about 12 o'clock, when he came in for the third or fourth time.

In the morning the drum was still beating; and my Mexicans, who knew a little about what was going on, looked very wise, and occasionally crossed themselves and muttered a prayer. Mexicans are a queer mixture of Catholicism and superstition.

Miguel came in with the wagon at about 4 o'clock, and as soon as he got there I took him into the house, gave him a drink, and, with Al's consent, told him the whole gold story and what we had done in regard to Inez.

He grumbled some and said that he did not believe in such foolishness; but I told him that this English gentleman had got to be amused, that he was rich; and that I didn't want him to get disgusted and leave me; that he (Miguel) should go with us and drive my wagon and cook at $15 a month; that he should have a share in our discoverings if we made any, and finally I pacified him so that he promised not to interfere.

It was a comical performance and the drum rolled con-

stantly, now loud as if approaching, now lower, till the sound almost died away as the wind changed. It is a wild, dreary place; the Mexicans are half savage, and perhaps I was somewhat of a curiosity to Al. He looked very much interested as night came on, and I half expected him to refuse to go up to the jacal after dark; but, no sir, he put on his "top coat," as he called his overcoat, and we rode up, up toward the drum. Over the boulders, through the scrub oak thickets, across the open thickets, across the open glades, till at last we came to the jacal. (A jacal, pronounced hackell, is a cabin built of poles. First dig a trench 18in. deep the size you want the house, with four deep holes at the corners; set in four logs with a fork at the top for corner posts; four logs with a trench cut on the under side from crotch to crotch; a roof of straight poles, then set poles on your trench with the upper end shaped like a wedge to fit into the trench cut in the frame; tamp your side poles in tight, put bark on the roof, then mud, then dirt, kept in place by poles on the edges of the roof; chink your walls, and inside and out daub mud mixed with straw cut up fine; make a stone fireplace in one corner and get a few boards and make a door; hang it on leather hinges cut from an old boot, and you have a cheap, storm-proof cabin that one can put up with an ax and a little time. I have built several, about the same as Miguel tans his buckskins—by proxy.)

We rode up and hitched. When we went in Inez was sitting by the fireplace squatted flat on the ground all alone. She did not look up. The fire was low but I could see all around the room. She looked worn and black, lean and ghastly by the light of the dying embers. We squatted by the fire, and she commenced to talk. Beating the drum low just a *tap, tap, tap*, as she talked, she told of a storm that would come on us when we went down the country, and of lost things that would be found. I translated to Al. Finally, after a long, vague talk she stopped and a shudder passed over her frame; she seemed to stiffen, and a voice from one dark corner said in thin, childlike tones, *in English*, "You will find gold."

We both jumped up and looked at the place that the voice seemed to come from. There was nothing there. I brightened up the fire. Inez arose and passed silently out into the night and vanished. Al remarked, "Well, by Jove!" in a big, hearty voice, and loaded and lit his pipe. That was all. So we went home, and did not see Inez again for months. Al and I of course discussed our seance and said it was ventriloquism; but that didn't quite explain how she had found out our secret, nor how the voice spoke in English when Inez had never been known to say one word of any language but Navajo and Mexican.

When we got home New York was there, and we were so full of the performance that we told him the whole story of the gold and all—witch story included—and let him into our company in full partnership, and talked the matter over far into the night. Miguel came down from his ranch half a mile up the creek, and said that Inez had got in and seemed tired and hungry, but that she would not talk; so I told him our story, and he promptly said that he was sure an evil spirit had spoken, and that it was awful to monkey with the unseen world, or words to that effect; but he was as eager to go as the rest of us.

We fixed up the outfit the next day and started at noon—York on Al's wagon, Miguel on mine, Al and I on horseback, my black greyhound prancing around us. We drove into camp on the Vacheche Arroya about dark. Lonny Horn, a stockman, who now lives in Trinidad and is a rich banker, had a claim cabin at the water there, so we camped indoors (jacal of course) and passed a very comfortable night. Al had a violin and played everything, from selections from operas to that time-worn melody "The Unfortunate Dog." York told many an Indian story of the Texas cattle trail from Texas to New Mexico. Al told of English sports, and I told a few yarns and translated some of the others to Miguel when he could not get the drift of the story. Miguel can read and write Spanish, is as smart as a trap, honest with his friends, and in fact an awful nice little man. He can partiallly understand English, but can't talk much. So at last we slept—Al on a nice mattress alone, York and I together on my buffalo robe, and Miguel rolled himself in his serape or Mexican blanket and just lopped over close to the fire.

Miguel was up by daybreak and had breakfast ready when I got up. The wind was howling and the first snow of the season was sifting in through the cracks around the door. We fed the horses, got part of our load in doors, and then sat down and played high-low-jack till dinner.

After dinner I went down the cañon hunting on foot, and did not see anything but a wolf and could not get a shot at him. Al killed a mess of rabbits with his 12-gauge shotgun around camp among the rocks, and York baked bread and roasted coffee. It stopped snowing toward night, and the next morning we pulled out and by driving hard, for it was hard traveling in the melting snow, made the log cabin at the Follis big spring in the West Carisa cañon. It is a beautiful location, about a mile from Mac's old camp, which was at the Old Lenhart Ranch. No one was in the West Carisa that winter, and all wild animals were tame. The antelope had drifted in from the big prairies on the east before the storm, and would not run off more than 200yds. as we passed; turkeys, which we found roosting in the side cañons that ran up into the Mesa de Mayo, would not fly till after we had fired half a dozen shots up into the tree; the black-tail deer would run off 50yds. or so when disturbed, and then turn and stare stupidly. The big wolves were perfectly insulting in their manners on the start. They would stand on a little mound and watch us as we rode past, with a kind of an "I'd like you to come up here and be eaten" expression on their countenances: but we soon cured them. We commenced shooting at them whenever we saw them. After we had laid out a few and wounded several more, they ran on suspicion. After we had been in camp two days Al told me that he had only half believed my game stories before, but now knew that I had not exaggerated anything.

The morning after we got into camp we concluded to hunt for a few days, get a start of meat hung up, and then after the snow was all gone find our gold mine, and get a wagon load or so of nuggets for future reference. York went out after the horses before breakfast and reported them all gone toward home. I had picketed my saddle horse and fed a lot of oats to him, and so we had something to go after them on. I started after them as soon as I got breakfast and overtook them within 10 miles of my home ranch. I turned them around and ran them back as far as I could and corraled them at Thompson's corral on the Chaquaw Cañon after dark. There is a deserted house there; and I made a good fire and took a chew of tobacco for supper. Passed a chilly night wrapped up in a thin saddle blanket.

At noon I started for camp, traveling as hard as I could shove the horses. When my horse got tired I roped Al's big sorrel, which I was satisfied had led the others off, and turning my tired pony into the bunch, made them fly for camp at a gallop. When I got to camp no one was there but Nig, who was tied to the doorknob. I corraled the horses and fed them corn, fed my pet bay horse at the cabin door loose, freed Nig (he jumped all over me), went in and got dinner and supper for the day before and breakfast combined. I was very tired, and felt weak from my long hard ride and the freezeout I had played the night before, so Nig and I went to sleep on Al's mattress, and didn't wake up till the boys came in just before sunset.

Al was worn out carrying his cannon. The traveling had been hard on foot. They reported two antelope killed and thrown up on the roof of the Lenhart cabin, and Miguel was carrying the hindleg of a nice little buck deer that Al had slaughtered with the scatter gun. The rest of the deer was hung up on a tree two or three miles from camp. The boys were in high spirits. The snow was almost gone, and they proposed to find the gold at once next day. We picketed or hobbled all the horses that night, and several more nights, till we thought they would not run away; then we turned them loose again, and all of them started for home and Al had to go after them; but he got them in a few hours.

There was wild talk in camp that night, and New York decided to go to Africa and have a hunt after he got his $100,000. Miguel was going to Chihuahua, his birth place. Al declared that he was perfectly satisfied right where he was, and wished he could buy the whole Carisa county, Mesa de Mayo included, and live there forever. I didn't stop at $100,000; concluded that I would have a steam yacht for one thing, and a house in New York, with a cottage in Maine, one in Florida, and another in the Adirondacks, and not live anywhere in particular. Well, I haven't lived anywhere in particular ever since, but I haven't got the houses. Of all the wild schemes I ever heard in my life, I heard them in the succeeding week. And how we prospected. We hunted out every side cañon and every main one for miles around. We pounded rocks and looked at them with magnifying glasses. We hunted on the top of the Mesas—all but one lone butte that towered up on the prairie for 4,000ft. I didn't go up there, for it would have been an awful climb, but I have been always sorry I didn't, and I am going up there next summer.

There must be thirty or forty acres of level land on top of that butte, and I do not believe there was ever a white man on top of it. So there must be something up there that I want to see.

I found a coal vein. It's there yet, I reckon. Finally in about two weeks I got tired and began hunting game, and moralizing on the uncertainty of riches, and preaching that with food, raiment, a horse and a Winchester rifle one should be content, if his tobacco didn't run out. Al agreed with me, but Miguel and York stuck to it. Miguel found a small cave with two human skeletons in it, but nothing of value. Finally one night Al came home solemn and with big eyes. He had been hunting about ten miles south of camp on horseback down the cañon. We saw that he had something to tell, but let him alone till the spirit moved him. At last he said, "Boys, I have found something, but I have not found gold. I have found a stone house in a bank of dirt; I cannot get to it; and it may contain the Aztec's buried treasure. We will have to all go down there to-morrow and open it with oak crow-bars. If we can't do that we will blow it open with powder." (He had about 25lbs. in his old Noah's Ark of an ammunition chest.)

We had another big talk that night, and didn't get up till late the next morning—I never do unless I am hungry or have to from some very urgent reason. The others were naturally early risers from choice. We made some wooden crow-bars from green mountain oak. We went down the broad valley about ten miles or more, and then east to the hills, up a way, and came to a bank of earth 20 or 30ft. high. There, sure enough, was the edge of a house sticking out about half-way up. It showed about 9ft. of the side toward the top, and seemed 12 or 14ft. long. The stones had been laid in mud, I think, for mortar. They were mostly as big as a man could lift. We picked away at the cracks with an axe, and finally managed to dislodge several stones. We peered into a dark chamber about 12ft. square, and it smelled badly of confined air and a variety of stenches. York got some weeds and grass and we shoved in an armful and set it afire. It burnt well, and we crawled in. Against the back wall sat three skeletons. York took hold of one and it crumbled to the touch. They must have been very old. We dug in the floor and found some broken pottery, like Pueblo pottery, and a few stone arrowheads. York finally found a small piece of metal near the smallest skeleton. It was shaped like mine—pear-shaped and flattish. It had a hole through the smallest end, showing that it must be an ornament of some kind, probably a neck ornament. I took mine out of my pocket and could see that it must have been of the same character, it was worn or broken to below the hole. We sat down on the grass below our treasure cave and smoked awhile and then drove back to camp. Al offered York $20 for the charm and York promptly refused it. "I have a horse, saddle, blankets, six-shooter and gun. I don't need money, and am going to keep this to remember the trip by, and have it made into a breastpin," he said; and he kept it, too. I gave mine to Al the next day, for at that time I didn't care to remember that I had lost my yacht and my Fifth avenue house. Now I don't care.

We hunted about a week longer and got a few deer and many antelope and turkeys, and then rolled out for Rita Azul, well satisfied after all with our gold hunt. I have not told you much about our hunting, but I cannot, for my feelings still overpower me when I think how I lost my steam yacht—she was 100ft. long.

W. J. Dixon.

Forest and Stream comes to our desk this week much enlarged and improved. This well-known journal has been the standard of its class for many years, and no sportsman who gives it a trial will ever do without it.—*Greeley (Col.) Sun.*

Natural History.

THE EUROPEAN BISON.—III.

BY R. WALDECK.

[*Continued from Page 123.*]

THE writer of this article has received a description of the capture of living bison from the Forester, Dimitri Dolmatoff, who is in the Imperial service at the forest Bialowitza. The Emperor of Russia having promised to Queen Victoria, of England, two living bison for the Zoological Gardens in London, Dimitri Dolmatoff received the Imperial order to capture two young ones, since, of course, old ones would be hard to secure and would never grow tame enough to bear transportation and live in captivity.

Dimitri Dolmatoff therefore collected eighty peasants and drivers and started with this force at daybreak on July 20. The guns of the hunters were charged only with powder. They were first obliged to look for the tracks a troop of bison had left where they had spent the previous night. These having been found, they followed them step by step, with the utmost caution and in perfect silence. As they approached a little valley, Dimitri Dolmatoff and his companion, Count Kisseleff, who had brought the Imperial order, saw a large troop of bison at rest in the valley near a little brook. The young ones were jumping playfully about, throwing the sand high up with their feet, now running back to their mothers for some milk and again running away to play. At a signal given by Dimitri Dolmatoff the trumpets were sounded, and at the first blast a change came over the peaceful scene in the valley. The troop of bison at once prepared to fight. The calves were collected in the middle, the cows next to them and the bulls formed the outer circle and watched for the approach of their enemies. In the meantime the dogs of the hunters had been loosed and rushed upon the herd. The boldest of them approached too near, and in a moment were thrown into the air like balls, their sides ripped open by the horns of the bison bulls. The troop retreating soon approached the line of drivers, who received them with yells and with blank shots, but the herd of bison could not be stopped, and broke through the drivers who hid themselves behind the bushes. In the forced rush of the bison two calves had been left behind, one about three months old, was pretty easily caught; the other one about fifteen months of age, overturned eight men and escaped, but pursued by the dogs it was driven into the garden of a forester, where it was a second time captured. The same day, later on, four calves—three female and one male—were caught. One of the female calves was only a few days old. It was at once brought to a cow of brown color, which was very much like that of a bison cow. This cow accepted the little one, which sucked at once, but six days later it died of an abscess which formed on its neck. The abscess was noticed on the day when it was caught. For the first day of their captivity the rest of the calves refused to take any food, but on the second day the youngest of them, which was three months old, began to suck the cow which was brought to it. The remainder at length took fresh milk from the hand of a man, and later they eagerly drank from a pail. After a short time they had lost their wild look, becoming quite tame, and were very playful. While they were running around in the yard everybody took pleasure in watching their quick and active motions. They jumped with the quickness of a goat and liked to play with the calves of domestic cows. When playfully fighting with these, although they were much the stronger, they allowed the tame calves to overcome them.

The young bull fifteen months of age was much harder to tame, and for a time was quite savage, threatening with his horns any one who tried to approach him. After about two months, however, he began to lose his wild look and to show some recognition and affection for the man who attended him. It was observed by every one who saw this bison that he liked to paw with his feet, throwing the dirt high up in the air, and to rear like a horse. As soon as these calves were let out of the stable they at once began to play, lifting their heads, snorting and jumping gayly about. They were constantly trying to break through the fences which inclosed them, and looked wistfully to the woods near by. When they were driven in their stables they went in sadly with bowed heads. They soon became warmly attached to their attendant and looked after him when he left and showed their pleasure when he returned. They listened for his voice, licked his hand, and rubbed themselves against him.

The young prisoners were brought to two different places and seemed to do well. The two oldest bulls were fed hay, leaves or bark of the ash tree, oats and different herbs gathered in the forest and seemed to enjoy their food, which agreed with them. They also licked salt and seemed greatly to enjoy this. The younger calves which drank milk out of pails, were unfavorably affected for a time by their change of diet, probably because the milk, which was brought from some distance, was not always fresh enough. As soon as they received milk fresh from the cow they regained their health. The two older captives drank fresh water several times each day, but the younger ones would not take this unless it was mixed with milk. The captives grew very fast, for the abundant food, the stabling which protected them from the cold in winter, and in summer from the heat and the stings of the gnats, had a very good effect on them. When these calves were hungry or thirsty they let it be known by grunting much as pigs do, a sound quite similar to that made by the American buffalo. After they had been kept some time at the village of Bialowitza, these half tamed bison were transported to Grodno a distance of 60 miles. The two bulls which were destined for St. Petersburg were confined in a large cage which was covered with straw. The cage was large enough to admit of their lying down. On the first day of their journey they were frightened, and would not take any food, but by the second day they had become accustomed to the motion and behaved as usual, taking their food and lying down to rest. The pair destined for London were also in a cage just like the other, but the cow and the bull were separated. When they reached Grodno, the four were taken to a stable, but each one was put in a separate box-stall built of planks. This second change of stables enraged them so much that they became unruly, and

with a few buttings of the head they brought down the planks which separated them, and strangely enough all three bulls furiously attacked the one cow, and would have killed her, if the attendants and other people had not come in to separate them, and to take each one to a different stable.

I have seen bison in the Zoölogical Gardens at Schonbrunn, London and Hamburg. In Schonbrunn they live in a stable with a yard at one end. The yard is surrounded by a stout fence made of heavy oak posts which are set 4 to 5ft. in the ground, braced with counter posts, and each post connected with those on either side of it by strong cross bars. When I saw these bison, the cow had a calf only a few days old, to which she gave much attention and treated with much affection. In order to obtain a closer view of the young one, I stepped up close to the fence, but at once the cow lowered her head and dashed with such force against the posts of the fence that everything cracked and shook. I at once stepped back, but she repeated her attacks three or four times.

From whatever source I have heard anything about the bison I have always learned that however pleasant and good tempered it may be while young by so much the more it becomes ill-tempered and dangerous when it grows old. Often their own attendants have to be very careful, and must never trust them. The slightest cause may arouse their fury. Especially they dislike to change their abode. In a certain zoölogical garden it was necessary that a cow should be transferred to another stable. Long ropes were fastened to her head and twenty strong men held them and tried to lead her. For a moment she stood quiet and then suddenly shook her head, and with that motion all twenty men were thrown to the ground. Afterward double the number had great difficulty in inducing her to move.

The bison grows tame up to a certain point, but all efforts to render him docile are in vain. We read of only a single instance where a bison served man. This was a pair owned by Count Lazar, whose family arms showed the head of a bison. To-day, however, this old family has changed its crest to the head of an elk. This Count Lazar had two tame bison bulls, which he had broken to drive, and at a great festival held at Hermanstadt in the year 1740 he appeared in his carriage drawn by these bulls. They wore a splendid gold-plated harness and had their horns gilded. These bison were caught young in the woods of Gyergyo and tamed. An account of this is given not only in the family history of the Lazars but also in the chronicles of the town of Hermanstadt, in Hungary. This strange team was greatly wondered at.

The bison endures captivity very well in the zoölogical gardens, and it is to be noticed that the rate of increase is more rapid under these circumstances than when they are in the wilderness. Here it has been observed that the cow carries her calf 270 or 274 days. The mother treats her young one with much tenderness so long as no human hand has touched it, but as soon as even the well-known attendant tries to caress it, she becomes enraged and will kill her calf unless it is at once taken from her. The bison bull has to be separated from the cow before the calf is born. A peaceful family life has never been known among them in captivity. On May 22, 1865, a bison calf was born in the zoölogical gardens at Dresden, and as the habits of the bull were not known he had not been separated from the cow. As soon as he saw the young one he caught it on his horns and threw it over the fence. Here it was taken up by some attendants and, as it was not injured, it was brought back to its mother, after she had been separated from the bull. She smelled of the calf, and probably noticed that it had been touched by human hands, for she pierced it with her horns, and killed it at once by goring and stamping on it. It is noticed of all the bison cows, that several weeks before their calves are born they grow wild and suspicious and remain so for a month or two after the calf is born.

Some naturalists pretend that there is close relationship between our domestic cattle and the bison, but there are a number of proofs that this is not the case. Usually the bison and the domestic cattle avoid each other, though I have received a report of an exception to this rule which is worthy of mention. In a little village of the district Esit near the forests of Biaolowitza, where the village cows were pastured near the border of the forest, there was a bison bull which took a fancy to one of the cows and came every day to see her. Not content with that, he grew bolder and bolder, and when the cows were driven homeward in the evening he kept her company until the first house of the village was reached. Shortly after that he followed her as far as the stable, where the frightened people were obliged to admit him, and afterward he returned each night with the cow to the stable and left with her in the morning. The same letter which contained this account gives an example of the opposite feeling.

About the utility or harmfulness of the European bison nothing can be said. The damage done by them in the forests of Bialowitza is inconsiderable, as the number of bison is very small in comparison with the extent of the forest. The meat is very good to eat and has something the flavor of the deer. The leather is thick but not very strong. The horns and hoofs are used for different purposes. The old Germans used the horns as goblets, and in the Caucasus they are still used for the same purpose. In a feast given to Gen. Rose by a Caucasian Prince seventy bison horns served as goblets.

Up to the end of the last century we knew of a Caucasian bison only by report, until a certain Mr. Guldenstedt found, while crossing the Caucasian Mountains, the skeletons of fourteen bison in a cavern. In the year 1836 Baron De Rosen brought some bison skins with him from the Caucasus, and when those were examined it was seen that the animal of the Caucasus was similar to the bison of the Bialowitza forest. In the year 1866 the first living bison was brought to the Zoological Gardens of Moscow. A petition from a Zoological Society had been presented to the Emperor of Russia asking him for the sake of science to give orders that a living bison should be caught in the Caucasus and brought to Moscow. The Emperor at once did as requested and some hundred of roubles were offered as a prize for the lucky hunter. An inhabitant of the village of Kuvinsk named Adjeff was lucky enough to win the prize. In a great pine forest near the village of Atcikhar he and his seven companions observed the tracks of a troop of bison. They followed these tracks and soon discovered the troop, which numbered about fifty, pasturing quietly in a little spot of prairie in the woods. Adjeff succeeded in shooting a cow, which with her calf of about six months of age was a little to one side of the main herd. The cow was killed, but the bison went off and the young one with them, and Adjeff and his companions supposed that they must make further efforts before getting hold of it. They stopped to take lunch, and while they were eating, they suddenly heard the cracking of dried branches near by. At once they hid themselves and soon saw the young bison calf coming back to the body of its mother, where they succeeded in capturing it. This calf was kept for four or five months in the village of Kuvinsk and in the autumn was sent on with Adjeff and some soldiers to Moscow, where it was discovered to be the same as the bison of the Bialowitza woods.

From this time we have often heard of the Caucasian bison from celebrated travellers, such as Nordman, Tornau and Radde. According to their reports, the animal lives in the forests which extend for about 150 miles between Kuban and the Psib or Kapuetti River and in the great pine forests at the foot of the Marucha Glacier. It is also observed here that in summer they go higher up into the mountains and in winter come back again to the lower country where the cold is not so severe. Tornau frequently saw herds of them, and writes that the bison when going to water in the morning travel in long lines in single file, one stepping in the tracks of another, just as is done by the American buffalo whose deep trails always bring us to a stream or brook.

In captivity besides the zoological gardens mentioned above the bison is kept by the Prince of Pless in Silesia, Austria, in a forest several miles square. This forest is fenced in by posts and strong wire. The troop numbers about twenty or thirty animals very carefully fed and protected.

A DOUBLE-HEADED GOPHER SNAKE.

AUBURN, Cal., Jan. 25.—A very beautiful specimen of a double-headed gopher snake was captured on a ranch near here the other day. A young man was removing a pile of rocks, preparatory to plowing, and saw it protrude its two heads from under the bottom ones. He at once saw the peculiar build of the creature and proceeded gently with his work, and captured the snake unhurt. It is a perfect specimen, the two heads being exact counterparts of each other. Accompanying this I send you a rough drawing, which will give a better idea of its appearance than any description. It is about fifteen inches long, being a young snake, is very tame and gentle, and apparently in perfect health.

Specimens of this snake (*Pityophis cunifer*) are not uncommonly found in museums, having two heads, but I never saw a living one before, nor such a perfect and symmetrical one. There is no malformation about it saving in its having the two heads. When it travels it presses the two heads closely together, chin to chin, and then looks like an ordinary snake, especially when traveling quickly. But when at rest the heads separate for about one inch up the body, and are perfectly independent of each other, one protruding its tongue when the other does not, and doing all other things they are capable of doing, independently. Whichever head comes handiest seizes its prey, and while the one gorges it the other is on the lookout for more. It would make a very beautiful and attractive specimen for a museum or private collection, and more especially for a zoölogical garden. AREFAR.

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. A HARE DRIVE IN GERMANY.

ON my recent visit to Europe I had the pleasure of an invitation to one of the most famous hunts for this game in central Europe. It was the Domain of Pitchke, with an area of ten thousand acres all under the most perfect cultivation. The soil is well adapted to the large English hare, and he thrives here so well that at the yearly hunt as high as fifteen hundred are killed in a single day without diminishing the annual supply.

Arriving at the castle, I found a very select company of high officials and officers of rank, numbering about twenty-five, and after a splendid lunch the signal for the start was given at 10 o'clock. A glance out of a window overlooking the courtyard showed a novel scene and almost military discipline. On one side of the large court were ranged the coaches which were to convey us in pairs to the hunting grounds, while on the other hundreds of drivers, many of them women carrying large willow baskets on their backs, were seated on wagons, each drawn by four very heavy horses. The days in this high latitude being very short, and the territory so large, it was necessary to move from drive to drive with utmost dispatch.

The territory was laid out in four squares, and one-half of the hunters and half of the drivers were driven to the opposite corners of a square. Each had its captain, who immediately commenced to throw out wings to the right and left angles of the square, and we were instructed not to commence firing until the circle was completed. The hare is a very wary fellow and a few shots prematurely fired will often set them all going. Each hunter was followed by five drivers, about eighty yards apart, and many a tempting shot offered while on the march to complete the circle. Finally the four rings met; we faced toward the center, and when the guns commenced to crack hundreds of hares rose up and could be seen running at top speed. Sometimes as high as fifty would make a rush for me. The whole field seemed alive and moving and it was a hard matter to keep cool. Most of the hunters were supplied with two guns, one of which, with the cartridges, was carried by an attendant. As the circle narrowed, flock after flock of partridges would rise and fly out, giving splendid overhead shooting. Finally the signal was given to stop shooting toward the center, the drivers advanced and the hunters faced about and the firing now was only outward. The game was quickly stretched in a long row, every tenth one being laid below the line and the total footed up to 438 hares. In a few minutes all were in motion again, headed for the second square, and here 256 more were added to the number killed. A heavy fog now settled over the field, and as time was precious the horses were started on a run for the points of the third square. This was the most famous territory, and had darkness not overtaken us before the hunt ended, no doubt it would have resulted in a very high score; as it was, 356 were brought to bag.

The shooting is not so easy as most people would imagine, and requires excellent judgment, as the frightened hare is a rapid goer and hard to kill, and most of the shooting is at a range of 60yds. and over. Right here in this last drive I had the pleasure of witnessing the finest shooting I ever saw in my life, and in the past thirty years I have seen a great, great deal. My next neighbor in this drive was the head forester of the Emperor of Germany; he was using a very fine Winchester repeating shotgun, while his servant carried his Greener ejector. We were advancing toward a large lot of straw stacks stretching out at right angles, forming a wing which forced the game toward us. Eight hares, only a few yards apart, came with a rush; six times cracked the Winchester, faster than I can tell it; twice the Greener, and it was all over. All I could do was to take off my hat and congratulate. Not even one cripple, they all rolled over as if struck by lightning. Noticing the terrific killing power without smoke and hardly any noise, I inquired what powder he was using, and he informed me that it was called the new "Walsrode." The powder is certainly wonderful and is taking Europe with a rush.

A splendid dinner, lasting until midnight, wound up the hunt; and as I passed the rows of empty bottles on my way to breakfast in the morning, I wondered if there were more hares or empty bottles. WHIPPOORWILL.

THE DEVIL'S RIVER COUNTRY.

DECEMBER 1st "last past," in company with three friends, and Bob, our colored cook, I left Abilene, Texas, for a three weeks' outing in the famous "Devil's River country."

Our outfit consisted of two two-horse wagons, guns, ammunition, fishing tackle, a good tent, and other indispensables. Quail were plentiful en route, and now and then a brace of ducks were added to the bill of fare. We arrived at our destination rather later than we had calculated, but found deer plentiful, and had a splendid time. Six deer and two wild turkeys made the bag. Five of the deer were killed in one day.

The Rio Diavolo, or Devil's River, springs full grown from the base of a mountain, and it is about 40yds. wide at the spring. Black bass in uncounted thousands are here. We caught about 40lbs. of these fish in a couple of hours. Minnows were used for bait. This strange stream rises in Val Verde county amid the most picturesque scenery I have seen anywhere in Texas.

Mr. Hi Young, a successful sheepman, has his ranch some seven miles from Pecan Springs, the head of Devil's River. He is an enthusiastic sportsman, a devoted friend to FOREST AND STREAM, a prince of good fellows, and the best hand at telling a sportsman's story I have met in many a day. He keeps a fine pack of hounds, and woe to the marauding panther or prowling lynx that wanders into Hi Young's bailiwick. I have forgotten the exact number of panthers he has slain in the past two years or so, but think it eighteen. He can tell you exactly, and ought to do it.

If he would set his old Remington rifle aside, hang up that orotund-voiced horn, and sit down long enough, he could write some accounts of tussles with *Felis concolor* and *Dicotyles torquatus* that would surpass the "deeds of derring do" attributed to Davy Crockett.

The peccary is plentiful in that region. He is classed as "the out-fighingest varmint" in the West. Some of our party captured about a two-weeks-old pig, and Hi said that "you might touch him in the short ribs with your finger and he would bite you three times before you could get it away." I didn't try it. Hi's love of hunting is only surpassed by his hospitality. He is a bachelor, and to use his own language "runs a typical stag ranch," but he is nevertheless a cultured gentleman.

J. C. WINGO.

ABILENE, Texas.

STOLEN GUNS AND RIFLES.

Editor Forest and Stream:

Wishing to inform my brother sportsmen of my loss, and request their co-operation in assisting me to regain the same, and if possible bring the guilty to justice, I can think of no better way to do this than through the columns of your valuable journal, of which I am proud to be a subscriber.

During my recent illness with typhoid fever some thief or thieves broke into my gun-room, which is located over my store, and took the following guns and rifles: One Parker hammerless $100 grade, 12-gauge, 30in. Damascus barrels, pistol-grip stock with silver plate, the initials E. B. W. engraved on the same, weight 7¼lbs. and No. 61,833. One J. P. Clabrough & Bros.' hammerless guns, 12-gauge, 28in. Damascus barrels, silver shield on stock, pistol grip, and "J. P. Clabrough & Bros., London," engraved on the barrels, weight 7lbs., and No. 4,329. One F. Williams hammer gun, 12-gauge, 30in. laminated steel barrels, matted rib pistol grip, checkered and engraved. One Winchester rifle .45-70, model 1886, fancy shotgun butt stock, pistol grip, Lyman rear sight and Winchester express sights, No. 56,328. One Colt lightning magazine rifle, 28in. octogan barrel .40-60-260 and No. 318.

Brother sportsmen will sympathize with me when they know my favorites were among them, viz., the Parker hammerless and Winchester .45-70 rifle (made to my especial order) and will confer a great favor by making a memorandum of the guns and their numbers and informing the subscriber should they run across them, for which they will be liberally rewarded by

CAPT. E. B. WADSWORTH,
(162 Eliot street, Boston, Mass.)

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

THE NEW YORK STATE CONVENTION.

SYRACUSE is a stronghold of protection. There is a small army of men there who hold to nothing more tenaciously than that game and fish laws are made to protect game and fish, and must be enforced. These men do not exhaust all their energy and enthusiasm in talking protection. They put their hands down deep into their pockets and pay out money for it, not once, but time and again. Syracuse is the home of the Onondaga Anglers' Association, made up of such enthusiastic workers as Henry Loftie, J. N. Babcock, Walter S. MacGregor and others—the association which backs up Protector Hawn in his fight against the netters. The Onondaga Sportsmen's Association has done similar good work in the suppression of game pirates. There is indeed not to be found in this country a city where fish and game protection is more intelligently appreciated and energetically enforced, where works attend words more effectively, and actual accomplishment more richly rewards practical effort. It was something of a foregone conclusion then, when Syracuse was named as the place for this year's convention of the New York State Association for the Protection of Fish and Game, that this organization, which for ten years past has been known only by its trap shooting tournaments, should catch the spirit which pervades the city, and that before the 1892 calendars should be torn down a change of programme might be looked for. In due time a call for a winter convention was sent out by President Horace White of the State Association, and in response to this call there came together at Syracuse last Friday, a gathering of enthusiastic and representative sportsmen of the State, to discuss game and fish interests. The spirit of the convention could not be mistaken; those who had given up a day to attend the meeting were there because they wanted more efficient legislation, and improved enforcement of the statutes. It was a business meeting, in earnest, harmonious, and controlled by the spirit of the greatest good to the greatest number.

The delegates assembled in the Music Hall of the Y. M. C. A., at 10 o'clock Friday morning, and after a happily worded address of welcome by President White, the convention organized with Charles B. Reynolds, of the FOREST AND STREAM, as chairman, and John B. Sage, of Buffalo, as secretary. The roll call showed that delegates from all sections of the State were present, from Long Island Sound to the Niagara line, and demonstrated the representative character of the assembly:

Anglers' Association of Onondaga—Walter S. MacGregor, Henry Loftie, Amos Padgham, John N. Babcock and M. J. French, all of Syracuse.

Anglers' Association of the St. Lawrence River—W. H. Thompson and A. C. Cornwall, Alexandria Bay; R. P. Grant, George H. Strough, G. M. Skinner and Chas. Ellis, of Clayton.

Auburn Gun Club—Wm. A. White, Chas. W. Tuttle and C. U. Chedell.

Balsam Lake Club and Sundown Fishing Club, Sullivan County—J. S. Van Cleef, Poughkeepsie.

Black River Fish and Game Protective Association—F. X. Salzman, Forestport; W. E. Wolcott, Utica.

Central New York Association for the Protection of Fish and Game—Chas. A. Bannister and Geo. R. Peck, Cayuga county; Fred. J. Davis and Clinton S. Carr, Tioga county; W. S. Gavitt and C. Hotchkiss, Wayne county; J. G. Stacey and Lyman Root, Ontario county; Dr. Fowler, Tompkins county; Chas. T. Silsby and J. N. Hammond, Seneca county; A. M. Schermerhorn, Cortland county.

Cheap-r Food Fish Association—Frank J. Amsden, Rochester.

Chenango Fish and Game Association—J. P. Alds, Norwich.

Chemung County Sportsmen's Club—Chas. H. Knippe, Elmira.

Clyde Gun Club—Geo. B. Greenway. Jas. M. Streeter.

Genesee Valley Association—O. T. Hamilton and C. C. Laney, of Rochester.

Glen Haven Game and Fish Protective Association—Geo. K. Collins, E. D. Crossley, Hosea Randall, Jr., Jefferson J. Brown.

Leatherstocking Gun Club—J. K. Stockwell, S. O. Osterhout, of Oswego.

Monroe Sportsmen's Association—Jno. R. Fanning and Dr. M. L. Mallory, of Rochester.

New York Association for the Protection of Game—Robert B. Lawrence, Flushing, L. I.

Niagara County Anglers' Club—John F. Little, W. W. Trevor, of Lockport.

Oneonta Fish and Game Protective Association—Edward E. Ford.

Syracuse University Gun Club—Frank E. Oliver.

Oneida County Sportsmen's Club—Gustavus Dexter, Utica, N.Y.

Onondaga County Sportsmen's Club—Chas. L. Becker, W. E. Hookway, C. H. Mowry, Wm. Prettie, Myron Weidman, H. M. Chase, N. Ayrus, Horace White, Henry Loftie, all of Syracuse.

Spencer Sportsmen's Club—W. S. Gavitt, M. L. Forsyth, Henry Killick, J. W. Putnam and W. C. Soule, of Lyons.

Utica Fish and Game Protective Association—I. C. McIntosh, John D. Collins, of Utica.

Weedsport Rod and Gun Club—G. M. Stickle, E. L. Benedict, James Wright, of Weedsport.

Others present were Gen. D. H. Bruce of Syracuse; John B. Sage of Buffalo, Secretary of the Association; Chief Game and Fish Protector J. Warren Pond of Malone; Protector Harrison Hawn and Deputy Henry Jackson; Monroe A. Green, Superintendent Caledonia Hatchery; A. C. Stewart and Dr. A. E. Mallock of Hamilton, Ont., representing the Ontario Game and Fish Commission; H. W. Rogers, of the Rogers fishway, Amherst, N. B.; F. P. Doyle, of the American Fisheries Society; Chas. B. Reynolds, of the FOREST AND STREAM.

Letters of regret at enforced absence and expressing warm interest in the cause were received from Judge Vann, Gen. R. U. Sherman, C. H. Post, Senator Donald McNaughton and Secretary Richard O. Harding of the Massachusetts Association.

On motion of Frank J. Amsden a committee on game laws was appointed to consider the Gould bill, and to recommended action on it. The committee of thirteen was made up as follows:

Fish Interests—F. J. Amsden, George H. Strough, Henry Loftie, Hon. John Little and Henry M. Chase.

Game Interests—Charles H. Knapp, William S. Gavitt, Robert B. Lawrence, William Hookway and J. Warren Pond.

Law Enforcement—Walter S. MacGregor, Dr. J. S. Van Cleef and John R. Fanning.

After discussion of a resolution offered by C. H. Mowry, that if the present State Association were inadequate to meet the requirements of game protection interests, a new one should be formed, this committee on permanent organization was named: Messers Mowry, Sage, White, Strough, Bruce, Lawrence and Walcott. Their report was read by Gen. Bruce at the afternoon session, and was unanimously adopted as follows:

Your committee, to which was referred the subject of effecting a permanent organization of this convention, have had the subject under consideration and report as follows:

It appears by the roll of the convention that the attendance is wholly from the membership of clubs and associations situated in various parts of the State, though not all such organizations are members of the present State Association. The present representation shows what may be accomplished where all such organizations come together; and with this fact before us we submit the following conclusions and recommendations:

1. That we deem it to be inexpedient to organize another State association at this time, believing that the present Association will hereafter be more vigilant in the exercise of its powers for the protection of fish, game and the forests, provided it shall have the help and support of all associations organized for the purpose for which the State Association was created; that is, protection.

2. We recommend that all such clubs shall become members of the State Association, with a view to increasing its influence and power.

3. We call upon the State Association to appoint and hold a meeting in January of every year, solely for the consideration of legislative questions, and the appointment of a standing committee to be composed of a vice-president for each judicial district who shall be chosen for his fitness to supervise the administration of the laws in his district.

D. H. BRUCE,
C. H. MOWRY,
JNO. B. SAGE,
HORACE WHITE,
G. H. STROUGH,
R. B. LAWRENCE,
W. E. WALCOTT.
} Committee.

The chairman of the convention was empowered to appoint four other members of a committee of five to submit to the State Association, at its June meeting, suggestions as to protective work and the enlistment of support by protective organizations which are now not members of the Association. A committee on forest preservation was made up of Messrs. Walcott, Hamilton, Malloy, Laney and Bruce. Their report, with its embodied resolutions, was adopted as follows:

Your committee on forest preservation respectfully report by resolution as follows:

Resolved, That we believe that the preservation of the Adirondack wilderness as nearly in its original state as may be practicable at this late day is absolutely essential for the equalization of the temperature and rainfall; for the maintenance of the canals and the water supply of the State; for the conservation of fish and game; for the purpose of affording a natural sanitarium for invalids and a delightful resort for rest and recreation; and for the comfort, health and general welfare of the people of the State, and

Resolved, That the plan for the occupation of the Adirondacks as a State park is in every way desirable, and no time should be lost by the State in appropriating funds to purchase all lands obtainable at a fair valuation, exercising its right of eminent domain when it is for the best interest of the State to do so. That no State lands in the Adirondacks should hereafter be sold or exchanged. That measures should be taken to perfect all titles of lands sold for taxes and held by the State. That a system of forestry under competent supervision be established, and all land owners, clubs and associations be urged to place their lands under its control.

We recommend that all good citizens should take a deeper interest in the forestry question and that they identify themselves, with some forestry association and encourage the dissemination of information on this subject among land owners throughout the State.

W. E WOLCOTT,
ARTHUR T. HAMILTON,
DR. M. L. MALLORY,
C. C. LANEY,
D. H. BRUCE.
} Committee.

The committee on game laws reported the Gould bill with certain amendments, as noted below. Each amended section was considered separately; and the measure was then indorsed as a whole. The committee on game laws was continued, with instructions to prepare a revised draft of the Gould bill, embodying the recommendations of the convention, and to urge its adoption before the Game Law Committee of the Assembly at Albany, at a hearing which will be given Feb. 23. President White was made a member of the committee. The Assembly hearing had been set for Feb. 16, but as it would be impracticable for the Syracuse committee to be present on that day, the chairman of the convention was instructed to request a postponement. This has been done, and Mr. Gould has advised the FOREST AND STREAM that a hearing will be given next Tuesday, Feb. 23. It is earnestly hoped that all the members of the game law committee may be present, and all others interested in securing the passage of the Gould bill are urged not only to attend the hearing but to use their influence with their representatives at Albany to that end.

A pleasant incident of the convention was a brief address by Mr. A. D. Stewart, of the Ontario Fish and Game Commission. Mr. Stewart assured the delegates of the warm interest which Canadians felt in the proceedings of the convention; sportsmen, he said, were united in sympathies and a common interest, which no political boundary lines could interrupt. He announced that his commission had on the day before submitted its report to the Ontario Legislature, and had recommended a uniform shooting season from Sept. 15 to Dec. 15, spring shooting being entirely abolished. This announcement was received with much satisfaction. The sentiment of the convention, as shown in the amendments adopted, was very strongly against spring shooting.

At the conclusion of the game bill discussion Mr. Rogers spoke on the economic importance of fishways. Then with votes of thanks to President White, the chairman and Secretary Sage, the convention adjourned *sine die*.

THE GOULD BILL.

The Gould bill is the bill prepared as a result of the labors of the Game and Fish Law Codification Committee. It was in the Legislature last winter, but failed of passage. The bill of 1892 is substantially that of 1891. Its general provisions are given below. The amendments adopted by the Syracuse convention are noted in brackets.

The bill provides for five fish commissioners, one from each judicial district; and twenty fish and game protectors, to be appointed by the fish commissioners, and under their control.

Deer close season, Nov. 1 to Aug. 15. One person may take not more than two deer in a season. Does and fawns may not be killed. Hounding permitted from Sept. 10 to Oct. 11; forbidden at all times in St. Lawrence, Delaware, Green, Sullivan and Ulster counties. Dogs chasing deer illegally may be killed. Transportation of venison restricted to one carcass, to be accompanied by owner. Crusting forbidden. [The amendments forbid "owner or harborer" to permit dogs to run at large in the deer country in close season; and forbid transportation from "or through" any county.]

Close season for hares and rabbits, March 1 to Sept. 1; on Long Island, Feb. 1 to Nov. 1. [Amended to make the season everywhere Jan. 1 to Sept. 1.] Trapping forbidden.

All shooting forbidden on Sunday.

Close season for black and gray squirrels, Jan. 1 to Sept. 15; on Long Island Jan. 1 to Nov. 1. [Amended to make season everywhere Jan. 1 to Sept. 1.]

A bounty of $10 is given for a bear, $30 for a grown wolf, $15 for a pup wolf, $20 for a panther. [Amended to add a bounty of $2 for a fox.]

Close season for wild fowl, except geese and brant, March 1 to Sept. 1; on Long Island May 1 to Oct. 1. [Amended to make season everywhere Jan. 1 to Sept. 1.] May not be killed save with gun raised at arm's length and fired from the shoulder, nor from any boat other than a boat propelled by hand.

Sec. 162, exception as to wildfowl, was amended to read: "Floating devices may be used for the purpose of shooting web-footed wildfowl therefrom in Great South Bay west of Smith's Point, Shinnecock Bay and in any part of said counties said birds may be pursued and killed from boats propelled by hand, and from any sail boats in Long Island Sound, Gardiner, Peconic and Napeague bays."

Close season for quail, Jan. 1 to Nov. 1. On Robin's Island they may be killed from Oct. 14 to Feb. 1; quail lawfully killed may be sold to Feb. 1.

Close season for woodcock and partridge, Jan. 1 to Sept. 1; on Long Island, Jan. 1 to Nov. 1; in Lewis, Warren, Saratoga and Richmond counties, Jan. 1 to Aug. 1. [Amended to read for "partridge," "ruffed grouse, commonly known as partridge, or any member of the grouse family." Season everywhere made Jan. 1 to Sept. 1.] Sale of lawfully killed birds permitted to Feb. 1. Transportation of woodcock, quail, partridge, ruffed grouse, or any birds of the grouse family is prohibited from any county unless accompanied by owner. Snaring forbidden.

Close season for plover, snipe, mud hen, gallinule, grebe, surf bird, curlew, water chicken, bay snipe and shore birds, Jan. 1 to Sept. 1; on Long Island, Jan. 1 to July 1. [Amended to read "Wilson's snipe, commonly known as English snipe, plover," etc.]

Wild birds, other than those named, are protected at all times, except the English sparrow, crane, crow, crow-blackbird and kingfisher. Birds destroying fruit may be killed. Close season for robins, blackbirds and meadow larks, Jan. 1 to Oct. 1. [Amended to make season for blackbirds and meadowlarks Jan. 1 to Sept. 1., robins not to be killed at all.] Robbing of nests of wild birds prohibited. Naturalists' permits for collecting scientific specimens may be granted by incorporated societies of natural history and by the Regents.

[All the sections relative to Long Island seasons and conflicting with the foregoing were stricken out.]

FISH.

The bill forbids pollution of waters by dye stuff, coal tar, gashouse refuse, sawdust, shavings, tan-bark, lime, etc.; taking fish by drawing off waters or by means other than angling (exceptions to be noted); taking trout of any kind, salmon-trout or landlocked salmon, from public waters for stocking private waters, or taking them through the ice. Close season for trout of any kind, Sept. 1 to May 1; on Long Island and in Spring Brook Creek, in Livingston and Monroe counties, Sept. 1 to April 1. The lawful size of trout, salmon-trout and land-locked salmon is 6in. [Amended to 12in. for salmon-trout or land-locked salmon.] Trout may not be disturbed on spawning beds. Close season for salmon-trout and land-locked salmon, Oct. 1 to May 1; on Long Island, Oct. 1 to April 1. Transportation of trout, salmon-trout and land-locked salmon forbidden unless accompanied by owner. Sale of lawfully killed salmon trout permitted from May 1 to Oct. 1.

Close season for black bass, Oswego bass, Jan. 1 to May 30; in Lake George, Jan. 1 to Aug. 1; Black Lake, Jan. 1 to May 5. Lawful limit of length 8in.

Close season for muskallonge, Jan. 1 to May 29. [Amended, Jan. 1 to May 30.]

Close season for salmon, Aug. 15 to March 1. Lawful limit of length 18in.

Numerous exceptions are made as to certain waters. Sec. 142 permits ice fishing for bullheads, catfish, eels, suckers, perch, pickerel and sunfish in lakes Champlain, Seneca, Cayuga, Keuka and Canandaigua. [Amended to include also Skaneateles and Owasco.]

Sec. 143 permits in the Oneida River eel weirs with lath not less than ½in. apart. [Amended: "Provided that there be a clear passageway, at low water, for boats and fish of not less than 10ft."]

"Angling" is defined to mean taking fish with hook and line or rod held in hand. [Amended by adding, "and does not include set lines."]

PROSECUTIONS.

Sec. 231. Actions for penalties and as provided in section 230 shall be brought in the name of the people on order of the chief protector or by direction of either of the commissioners. [Amended by adding after "commissioners:" "who are hereby authorized, in their discretion, to employ special counsel to commence and maintain such actions, and the compensation of such special counsel may be fixed and allowed by the commissioners."]

Sec. 243, which authorizes protectors to arrest without warrant any person committing an offense against this act, was amended by adding:

"Such protector or peace officer may cause any chest, locker, box, crate, basket or package in possession of such person to be broken open and the contents examined, and may enter upon any skiff, boat or vessel and search any and all parts thereof for that purpose."

An entirely new and very important section, designed to remedy what has proved an obstacle in the way of the protectors, was adopted as follows: Section 244. It shall be the duty of any keeper of a boat livery to let or hire to any protector, or special protector, on tender to him of the customary fee for one day's use or hire of a boat, any boat and appliances kept by him, not in actual use, and any protector or special protector on tendering to any keeper of a boat livery the customary fee for one day's use of a boat, may take any boat and its appliances in said livery not in actual use, and use it for the purpose of this act, and shall not be liable to any action for damage for so doing, and any keeper or owner of a boat livery refusing to permit such protector to use such boat on payment or tender of payment of the customary fees therefor, shall be liable to a penalty of $25 for each and every offense, to be collected and enforced by the protector or chief protector.

NOTES OF GAME.

Editor Forest and Stream:

We have had very little shooting this winter on account of deep snows. I saw nine partridges budding a few days ago in one tree. Two black ducks have been shot in the last two weeks in Pike River, something never heard of before so late in the season around here, as it has been very cold weather for some time back. We expect some duck shooting when the spring opens. H. C. C.

BEDFORD, Quebec.

Editor Forest and Stream:

We have had a very open winter so far, lots of prairie chickens being left over from last fall—which will insure good shooting next fall, should the spring be dry enough for hatching. Rabbits are quite plenty, so we are not wholly at a loss for something to keep in shape on.

ROCKWELL, Iowa, Feb. 8. W. L. H.

Editor Forest and Stream:

Messrs. G. W. and J. A. Patton returned from a ten days' trip to the Sacramento Mountains, 80 miles from here, where they found game of various kinds abundant. They saw over 200 antelopes, 30 deer, one bear, and hundreds of ducks, quails, curlew, etc. They state that they could have loaded a wagon with game, readily, but killed only such quantity as they could use. Mr. W. McK. Pardee, who is a persistent and enthusiastic quail shooter, says that the quails here are becoming educated. He finds that after a covey has been shot into a few times and become scattered the single birds lay well to the dog, and that they can all be flushed within easy range. He has made several good bags of late. The open season on large game and game birds continues until May 1 in this Territory. G. O. SHIELDS.

EDDY, New Mexico, Feb. 6.

The Legislature of Ohio is this session evolving the usual miscellaneous assortment of fish and game bills. The first one in the hopper simply prohibits the killing of quail for five years. The series of warm winters of the past few years has rendered this game plentiful, and sportsmen see no call for this five years of prohibition.

Perhaps the most absurd bill yet introduced limits the gunning season to Mondays, Wednesdays and Saturdays, between Nov. 1 and Dec. 21. There is little probability that either bill will pass. The only danger lies in the action of hundreds of indignant sportsmen who are liable to offend the farmer members, of whom there are forty-five in this Legislature, but, to their credit, all these absurd bills are evolved by a different element, lawyers, book-keepers, etc. The farmers of the State have been outrageously imposed upon by so-called sportsmen, pot-hunters, etc., and of late years have posted their lands, formed protective associations, etc. Most of them, however, will permit reputable business men to hunt on their premises during the season, if a previous arrangement is made, and a few words by this class of sportsmen to the farmer legislators will have the desired effect.

One bill has been introduced, as an opening wedge, to make the large canal reservoirs of the State public parks. It is generally believed that this bill will become a law. It specifies the Licking Reservoir, a good fishing and shooting resort, about thirty miles east of Columbus.

REP.

HIRAM AND THE BULL.

TEN years ago the hunter ambitious to secure a buffalo could still go to a region where he could kill hundreds of them. Then there was a western "town" into which the buffalo often came down at night, and it was not unusual for the residents when they arose in the morning to see a bunch within rifle range of the houses. Among the dwellers in this town was one who, although he had lived on the frontier since the early '60s, had never killed a buffalo. One morning when Hiram looked out of his door, he saw, not far away, a great buffalo bull rubbing his ragged sides against the bole of an old cottonwood tree. Here was a chance such as had never before presented itself. "Such an opportunity might not occur again," and he was filled with a great longing to kill this bull. Seizing a gun, he crept out, and stealing through the sage brush and among the trees, was soon quite near the bull. Its immense size—for he had never before been close to a buffalo—somewhat startled the hunter, but he had gone too far to retreat now. Feeling a little nervous, he leveled his gun and fired. At the report the bull jumped a little and then glared slowly about with an air of the utmost ferocity, as if eager to pulverize whoever had fired the shot. This slow searching gaze and the brute's fierce aspect were too much for Hi's nerves. They gave way, and, dropping his gun, he ran nimbly to the nearest tree and climbed into it with the activity of a boy. The bull meantime was thundering off in the opposite direction, while some of his companions, who had been looking on, were shouting with laughter. OLD MAN.

SPORT IN TEXAS.—Mr. Robert B. Roosevelt, who was making his arrangements to visit the neighborhood of Corpus Christi and Texas for relaxation by sport with rod and gun, has just received a letter from one of his friends which states that green turtles are so plentiful there that they are actually given away by the dozen, there being no market for them. The boarding houses, which it is the habit to ridicule for the nature of the food they furnish, especially the famous hash, are now supplying their guests with turtle steaks and soup, as the cheapest food they can give them. His correspondent further says that he went driving in the neighborhood of the hotel, and saw quail in such numbers that he could have reached many of them with his whip. Texas bids fair to be the best State of the Union for sport, as the fishing in the vicinity of Corpus Christi, and, indeed, all along its coast, is better even than in Florida, tarpon being so plentiful that hardly a day passes but the sportsman can catch three or four of them.

A NEW PENNSYLVANIA ASSOCIATION.—We had a very well attended meeting of the sportsmen of Wilkes-Barre and vicinity last night at the court house, and organized a sportsmen's club for the protection of game and fish. The poachers and pot-hunters and fishers have been hunting and fishing out of season, and paying no regard to our laws. Only last week pheasants and rabbits were known to be killed, and hunting is done here at all times of the year. We propose to stop this, and ask the cooperation of all lovers of game and fish to try and bring some of these law breakers to justice. I hope our brother sportsmen will fall in line and help us in our good work. The writer has been putting trout fry in the streams for the last ten years in Luzerne county, and have known them to be caught and sold here in our market the next spring. Our markets have game such as woodcock, quail and pheasants on sale even at this late day. Is there no law to reach them?—H. L. M. (Wilkes Barre, Pa.).

MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION.—Hon. Geo. W. Wiggin presided at the monthly dinner and meeting at the American House, Boston, Thursday evening, Feb. 11, 150 being present. Seventeen applications for membership were presented and referred to the committee. Messrs. D. Currie Doleman, Geo. Ellis, Col. Chas. E Fuller, Sumner Paine, Nathl. C. Nash, Victor J. Loring, Eugene E. Patridge, Alfred A. Pocock, Walter C. Bailies, Charles S. Bird, W. M. Pitman, Geo. W. Foster and Lee Hammond were elected members. Mr. Benj C. Clark, chairman of fund committee, reported the depositing of $234.17 toward the permanent fund, making a total of $1,190 55 as the association fund. It was voted to oppose the passage of the bill presented by W. L. Gilbert, of Plymouth, Mass., asking that domestic raised trout be allowed to be sold during the close season or part thereof.—RICHARD O. HARDING, Secretary.

W. J. Gidley, the manager of the stage line between Gillette and Buffalo, in Wyoming, has had many exciting adventures on the box. Perhaps the worst—the one that left him gray-haired, he says—was a battle with wolves in the Bad Lands of Dakota. He was driving six horses and had a full load of passengers. It was mid-winter, intensely cold, and with two feet or more of snow everywhere. A pack of wolves made a determined assault on the outfit. For three hours it was a desperate battle for life. No less than thirty wolves were shot down. Finding destruction was almost certain, Gidley tied the lines to the brake, and walking out on the tongue leaped on the back of one of the "swing" horses. From this perilous position, with the wolves snapping at him, he managed to loose the team of leaders. The wolves took after the liberated horses and the coach was brought into a station safely.—*Salt Lake Tribune.*

"Memory is a great thing, a food of which we never weary, appetizing and strengthening. So as firelight flashes on spear blade and tusk, or skin, antlers and trophies of shikar, gained when youth, strength and energy were yet ours, it brings back the days of long ago, with all their charm, fresh and distinct, and once more we live in the past, once more feel the bounding stride of the game horse under us, once more hear the shouts of the beaters, feel the hot air of an Indian morn, once more feel our blood surge up as we embark in the mad rivalry of a race for first spear, and hear the boar's gruff grunt of defiance as he charges home, and are once more—young again. So, is not memory a friend? Surely it is, a true and trusty one, one to be hugged to our bosom and clung to, for when other friends desert us memory will help us through many an hour of trouble and sorrow."—*Thoughts of a Sportsman.*

A TRUTH FROM "TRUTH."—The New York Central is really first-class in all its appointments. Think of it, it has four tracks laid with the heaviest of steel rails in the most substantial manner, and when you are sleeping or lounging around in one of their superb Wagner cars, and flying along at the rate of nearly a mile a minute, as some of their fast expresses do, you will hardly realize that you are moving, so excellent is the permanent way. A short time ago a special train made the run from New York to Buffalo at the rate of a mile a minute *the entire distance.—Adv.*

TROUTING IN THE CASCADES.—X.

THE MOLALLA COUNTRY.

EARLY in the forenoon of the 5th we were landed on the east bank of the Molalla above the upper ford. The tents were pitched on a level, smooth, grassy sward, surrounded and protected from the August sun by wide-spreading alders and tall cotton trees. A little spring trickled out from the base of an adjacent bluff and apparently we were supplied with all the necessaries for a comfortable camp that nature, in an exceedingly wild state, could furnish.

Moody said that either he or Fay would come over every day or two and bring us fresh milk and eggs, although he had heard that an old Dutchman had lately settled somewhere thereabout and, as the Dutch were great people for cows and hens, he had no doubt that if we could find the cabin of the German family we could get plenty of everything, including garden stuff. If there was garden stuff to be had I knew that Billy would find the Dutchman, if he had to go to Germany to do it, so I let the matter drop for the present.

Fay had counted on staying with us awhile, but as there was a little more harvesting to do Ira informed him that he would have to wait a few days.

At Billy's suggestion we resolved to take it very easy, fishing and hunting only mornings and evenings, and lounging in the shade during the heat of the day. Our experience the evening before seemed, however, to have awakened in Billy a new interest in fishing and to have touched a responsive chord somewhere in his breast; but his disposition to have everything about camp in shipshape called forth the suggestion that we had better put in this first day making things comfortable and not be in too much of a hurry to catch all the fish and kill all the game in the country. Besides, my wife manifested a disposition to avoid being left alone. I could not blame her much. Harry Beal and George Vanderbeck had promised to pay us a visit and spend a week with us, and, as they were both expert and tireless fishermen as well as crack shots, I about half resolved to husband my strength and give them a benefit when they arrived.

They would probably be with us by the evening of the following day, and, as we wanted to give them a cordial reception, we proceeded to clear a pretty spot for their tent and lay our plans for a genuine surprise, in the shape of a nice trout and game supper. Then, feeling that I had performed all that duty required of me, I walked over to the Molalla and sat down on a rock, to survey the new fishing waters.

As far as I could see in either direction, up and down stream, it seemed to be a succession of foaming rapids and purling swirls, coming from a dark, mysterious cañon above and lost in a leafy bower below. But, of course, I could not see far, because of the windings of the stream, and was left to my own imagination about its character on and above the dark chasm, among the gray mountains where

"Deep the sunless glens are scoop'd between,
And brawl o'er shallow beds the streams unseen."

I had left my tackle at camp, out of respect for Billy's feelings and the solemn asseverations about mid-day rest and recuperation. So I returned to camp and pretended to lazily lounge in a hammock while I impatiently awaited the coming of the shadows that announce trouting time.

Billy put on his hat and started up the trail in a business sort of way, and I imagined that I knew what he was after. He must have been gone a full hour, and, as I had anticipated, he had been in search of the Dutchman. Evidently he had found him, for here he came loaded to the guards with onions, radishes, peas, berries, new potatoes, etc. He dumped his cargo down with a significant toss of the head, as much as to say, "If it wasn't for me what would become of this camp, anyhow?"

Yes, he had found the lost Dutchman, and right here permit me to say that he was not a Dutchman at all, but a perfect German gentleman, with an interesting family consisting of a splendid intelligent wife and three bright youngsters, the eldest of whom was about five years old. It was indeed lucky that Billy had found them, for very much of the pleasure and comfort of our second trip to the Molalla country must be attributed to the kindness and generosity of this good, honest German family, of whom more anon.

The blazing August sun hung low over the coast mountains before I took up my rod for the evening. I had waited for Billy to make the first move, but now he announced that he had promised Mrs. Fyrer to bring us all up there for supper; and Billy's word once given, you must know, was as binding as the statute law and could not be tampered with, and I saw that I must do the fishing act alone that evening. Informing them that I would not return in time for supper at the Dutchman's, I struck out for the Molalla.

The early evening shadows were lengthening back into the oblivious retreats of the silent mountains before I reached the stream, and the hackles and alder flies were flitting temptingly over the shadow-streaked pools, while an occasional smack told with what interest the trout were watching the aerial dance of their unsuspecting victims.

"When insect wings are glittering in the beam
Of the low sun, and mountain tops are bright,
Oh, let me by the crystal valley stream
Wander amid the mild and mellow light."

I love to fish in the evening. It is then that the big fellows come forth from their dark retreats to feast and frolic. On, and until the last glimmering ray of light dissolves; until, in fact, the white-winged miller is no longer discernible on the breast of the placid pool, the big fellows are seeking the festive fly. Nature never made a prettier trout stream than the Molalla, and I wooed the wild stream that evening in my most artful style.

My favorite whip is made up of royal-coachman, ginger-hackle and professor, with the royal for stretcher, and I used this combination on this occasion. There seemed to be no small trout, all big fellows. If there were any small ones they were forced to wait for the second table by their uncles and big brothers. The grown people proposed to monopolize the luscious tid-bits that dangled from my leader.

Twilight had deepened into night before I turned toward camp, and

"The sun
Declin'd, was hasting now with prone career
To th' ocean isles, and in th' ascending scale
Of heaven the stars that ushered darkness rose."

I had taken but eighteen trout but had been busy all the time. They were of the kind that demand time and patience in their capture, and I was perfectly satisfied with my evening's catch. On my arrival at camp I met, and was introduced to, Mrs. Fyrer, the young and comely wife of the Molalla Dutchman, of whom I had heard so much of late, and proprietress of Bill's new-found garden patch. She greeted me pleasantly and informed me that she had kept supper hot for me and I must come up and eat or Gottlieb would think that I was not friendly. They lived only about four hundred yards away, on the second shelf of the Molalla Valley, and we all walked up together and I sat down to such a supper as only a country-bred German woman can prepare. Intentionally I had brought my creel of trout, and now offered them to the good people. Strange as it may seem, they had never tasted trout, but it was only after our solemn promise to all come up to breakfast that the generous-hearted woman would take them. The old gentleman could not speak a word of English and seemed very much chagrined because he could not entertain me, but his wife, being American born, adroitly filled the double position of hostess and interpreter and everything went smoothly. Gottlieb would help us to move our camp right up by the house in the morning and we must stay a month, and must come earlier next summer and stay until fall and bring Mr. Billy with us. It beats all how agreeably such people can entertain, and make one feel at home. Then the old man, through his wife, informed me that there was a crab apple bottom on the creek above, that was two miles long and half a mile wide and full of wild chickens. He had never killed any of them because he had no gun, and they were very tame. Aside from this he knew little about the Molalla country for they had been there less than a year, and he had stuck pretty close to his pre-emption.

In twenty minutes after we reached camp I was sound asleep, dreaming of pools and trout and grouse, but it seems that my wife's slumbers were somewhat more disturbed. A sharp dig in my side from her elbow brought me to an awakening sense that there was something wrong in camp. We had left the cracker box outside and evidently some animal was there, trying to get into it. Now and then the lid would come down with a slam that was loud enough to awaken even Billy in his tent over by the spring, had he not been Billy. I arose and stepped cautiously to the tent door. Nothing could be seen except the lonely cracker box, and I went back to bed and to sleep. Shortly I was awakened again in the same way to listen to a repetition of the same performance outside. This was getting monotonous, and after vainly peering into the darkness for some sign of the marauder, I tried to get my old setter to go out and investigate; but, as Frank had said, "he wasn't that kind of a dog," and absolutely refused to go outside of the tent. So I took my shotgun and laid down by the tent door to await the third coming of the intruder. I had almost concluded that the animal had taken the hint and left for good, when I discerned his dim outlines standing on a log ten or twelve feet the other side of the cracker box. I let go both barrels at once, but am satisfied that I overshot him.

After a short explanation to Billy I again went back to bed and slept soundly, but my wife patiently listened all night. I tried, next day, to convince her that it had only been a lost hound, but when Fay arrived with the intelligence that he had met a bear down the trail, arguments were of no avail, and so the records show that we were visited by a bear.

The camp was duly moved up to Fyrer's, and the tents pitched upon the most lovely spot for a camp I have ever seen. Near the house a huge spring poured out from under the mountain, divided, and again united 50yds. away, forming an island about 20yds. wide at its widest. This island was gently rolling and covered with velvety grass, and surrounded with a healthy growth of young alders, while further back the giant firs towered to the sky. Upon this island we pitched our camp. Then, down into the crab-apple orchard went Billy and I after "wild chickens." Such a place for pheasants and grouse I never saw before. In a few minutes the dog had flushed five distinct coveys. Billy, armed only with a Winchester rifle, left the birds to me and in less than an hour we were back at camp with fifteen fine birds. Then we went over to the Molalla and caught a big mess of trout and patiently awaited the coming of George and Harry. They arrived via the Moody Express about sundown, and after a magnificent supper we lit our pipes, stirred the fire and sat down on the grass to plot against the trout and grouse of the Molalla country. S. H. GREENE.

PORTLAND, Oregon.

BROOK TROUT IN NORTHERN OHIO.—Columbus, Feb. 13.—*Editor Forest and Stream:* During the past two or three months one of your correspondents has attempted on two or three occasions to controvert my statements that the brook trout was a native of northern Ohio waters discharging into Lake Erie, including the Castalia stream. There is a member of the present Ohio Legislature who was born and raised in that region, who informs me that old people who were also raised in the region, inform him that the "speckled trout" were always in that stream as far back as they can remember. Henry Howe and son, the eminent Ohio historians, have recently informed me that most of the early historical records of northern Ohio refer to the "speckled trout" in the waters of different counties bordering on the lake. A few days ago I had occasion to refer to an early Geological Report of Ohio, and found therein reference to the brook trout in two streams in Ashtabula county.—MILTON P. PEIRCE.

WINTER SPORTS IN NORTH CAROLINA.

LETTER V.

Fishes in Quantity and Variety.

THE great variety of edible fresh-water fishes seen in the Newbern market thus early in the season is something remarkable. Last week the drag nets captured twenty different kinds off the mouths of the several large creeks which empty into the Trent River above tidewater. Included in the list observed on a given day were large and small-mouthed black bass, striped bass, blue and yellow catfish, mud cats, yellow perch, white perch, croppies, red horse, mullets, pond sunfish, white and hickory shad, branch herring, red drum, spots, roach, weakfish, pickerel and garfish. *Ex cathedrâ*, no such assortment can be found in the New York markets at any time. There the daily exhibits of salt-water fishes are noteworthy, both for their variety and abundance; which is not to be wondered at, since the dealers draw their constant and changeful supplies from sources all along the coast from Newfoundland to the Gulf of Mexico. North Carolina herself furnishes a very large percentage of their Southern representatives, and if any interested reader of FOREST AND STREAM would take pains to attend the coming Fish and Oyster Fair which is to open at Newbern on Feb. 22, he will possibly see from thirty to forty kinds on the slabs.

But while marine species are commercially the most important, inland species deserve attention. A broad, untrodden field of study lies wide open here, where the streams meet the tide. Here anodromous species come up from the ocean to spawn. Right here the fresh-water species drop down from the watersheds to disport in the brackish inflow. Glut herring, or branch herring, so like the gaspereau of the British Provinces in habits and appearance, choke all the streams. Rockfish or striped bass penetrate inland to their very headwaters. Salt-water trout, or weakfish, "use" in the deep fresh-water holes which occur in the estuaries having obvious underground connection with the rivers. Pickerel sport right on the edge of the tide, when the water is perceptibly qualified with the brine. White shad (*Clupea sapidissima*) are running up already to spawn, and by the latter part of May fingerlings an inch long may be seen descending to the sea in company with their parents. Most of the channel ways are paved with shell rock [coquina], and spawn finds chosen depositories in the hollows and crevices. Sometimes spawn and one-inch fish are seen at the same time. Young channel bass, or red drum, are now in the mouths of the fresh-water creeks; both kinds of black bass (*Micropterus*) venture within the lines claimed by the sea. By such occasional interchange of habitats the littoral and inland species promote fecundity and grow in size and flavor.

There is no such nursery for fishes of all sorts and proclivities as the Trent River.

A little later on both herring and shad will crowd it to its fullest capacity, and fish eaters will luxuriate on cheap food. Just now shad sell at 75 cents per pair. Earlier specimens brought a dollar apiece. All the way up the river, for forty miles or more, there are fishing stands made of poles projecting from the banks, where negroes stand with long-handled dip nets and scoop them as they ascend, sometimes as many as half a dozen at a time. Occasionally there are rude windlasses, fashioned of unpeeled logs and poles to be used in hauling drag nets and stake nets set across the mouths of creeks. Every settler along the riverside makes fulsome use of his riparian rights in this respect. For a month past in White Oak River and New River, in Onslow and Carteret counties, bordering the sounds, fishermen have been making big earnings, and last week two crews of ten men divided $700 as the net profits of twenty-four hours fishing. The fish business of Newbern occupies four or five heavy packers and shippers. Vessels from outside and skiffs from the rivers are constantly arriving with fish and oysters, and the market slip is usually crowded with the craft. Winter fishing for marine species is always active from Roanoke Island to Bogue Inlet, and there are numerous shippers at Manteo, Hatteras, Morehead City and Swansboro. All through December weakfish are abundant. The first white shad was caught on the 15th of that month, a date so early as to be noteworthy. On the 20th there was a great run of big bluefish, averaging 12lbs., all the way from Morehead to Manteo, and there were also in market large red drum (*Scicena ocellata*), croakers (*Micropogon undulatus*), spotted sea trout (*Cynoscion maculatus*), mullets, croakers, weakfish, and a few scattering shad and yellow perch. On Jan. 1 red drum, spots, weakfish, croakers, and a few salt and fresh-water catfish, robins, yellow perch, red-horse, pickerel and black bass. Fishing will improve from this on and reach its climax in June, when drum, weakfish, hogfish, pinfish, sheepshead, bluefish, croakers and Spanish mackerel will afford good fishing with hook and line. July and August are the poorest fishing months. Fall fishing begins in September, when there is always a big run of mullets, which are highly esteemed here for the table, lasting until November, and then rockfish and white perch. Fresh-water fishing is always in abundant variety, as already indicated, but there are no species of any account other than those enumerated.

Hitherto the ichthyc fauna of North Carolina has not been intelligibly differentiated and investigation may be prosecuted with advantage, economically and scientifically. But students will be puzzled with the local synonymes, which are as quaint as they are specific. Popguts white-headed minnow, for example, is intensely characteristic, though it does not clearly designate the class or family of fishes to which it belongs. Millpond flier is an expressive name for the croppie, which is also known as a chinquapin perch, speckled perch, silver perch, goggle-eye and several other aliases. Ring perch, raccoon perch and redfin all do very well to designate the common yellow perch. Red-bellied robin-perch and leather-wing are names applied to the common pond sunfish. The big-mouthed black bass is known as a Welshman, and the small-mouthed bass as a chub and red-eye. Pickerel are called jackfish; red-horse are known as sucking mullets; roach as bitterheads—a species of small dace excellent as bait for bass. Hell-benders are known as water-dogs. Each one designates some peculiarity of habit, trait, or feature. A similar nomenclature attaches to a long category of animals, birds and plants, and a full chapter thereon would be interesting. From "Tar Heel" to "pine root hog," the list is full of novelty.

As to angling, *per se*, it is a dead art in these waters. Occasionally a venerable negro will take his rickety old punt and steal away to a favorite bend in the river where there is a deep hole and a stake to tie to, and sit so quietly that his russet garb can hardly be distinguished from the dead grass of the marsh which surrounds him; but sportsmen seldom follow the pursuit in this way. In the fall they go to the beach and troll for bluefish from a sailboat or fish with handlines for weakfish. Nevertheless, as the days lengthen and the weather grows warmer, there will be some lively skittering for Welshmen along the sunken trees by the Trent-side, when my friend and I take a hand in. Chub, so-called, are scarce in this part of the State, but there are several ponds which are said to be well stocked with them. Pickerel here are very numerous in all the creeks, but they taste of the bottom and are considered of small account. Pike, however, are favorably regarded, though not abundant. Fishing for speckled perch or croppies in some of the interior lakes is reckoned superlative sport. As far as I can judge the fishing here is well up to the average of Northwestern lakes. Later on I can write more definitely about it, though I hardly think the incidents of our outing will be exciting enough to justify an extended chapter. There are some lakes out here on the "Po-coson" which are well stocked with bass and blue and yellow perch. I have been out there, and in my next I will describe for you what Pocoson is like.

CHARLES HALLOCK.

NOTES FROM NEW HAMPSHIRE.

LANCASTER, N. H., Feb. 11.—Mr. Bumford's party to his hotel at First Connecticut Lake, for a few days' ice-fishing, of which mention was made in a recent issue of FOREST AND STREAM, failed to materialize, the party wisely deciding to postpone their trip until spring, when they can enjoy every detail of angling.

A few words in regard to the winter fishing at these lakes may be of interest to your readers. Of course the laws of N. H. make it legal to take lake trout through the ice after Jan. 1, and it is practical every winter more or less, both at First and Second lakes, but more particularly at First.

The writer spent several days at First Lake at two different times last winter, and if his experience is that of the majority of winter fishers there, it is safe to say that the resources of First Lake will suffer no diminution during the winter. The patience required to induce a nice, big "laker" to quit his comfortable quarters, and come out into this snowy, frozen country, is something the average man does not possess. Of course some fish are taken through the ice every winter, but the numbers of fishermen grows less each season. Now and then a speckled trout is caught when fishing for lakers, but they are returned to the water again (?), for if they were found in possession, the unfortunate fisherman would be made to dance a jig to the tune of "dollars, hard dollars, several dollars."

The fishing for the "lakers" in spring and early summer is fine, they at times rise readily to a spoon hook, but the most satisfactory method is in the use of live bait, shiners being the best.

The writer and his "best fellow" had lots of sport at First Lake last June, taking five, six, and eight pound lakers with fly-rod, using small live shiners and sinking in from 20 to 30ft. of water. They will make a good fight a few minutes, but like a fat man running up hill, they are soon "winded." The fish in these lakes will run from 2 to 12lbs. in weight, and every season brings a few from 12 to 20lbs., and last season a 14-year-old son of Mr. J. W. Baldwin of Pittsburg caught one that weighed 21lbs. and measured just 36¾in. in length, and there are said to have been caught in years past now and then some even larger than that. Just imagine yourself with a 7oz. rod and fast to a 21lb. laker. It is said that there are "just as good fish in the sea as ever were caught." I believe I have "lost" a 21lb. trout in Connecticut Lake, and as soon as the season opens, I shall make a very presistent effort to find him.

"Mart" Noyes of Diamond Pond Camps has gone "down country," as we say here. He and Mrs. Noyes will visit some of their many friends in Mass. and Conn. before they return, and I'll warrant "Mart" will have lots of reminders of the trip when he gets out to Camp Diamond next spring.

By the way, I wonder if this would not be a good time to tell a little incident that took place one Saturday afternoon, last summer, at this same Diamond Pond. Early in the afternoon there was heard quite a commotion in the woods below the Camps, with now and then such military commands as "Git up there" and "Go 'long, you old cuss." An investigation was about to be made, when the cause of this irregularity made its appearance in the persons of two natives (later on found to hail from the Green Mountain State) leading an old gray horse, from the back of which hung sundry camping utensils, together with a fifty-weight butter tub, ingeniously but securely fastened on. It so happened that our efficient and every-where present Fish Commissioner, Colonel Hodge, was stopping for a day or two with mine host Noyes, and chanced to be present when the party arrived. The Colonel greeted the newcomers very cordially, at the same time eyeing the butter tub, and this is the conversation that ensued. The Colonel says: "Well, boys, I conclude you have been fishing." "Yaas." "Where have you been?" "Down on Dimun stream." "Have good luck?" inquires the Colonel. "Yaas, we got a hull lot ov 'em, but there's lots of little cusses, tho'." "You've no objections to my looking at them, I presume?" observes the Colonel rather disinterestedly. "Oh, no, not a bit; you jest wait a minit until we git unhitched, an' then you can lift the cover off 'm the tub and see the hull business."

It is safe to say the Colonel did "see the hull business." He did not only "see it," but "went it several better," the result being that they were brought before the proper authorities to answer the charge of having more than ten pounds of brook trout each in their possession, and also of having brook trout in their possession of less than 5in. in length. They settled to the amount of about $75 fine and costs.

The look of astonishment when they found who Col. Hodge was can better be imagined than described. "B'gosh," said one to the other, "If that 'are 'aint thet New Hampshire fish man; I guess we're in for 't now."

ROB.

ANGLING NOTES.

JUDGING from a photograph recently received I should say that there was still some big trout left in Michigan. The picture represents twenty-five speckled trout that weighed 29lbs. dressed. The two center ones are monsters that must have weighed 4 or 5lbs. each, but they are handsome fish and well proportioned. They were caught by John Cole, of Tremont, Mich.

As a rule these very large trout are not pretty to look at, they generally are short in proportion to their length and have ugly heads. Besides this they are apt to be black in color, and their meat is, as a rule, rather coarse and dry. The only way to cook these old fellows is to boil them and serve them with egg sauce.

I do not believe there is any fish that varies so much in flavor as the speckled trout. When taken from ponds where there are many decayed logs and rotten leaves they are sometimes unfit for food, and in some fine clear streams they seem to be soft in texture and absolutely without flavor. I have caught trout in hundreds of localities, and I think the finest on the table that I have ever tasted came from Green's Creek, on Long Island. New Bridge Creek, another salt-water stream, used to furnish superb bright pink-meated trout. The best mountain trout I have ever eaten came from the streams around Ralston, Pa., and as I spent eleven seasons at that place I had a pretty good opportunity of judging.

Those who have experimented in feeding trout state that a liberal supply of flies make the best meat, and next to that diet minnows and shrimp. Trout fed on earth worms are the poorest of all.

There are three excellent methods of cooking trout, viz., frying, roasting in the ashes *à la* Thad Norris, and steaming or boiling. To fry trout well is a great art, and rarely understood. The fat, be it butter, olive oil or lard, should be sweet and burning hot. As soon as browned, the fish should be lifted out and the fat allowed to drain off. A thin slice of salt pork or even bacon will go well with the fish, but too much bacon may give them a smoky flavor. Small trout, from 6 to 8in., are best cooked in this manner. Any sized fish may be roasted in the ashes, and they are excellent that way; but trout from ¼ to ½lb. give the best results. But above all, give me a good big trout boiled properly, with a little white wine vinegar in the water, and served hot with either caper or egg sauce, and a glass or two of white wine to wash them down. I think a trout so cooked goes ahead of even the royal salmon, as it is more delicate and not so cloying. I have never eaten a well-cooked and tasty trout in a city restaurant. It is impossible to get them fresh enough, and they are generally disguised with some outlandish sauce which ruins their true flavor.

In selecting any kind of fish in the markets, see that the flesh is firm to the touch, and the eyes bright and clear. The gills should be of a bright red color and not slimy. Frozen fish are never good. Freezing seems to spoil the texture of the meat and to destroy the flavor.

Gen. Bruce's chapter, in last week's issue, was a most interesting and excellent article, but I do not agree with him in his artificial-fly theory. He states that "an angler's flies resemble nothing when cast upon the water." Now there are a number of artificial flies that are very close imitations of natural insects, and on over-fished streams these are the only killing flies. The scarlet-ibis, silver-doctor and the like answer very well for wild waters of Maine, Canada and the Adirondacks, but they are useless on the Beaverkill, Neversink, and other old streams that have been fished for years, and which require the finest of leaders, and most delicate and careful imitations of the various duns and millers to please the big fellows and coax them out of their hiding places. I could mention dozens of instances, in my 30 years' experience as a fly-fisherman, when I have found some one fly taken after offering them many others which generally they would not refuse, but on these occasions they would not look at.

SCARLET-IBIS.

SEWER FISHING.

MR. TOM DEERY tells a story of having caught a fine 3lbs. red snapper in a New Orleans sewer during the exposition of 1884. One not acquainted with the wide open sewer system of that city, would hardly credit the story. His tale in plain unvarnished English (with a little brogue), is as follows:

"We were going back from the exposition building via a street running into the center of the city. There was a boy and girl sitting on the bank catching sunfish and crawfish; right on the other side of the street I happened to be noticing of the gutter and saw a red snapper, right in the open sewer, a mile and a half from the Mississippi and two miles from Lake Pontchartrain."

This fish was lifted from the sewer by Mr. Deery's hands, there being not enough water to allow its escape.

All our visitors to New Orleans were enchanted with the beauties of Lake Pontchartrain, where, to use Mr. Deery's words: "The fish were jumping all around, one can catch fish by the thousands there, and fine ones, too. The most beautiful place I ever laid eyes on."

A well-known collector and writer upon natural history subjects a few years since caught a 5ft. gar-pike in his backyard gutter, in New Orleans.

Eels, catfish and small fish of various kinds are often found in city water pipes. A few years ago a plumber had occasion to do some work at the Executive Mansion, here in Washington, and upon opening the box placed to catch such things he found quite an assortment of fish skeletons and an eel as thick as his wrist. There is a 3in. pipe running into this house, and that accounts for the extra large fish haul.

BON.

A BIG BROWN TROUT.—The sketch received by Mr. Eugene G. Blackford of the big brown trout caught in Spring Creek at the Caledonia hatchery, represents a fish measuring 27¾in. in length, 15in. in girth, and weighing 9lbs. 12oz. Herr von Behr sent the eggs, from one of which this giant was produced, eight years ago. Mr. Myron Green is confident that some of the brown trout of this age are now of the weight of 15lbs. The struggle between a great river trout of 15lbs. and our brook trout weighing a pound or two will probably be short, sharp and decisive—then the lion and the lamb will lie down together, with the lamb inside.

CHICAGO AND THE WEST.

[By a Staff Correspondent.]

MR. JOHN L. STOCKTON is lately back from a trip to Swan Lake Club, of the lower Illinois country. Speaking of the late imbroglia in which the club's keepers, the Woods boys, were concerned with the warden of the Illinois Valley Protective Association, Mr. Stockton says that the boys have done no fishing whatever since then. Yet they tell him that more netting has been and is going on now on the Illinois River than for a long time. They tell him that these nets are plentiful even as high as Peru, the headquarters of the association, and that around Chillicothe and Peoria they are also abundant. The warden at Chillicothe is reported to have a different mode of procedure from that of the association officers. He allows fishing, tells the fishers to sell their netted fish in order to pay their fines, and advised them to use the 2in. mesh. This is above the Copperas Creek Dam. This warden, if Mr. Stockton is informed rightly, is assuming as correct a construction which the whole effort of the Illinois Valley association has been to show incorrect and illegal. The association has hung out the flag to stop all seining whatever above Copperas Creek Dam. It would better interview the Chillicothe warden. Of course, that will be the way to get the case correctly, as it has passed through several hands at this stage, and some of us may have erred unconsciously. Mr. Stockton tells me that, so far as the Woods boys are concerned, he doubts if they fish much more, the tacit feeling of the club being so strongly against even a possibly illegal act of its men. A new arrangement for the coming year will be made. Possibly only one of the boys will be retained as keeper, but all these points are not yet determined.

This seining in the Illinois River will have to come up for judgment some day, for over this question the chief fight is now waging, and will be waged. Stop the seining in the Illinois, and you improve a hundredfold the fishing in a great district of northern and central Illinois. There should be a test case, and if we get beaten, we should go to work and get a better law, or die trying to. I don't believe for a minute in holding back from a test case because of a supposed weakness of the law. Test the case and test the law. It's no comfort to think that maybe you are standing over a quicksand, though you hope you aren't. Find out, and if you are, get off from over it. The gentle neighbors of the Woods boys had about got them worked up to the point of fighting a test case, but Mr. Stockton showed them they would thus be litigating for a class, and not for themselves, and so they concluded not to put up all the necessary funds. As the case stands, the best temporary solution of the whole difficulty at Senachwine Lake is to have the Woods boys stop fishing. This solution would be but temporary, however, and I am of the belief that a case ought to go up on the Copperas Creek Dam clause, and that at an early date.

Up above us the ice still holds, and March 1 bids fair to show it covering all the lakes of the Fox Lake region. Mr. Savage, of Lake Marie way, says the residents are getting their tackle ready and are catching their bait for the spring trade. They think the law is not so bad, if the ice will hold a few weeks after March 1. That is the best of the ice fishing season always.

It is a mournful fact that the glory of the "lower country," or that portion of Indiana and Illinois south of Chicago visited by the Chicago Club men, is gradually departing. Tolleston Club by a big fight keeps good shooting, the Kankakee clubs get a little shooting at long intervals and some fishing, Hennepin and Swan Lake also get a little shooting occasionally. Still, though the thought is reluctant, sport at these places is not what it was, and it is not so certain as to invite a good number of the members even during the fall season. Of the "sandhill" clubs, between the Calumet and the lake, the growth of the city has left practically nothing. At Fox Lake sport is slowly but surely changing into summer resorting. The situation in all this has changed very much indeed even since I made my first studies three years ago among the Chicago clubs.

The question ensuing upon the above statement of facts, which after a while all will admit to be current, is, Where shall Chicago next turn for her playground?

I am disposed to think that nature and the lumbermen have already answered that question. Within a night's ride above us, in Wisconsin and Michigan, there are millions and millions of acres of land over which the logger's axe has passed never to return. The timber once taken off, the land has no value. It cannot be farmed. The most pitiable thing in the world is to see a man try to support his family on a pine woods sand farm. The logger opened this country, and behind him it is closing. By hundreds and hundreds of miles it is swiftly lapsing again into wilderness, silent and untracked. Nature is trying to forget the lumberman.

All through much of this region there are streams and lakes which, even treated as they have been, afford better sport than any below Chicago, and in a wilder, healthier, more fascinating country. The trees, thinned out so terribly, will increase as the logging operations become less and less. In short, there is in this vast wilderness to the north many and many an opportunity for a magnificent club holding to be obtained at very little cost, perhaps a few cents an acre.

The Eagle River Fishing and Shooting Club, one season old, is a good index to what may be the next drift of Chicago sportsmanship. They have secured a great tract, northeast of Crosby's, on the heads of the Eagle system, and have gone to work to make a fine place of it. At their meeting last week they voted to erect further buildings, buy more boats and fix up good quarters for the ladies. In the early spring a road will be cut in from Hemlock station, which will put the club within walking distance of the railway. The old road was twenty-two miles. The club has good deer country and plenty of deer, it is said, besides seasonable sport at bass, muscallonge and trout. Mr. Al. Hofmann is to be the president for the coming year, and Mr. Alex. White secretary, Messrs. C. D. Gammon and H. C. Nicholls on the board of directors. I think we shall not only hear more from this club but from others like it.

The Chicago Fly-Casting Club, as announced in prospect, held their meeting Wednesday evening, Feb. 3, at the Grand Pacific, Mr. Harryman, president, in the chair, Mr. Kenyon, secretary, at the table. There were present Messrs. Geo. Murell, E. E. Wilkinson, H. M. Dunn, J. S. Rossiter, John Christian, Wm. Krocke, Chas. F. Johnson, H. Liphardt, J. M. Clark, O. Von Lengerke, Chas. Antoine and H. Babcock. The constitution as earlier outlined was adopted clause by clause, the initiation fee being, however, placed at $2, with annual dues of $1, with membership limited to 100. The club will hold its next meeting the first Wednesday in March. The executive committee chosen, Messrs. Antoine, Rossiter and Murell, were requested to find a place for practice. Messrs. Hough, Strell and Clark were appointed a committee to draft rules for competitions.

Dr. Bartlett, State Fish Commissioner, is laboring with the State League question in the lower country, and writes me as follows:

> QUINCY, Ill., Feb. 3.—I am making a personal census of the fishing clubs with a view to secure an assessment per capita from each club and try and secure the proposed amount needed before we complete organization. I have had a talk with two of them and with favorable results. I have been, however, more than half sick myself for two days and with considerable less inclination than usual for work. I will be in Chicago, all being well, again some time next week.—S. P. BARTLETT.

Mr. L. R. Brown, of this city, was born under a cloud, and has never emerged from under it. It is his particular notion that he can't touch a fishing rod without breaking it. He went fishing every week last summer, and he broke a rod every time he went. Once he made a special effort, and put his rod knowingly behind him as he paddled down the river toward home. His paddle caught in something and he gave it a wrench. It was a bight of the line hanging overboard, and it broke the rod short off. "I was afraid of that," said Mr. Brown, and he got another rod. The next day he and his wife went out fishing together, and much to his surprise he got through the day without breaking his new rod. With pride mantling his cheek, he got out of the boat and started to go into the club house, the rod over his shoulder. His wife held the door open for him. Mr. Brown got almost through the door with the rod, when there was a slip and a bang, and the spring door closed on about six inches of the tip. That was the nearest Mr. Brown ever came to not breaking a rod. This gave him hope, but he bought no more rods last fall. He ordered a very large, strong, coarse and masculine Bethabara rod, such as no man could break. He ordered it last fall. It got here yesterday. Before a large crowd of friends Mr. Brown took it from the case and passed it around. They tried it admiringly. "You can't break this one, Brown," they said. "No, I should say not," said Mr. Brown, "nobody could." He took it in his hand, looked at it with a proud gleam in his eye, whipped it once or twice up and down, and—— smash! went the rod, square off through the second joint! The man who can make Mr. Brown a rod which he can't break will fill an aching void. The funniest thing is, Mr. Brown gets madder and madder every rod he breaks. There is no use for him to kick at his cloud. He will always break rods. Some men are born that way.

There is coming a vague fever in the air, these many moons in advance. There is a great deal of talk about tackle. I saw a faithful angler yesterday sorting his flies, and figuring just where he was going to make his first cast for bass and what flies he would use for that cast. "It shall be at Kelly's on the Kankakee," said he, "and I shall use silver-doctor for stretcher, with Donaldson above it."

E. HOUGH.

BOSTON ANGLERS.

PLANNING new trips for the coming season, and the pleasures of anticipation is now almost the sole enjoyment of Boston anglers. Each succeeding year sees a larger number of the disciples of the "gentle Izaak" bound for the early spring fishing in the lakes of Maine and New Hampshire, and there is much speculation just now as to when the ice will go out. Trolling for landlocked salmon and the big lakers, which abound in Sebago and the Rangeley Lakes in Maine, and Winnepasaukee, Newfound and Sunapee lakes in New Hampshire, is exciting sport, and the results attained are often more satisfactory than the fishing indulged in later in the season, even though the conditions may not be quite so comfortable. Although the breaking up of the ice varies each season with the severity of spring weather, clear water can generally be counted on as certain by the 15th or 20th of May at the latest. Arrangements are made to get the news at once by telegraph, and when it comes it is all aboard boys and away for the sport. The different lakes visited depend altogether on the affections of the angler. Some of our Boston fishermen have been for years visiting the same waters, and almost always with good results. Others go year after year to different places, and come back well pleased with what they have accomplished. The Rangeley Lakes have the greatest number of devotees of the sport. Among the anglers of the Hub who make a yearly spring pilgrimage to this popular resort are Henry W. Clarke, Mark Hollingsworth, C. W. Glidden, Dr. H. C. Haven, Wm. G. Russell and son, Harry Dutton, State Treasurer Geo. A. Marden, M. N. Smith, A. C. Ashton and son, L. Dana Chapman, G. W. M. Guild, Gov. Wm. E. Russell, Mayor Nathan Matthews, Jr., W. J. Reynolds, and many others almost too numerous to mention. Other towns and cities lying close to Boston, also furnish their quota for the early fishing, prominent among which may be mentioned Mr. C. D. Boss, Jr., of New London, Conn.; A. A. and H. C. Sargent, of Haverhill, Mass., who have been going to Rangeley for many years; O. A. Benoit, Worcester, Mass.; G. H. Webster, Haverhill, Mass.; C. W. and J. M. Lasell and G. M. Whitin, of the Whitinsville Machine Co., Whitinsville, Mass., and A. F. Lamb, of Providence, R. I.

Sebago Lake, Maine, has loomed up during the last four or five years in landlocked salmon fishing, and as it possesses the virtue of being easy of access, it is a favorite place with those who have but little time to spare away from business. Newfound Lake, N. H., has been well stocked for some years past, and is now proving to what a successful issue this kind of work can be brought. Of course it has its off seasons, but almost every spring the yield of fish is quite wonderful. Among those who visit the lake are Col. Bebee of Boston, Dr. Heber Bishop, one of the best known sportsmen in the Hub, Frank W. Benson, Philip Little and W. S. Thayer, all of Salem, Mass., A. G. Weeks, Jr., M. C. Greaves and many others. Winnipasaukee for large lakers is unsurpassed; some of those who drop a line in its waters every spring are J. T. Busiel, Laconia, N. H.; C. F. Goodnow, of South Sudbury, Mass.; Dr. H. F. Hamilton, of Boston; Dr. J. F. Hadly and W. H. Flagg, of Waltham, Mass., and W. A. Pevear, of Lynn, Mass. Though the weather may be ever so cold and blustery when this kind of fishing is best, it has no terrors for the real enthusiast, and the thorough enjoyment of the trips are evidenced by the zeal with which they relate their experience on returning home.

SALMON AT SEA.

WHERE the salmon go when they descend the fresh water rivers and enter the sea is as yet a matter of speculation, or, as I expressed myself on another occasion, "There is a certain mystery about the habits and movements of the sea salmon after it has left the fresh water rivers in which it spawns, and gone down to the sea, that never has been satisfactorily explained. One theory is that all the salmon of the rivers along a coast may journey down to the sea and then move ultimately in one great body southward along the coast until they find water of suitable temperature, with an abundance of food, in which to spend their time in growing fat until the spawning instinct warns them to return, when they proceed northward, each river school entering its own particular river as the main school arrives opposite the river mouth. Another theory is, that the salmon of each river as they arrive at its mouth, after descending from its headquarters, go out to sea sufficiently far to find the conditions of temperature and food which suits them and there they remain, separate from the salmon of other rivers, until it is time for them to return to fresh water. Considering the certainty with which the salmon of any particular river return again to the stream of their birth, the latter theory seems most tenable of the two."

That was written several years ago, and while the mystery is still unsolved in all particulars, light has been thrown upon the matter which leads to the conclusion that the movements of the salmon are governed entirely by the question of food; that if they find food at the mouths of the rivers there they remain, and if not they seek it further away, in some instances at a great distance from their rivers. Apparently they seek no particular food as much as they seek quantity.

A week or two ago I read in the market report of a New York paper that Atlantic salmon were worth a certain price and that they were captured at sea off Cape Cod. I asked Mr. Blackford if he could tell me whether the salmon were captured in shore pounds or in deep-water nets, and he replied as follows: "We get every winter a few fish from the Atlantic coast that are evidently part of the schools of fish that run up into the Kennebec, Penobscot and other Eastern rivers. During November and December we had about fifteen to twenty fish, weighing from 12 to 24lbs. each, that were caught in the mackerel nets in the vicinity of Provincetown and North Truro, Mass. These nets are set out from the Cape in very deep water. During the past two or three weeks we have received several specimens of very handsome salmon from Maine, where they have been caught by the smelt fishermen in their nets when they have been fishing for smelt. I think these catches of salmon go very far to prove that the schools of fish are not very far off from our shores during the time that they are not found in the rivers, and that both shad and salmon when they leave our rivers do not go either east or south, but are within 100 miles or so of the rivers where they were spawned. The fish are remarkable in being in splendid condition and perfect in form and appearance."

My first thought was that these fish taken off Cape Cod were Merrimac River fish, in fact, they must have been from either the Merrimac or Penobscot, unless we include the Hudson; and as salmon were being taken off the mouth of the Maine River at the same time that they were being taken off Cape Cod, it is still reasonable to suppose that the latter were Merrimac fish. It would be interesting to know what food these fish had in them.

A Scotch writer has said that 15 per cent. of the salmon taken off the east coast for an Aberdeen salmon preserving establishment were filled with herring, and that the fishermen could calculate the appearance of the herring off the coast from the condition of the salmon, and from this and other similar testimony he argued that the movements of the salmon at sea were regulated to a certain extent by the movements of the herring schools. Salmon preservers testify also that salmon live mainly upon herrings in the German Ocean; but they have been found to have in their stomachs mussels, sand eels, smelt, whiting and shrimps, when taken in European waters. Mr. John Mowat, of New Brunswick, a fishery officer of long experience, says that when the Canadian salmon arrive in the estuaries they are commonly filled with herrings or mackerel; that they gorge themselves when they strike the capelin schools on the coast, but that he has opened many hundreds of salmon on the coast where sand eels are plentiful and never found one in the stomach of a salmon. All of which may be accepted as evidence that the salmon do not move along the coast in one great school, each salmon river adding its quota, seeking warmer or colder water, as the case may be, but that they go off the coast sufficiently far to find schools of herrings or mackerel, on which they feed, be the distance more or less.

That salmon do travel great distances in the sea is established by the fact that in the rivers of Holland salmon have been caught with cod hooks in them which must have been taken from the deep sea lines of the Norwegian fishermen, a distance of six or seven hundred, or even more miles. I read of one instance within the year of a salmon being taken in one place with evidence about it that it had come from another place, neither of which I can recall at this moment, although I think it was in the Baltic, but I distinctly remember that I figured the distance between the two places and that it was over 1,000 miles. The reason given for the journey was scarcity of food.

There is another matter of speculation which I refer to briefly. For years fishermen and fishculturists have been guessing how many eggs of the salmon laid in the natural way arrived at maturity in the shape of healthy fish, either fry or older. Mr. Alexander Mowat, a fishery officer in Canada, reports that he has overturned and examined salmon beds on the Restigouche, Prince Edward Island and St. John rivers, after the water has receded and left the beds dry and the ova to perish, and in all instances he has not found more than one egg in fifty that was vitalized. If only two per cent. of salmon eggs naturally deposited are fertilized, the guesses as to the fry hatched are very, very wide of the mark. As ninety-five per cent. of eggs artificially taken are hatched and turned into the rivers, comment upon the success of artificial fishculture is unnecessary.

A. N. C.

THE TARPON RECORD.

I FIND in the Jan. 28 issue of FOREST AND STREAM the following: "The Tarpon Record.—Punta Gorda, Fla., Jan. 24.—On Saturday last Charles A. Dean, of Boston, caught in Charlotte Harbor the largest tarpon ever taken with rod and reel. Its weight was 196½lbs., its length 7ft. 1in."

I saw the same thing a few days ago in the Jacksonville *Times-Union*, to-day one of my friends, who is an enthusiastic pursuer of tarpon, and interested in all pertaining to it, sends me a similar clipping from the Philadelphia *Times*, the dispatch being sent directly from Punta Gorda to that paper. This tarpon record is a matter of interest to very many fishermen, and there should be no inaccuracy in reporting the measurement and weight of the fish, and certainly misrepresentation is criminal.

For several years the fish taken by Mr. Hecksher, which was 6ft. 9½in. long, and weighed 184lbs., headed the list of those taken with the rod; and Senator Quay's 7-footer, weighing 187½lbs., was the champion of the hand line. Mr. Hecksher's fish held its own until May, 1891, when Mrs. Geo. T. Stagg took a fish at Fort Myers 7ft. 1in. long weighing 189½lbs., and followed it with the champion, 7ft. 4½in. in length, and 205lbs. in weight. This last fish was measured and weighed in the presence of half the population of the village. The weighing was done on the scales of the steamboat company. Mrs. Stagg made the measurement 1½in. less, but I was informed by a gentleman at Myers that he measured and weighed the fish for his own satisfaction in the absence of the captor, with the above result.

The object of the dispatches sent broadcast as above indicated is of course to boom a fishing resort which has no fish to attract anglers except a few jewfish and an occasional tarpon. The unfortunate phase of it is that it apparently implicates a most upright and honorable gentleman as participator in a fraud. When I called his attention to it, inquiring as to the truth of the report, he at once wrote the inclosed letter to FOREST AND STREAM, and also sent a similar communication to the *American Angler*.

The facts are these: The fish in question was weighed on a board, and the weight was 204lbs. After the weighing, and privately, Mr. Dean and a friend weighed the board, and ascertained its weight to be 32lbs. The hotel manager was probably ignorant of this "verification," for he had the board destroyed.

FOREST AND STREAM is open to criticism for publication of this dispatch, for it published a contribution entitled "Queen of the Rod," when Mrs. Stagg captured her great fish, and also made editorial comment on the feat. F. S. J. C.

ST. JAMES CITY, Fla., Feb. 9.

Editor Forest and Stream:

Please correct the statement that I have caught a tarpon weighing 204lbs. or 196lbs. The fish was 172lbs. net, 6ft. 10½in. long. CHAS. A. DEAN.

THE SIX-INCH TROUT LAW.

Editor Forest and Stream:

When you opened up this question, asking for opinions pro and con, I thought you were unusually generous and considerate of the class that might be against certain restrictions of the new code, and I hoped, but feared otherwise, many on that side might speak up. It is, I suppose, popular to restrict, and vice versa, so that the poor fellow who likes reasonable liberty and who may be in the great majority, will hesitate to say a word, and simply lie down to be trodden over. The gentleman who favors a 12in. limit, and possibly a six weeks open season, can have the floor, however, and somehow claim to have the backing of all that is good, true and beautiful. I suppose, also, in these days of progress, it will never do to admit the use of any means but the artificial fly in taking trout, although in the early season bait is almost the only lure of value.

That there is much of pretense in this claim of exclusive use of the fly is well known, and I can safely say I never saw a purely fly-fisherman, one that would not yield to temptation when on the ground facing conditions versus theories. My brother fishermen, whom I know in habit, methods and feeling, and whom I think will average well in their class, all do it—in the season referred to. For myself, the use of bait, in itself, never has troubled my conscience; but I have admitted the trouble that comes to me from the great injury to a mass of victims whom I could not claim mine, but must return in a crippled or dying condition to their element. This has driven me from my favorite trout streams and cut off my most cherished pastime. I do not wish to be considered misstating things as to injury to such trout. The injury is too painfully evident to bear contradiction even after the use of great care. Doubtless the artificial fly injures trout less than bait, and perhaps because it is in a degree less harmful the great mass of bait-fishermen are expected to forego their methods and undergo a great reform. Thus there would be a further restriction. Put this in the new law as the next step.

But restrictions as to size, season and methods seem to me somewhat inconsistent with restocking processes. Our hatcheries turn out annually millions more than are taken by legitimate sportsmen in angling, and yet in connection with this immense supply come restraints. Fish, let it be remembered, differ in one respect from all other game, as they can be reproduced, and that *ad infinitum*.

I have wondered if much of the trouble was in the markets? Now, what cares a trout fisherman for a market? What genuine sportsman ever sold a trout? If there is trouble here, why cannot fishermen arise *en masse* and cry it down? As an illustration how this may have much to do with a scarcity of trout, if scarcity is complained of, I have found on Redfield streams numerous men fishing especially for market. They camped on the streams, stayed there days and weeks, were seclusive and even troublesome to chance sportsmen that happened on their grounds. At Sandy Creek and other stations I have seen their spoils packed and labeled for market. This business can be stopped, I suppose, as shipping venison to market has been stopped, and I prefer means such as this to the taboo I find on much of my enjoyment to the territory.

I would also limit the catch of any fisherman if necessary or considered beneficial. I think—and few will venture to deny this, I judge—that if we all considered the privilege of fishing in April, and are allowed to go somewhat below 6in. in length, there will still be trout. If there are not enough our hands can go into our pockets for a fresh supply from the outside. That streams have held good under such conditions all that can remember back ten or fifteen years well know. Let the restrictive mania as to trouting be checked somewhere, say I.

PROTESTER NO. 1.

OHIO RIVER NETTED TO DEATH.—Your issue of Feb. 4 contained an article and an editorial in reference to the destruction of game and fish in Florida. Other parts of the country suffer from the same cause. The Ohio River is an example. Seining and netting are allowed to go on every month in the year, without the least interference. It might be asked, Can this evil be eradicated? Nowadays it is practically of no use to fish in the river with rod and reel, or even with a hand line, as the fish are removed by seines or nets. The sportsman is thus saved the trouble of waiting until he catches "this one and one more" before he has two. I would like to hear what others may have to say on this subject.—E. M. D.

ALUMINUM REELS.—Los Angeles, Cal., Jan. 29.—*Editor Forest and Stream:* I desire to approve the sentiments expressed by "Von W." in your issue of Jan. 14 anent aluminum. Why do they not give us aluminum fishing reels? I have seen a few single-action trout reels of that metal, but the price asked for them was outrageous. The Henshall-Van Antwerp bass reel, for instance, or the Abbie & Imbrie "steel pivot" reel, would surely be dandies if made of the new material. I should think it would be particularly available for the large reels for tarpon fishing, etc., where there is so much objection to the great weight. Let us have aluminum multipliers and at reasonable prices.—W. R. M.

Fishculture.

NEW YORK FISH COMMISSION.—At the meeting of the Fish Commissioners on Thursday last Messrs. Huntington, Joline and Hackney were present. Applications for trout called for a distribucion of 15,000,000 fry; but as the total stock in the hatcheries is a little less than 5,000,000 there must be extensive cutting down in the allotments. The brook trout and brown trout have been assigned chiefly to the counties of Delaware, Franklin and Sullivan, the largest shares of fry going to the Delaware and Hudson Canal, Ontario & Western and the Rome, Watertown & Ogdensburg railroads. The Commissioners desire to secure an increase of the appropriation to $34,000 annually, including the amount of $1,500 for the hatching apparatus in the fish transportation car.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

FIXTURES.

DOG SHOWS.

Feb. 16 to 19.—Second Annual Show of the Central City Kennel, Jackson, Mich. Chas. H. Ruhl, Sec'y.

Feb. 23 to 26.—Sixteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Supt.

March 1 to 4.—First Dog Show of the Keystone Kennel Club at Philadelphia, Pa.

March 8 to 11.—Washington City Kennel Club, Washington, D. C. Fred. S. Webster, Sec'y, 738 Broadway, New York.

March 15 to 18.—Second Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Sec'y.

April 6 to 9.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Sec'y.

April 13 to 16.—Third Annual Dog Show of the Continental Kennel Club, at Denver, Col. R. W. Isenthal, Sec'y.

April 20 to 23.—Fourth Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.

May 4 to 7.—Annual Dog Show of the California Kennel Club, at San Francisco Cal. Frank J. Silvey, Sec'y.

Entries for Keystone Kennel Club's show close Friday, Feb. 19, with James Watson, Box 770, Philadelphia, Pa.

OUR NEW YORK REPORT.

IT gives us great pleasure to announce that we have arranged with Mr. George Raper, of Wincobank, Sheffield, Eng., for a report on all the classes judged by him at the New York show.

As Mr. Raper is conceded to be the best all-round judge and show reporter living, his description of the dogs at New York will be a piece of work which no one interested on the subject can afford to miss.

No pains will be spared to make the FOREST AND STREAM report of the New York show in every respect worthy of the occasion and of the paper.

CHICAGO DOG SHOW.

WE should like to be able to chronicle a success in every way for the Mascoutah Kennel Club's third annual dog show, but we are unable to do so. The most pleasing part of it was the attendance. This as usual was all that could be desired, and I believe was larger even than last year. The club is still seriously handicapped by inadequate buildings. The judges chosen did not on the whole prove entirely satisfactory. Of course they never do, but there seemed to be more genuine kicking than at any show of similar standing I remember attending. As a consequence of this kicking in one or two cases previous awards were changed, and others would have liked to have done so when they saw the dogs after. This is not the proper way, but I shall have more to say on this and other subjects in "Dog Chat," where in future the usual introductory notes on this and future dog shows will be found, believing that comparatively few take the trouble to read a whole report through and so very often many interesting occurrences are lost to the general run of dogmen. The judges were as follows:

St. Bernards, R. J. Sawyer; mastiffs, Newfoundlands, fox-terriers, bulldogs, bull, Welsh, Clydesdale, Bedlington terriers and Dachshunde, Harry L. Goodman; Great Danes, H. C. Haeffner; Russian wolfhounds, deerhounds, greyhounds and whippets, Roger D. Williams; Boston terriers, J. W. Newman; English setters, P. H. Bryson; collies, John A. Long; Irish and Gordon setters, cocker, Clumber and field spaniels, foxhounds, beagles, and bloodhounds, black and tan, Irish, Scotch, Skye and Dandie Dinmont terriers, John Davidson; pugs and toys, Yorkshire terriers, King Charles and Blenheim spaniels, poodles and Italian greyhounds, Dr. M. H. Cryer; pointers, Chesapeake Bays, Irish water spaniels and miscellaneous, Tim Donoghue. R. J. Withers, M.D, V.S., was the veterinarian, but we heard that many of the dogs went in without being identified or examined, and several cases of skin disease that could be seen would lead one to suppose this to be true.

The judging, as stated in FOREST AND STREAM last week, was much delayed on account of the benching not being ready, and judges were still making awards of specials on Thursday and Friday morning.

MASTIFFS.—The Western breeders have some good individual specimens, and such breeders as Mr. Bunns and others have struck the right sort of short-headed ones, but the East will supply the general winners for another year or two. Ormonde and Sears' Monarch met in the challenge class. It is a near thing between them, but the former's better skull and body outset his bad tail and rather weak pasterns. The winner in open dogs is well known—Elkson; he is much improved and in skull and body beat Wellington, but these two I thought could have exchanged places with Cardinal Beaufort, who beats in general type, size and carriage of stern; Wellington has an immense skull for his muzzle; Edric, fourth, is cowhocked and might carry his ears better. Cyrus, reserve, gained his high mark by his good body and legs, as his type of head is out of fashion. Among the vhc. dogs I did not find a good one; Nero is leggy and houndlike, Webster Judge's head is too long, and the best of the hc. dogs was Stanley, who is, however, too small. Hector did not deserve notice and Ilford Caution III. is of the long type of head. The bitch class was small, only five. The winner, Sinaloa, has a good head, pasterns faulty, nice body, etc. Ilford Cameo, second, is small, light bone, weak in muzzle, but good legs and body; Matella drops behind the shoulder, head of good shape but not massive enough; Mai Chancellor, fourth, has a plain head; Melrose Portia I liked as well as any of them, barring condition—suckling a litter in the show, sad to relate—her head is good, if a bit narrow, and she has a well made body and good legs. Puppies were numerous. In dogs, Sraosha, by Beaufort, had been sold and removed before I saw it, but the second winner, Prince Cola, must have hustled him. Chocolate-colored markings detract from his appearance, still he is a finely made dog, splendid legs, good body, and head very much like C. O. D.'s, but a trifle longer and may be a little narrower, nice wrinkle and showed lots of quality; would have pushed them in the open class. Ilford Dates, hc., had a very bad head, ears carried wide; Stanley, vhc., is a better one. Dan, reserve, I did not see; the others were small and most of them by Ormonde and quite promising. The awards in bitch puppies followed the open class in the money. Countess von Moltke, reserve, is weak-faced; best part is her body. Others were small.

GREAT DANES.—Type in this breed is still mixed and winners were not consistent. In numbers an advance has been made. This was the banner kicking center and faction spirit ran high. All dogmen should deprecate this sort of thing, it serves no good and only results in disruption and abandonment of the breed by those who otherwise would make useful members of dogdom. Imperator and Melac furnished an inexhaustible subject of discussion. Melac has the fewer faults, and while his head is a little heavy, still his grand body, legs and general carriage is preferred by many to Imperator's. Imperator's skull is too mastiffy—but it's all a question of type, greyhound build or mastiff. Irene, looking well, furnished the winner in the challenge bitch class. In open dogs type was all over the benches. The well-known Favor furnished the winner, beating Roland in head and neck. Brutus has a sour head, but stands on good legs. Hans, fourth, is good type, well-shaped head, rather throaty. Cæsar, vhc., is faulty in head, but actively made. Fritz is plain in head, not quite right in forelegs. Tyrus, barring his snipy muzzle, is well formed and might have been higher up. Pedro, that received nothing, should have been in the money, head fair, legs and body very good. The winning ribbon in the bitch class fell to the Wolverine Kennel again with Ultimo, well-known. Uima II., shown too fat, came second. Nora, third, was in the rings somewhere when I came round. Fris, fourth, is short-headed and small. Minerva's Fawn, vhc., should have had a much better position, for barring muzzle she is a good one, but more on greyhound build. There was nothing very striking in puppies, Tyrus getting second. Uncas, third, is a bad one. Tiger, fourth, is too long in muzzle. Mr. Nichols's three dogs were not mentioned, they were as good as any in the class nevertheless, excellent size and bone. Ultima was the winner in bitch pups and Charmion, nice head and legs, deserved her win. Victoria and Blanka came next; the latter was marked fourth but there were only three prizes; Blanka was much the best. Bonnie T. is faulty in muzzle and stifles. From what I could gather and what was written in the daily papers there is likely to be considerable unpleasant exposing in connection with some phases of the judging, but more on this point will be told in "Dog Chat."

ST BERNARDS.—As usual, these classes furnished an interesting exhibit, and classes were excellently well filled. Mr. Sawyer's first appearance showed him a careful judge, but unfamiliarity with so many dogs in one ring rather rattled him at times. Lothario, a very good little typical dog, was quite overlooked in the general orders. In challenge dogs, Plinlimmon, Jr., was alone, and looked well; Manon, of the same kennel (Wyoming), furnished the winner in the corresponding class in the absence of Lady Livingstone. In open dogs Aristocrat, still out of coat, I thought rather lucky in winning from Jim Blaine, whose well-formed head is superior, excepting in expression, which is slightly marred by different colored eyes, his great bone and good legs are very noticeable, he droops a little in back. Aristocrat depends so much on his coat that it is unfair to show him now. Beausire is another good dog with excellent understandings, a well-shaped massive head, good markings, wants more rib and is a little straight behind, pasterns could be better and he should stand freer at elbow. Fernwood Bruce, fourth, was one of the disappointed ones, he is very handsome; beautiful coat, but lacks massiveness in skull for his muzzle, is flat-ribbed, good legs and feet, but tail curls far too much. Lord Wilton, barring his head, has few faults, has a good body and fair head, is of good size, feet could be truer, but bone and limbs O. K. The plain-headed Burns came next, he is well known and was placed about right. Lothario, with whom—when you have said he is small—little fault can be found, was not noticed till after the judging, but he got three letters. This must have been a most difficult class to judge, as the ring was none too large and 23 dogs were shown. Othello is another good dog, fully reported on in FOREST AND STREAM before. The long-headed Kinglimmon, light in flesh, took an hc., and was the best of that division. The others require no further mention. In bitches, the much-talked-of Hepsey was a nice winner at the first time of asking, her good legs and feet and roomy body being noticeable features, her skull is not full enough for depth of muzzle, and her light orange is somewhat against her, but her head markings are beautiful, she is out of coat and hocks might be better—throw in a trifle. Guess Noble, second, is another good bitch, and Mr. Reick made a bargain before the judging by securing her for $250. She is a bit deficient in muzzle, but her grand skull and body, legs and feet, will always find favor, but am afraid she will be more of a smooth than a good rough. Altonette and Lady Adelaide furnished the next places in the order named, and both of them I have written up or down before. Lady

Hibernia, hardly looking so well as at Albany, took three letters. Mascot Floss is common in head, lacks markings—a very lucky bitch. Merchant Princess was in bad shape and is too long in head. Others call for no particular mention. In rough pups Lord of Richmond was counted the best, but I failed to see him. Mike Norkett I liked; good head, coat and bone. Fernwood Victor loses in head. Saladin, reserve, is dish-faced and light-eyed. Melrose Pluto, vhc., is long-headed, but has good size. The winner in bitches was Theban, a daughter of champion Gemma; she had been taken out under the rules. Effie of Lemont, second, has a bad, domy skull, but is good otherwise; Christmas Eve has a much better head. Lady Burghley is faulty in head and forelegs. Cloven, hc., is young but promising. Beausire won well in novices with something to spare. The others followed open wins chiefly.

There was an excellent show of smooths, and they kept truer to type than the roughs. Lord Hector felt happy that champion Victor Joseph, his kennel mate now, was absent, and thus he won his first challenge prize. The grand bitch Empress of Contoocook curled her apology for a tail when she walked out with the order of merit over poor old Thisbe, who still welcomes her old friends with a look of pleasure which her intense quality adds so much to. That good dog Mascot Royal in open dogs won well over Ben L., who has not enough stop, rather too much coat, but good elsewhere. Ibo II. has a bad head; St. Michael, fourth, has a sour head, but good bone; Max Piccolomini has a plain, long head; Victor is weak-faced. Fernwood Goldy was gone when I reached her stall; Mascot Nellie, second, is houndy-headed; Lady Gladstone has no shadings, therefore plain; Dell, fourth, was invisible; Wabash Myrtle has a poor head. The best in puppies was Rex Watch, a son of the old dog out of Sunrise, and is an undeveloped likeness of him, barring his head, which is altogether much poorer, too long and not deep enough in muzzle; but will no doubt improve yet. Lord Milton, an Alton pup, took second; nice expression, faulty in body. Sir Michael II. carries his ears too high. Mons. Jarvis is a dog of nice type and might have done better. Globe, fourth, has a long, narrow head, and shows already too much haw. Bellegarde, from the Duchess Kennels, won in bitch puppies; she has a bloodhoundy head, bad ring tail, and Mascot Nellie is also faulty in head, but not so bad as the other though. The novice awards followed the open classes, Rex Watch, Lord Milton and Ibo II. being the order. St. Bernard breeders should be pleased to see the good showing of smooths out at the show; keep the smooths intact and breeders will never lose sight of type.

Bloodhounds were represented by two good ones, the well-known Jack Shepherd, excellent in head, peak and wrinkle, won in dogs, Burniston being withdrawn. In bitches Pembroke Star, hardly straight in front, nice wrinkle, peak and leather, was alone.

Newfoundlands.—The only two deserving of proper recognition were Prince Hal and New York Lass; the dog won but was not in good shape; had a nasty sore on his back. Lass's head has filled out a little, still her coat and body is the best part of her. Rock, third, is curly-coated.

Russian Wolfhounds, as named in the catalogue, turned up in greater force than heretofore, and the show was notable for the appearance of a hitherto dark horse, the Seacroft Kennels' Leekhoi. It will be remembered that Forest and Stream gave exclusively the news that Mr. Hanks was in Russia on a visit to relatives, and had succumbed to the "Borzie" fever. Leekhoi was an easy winner, and is certainly the grandest specimen I have yet seen; on accepted principles little fault can be found with him, his head must be nearly perfect, according to the standard, of immense length, is beautifully fronted, none of that extreme heaviness at shoulder, and his forelegs are as true and straight as a greyhound's, with feet compact and well formed, immense depth of chest and ribs sufficiently sprung, nice arch of loin, quarters droop considerably, and hindlegs of that peculiar formation known to this breed. He was shown thin and will be much improved with more flesh. The second prize winner, Osmaday, loses in head, depth of loin and in ribs, and his pasterns are not so good. Oridaff, in the catalogue, was really the well-known Zloeem shown in his stead, but quite openly and above board, but wrongly all the same, being out at elbows and his indifferent feet put him out. Flodeyka, first in bitches, is flat-ribbed, and her head is not so good, following Leekhoi's type. Svodka has a better head, but is not so good in feet or front and depth of chest. Zanoza is weak in muzzle, and loses to the others in front. Viola runs her close.

Deerhounds.—A good show of these grand dogs, Eastern men being well represented. Robber Chieftain and Clansman fought their battle again and fell in the order named, in dog challenge class. In bitches, Wanda was placed over Theodora. Olga, not in as good shape as I have seen her, got reserve. Thora II. is too small. In open dogs, Hillside Warrior, better in head, won over a good stamp in Alan Breck, both well known, and Duncan, another familiar one, came in third. Alpin, reserve, loses in head and loin Claymore, out of coat, loses in loins and ribs. In bitches, Romola and Ruth were properly placed and were the only two entries.

Greyhounds.—A good lot of dogs met Mr. Williams on his first appearance. Gem of the Season was the only challenge entry for competition. Master Rich and Miss Rare were on exhibition, being the property of the judge. In open dogs, Ornatus had to give place to Lord Neverstill, better in ribs, loin and quarters, though the black dog is better in pasterns. Neverstill was the winner last year. Surplus, third, is rather weak in loin compared to the other two. Pious Pembroke, well-known, came reserve. Yonder He Goes, a strongly built dog, is heavy in shoulders, not straight in front and falls away too much in quarters. Kentucky Blue is thick in skull and light in loin among other faults. Bitches, Little Climber, last year's winner, won, she being Bestwood Daisy in bone and substance, rib development and thickness of loin, but Daisy is truer behind, in hocks; Lilly of Gainsboro, third, hardly looked herself; she loses to the others in front and shoulders; Sunol, reserve, is not let down enough behind and had a swelling on the side of her jaw; Lady of Fashion, vhc., is rather heavily built and could be better in ribs and loin. Liberty was shown last year; is heavy in shoulders, has faulty pasterns, and neck too short.

Clumbers.—Boss III. and Lady Bromine were the only Clumbers shown, and were in fair condition.

Field Spaniels.—Many of the winners need no description. Samson and champion Bridford Gladys furnished the challenge winners. In open dogs, Rideau Bob, first, was shown in Canada. Wonder loses to him in head, too houndy and wide in front, fair body and good coat. Arko, third, is too high in skull and muzzle snipy. Bob, reserve, won at Toronto last year. In bitches, Whatnot, first, won nicely over Woodland Sallie, well known in Canadian shows. Baby Flirt, third, is leggy and not square enough in muzzle. Bird, vhc., was in whelp. Madge, reserve, has not stop enough and is faulty in front. In liver class the well-known Napoleon won, only entry. In any other color, dogs, Newton Abbot Farmer, a bit broad in skull and wide fronted, gave way to Newton Abbot Torso, coarse, but excels in front and bone, body light; decision might be reversed.

Black Dufferin, shown in fine shape, easily beat Rabbi in present condition in cocker challenge dogs. In the next class the well-known I Say beat Bessie N. in front, body and condition. Open black dogs, Willey's Jersey Obo won nicely over Amusement, who is more of field type or a mixture; muzzle too long. Jersey Boy is thick in skull and feet turn out. Adam, reserve, has been lately criticised. Bitches were a warm lot, Black Duchess proving the winner; a little full in skull, but nice type throughout. Cleo II. is plain in muzzle, expression faulty, only fair front; Amazement should have changed places, better in head and front; Woodland Susie is a bit straight-faced; Eve took only vhc. this time, and Lady Fidget is too wide in front. Any other color, dogs—Red Rowland has a dachshund front, but a rather good head; Little Ben II. is rather long, too much cut out before eye, and feet turn out. Jessie C. won in bitches, but class was poor. These dogs were very much mixed in benching, many being allowed to bench in kennels, and their positions were changed several times.

Collies.—An excellent gathering and Mr. Long had considerable difficulty in picking the winners in such small space. Roslyn Wilkes in his present good shape and coat had no difficulty in beating Maney Trefoil, whose coat was better than I have seen it for some time, but he loses to the other in body and head. Roslyn Wilkes afterward beat Christopher for the special. In challenge bitches Roslyn came well to the front over Metchley Surprise for her new owner, beating in head and coat and general build, though lucky for both Flurry III. only competed for specials. Cora II. was out of this company. Sir Walter Scott this time beat Metchley Wonder II. and certainly he is an improving dog, but his lively tail spoils his looks somewhat. Moray is a little too strong in head and stands out a bit at times. Roslyn Conway and Tory are well known, the former getting his coat again. Metchley Wonder, Jr., is coarse in head. Dublin Scotilla is short faced. The winner in bitches, Daylight, has a good shaped head marred by washy tan markings, dense in coat, making her look a bit cloddy. Heather Twig shows more quality, is a little full in skull, nice coat but soft in texture. Jakyr Dean is well known. Bernice, reserve, has a common head, no undercoat and shelly in body. Some nice puppies were shown, Strathern winning in dogs, good coat, good length of head though a little domy in skull yet. Mistletoe, the winner in bitches, I could not find, but she was termed a nicely made one with good coat and length of head, ears well up and good on legs. Novice wins followed the puppy wins chiefly, but space forbids going over every entry.

Poodles.—Dexter alone in challenge, getting his coat every day. In dogs Sidi beats Parisian in coat, head and loin. The bitches were poor.

Bulldogs.—The West can now make Eastern exhibitors pull themselves together, and it is likely many future prizes and cups will find their way Chicago wards. Bo'swain had the challenge dog class to himself, and Graven Image's better head and shoulders beat Duchess of Parma. In dogs, the new one, King Lud, beats African Monarch in skull, layback and cushion, has nice body and bulldog action. Little Monarch not in it. Peckham Lass, the new bitch, beat Lady Nan in front, otherwise the latter is nicely made. Nobby Twist's head, in puppies, is spoilt by big and falling ears, otherwise he is promising, and an American bred one too. The Woodward and Mariner Kennels should have won the special for the best kennel of non-sporting dogs; they have got together a grand collection for this country.

Bull-Terriers.—A capital lot and Mr. Goodman had some puzzling questions to decide. Dufferin alone upheld the challenge dogs, Attraction being absent. Then Streatham Monarch and Carney had their tussle, and great was the interest manifested around the railing and inside the ring. A long examination and then they were weighed: Carney 40lbs., Streatham Monarch 52lbs., and Joe Lewis gave a yell as he saw the judge mark Streatham Monarch first, but the smile died in its infancy when the judge put another point opposite Carney's number—equal first. The owners wanted it one way or the other, but the spectators smiled and thought the judge had done a very wise thing. Carney has the advantage in better size, and will keep himself longer, while Monarch is growing beefier with age. Carney has the better head, cleaner and not so cheeky, and is much better in front where Monarch needs showing properly as he is apt to stand out there, bodies are about equal, but hind legs are in Monarch's favor and tail must be credited to Carney—*voila tout messieurs*—take your choice. Sir Jack should have given place to Sir Monty II., though heavy in shoulders and faulty in feet, while Sir Jack is weak in muzzle and elbows are out; Keno, vhc. is short faced and too light in body. Grove Baroness won in bitches, short in head and falls away in quarters and is not a good one by any means. Rose is light in eye, cheeky and weak in pasterns; Queen Bendigo third, is well known, Edgewood Fancy could just about win here, better fronted than any, and nice head, Winning Wagtail was in bad shape. Under 30lbs. Tom Beverly won is on the English type, long narrow head fine body and limbs, looks a "laster." Mister Dick is short necked and thick in head; Watchful Wagtail is good barring his bad front; Mister Dick Bendigo won under the judge, but was disqualified as over weight. Luce cannot beat Lady Vesuvius, latter better in head, legs and body. Mister Dick Bendigo won in puppies and Tom Beverly should have been second over Lady Vesuvius.

Dachshunde.—Windrush Rioter won nicely in dog challenge class over Hundesport Bergman in head, muzzle especially, chest, crook and ear. Girl added another lucky win to her score in her class. Open dogs was a good class, and Wallenstein, better in head and crook than Superbus, won. Hundesport Zänker is too short-faced. Prince Schnapps, reserve, has bad feet, nice head and body; the others need no particular mention. In bitches Janet smothered Lina K., and Tatzy has too much white. Dachshunde are evidently making a move to the front.

Fox-Terriers.—Classes were well filled and the judge did his work creditably in such a small ring. Raby Mixer had no trouble in downing Sturden's Jack in challenge dogs, who loses in head, neck and shoulders very much, and Dona was alone in the corresponding class. Then came a class, when Dobbin's better head and front put him over Glendon Spark, who loses in skull. Brockenhurst Tyke loses in head and loin and front to the others. Painter, reserve, is well known and should have changed places with Bourbon, who beat in head and shoulders, the others need no particular mention. The bitch class was a large one, but Miss Dollar had no difficulty in beating Woodale Regina in head, carriage of ear, front and coat. Rowton Safety is improving somewhat, but still her skull and body are not so good as Refusal, shown at Albany, or Damson's; a lot of these dogs were given vhc.; in fact nearly every one was highly mentioned, which makes the awarding of these cards a farce. Many of them will be seen out again, so it is no use particularizing them at present. Harvard, first in dog pups, is weak in jaw, but nicely fronted. Seacroft Bourbon won second. Bitch puppy awards followed the open bitch class mentions. In wire dogs Eskdale Broom's better coat and front put him nicely over Phasa, and Boston Sting, shown in Canada, ran the latter close. In bitches Capsicum went under to a goodish terrier in Brittany, a son of Brittle.

Irish Terriers.—Breda Bill was alone in dogs and Dunmurry and Breda Tiney was the order in challenge bitches. Jack Briggs beat Boxer IV. in head, coat and front very slightly. Gultis, third, loses in head to both. The bitch entries were absent.

Rough-Haired Terriers.—In Scotch, Kilston again beat Kilbar, and Grey, in bitches, was some distance behind these two. Mephisto Dick was the only entry in Welsh terriers, and Sentinel II. represented the Bedlingtons. King o' the Heather had a challenge class in Dandies, but Heather Madge is better type despite her want of coat than Ourab, and she is better in the leg, the other being too light, but has a nice coat and body. Skye terriers had Sir Stafford far the best.

Yorkshire Terriers.—Toon's Royal and Venus represented the quality in this breed. Dick, short of coat and mixed in blue, was first in dogs over Damfino, described before. Dick beat Toon's Royal for the special, but should not have done so. Minnie Yorke was alone in bitches.

Black and Tan Terriers.—Matchless beat Buffalo Lass in eye, head and body in challenge class. Prince Regent was alone in open dogs, and Meersbrook Empress had a near touch in beating the other in her class.

The toys were poor as usual. Whippets—The Detroit dogs were the only two entries.

Pugs.—These pet dogs were judged on an elevated carpeted platform, but I was unable to get notes on these dogs owing to the crowd. The winners, however, are all well known. Something should be done about benching these dogs. For convenience sake they were put by their owners two and three in a coop, when it is almost impossible to distinguish which is which, unless the owner happens to be at hand. The awards will be found in the list, many of them will be shown again so they can be left over.

Toy Spaniels.—A nice show of quality, and our breeders are getting the skull and short faces more frequently nowadays. Royal Duke beat Young Milwaukee in dog class in breadth and height of skull, coat and forelegs; Ben D'Or, Jr., is dark in tan, small in eye, and has chorea or something like it. In bitches, Mollie Darling beat Little Dollie in head, body and coat; eyes, however, could be larger in the former. Nell Gwynne II. is smutty in tan and loses to the others in head, but is a better mover than either. In puppies, Young Milwaukee beat Mollie Darling in skull and shortness of muzzle. Blenheims showed up well, Young Duke beating Bob W. hands down. Little Girl was alone in bitches, nice head and body, coat fair.

Italian Greyhounds.—Lewis Spring, well known, beats Prince in head and front. Bitches had seven entries, Lewis Star has the most correct head, carries ears well and is good in front; Victoria, faulty in ear and eyes, second; Psyche, ears not carried right, third; Sprite should have been higher up, better head, front and body than either. H. W. Lacy.

Boston Terriers.—Seventeen dogs, owned by members of the Boston Terrier Club, were shown at Chicago. As might have been expected, the number and quality did not quite equal those seen at shows in Boston. The most of these dogs of the best type are owned by wealthy Bostonians, who could not be induced to send their pets so far from home. In open dogs, 20 to 35lbs., the best type was Ben, followed closely in order by Ross, Pawnbroker and Max; of the other two dogs Noble is faulty in head and tail, while Towser is faulty in ears, muzzle, cheeks and general bulldog make-up. Open bitches, 20 to 35lbs., had only two entries. Topsey, first, is a handsome brindle bitch, but very faulty in muzzle. Nell, the other entry, is only a fair specimen, but second prize was withheld on account of docked tail. Open dogs, 10 to 20lbs., had four entries. Smasher, first, a finely-marked brindle and white dog, won easily, his only fault being a tail carried too high. Toby, second, and King of Trumps, third, were only fair specimens, and Littleone, a toy, was outclassed. Open bitches had three entries. Mollie, first, won in a close contest with Bessie, second, who beats her in muzzle, but loses in coat, color and body. Tillie, third, is a nice little bitch, but a trifle light all over. In puppies Rags, first, is an extra good specimen of the breed, his only fault is that he is too thick in neck. Hector, second, is a nice small brindle dog, but faulty in muzzle.—J. W. Newman.

Foxhounds.—The entry was light in numbers. The challenge classes had no entry. Ball, the winner of first, is short and plain in head and lacking in foxhound expression. He is chunky in build, showing a modified type of English foxhound. His legs and feet are only moderately good and his eyes are badly colored. Colonel, winner of second, is a better hound, he being more symmetrical, better in body, legs, feet, head and leather, and shows better foxhound character. His body is well ribbed and he is compactly built. Cull, third, is throaty, has a fairly good head, and his legs and feet are better than those of the first-prize winner. There were but two more dogs in this class, Barney, the reserve, and Sport, vhc., both about average in merit. Six competitors faced the judge in the bitch class. Dart, first, was heavy in whelp, which detracted somewhat from her appearance. She is a modification of the English type. Her legs and feet are good. Beauty, second, is a trifle too heavily built, plain in head and good legs and feet; she was a warm competitor for first. Third went to Kitsy, straight in stifle and only ordinary in form. Shaggy foxhounds had but one entry, a dog, King B., in the open class, to which only a second was awarded, first being withheld.

Pointers.—The pointer classes were well represented in point of numbers, and some were shown which were of excellent quality, notably the kennel of Mr. T. G. Davey, of London, Ont. Heavy-weight challenge dogs had three entries, of which Robert le Diable was absent, leaving the competition between Trinket's Chief and Pontiac, both of which were shown in good condition, the former winning. Heavy-weight bitches had no entry. The class for dogs, 55lbs. and over, had fifteen entries, two of which were absent and one transferred to the light-weight class. Count Graphic, winner of first, is a symmetrical, well-built dog, a bit high on legs and too heavy in neck, which is of good length and well set on good shoulders. He stands on good legs and feet, has a well-made body and was shown in excellent condition. Second went to Westminster Drake, a dog showing some coarseness. He is too heavy in the shoulders, plain in head, yet he shows good pointer character and fair symmetry. Prince Graphic, third, has a coarse head, is throaty and heavy in neck; otherwise he is a well-made large dog. Dude N., fourth, stands on good legs and feet, body well-made; he is somewhat coarsely put together; he is straight in stifles and heavy in head and neck. Two dogs, Ned W. and Chief Ammo, received vhc., the former is somewhat coarsely built, is throaty and too heavy in flew. His legs and feet are well made. The latter is short in neck, is a bit cheeky, he has a good body and stands on good legs and feet, with a fairly good head. He could have changed places with the winner of fourth, he being much the better dog of the two. Pluto, Grand Duke and John S., all hc., are dogs of ordinary merit. The heavy-weight bitch class had nine entries. Revelation won first easily, although she was shown entirely too high in flesh, which marred her symmetry. Second went to Lightfield Madge, also too fleshy; she is short in neck, and her head would be in better proportion if heavier; her shoulders are a trifle too heavy. She could have changed places with Pickwick, winner of third, good in body, legs and feet; neck good and well set; head not quite clean cut enough for good form. Fourth went to Princess Marguerita, having a coarse, wedge-shaped head; otherwise she was fairly well built. There were four which received vhc., of which, Lady Trinket, was wide in chest and short in head, Lord Graphic Gem was throaty and somewhat cheeky, Daisy B. was light in muzzle, poor in head, stands too high and shows throatiness, and Cricket C. was only average.

Launcelot shown in good condition, had a walkover in the challenge class for dogs under 55lbs. Duke of Hessen, the only other entry being absent. The corresponding bitch class had no entry. The open dog class had eight competitors. Ridgeview Wagg won first. He was transferred from the heavy dogs to the light, he being one of the dogs which are so near the limit of weight that they are light weights before dinner and heavy weights after. He is symmetrical, but somewhat stockily built. His shoulders have some heaviness, but his legs, feet, body, stern and symmetry are superior. Inspiration won second. He was in fine condition. Graphic's Tonic is heavy in skull and leggy, yet his legs and feet are good, and he has fair symmetry. Osborne Ale II. has a neck too short, but otherwise he is fairly good. The rest of the class was but an average lot. Eleven were in

the class for bitches under 50lbs. Miss Rumor, winner of first, is good in body; her legs and feet are superior, body well made, neck good and her symmetry is superior. Pattie Donald, second, is plain in head otherwise she is well made. Lady Gay Spanker, third, is a symmetrical bitch, well built, and good every way excepting a slight throatiness. I thought her the best one in the class with Miss Rumor for second and Pattie Donald third. Ridgeview Beryl is deficient in symmetry, has a small short head, good body, fair legs and feet. Camille vhc., was shown in too thin flesh. Minka, also vhc. is common in quality and build. The puppy class had but two entries. Lord Graphic's Bang, first, is heavy in head; legs, body and feet are good. Bruce D, second, is about a good average. Mate was the only entry in the bitch puppy class.

ENGLISH SETTERS.—The challenge class for dogs had three entries, Cincinnatus, Paul Gladstone and Edgemark. Cincinnatus, first, has thickened up, or carries more flesh than heretofore, which greatly improves his appearance by giving him the necessary rounding in his form and outlines. Paul Gladstone, second, was looking well, despite his ten years. The corresponding bitch class had two competitors, Cambriana and Albert's Nellie, placed in the order named. The open dog class had 22 entries, of which there were three absent. First was won by Breeze Gladstone, a catchy dog in appearance, but one which does not bear careful examination successfully. He is straight in stifles, not first-rate in arm and shoulder, and not near equal to Cincinnatus, which he beat for the special prize, the latter surpassing him in head, neck, shoulders, legs, and general symmetry and quality, with a more perfect muscular development. Toledo Blade, second, shows more spring of ribs than he should for good form. He was looking in good condition. Third went to Paul Bo, a dog of good symmetry and well made, but out of condition for a bench show, he having only recently been brought from the South, where he was used by his owner, Mr. Merrill, to shoot over, and where he also competed in the trials. Matane won fourth; he is a good all round dog. Benzine, Dad Wilson's Boy and Sir Frederick, vhc., are all good dogs far superior to the class of dogs to which vhc. is commonly awarded. Eighteen competed in the bitch class. First went to Amy Robsart, a bitch out of condition and deserving about third. Sue II., winner of second, is light of bone, passably good in head and fairly good otherwise. Daphne, third, is a bitch of superior quality. Lady Dudley, fourth, has excellent legs and feet, a lean good neck and well-shaped body. The judge entirely ignored Nia in the awards, a bitch of superior quality, a winner at several bench shows, and also Canadian Lillie, a bitch of very superior merit. The awards in this class gave a great deal of dissatisfaction, most of the opinion being in favor of Canadian Lillie for first, Daphne for second and Amy Robsart for third. Pembroke's Blue Light, vhc., is a good small bitch, a shade light in bone, good body, legs and feet. Nell Q., also vhc., barely deserved the three letters. Dog puppies numbered six. Best Tonic, a very superior puppy, having a well-ribbed good body, a well shaped head and good legs, won first. Second went to Pembroke's Blue Grouse, shown too thin in flesh. The rest of the class was commonplace. Misfortune, the winner in the class for bitch puppies, shows good quality.

IRISH SETTERS.—An excellent lot of Irish setters was shown, they having more uniformity in type and race characteristics. Kildare won over Seminole in the challenge dog class, while Laura B. won over Elfreda in challenge bitches; all these are well known. The competition in the open dog class was close. Duke Elcho secured first. He is a trifle heavy in skull, has a good body, and stands on good legs and feet. Pride of Patsy, second, is also a good dog, having a well-shaped head, and feet and legs well made; good symmetry. Rex, third, has a short, plain head. Rancho, fourth, is a trifle too heavy in head and not well enough sprung in ribs. King Elcho, the reserve, is on the coarse side of the type. There were fifteen competitors in the bitch class. Edna H., a bitch of fine form and symmetry, won first. Nellie M., second, was a close second; she is a good all-round bitch, having a good head, neck, back, legs and feet. Kildare Rosalie, winner of third, has a skull a bit too narrow, and head only fair in shape. Fourth went to Kildare Doris, not deep enough in chest and plain in head. Five puppies were shown, all dogs, and only a fair lot.

GORDON SETTERS.—The entries in these classes were light, Ivanhoe and Leo B., and Lady Waverly and Duchess of Waverly winning in the challenge classes, for dogs and bitches respectively, in the order named. The open class for dogs had three entries, of which Nabob won first. He has good tan, and is well built, but might be better in short ribs. Reginald H., second, has a good head, body, and his legs and feet are good. Wallace, third, is only a fair dog. He is deficient in tan markings. There were three in the bitch class. First went to Janet, a bitch of good color and well built. Maid of Waverly was a good second. She is somewhat shallow in chest. Nan, third, is too narrow in head and light in tan. Bob B. had a walkover in the dog class for puppies, as did Carmencita in the corresponding bitch class. They are both unusually good puppies.

CHESAPEAKE BAY DOGS.—The challenge classes were without an entry. There were but two entries in the open dog class, Barnum easily defeating Dan, the latter being too coarse and throaty. There were three bitches. Ruby III., winner of first, has a short, poor head and is light in bone. Wave, second, was far away the best bitch in the class, better in head, type, muscular development and coat. Gypsie II., third, is coarse in head and deficient in symmetry.

IRISH WATER SPANIELS.—There was an unusually good exhibit of Irish water spaniels both in quality and numbers. None of them were in good coat, and some of them were too straight, soft and fluffy in coat. Jack A., first prize in open dogs, had the best coat and topknot, a good head, and was better built than any in his class. Pat Rooney, second, is light in body and in poor coat; he has good legs and feet. Dennis O'Donoghue, third, is good in bone; straight, light thin coat; out at elbows; too high on legs. Bitches had five entries. Queen Vic, first, has an ordinary head, out of coat and deficient in symmetry. Mallard Duck is high behind, too fat, poor coat and little symmetry. Nora O'Donoghue, third, is a good small bitch, fairly good coat and bone. Two puppies were shown, Pat Rooney, already mentioned, winning first, and Willie Riley, only an average puppy, winning second.

MISCELLANEOUS.—This class was extremely light in numbers, there being but three competitors out of five entries. Orson, a bob-tail sheepdog, won first. Busybody, an English terrier, took second, and Spot, a dog which could not be found anywhere after a diligent search, being third.

B. WATERS.

AWARDS.

MASTIFFS.—CHALLENGE—*Dogs:* 1st, C. E. Bunn's Ormonde; 2d, Wyoming Kennels' ch. Sears' Monarch.—OPEN—*Dogs:* 1st, E. L. Kimball's Elkson; 2d, A. H. Ayres' Wellington; 3d, Flour City Kennels' Cardinal Beauforth; 4th, C. N. Powell and A. H. Ayres's Edric. Very high com. res., C. C. McLean's Cyrus. Very high com., H. Harley's Nero. A. J. Geis's Webster Judge, C. H. Strass's Dan. High com., J. Van Slyke's Trust, H. Wyeth's Stanley, F. Bachmeyer's Ilford Caution III. and S. S. Badger's Hector. *Bitches:* 1st, 2d and 3d, C. E. Bunn's Sinaloa, Ilford Cameo and Matella; 4th, H. Wyeth's Mai Chancellor. Very high com., E. A. Davey's Melrose Portia.—PUPPIES—*Dogs:* 1st, Mrs N. McLean's Sraoshn; 2d, G. E. Holcomb's Prince Cola; equal 3d, L. R. Owen's Ilford Dates and S. S. Badger's Hector. Very high com. res., C. H. Strass' Dan. Very high com., H. Wyeth's Stanley, R. Morse's Sassicus, Baby Bunn and Rob Ranter. High com, J. B. Benedict's Hector B. and F. Bachmeyer's Scott's Binga. Com., F. Bachmeyer's Guy. *Bitches:* 1st and 2d, C. E. Bunn's Sinalon and Matella; 3d, H. Wyeth's Mai Chancellor. Very high com. res., G. H. Gernhofer's Countess von Moltke. Very high com., B. R. Morse's Clotilda. High com., L. Lange's Iris.

GREAT DANES.—CHALLENGE—*Dogs:* 1st, Imperial Kennels' Imperator; 2d, H. G. Nichols's Melac. *Bitches:* 1st, Teutonia Kennels' champion Irene.—OPEN—*Dogs:* 1st and 3d, Wolverine Kennels' Favor and Brutus; 2d, Teutonia Kennels' Roland; 4th, J. W. Van Dyke's Haus. Very high com., L. P. Wolt's Cæsar. High com., J. C. Lineman's Fritz. Com., Dr. Schmidt-Wartenberg's Tyras. *Bitches:* 1st and 4th, Wolverine Kennels' Ultimo and Fris; 2d, T. Honegger's Ulma II.; 3d, H. F. M. Podeyn's Nora. Very high com., Dr. W. Mills's Minerva Fawn. High com., J. W. Heitz's Minca. Com., A. M. Jaggard's Lorka.—PUPPIES—*Dogs:* 1st, withheld; 2d, Dr. Schmidt-Wartenberg's Tyras; 3d, O. Seeger's Uncas; 4th, M. G. Gervich's Tiger. Very high com., C. Sullivan's Don Senator II. *Bitches:* 1st, Wolverine Kennels' Ultima; 2d, Herbert G. Nichols's Charmion; 3d, H. Raison's Victoria; 4th, O. Seeger's Bianka. Very high com., G. Collins's Minerva. High com, Jas. Traeger's Bonnie T. Com., P. Shordiche's Clio.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—*Dogs:* 1st, Wyoming Kennels' Plinlimmon Jr. *Bitches:* 1st, Wyoming Kennels' Mahon.—OPEN—*Dogs:* 1st, Jacob Ruppert, Jr.'s Aristocrat; 2d, Wyoming Kennels' Jim Blaine; 3d, John Poag's Beau Sire; 4th, W. C. Hickox's Fernwood; Res., Harriette M. Hughes's Lord Wilton. Very high com., Wyoming Kennels' Lothario, R. P. H. Durkee's Burns, J. W. Dunlop's Othello. High com., Richfield St. Bernard Kennels' Kinglimmon, M. A. Broussias's Carl, C. G. Bogart's Grover Bogart, J. Maischaider's The Baron Com., J. Roach's Mascot Bernard, E. C. Preble's Melrose Pluto, R. M. Isherwood's Senator Boi. *Bitches:* 1st and 4th, Wyoming Kennels' Repsey and Lady Adelaide; 2d, C. H. Tobey's Queen Noble; 3d, and res., Jacob Rupert, Jr.'s Altonette and Helen Terry. Very high com., G. H. Roose's Mascot Floss and Jacob Ruppert, Jr.'s Lady Hibernia. Best pair rough-coated exhibited, Jim Blaine and Hepsey. Best kennel, Wyoming. Best collie stud dog, Christopher. Best dog under two years in open class, Sir Walter Scott. Best bitch, ditto, Heather Twig. Best dog in novice class, Strathearn. Bitch ditto, Daylight. Best kennel, Chestnut Hill. Best puppy whelped after Sept. 1, Mistletoe. Best bloodhound, Jack Shepard. Best Russian wolfhound, Leekhoi. Best bitch, Flodeyka. Best kennel deerhounds, John E. Thayer. Best dog, Robber Chieftain. Bitch, Romola. Kennel greyhounds, H. C. Lowe. Best dog, Lord Neverstill. Bitch, Little Climber. Foxhounds pack, R. N. Poole. Best pair, Ball and Dart. Best dog, Ball. Bitch, Dart. Best kennel pointers, T. G. Davey.

Best English setter in show, Breeze Gladstone; bitch with two of her produce, W. B. Wells's Cambriana; best dog ditto, J. E. Dager's Toledo Blade. Breeder of best three dogs or bitches over 12mos., W. B. Wells. Dog or bitch with best field trial record, Toledo Blade. Best Kennel, W. B. Wells. Best that has run in a field trial, Breeze Gladstone. Best brace under 12mos. old, Blue Ridge Kennels' Esmeralda and Misfortune. Best kennel Irish setters, Oak Grove Kennels. Best kennel of Gordons, Dr. Dixon. Best kennel Chesapeakes, H. H. Smith. Best kennel field spaniels, A. Laidlaw. Best cocker kennel, Luckwell & Douglass. Bull-dog Club—Best dog or bitch, King Lud. Best American-bred dog, Nobby Twist; best puppy, Nobby Twist. Best kennel, Woodward & Mariner. Best kennel bull-terriers, John Moorehead. Best dog over 30lbs., divided, Streatham Monarch and Garney; Boston terrier 10 to 20lbs., Smashers; bitch ditto, Mollie. Dog 20 to 35lbs., Ben; bitch ditto, Topsey. Best kennels, Auburn Kennels. Best kennel dachshunde, E. A. Manice. Best kennel beagles, Rockland Kennels. Garfield cup for best fox-terrier, Miss Dollar. Best kennel, J. E. Thayer. Best pair of pups between 3 and 6mos. old, Harvard and Princeton. Best Yorkshire dog, Dick. Best American-bred black and tan, Ruby H. Best kennel, Toon & Symonds. Pug Breeders' challenge cup, Sateen. Best kennel, Howard Bros. Best kennel Italian greyhounds, Mount Washington Kennels.

BLOODHOUNDS IN AMERICA.

Editor Forest and Stream:

Will you allow me a small space in your columns to state that Mr. J. L. Winchell and myself are not now breeding and exhibiting bloodhounds jointly. I have been a breeder of bloodhounds for more than twenty years, and, of course, take a very great interest in everything pertaining to this historical breed teeming with old associations and old time stories, and capable of being brought back into practical, every day use instead of being chiefly valued for its magnificent appearance and services as the artist's model.

We have now a number of specimens which come very near perfection in hound properties, and are of great power and pace. It is scarcely necessary to say that the breed stands very far in advance of any other as regards scenting powers. Until the last few years the bloodhound was practically unknown in America and I have long felt that if properly introduced it would be of the greatest advantage not only to the breed itself, but to every gentleman who was induced to go in for it in a workmanlike manner.

Through the kind offices of my friend Mr. Taunton, in February, 1888, I became associated with Mr. Winchell, and I consider myself especially fortunate in this, as our relations have always been of the pleasantest character, and I don't think that any one could have been more enthusiastic in getting the bloodhound taken up on your side. I am glad to say that his exertions have been successful and that we consider that the breed has now got a fair start.

Although we shall not now be associated together in breeding and exhibiting, Mr. Winchell will continue to import hounds from me when he runs short of suitable ones of his own breeding, and I hope that I may some day be able to bring a team over to compete with your home-bred ones at one of your New York shows. Edwin Brough.

Scarborough, England.

The St. Bernard men are arranging for a club dinner at Delmonico's or the Brunswick during the show week.

DOG CHAT.

Mr. Vredenburgh writes us: "I notice two errors in your issue of to-day and beg to send you the corrections. First—By the payment of the prize of the defunct Albany Kennel Club to Mr. A. W. Smith, of Buffalo, amounting to $8, the disqualifications against the officers were removed, but the club was not reinstated, it having been dropped from the roll of membership for non-payment of annual dues at the last annual meeting of the club, held Feb. 26, 1891. Second—The expenses of Mr. L. F. Whitman, of Chicago, for attending the last annual meeting of the A. K. C., to the amount of $36, was not paid by the club. Mr. Whitman came on to the W. K. C. show, and while there attended the annual meeting as one of the delegates of the associates. He doubtless paid his own expenses, as no claim for such was ever made to me by him. The item of $36 for 'expenses of associates' as published in my annual statement, refers to moneys paid to Dr. Perry to cover his expenses in attending two meetings during 1891." Evidently a slight misunderstanding, and we are pleased to correct the latter statement in justice to Mr. Whitman, though as our information came from one of the officers of the club we felt justified in printing it.

Mr. Geo. W. Patterson, in renewing his advertisement in Forest and Stream, remarks that he will be unable to show his kennel at New York, as his bitches are in whelp and puppies too young to show under the new rule.

Spaniel men and those who are not exactly known as spaniel men, but who appreciate a happy gathering of dog men, should not forget the Spaniel Club's dinner, which will be given at Morello's, Wednesday evening of the W. K. C. show. Full particulars can be had from Mr. A. C. Wilmerding, 163 Broadway, New York. The Spaniel Club cups will also be on exhibition at this gentleman's office.

The entries for the New York dog show, although not so large as last year, it is safe to say will show an increase of quality over all former years. The $5 fee seems to have had little effect. The number in each breed is:

Mastiffs	33	Basset hounds	1
St. Bernards	130	Dachshunde	27
Bloodhounds	8	Beagles	39
Great Danes	37	Fox-terriers	116
Newfoundlands	6	Irish terriers	25
Russian wolfhounds	7	Black and tan terriers	14
Deerhounds	24	Welsh terriers	1
Greyhounds	40	Dandie Dinmont terriers	7
Foxhounds	10	Bedlington terriers	11
Harriers	6	Skye terriers	9
Pointers	95	Scotch terriers	4
English setters	81	Yorkshire terriers	18
Irish setters	74	Toy terriers	7
Gordon setters	36	Pugs	23
Chesapeake Bay dogs	1	Toy spaniels	45
Spaniels	90	Italian greyhounds	4
Collies	85	Schipperkes	2
Poodles	19	Miscellaneous	12
Bulldogs	42		
Bull-terriers	47	Total	1247

The late entries are now all in, and number 1266, or 1163 without duplicates, and they will all be bunched on the main floor.

Mr. Brooks is importing, we hear, a crack pair of Scotch terriers. He is not content with running second. This is the way our breeders pick themselves together and the breeds benefit thereby, and some of the terrier classes need a little new blood.

The young mastiff Sraosha was sold during Chicago show to Mr. F. G. McCain for $200; he won first in dog puppy class.

Mr. Carl Heimerle sold ch. Irene, the Great Dane bitch to a Milwaukee man for a house and lot—no, some real estate, value $1,500—so Mr. Heimerle says.

It is no use attempting to run a show without an experienced man as sole superintendent. This the Chicago people have by this time probably found out. Of course it is understood that the club was handicapped by the non-arrival of the full lot of benching, but carpenters were got to work. But somehow benches were not assigned to the dogs, and the first night of the show some of the terriers were still in the crates, and deerhounds and terriers tied to the flooring for a couple of days after the opening. Of course there was grumbling at this. Then the watering of the dogs was not attended to as it should have been. The aisles were not kept as clean as last year; in fact, the whole show in the way it was run was not up to date. There are several men who for, from $150 to $300, will manage the shows properly, and as they know the exhibitors and are practical exhibitors themselves, know what is required. Messrs. Goodrich, Hagans, Lincoln, Locke, etc., worked hard enough in all conscience and were never off the ground hardly; but still for the want of knowing how their labors were doubled.

There was considerable amusement at Mr. Lewis's vigorous kick in Italian kennel prize award decision, the judge scoring on a basis of 5, 4, 3, 2, in order of prizes, so that the kennel with several seconds and mention cards was given the special. This score card was afterward torn up and the special given to the right kennel, the Mt. Washington Kennels having the best dogs.

Then the kennel prize for best sporting kennel was judged by Mr. Davidson, when all the sporting judges should have taken a hand in. Under the first decision Messrs. Davey and Fowler's kennels divided, but next day when they all got together the prize went rightfully to Mr. Thayer's team of deerhounds and fox-terriers.

The goat circus seemed to be a great fund of amusement. This is an innovation which hardly interested the *cognoscenti* however, and Prof. Parker is much missed this year.

The catalogue was much too full of errors, and many well known names had only a suspicion of their former meaning. Several of the numbers would be missed and found on other pages. The dogs were benched in many classes with little regard to rotation, and as kennels were allowed to bench their dogs together much confusion resulted, and one could not tell where one breed began and another ended in the main building. The club is sorely handicapped at having such dark small quarters for their show, and this may be the cause of much of the trouble and annoyance. If this is the case the entry list should be restricted as at New York, or another building procured. Marked catalogues were issued by Thursday and on the whole the awards were very accurate. Judging was not concluded till Friday with the awarding of specials.

Mr. Sackett, who owns Adam and Eve, the cocker spaniels, purchased Rabbi from Mr. Laidlaw and Bessie W. and Novel from Mr. Willey and intends to get together a good team of cockers.

Mr. Frank F. Dole has sold Attraction, the bull-terrier, to Mrs. Bradford, of New York. She was entered at Chicago, but the purchaser wished to take her home at once from Mr. Dole's kennels, so friend Frank bemoaned a loss of $10 prize money at Chicago, but it is more than likely our friend remembered this when making the sale, so we cannot condole with him. Mr. Brooks, through Mr. Dole, bought the Dandie Dinmont Border Reiver from Mr. R. D. Williams during the show. He is getting a clinker out from England.

Mr. Symonds is getting ready for the show season. Here are some of the dogs he is importing: The black and tan terrier bitch Gipsey Girl, by Rock out of Western Maid; Whippets, Boston Model, blue and white, a big race winner; also Perfection, by ch. Spark out of Young Wonder, color red and white. The Scotch terrier Bell, a red brindle, whelped Jan. 17, 1890, by ch. Kildee out of First Fettin; also Scotch Hot.; bull-terrier Comet II., by Comet ex. Nora; Pomeranian Sheen, by Rocket out of Vivert, whelped October, 1890. The pointer Ruby VII. (E.K.C.S.B. 24,451), whelped Jan. 17, 1886, by Don out of Romping Doll; her wins are 30 firsts, 18 seconds and 3 thirds. Among those is a first at Crystal Palace; with this bitch also comes Devon Bangor. All these with exception of Ruby VII. came on s.s. Lake Superior, of the Beaver Line, and Ruby VII. will follow in time for New York show.

Mr. E. H. Morris has bought a Sussex bitch in England, from noted stock and in whelp to Bridford Bachelor. She is entered at the New York show, but being uncertain as to her fit condition to compete, his order was filled for a black dog, Bachelor, said to be a good one. He is by Hindley Black Prince (E. 27,002), going back on this side to Sterling, Moonlight, Old Nellie Bachelor, Smutty Scamp and Silvia. His dam is Floss, she by Moonstone, a winner of twenty first prizes and ten specials.

The application of the Keystone Kennel Club of Philadelphia has been received at the A. K. C. office, and a claim for March 1 to 4, 1892, allowed for its inaugural show.

We regret to hear that Mr. Michael Flynn, whose Irish setter Sedan won the All-Age Stake at the late Irish setter field trials, owing to business arrangements, has been obliged to part with his dogs, and must now be only a looker on. It was his intention to run Sedan this fall in the Champion Stake under S. C. Bradley's charge, of whom he speaks in glowing terms as a man and a handler.

Dr. Wesley Mills's new work, "The Dog in Health and in Disease," will be on sale at the New York show."

We have received the premium list of the Keystone Kennel Club's first show, to be held at Tattersall's, Philadelphia, March 1 to 4. The list is quite liberal, challenge prizes of $10 are given to important breeds, and open classes have $15, $7 and $3 in mastiffs and St. Bernards, pointers, setters, collies, fox-terriers and pugs $10, $7 and $3. Other classes $7 and $3. The judges have already been announced. Entries close Feb. 19. A Dachshund class has been added to the premium list, and if there are two competing kennels of Gordon setters a kennel prize of $15 will be given. Other specials will be announced later.

As a direct result of the show just held at Elmira, N. Y., those interested in dogs organized a kennel club Feb. 7. The officers elected are: Pres., Ray Tompkins; First Vice-Pres., Dr. A. DeV. Pratt; Second Vice-Pres., Jno. F. Langworthy; Third Vice-Pres., C. W. Jones; Sec'y and Treas., Charles A. Bowman. Executive Committee: George W. Rogers, Manfred H. Davis, Frederick A. Cheney, Prof. J. W. Roberts and George Brand. They have made application for membership in the American Kennel Club, and intend to hold their first show during the Inter-State Fair, September, 1892.

Dr. Nicolai writes us to correct the impression that the great Dane Imperator cost $8,000. He says he knows the dog to have cost $1,000 to the club he is a member of, and this after he refused him at a price of $450.

The Duquesne Kennel Club's premium list is before us. In keeping with its standing as an important show, they have offered some very good prizes. All the big breeds, the drawing cards, are given $20 and $10 in challenge classes, and $10, $5 and $3 in the open. Other breeds $10 and $5 in challenge, and $10, $5 and $3 in open classes. A number of valuable specials are given both by specialty clubs and individuals, so that there will be good pickings for the lucky ones. The judges are: John Davidson—English, Irish and Gordon setters, pointers, greyhounds, deerhounds, beagles, foxhounds and Italian greyhounds. Miss A. H. Whitney—St. Bernards, Newfoundlands and great Danes. Mr. George Raper, England, all the other breeds. Entry fee for mastiffs, great Danes, St. Bernards, Barzois, Newfoundlands, Deerhounds and bloodhounds is $4 All other classes $3, and entries close Feb. 27, with superintendent, Box 515, Pittsburgh, Pa.

Mr. R. F. Mayhew has been commissioned to report the New York Dog Show for another greatest paper in the world, the London *Field*.

Mr. George Bell has repurchased Obadiah, the cocker, from Mrs. King, Lexington, Ky. He reports a crack by this dog to come out at New York. He also sold Gothamite to a Chicago party.

Messrs. Brooking and Parry, after selling the beagle Frank Forest, cabled to England for a crack trailer.

A number of queries will be answered by mail this week, and Kennel Notes are left over for want of space.

Mr. F. F. Dole will attend to auction sales of fox-terriers at New York, and will be pleased to purchase dogs for intending buyers who cannot be present themselves.

Mr. Lamb expected to receive a St. Bernard, which he describes as a "clinker," by a steamer arriving last Monday or Tuesday. Further particulars are not vouchsafed.

Mrs. Smyth, of the Swiss Mountain Kennels, has purchased another good St. Bernard bitch, Nancibelle, from C. J. Clarke, Elmira, N. Y. This bitch is by Alton out of Nero III., sire of Sir Bedivere. This lady also purchased Nancibelle's two dog pups, by Tristan G.

The premium list of the Continental Kennel Club's show at Denver, Col., April 13 to 16, is being mailed. The club should have a good entry with such prizes as $10 in challenge and $10 and $5 for all the breeds except the hard-haired terriers and toys, etc.; entry for these breeds is $2.50, all the other breeds $3. Entries close March 28. The club gives a special of $65 to handler showing the largest team in best condition, and $35 for the second best. Mr. John Davidson will judge all classes. Spratts biscuits will be fed and Sanitas disinfectant will be used.

The cocker spaniel Red Roland will be shown at New York, Philadelphia and Pittsburgh this spring. Western papers please copy.

History is going to repeat itself in the case of the collie Charleroi II. Imported originally by Mr. Harrison, he returned as part of the deal for the great Christopher. Now Mr. Carswell, of Wilmington, Del., writes us that he has

purchased the dog and America will see Charleroi II. again. This dog was not appreciated at his true value when here before; in England, however, he has done well, winning several prizes and siring the sensational collie Christmas, which sold for $700 recently. As his sire was the famous champion Charlemagne and his dam Sooty, sister to champion Peggy II., dam of Christopher, his breeding alone is worthy of especial notice. He will be shown and placed at the stud.

As the constitution of the associate members provides that in the event of an elective officer declining to serve, the one receiving the second highest number of votes shall be duly elected, and as this resulted in Mr. Reick's election, he has expressed himself as now willing to serve, but we agree with him that the rule as it now stands should be altered, as a number of voters lose their expression of opinion thereby. Ample time should be allowed so that a final ballot could be taken when an elective officer declines to serve.

POINTS AND FLUSHES.

COURSING seems to be growing in favor steadily but slowly. The Great Bend meeting was the only event of the kind east of the Rocky Mountains for several years. Inclosed coursing had a short popularity, or else the obstacles to introducing and establishing it were too great to make it a profitable venture financially. The establishing of different coursing competitions on the plains in the home of the jack rabbit indicates a healthy sentiment and earnest support of this grand sport. Mr. H. C. Lowe, of Lawrence, Kan., famous in the coursing world, informed me that a coursing meeting was arranged to take place at Colorado Springs, near the western Kansas boundary, and that another was being arranged to take place in western Kansas in the near future.

Mr. W. B. Stafford, of Trenton, Tenn., well known as a trainer and field trial handler, contemplates an enlargement of his business by establishing a boarding kennel at St. Louis, Mo., in addition to his training kennel, which he will continue to conduct at Trenton. Mr. Stafford's great experience and large acquaintance should insure the success of his venture from the start in so promising a field, one in which there is ample room and call for such a kennel.

Mr. J. E. Dager, owner of the celebrated dogs Cincinnatus and Toledo Blade, and Prof. Osthaus, have united their doggy interests in a kennel, in Toledo, Ohio, the city in which they live. Buildings of approved arrangements will be built for the dogs, and a large area will be inclosed for kennel grounds, thus affording the best of accommodations and exercising opportunities. The two dogs above mentioned are not included in the partnership, but there is abundant material on hand for the new kennel.

The source of greatest regret in respect to the life of a good dog is that it is so short at best. A dog's worth and the affection an owner feels for so devoted a friend make the loss most keenly felt. Mr. W. B. Hill, Frankfort, Ind., writes me as follows: "I had the misfortune to lose by death my dog Reveler. He was whelped in March, 1889, and was by Gath's Mark—Esther. He won the Indiana Kennel Club's Derby in 1890 in merry style. He went to the Eastern trials the same fall and took distemper with Zig Zag, Jubilee (a litter brother), Tapster and Mr. Heywood-Lonsdale's string, nearly all of which died. I thought my dog well, but in bringing him into condition for the Central All-Age Stake of 1891, paresis set in and finally killed him."

Mr. Joe Lewis, of Canonsburg, Pa., one of the most genial and popular handlers at the bench shows, informed me that he had purchased the blue belton English setter bitch Daisy while in England last summer, and that she would be imported some time next summer. She is by Prince Rupert II. (Hartley's Lord Westmoreland—Fleming's Tris) out of Bashful Di (Discord—Belle of Ravensbarrow). Both sire and dam have a long list of winnings on the bench.

Mr. John Bolus, of Wooster, O., the veteran trainer and breeder of English setters, and the phenomenal field shot of that section, informed me that an intensely cold wave of last month was very destructive to the quail about Wooster. The thermometer indicated 30 deg. below zero, most certainly an intensely cold temperature. Mr. Bolus says that 10 deg. below zero is as cold as quail can stand, and below that temperature their destruction is great. A remarkable feature was that this intensely low temperature was in a comparatively small area of country, it being about 20 deg. colder than at Toledo at the same time.

Mr. G. O. Smith sold his English setter dog Dad Wilson's Boy (Dad Wilson—Dolly S.) to Dr. R. J. Withers on the last day of the show. Dad Wilson's Boy was bred by Mr. J. Shelly Hudson, and made a good showing in the field trials at New Albany, Miss., in 1891.

The new association organized in New Orleans, called the Interstate Sportsmen's Association, already having a membership of over fifty members, has arranged to hold a field trial on Monday, Feb. 15, at Magnolia, Miss. This is the inaugural event of the association. Next year it intends to hold trials open to the world. B. WATERS.

ST. BERNARD CLUB SPECIALS.

BLOOMFIELD, N. J.—*Editor Forest and Stream:* In response to invitations from various clubs to offer specials at their coming shows, the St. Bernard Club of America has offered the following club medals to be competed for by dogs belonging to members of its club, conditional upon the different clubs treating both smooth and rough-coated classes alike; that is, offering the same prizes to each variety. We are perfectly well acquainted with the fact that more rough-coats are entered, and consequently a greater revenue is derived from them than from the smooths; at the same time the smooth is the original animal and, as a rule, is far more typical, and it is the intention of our club to do all in its power to prevent bench shows from discriminating against the smooths.

Under the conditions mentioned above we have offered at Washington, four medals, one for smooth-coated dog, one for smooth-coated bitch, one for rough-coated dog and one for rough-coated bitch. All to be American bred, any age.

At Pittsburgh, six medals, one each as at Washington, but for animals over 12 months, and one for dog puppy under 12 months, rough or smooth, and one for bitch puppy, same conditions.

At Denver we offer four medals, same as at Washington, but, as our club has not one member at the present time in the far West who is likely to exhibit, our medals are likely to remain with us.

Two shows are to be held in California, and we should be most happy to offer specials there, but there is no use doing so unless some of the intending exhibitors join our club, for our medals are only for club members. Our medal is a handsome one, made by the Whiting Manufacturing Co., and they consider it one of the finest pieces of work ever turned out by them. It is good-sized, weighing between three and four ounces, and those of our members who have had the good fortune to win one are extremely proud of it, and prefer it to a meaningless cup. Any information concerning our club can be had of me.

W. H. JOECKEL, JR., President.

EASTERN FIELD TRIALS CLUB.—*Editor Forest and Stream:* The governor's meeting of the Eastern Field Trials Club will be held during New York dog show, Madison Square Garden, on Thursday, Feb. 25, at 2:20 P. M. A general invitation to all members is given. President, F. R. Hitchcock; W. A. Coster, Sec'y-Treas.

UNITED STATES FIELD TRIALS CLUB.

THE United States Field Trials Club held its annual meeting at the Palmer House, Chicago, on Feb. 11. The business transacted was chiefly of a routine character. The stakes arranged for the next trials are the same as those of last year; that is, a pointer and setter all-age stake, a pointer and setter Derby and an absolute winner for the all-age and Derby. The stakes at present amount to $2,600, with $100 more added to the Derby. Messrs. Richard Merrill, E. G. Stoddard and P. T. Madison were appointed as a committee to select the judges for the next trials. Messrs. Madison and Kerr were appointed to select the grounds, which probably will be in Indiana. There was only one change in the rules governing the running at the club's trials. Instead of "dogs must be broken," "should" was substituted for "must." The report of the secretary-treasurer showed a balance of $974.20 in the treasury with no indebtedness on the part of the club.

The list of officers elected is as follows: President, Dr. N. Rowe; First Vice-President, C. G. Stoddard; Second Vice-President, H. Hulman, Jr.; Secretary-Treasurer, P. T. Madison. Board of Governors, Dr. N. Rowe, Paul H. Gotzian, Hon. J. E. Guinotte, J. M. Freeman, Wm. M. Kerr, Col. A. G. Sloo, H. Hulman, Jr., H. J. Smith, C. G. Stoddard, C. E. Proctor, Richard Merrill, R. L. Shannon, G. G. Pabst, P. T. Madison and J. M. Avent. Messrs. W. B. Stafford, Trenton, Tenn., and B. Waters were elected to membership. There was some sentiment in favor of running the trials in the South, somewhere in Tennessee. Such a move would destroy in a great measure the mission which it has as a Northern club, since dogs would need a most thorough preparation on Southern grounds and birds before the trials, and therefore it would be under such circumstances a trial widely distinct from a trial in the North. All practical trainers go South at as early a date as possible to prepare their dogs for the trials held in the South, experience having taught them that their dogs must get accustomed to the water, climate, food and changed conditions of hunting and habits of the birds before they can enter a competion with any hope of success or even of a good showing. Indiana has abundance of birds, and proper grounds can be found if properly searched for.

CANADIAN KENNEL CLUB RULES.

Editor Forest and Stream:

You have doubtless by this time had your attention drawn to a couple of resolutions passed at the last meeting of the executive committee of the Canadian Kennel Club, and by which you could hardly fail to be impressed (?) by the enormous amount of ability and intelligence displayed in the framing and adoption of the same.

The first of these resolutions I refer to, which in the official report gives as the mover Mr. C. A. Stone, whom one would think had had experience enough to know that it could not possibly meet the end in view, is that a dog to be eligible for the title of champion must have won three first prizes in challenge class, one of which wins must have been at a show where there were 500 entries. Presumably the idea is to raise the standard of this class, but it certainly is a rather peculiar way to go about it. I could give you many instances where the entries in a show have been small, yet in some of the classes quite large and the quality exceptional. You will easily perceive that by the operation of this resolution an injustice may be done to a good dog by being debarred from a meritorious win. No; rather let the committee set about devising some other method of dealing with this question, certainly not by considering the different classes collectively, but I would suggest individually.

The other resolution is most absurd, and does not need any criticism to show its absurdity. It is "that a dog that has won in England may in future be eligible for entry in the novice classes." What massive intellects the committee displayed in adopting this resolution! What a pity Sir Bedivere was brought out so soon; he might have had a chance of distinguishing himself in the novice class at our show here next fall. Under this resolution any English dog, no matter what his standing, may compete in our novice classes. This is so very ridiculous that I trust the committee will close the farce at once by dropping this one and materially altering the first, so as to be of benefit to the candidates for champion honors. H. P. THOMPSON.

TORONTO, Can., Feb. 9.

SEEN OR OVERHEARD AT CHICAGO.

A COUPLE from Indiana passed where the sign said, "Take a FOREST AND STREAM weekly for liver complaint," and they took one from the pile.

"I see this yer paper talks about them Pass-over dogs," said he, a little later. "I guess we better go see them." So they went hunting for the Psovie, and finally found the place.

"Is these here things them new Preserver dogs?" asked she of the polite attendant.

The attendant studied for a moment.

"No, madam," he finally replied: "I think you are looking for the St. Bernards. Three aisles to the left."

—§—

The daily newspaper reporter was there, and the Russian importations direct from the throne of the Czar gave him a great chance. He had much to say of the wild and wooly personal character of Barzoi, "a dog that once aroused by the sight, smell and taste of blood will hold on to his object until he is torn to pieces, limb from limb." Since the above came out all blood has been carefully kept away from near the Barzoi kennels.

—§—

They do say that Leekhoi, the fine Russian wolfhound of the Seacroft Kennels, is the darkest kind of a dark horse. He seems to arrive there all the same, as Mr. Roger D. Williams, the judge, whispered as he twined the blue ribbon around his neck.

—§—

Mr. Roger D. Williams, of Lexington, Ky., is not the Roger Williams who discovered Rhode Island. The resemblance is only a facial one.

—§—

"We don't need any millinery in our family," murmured Mr. W. B. Wells, of Chatham, Ont., "not as long as we've got Cambriana." And he raked off some more blue ribbon from the old lady's neck.

—§—

"Rhuilas, alas!" sighed Tommy Davey. Tommy checks his overcoat this year. It cost him $50 not to last year.

—§—

Mr. Davidson judged the Gordons. He never told his love.

—§—

If Mr. H. C. Lowe, of Lawrence, Kan., will apply at this office he can learn of something to his interest. An Indian tribe wishes to purchase his secret of fattening greyhounds.

—§—

Patti was here this week, but she could neither sing nor draw with the dogs.

—§—

"Howly mother, Mike, pfwhat is that I don't know?" said one of the gintlemin as they stopped before a dachshund's box.

"Gwan, gwan, now, don't be stoppin' an' blatherin' right to the face ov a pore, innercent craythur that's borned deformed intoirely," said Mike. "Ye may well have crippled childhren of yer own sometime."

—§—

The benching was on the fence, but the fence wasn't on the benching.

—§—

Oh, Mr. Donoghue,
I'll tell you what to do:
You take the name of Chesapeake
And they'll take Donoghue.

—§—

"I've a very fetching way about me," said the Chesapeake champion Barnum, as he took another bite out a succulent damsel who tried to pat "that lovely curly doggie" on the head.

—§—

He never sleeps—the dog reporter. He don't get time.

—§—

"Aw, Chollie," said one of them, "heah's some pwetty wed dawgs, y' knaw. Let's stay heah a while, I'm weal tiahed, don't y' knaw."

"Oh! no, old chappie, we cawn't stay heah, y' knaw, these wed dawgs are Iwish settahs, 'pon honah. The English settahs are 'way ovah yondah, don't y' knaw."

So they went over and stood by the English setters y' knaw.

—§—

She was leading a pug and she stopped before an able-bodied fox-terrier.

"I think this little white and yellow dog is a regular little love, Annie, don't you?" said she.

The white and yellow dog made one spring, and took the harness off the pug and some pug with the harness.

"You nasty, dirty little brute," exclaimed the late admirer, "you bit my Lola! I'm going to see the man and have you put right out of this show, you ugly, dirty, cross, mean thing, you!"

—§—

I like the painted lily,
I don't mind the frescoed rose,
And as for female anglers
I can go a few of those.

I like the short-haired damsel,
Or the maiden with a curl;
I can stand the horsy woman,
But—I love the doggy girl.

—§—

Mr. Boggs, of Pittsburgh, was smoking in one of the aisles where such act was forbidden. To him came a policeman.

"Yez can't be smokin' in yer," said the policeman.

Mr. Boggs looked at him calmly. "I'm not smoking," said he, "I'm just holding this cigar for another fellow. He'll be along directly."

"Oh," said the policeman, "Oi t'ought yez was smokin'. If yez was Oi'd had to run yez out. Smokin' is not allowed at all, at all, see?"

—§—

Dick Merrill and Paul Bo didn't exactly know what was expected of them in the ring, but they both did well for a maiden effort. E. HOUGH.

JACKSON DOG SHOW.—JACKSON, Mich.—*Special to Forest and Stream:* The quality of the dogs is below the average. Judging began promptly, and all classes were finished by five this afternoon, and as a whole was good Attendance extremely light. Weather pleasant. Show is excellently well managed.—B. WATERS. A letter from Mr. Dole tells us that the boys are being well looked after. The Chicago contingent was met at the depot by President Kimball, Superintendent Sams and other members, who took them right in hand and "nothing is too good for us."

GORDON SETTER CLUB MEETING.—*Editor Forest and Stream:* The annual meeting of the Gordon Setter Club of America will be held at Madison Square Garden, on Thursday, Feb. 25, third evening of the New York dog show, at 7:30 o'clock, for the election of officers and such other business as may then come up. Members are requested to send their annual dues, $5, and the names of any new members to be proposed to L. A. VAN ZANDT, Secretary-Treasurer G. S. C. (Yonkers, N. Y.).

COLLIE CLUB MEETING.—*Editor Forest and Stream:* The annual meeting of the Collie Club will be held at Madison Square Garden, Wednesday, Feb. 24, at 3 P. M. Placards will be posted to indicate location of room. A full attendance is earnestly desired.—J. D. SHOTWELL, Sec'y, (32 Hillside avenue, Orange, N. J.).

ALBANY DOG SHOW.—Bay Ridge, N. Y.—*Editor Forest and Stream:* I notice in FOREST AND STREAM of Feb. 11 that my name is given as one of the signers of the testimonial to Mr. Farley. I wish to state that I never signed or saw such a paper.—HARRY TWYFORD.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $10. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50

THERE is nothing surprising in the failure which has thus far attended all attempts to promote general racing among steam yachts. Those made abroad some ten years since, together with the more recent ones of the American Y. C., including the establishment of a very costly challenge cup, have resulted only in a few unsuccessful races, and have failed to stir up any general spirit of competition. The reason for this failure lies in the nature of the craft that are expected to compete, and their unfitness for racing, as has been proven in such races as have taken place. The discrepancy between the record made over measured distance and under the most favorable conditions, and the speed claimed by owner and crew in ordinary running, has been so glaring in most cases, that few care to enter on a second trial.

The fact that with the exception of the Atalanta and a very few others these steam yachts are not built for speed, has apparently been overlooked by those who have sought to bring them together in racing. This is especially true in the case of British yachts, such vessels as Mohican, Sans Peur, Amy, Conqueror and Marchesa being built for sea-going, and not for high speed. So far, then, as the existing fleet of steam yachts of any size is concerned, there is small prospect of racing, especially of international racing.

The chief outlook for such steam yacht racing as may provide sport and excitement for yachtsmen, and at the same time tend to the advancement of designing and marine engineering, lies in the direction of craft of moderate size, not over 100ft., in which all considerations of convenience and accommodation are subordinated to

speed. This type is already represented by Vamoose, Norwood, Now Then, Buzz and a few other yachts; but unfortunately all attempts to race them has been attended with such a maximum of bluster and brag, and such a minimum of steaming, that the sport just now is in very low repute.

The fleet will be increased this coming season by a new yacht, the joint effort of Messrs. Gardner and Mosher, designed specially for high speed and for experimental purposes, and an attempt will again be made by the American Y. C. to secure a bona fide race; an attempt which, it is to be hoped, will not be allowed to degenerate into a mere advertising scheme, but which will be carried out to the credit of all parties.

There is every reason why racing of this sort is worthy of encouragement; it offers plenty of exciting sport, different in its way from match sailing, but none the less interesting to some; and if properly managed it may be the means of throwing light on many intricate points of marine engineering, and of leading to the improvement of all classes of steam yachts. A $500 cup is now up for a race early in the season, and it rests with those owners who are really in earnest to have their boats ready in time and at the line; leaving the advertising contingent to air their excuses in the columns of the daily papers.

THE current number of *The Yachtsman* contains a second installment of the vindication of the new deed, by its Boston correspondent, the chief points being the extinct centerboard question and the waiving of the dimension clause, which is quoted word for word. We need only point out that in this clause, which prescribes the method of procedure on the part of the challenger, the words *shall* and *must* are used throughout; he *shall* give ten months' notice, with which there *must* be sent the dimensions of the yacht. In this way, and in no other, can a challenge be sent with any certainty that it will meet with other than such a discourteous reception than has been accorded to others even less informal in the past. It is a fact that when the second informal notice of challenge by the Royal Clyde Y. C., in behalf of Mr. Sweet, was under consideration in 1887, a motion was made by a leading officer of the club that any such letters received in the future should be returned to the sender.

By its action in many cases since 1882 the New York Y. C. has firmly established the principle that it can (or will) take no official notice of any overtures for a race unless made in the exact form prescribed in the deed of gift; and with a full knowledge of this fact, it is idle for yachtsmen, however prominent, to talk about waiving anything.

If it is now ready to depart from the line of conduct pursued in the cases of both of the Royal Clyde challenges, and to accept and recognize a notice of an intention to challenge, and a request for mutual agreement as to details, the club must pass a resolution to that effect before any challenger will be found who will risk an open rebuff by sending a challenge without naming dimensions.

The present situation is practically this: The New York Y. C. desires a challenge and has no prospect of receiving one. In the event of a letter from a foreign club expressing a desire to challenge and requesting terms mutually agreeable, the club would be ready to acknowledge the letter and to make terms that would in all probability be perfectly fair. At the same time, such a course would amount to nothing less than a repudiation of the new deed, and while it might meet with the approval of a majority of the members, it would be opposed by the friends of the deed, and any one challenging in this way incurs the risk of a discourteous rebuff. If he wishes to avoid such a possibility he must first recognize the new deed as a fair and legal document by sending a "challenge in due form" with all particulars and dimensions as enumerated; but he may accompany this with an humble request that he may be allowed to depart from these dimensions, and that other dates than those named may be chosen. That he would get what he asked for is very probable, but only as a "generous concession," not as a matter of right. We are still looking for the promised discussion of the legal side of the question.

FEATHERING PROPELLERS.—The feathering propeller, by which the pitch of the blades may be altered while afloat from the inside of the vessel, is a novelty to American yachtsmen, though the device is largely used abroad by steam yachts. The steam yacht Nubienne, which visited this country in 1884, was fitted with one, and the new Sultana, built in 1890 at the Erie Basin, Brooklyn, also had one. The angle of the blades may be varied at will, and both blades may be feathered so as to reduce the drag when under sail alone. The drawings which we reproduce this week from *Engineering* show clearly the mechanism by which these results are obtained.

BOUNCER.

Editor Forest and Stream:

The old yachting readers of your paper will doubtless remember that some ten or twelve years ago when introducing the Nonpareil sharpie for regular yachting purposes, I made the broad claim that better work could be obtained from a boat designed to sail on or over the water rather than through it. In other words, that the water should be used as an inclined plane instead of an element to be violently wedged apart.

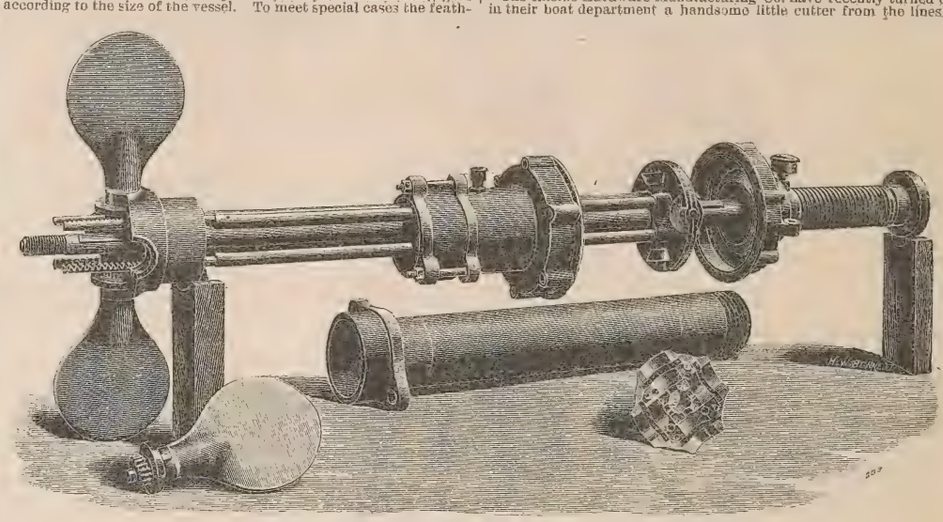
My arguments were met sometimes by personal abuse, but more frequently by such assertions as "Shoal boats cannot go to windward," "are unsafe," "impossible to be made seaworthy," etc., etc.

Well, I went on building my sharpies of light draft; even the largest of them—45ft. in length—drew but 20in. of water. Several of them sailed to Florida and back in the winter, and I have yet to learn of a Nonpareil sharpie yacht meeting with any disaster due to unseaworthiness. Hundreds of these boats, or others copied directly from them, are to day in use all over the United States and even in England (birthplace of the cutter type of wedge-shaped yachts). I see that a clear counterfeit of the Nonpareil sharpie is claimed by one of your correspondents as an English invention and reputed to be doing wonderful work.

The sharpie is a good boat, but until the measurement of length on deck for time allowance was practically abolished she could not compete in windward speed with wider and deeper boats, simply because she was not as large as they were, and for no other reason.

When deck length measurement was done away with it became at once apparent to me that the day had come for proving that greater speed could be attained over rather than through the water, and in the spring of 1890 I designed the little yawl-rigged, spoon-shaped Bouncer, and sailed her in all available regattas on Long Island Sound, with the result that she beat everything of her size or any where near her racing length, both above and under, no matter what rig was opposed to her, in spite of the fact that the wedge scientists had long since decided that yawl rigs must be, and were, slow. Her best performance was invariably to windward in strong winds. In brief the Bouncer drew only 5in. of water, yet distanced the deep, sharp boats of her size under exactly the conditions of weather said to be best suited to them.

In none of her races was ballast shifted; in fact she carried scarcely any dead weight, and sailed some of her best races with but one man aboard. The FOREST AND STREAM has a deserved reputation for fairness, and I ask you to publish this letter, because a theory first broached in your columns should properly have its successful proof recorded through the same medium. Since the little Bouncer appeared I have built a number of these so-called spoon shaped boats of larger size, the sloop yacht Chippewa being the largest. All of them have been prize winners, and have easily defeated the deep wedge type in every fair test.



Judging from recent newspaper articles and illustrations, several yacht designers of deserved renown are now adopting the spoon form for shaping their racers. This I am glad to see, not only because it indorses a principle I have believed in since I was a boy, but because it will make popular the speediest and handiest type of boat yet produced. The Bouncer was just one year in advance of any spoon-shaped boat recorded as showing remarkable speed. Chippowa and Gloriana appeared a year later and clinched the argument.

Roslyn, L. I., N. Y., Feb. 6. THOMAS CLAPHAM.

FEATHERING PROPELLERS.

THE accompanying engraving shows clearly the mechanical details of the design of the Marque feathering propeller. A solid collar is formed on the base of each propeller blade, and below this again is a toothed pinion; the propeller boss, within which are suitable recesses with bearing surfaces for the collars, is made in halves and bolted together by longitudinal bolts, in the usual way; the outer end of the propeller boss, not shown in the engraving, is of spherical form. Each blade is actuated by a rod supported in guides or bearings where necessary, and terminating in a toothed rack, which gears with the pinions on the base of the blades. The rods are connected to a disc, revolving between guide or thrust plates, which are bolted together as indicated in the engraving, and by moving them forward or backward, the straight rods, by the racks at the end of them, actuate the propeller blades, causing them to rotate and assume any desired angle with the center line of the propeller shaft.

In the example selected for illustration, the necessary movement is imparted to the guide or thrust plates, by causing them to rotate along a short length of a square threaded screw, formed on a portion of the propeller shaft, by suitable gearing, or by an endless pitch chain, which is worked either by hand, or by a steam steering gear according to the size of the vessel. To meet special cases the feathering gear can however be actuated without interfering in any way with the stern tube or shafting, although naturally a direct thrust from the guide plates is to be preferred.

FEATHERING PROPELLER.

The propeller illustrated is of small dimensions, and the details are, of course, varied somewhat to suit large vessels, the principle however remaining the same; the blades are generally built up of steel or phosphor-bronze sheets on a strong cast-steel frame, and are in relative proportion longer and narrower than those shown in the engraving. Means also are provided of automatically varying the steam supply to suit the angle of the blades, so as to prevent the engines racing when the pitch of the blades is reduced beyond a given point; and by a small wormwheel and gear, not shown in the engraving, the exact angle assumed by the blades is indicated on a dial at any part of the vessel.

It will be noted that the propeller blades being entirely independent of one another, no strain is thrown on the feathering gear if one or more of them should be carried away.

Several steam launches and small yachts have been fitted with the propellers, and have now been running some time, and it is stated with satisfactory results; one of them is, we hear, now in the Thames for trial, and an extended series of trial runs with another vessel on the Scheldt, has been made by the officials of the French and Belgian Governments. Other trials made by the French Government engineers on the Seine have led them to fit a propeller, at their own expense, to one of the dockyard tugs indicating about 500 horse-power, which is now nearly ready for service.—*Engineering.*

AMERICAN Y. C.

ON Feb. 9, the annual meeting of the American Y. C. was held at Delmonico's, New York; the following officers being elected: Com. Frank R. Lawrence, steam yacht Thyra; Vice-Com. John P. Kennedy, steam yacht Viola; Rear Com. Sheldon C. Reynolds, steam yacht Sigma; Sec'y. Thomas L. Scovill; Treas. George W. Hall; Fleet Surgeon, Charles T. Pardee, M.D.; Meas. Charles H. Haswell; Consulting Engineer, George W. Magee; U. S. N. Trustees, to serve three years; Washington E. Connor, sloop yacht Nahli; Wm. H. Starbuck, steam yacht Tillie, to serve two years; John R. Hegeman, steam yacht Evelyn; Charles H. Osgood, steam yacht Narwhal, to serve one year; Clement Gould, steam yacht Adroit; William L. Quintard, sloop yacht Nahma; Regatta Committee, George W. Hall, Ezra S. Connor, William S. Alley, J. Howard Wainwright, Stephen W. Roach.

The club appropriated $500 as a prize for a race of steam yachts, and June 18 was named as the probable date. It is expected that Vamoose, Norwood, the new Gardner-Mosher boat, and others will enter. The naphtha launch regatta will be held on March 4, the special sailing regatta on July 9, the steam yacht regatta on July 16.

From June 6 to Sept 10, a steamer will run daily between the club house and Wall street, leaving the club house at Milton Point at 8 A. M. and arriving at Wall street at 9:30 A. M.; returning, leave Wall street at 3:30 P. M., stopping at Twenty-fourth street, arriving at club house at 5 P. M.

Com. Lawrence suggested the desirability of a large attendance of the club fleet at the World's Fair next year.

On Feb 16 a special meeting was held, at which the annual dues were raised to $40.

NEW YACHTS.

NO new 46 has yet loomed up, the two or three lately promised in the daily papers having failed to materialize. At the same time work is increasing at Herreshoffs, and on Feb. 29 the new Rogers boat Wasp will be launched to leave the slip way clear for the keel of a steam yacht. This new boat, for Mrs. Helen T. Newberry, of Detroit, will be 131ft. over all, 108ft. l.w.l., 17ft. 6in. beam and 11ft. depth, with triple expansion engines and a speed of 16 miles. She will be named Truant.

The firm has also an order for a 30 racer for Boston, as well as three 21-footers, one a centerboarder. One 21-footer will be a fin keel for Mr. E. T. Bigelow. They have also orders for a 24ft. catyawl like Gannet, and one 17ft. 6in. fin and a 16ft. racer....Stewart & Binney have an order for a 21ft. centerboarder....Mr. J. Borden will design a fin keel for the same class, and others are building, making a racing class of at least a dozen boats of all types, cutters, fin keels and centerboards, the latter including Cape cats. Designer McVey has also a design for a 21ft. centerboard racer....Lawley has the Gardner schooner partly plated, and the three 21-footers planked up. ...At City Island Piepgrass has the Brooks schooner well under way ... Wood Bros. are at work on the Gardner-Mosher launch, and also are doing some excellent work on a Gardner 25 S.L. racer for Mr. Oswald Sanderson. She will be of a peculiar form below the water, but shorter and wider than the present boats of the class ... At New Rochelle Webber is busy with a Gardner design for a Philadelphia owner, a keel boat of 35ft. S.L....At Bay Ridge Wallin & Gorman are working on the four cats for the Seawanhaka C.Y.C.

NEWS NOTES.

Crystal, 30-footer, has been sold to E. T. Bigelow, of Boston.

The new "Gloriana Fisherman," the James S. Steele, is proving a great success, being a dry, fast and able boat.

A correspondent asks the address of makers of the swan boat or water velocipede; perhaps some of our readers can inform us.

Oneida, steam yacht, Mr. E. C. Benedict, was at Wilmington, N. C., on Feb. 11, awaiting her owner, who will sail for Cuba in her.

The Oswego Y. C. has announced the following fixtures: May 28-31, annual cruise to Great Sodus Bay. July 18, annual regatta L. Y. R. A.

Gladys, steam yacht, sailed from Charleston, S. C., for Cuba on Feb. 13. At the same date the steam yachts Far Niente and Wanderer were at Charleston.

The Roberts Safety Watertube Boiler Co. has issued a special "yacht list" of vessels fitted with the company's boilers, giving the flags, dimensions, etc.

Three of the new stations of the New York Y. C., at New London, Whitestone and Vineyard Haven, will be ready by June 1, and will be kept open through September.

Wadena, steam yacht, Mr. J. H. Wade, after calling at Norfolk and several Southern ports, was at St. Thomas on Jan. 27, sailing three days later for Barbadoes.

The new house of the Seawanhaka C.Y.C. at Oyster Bay was turned over to the house committee on Feb. 13, in advance of the date of the contract. It will be furnished and ready before the season opens.

We have received the first number of a new nautical publication, the *Revista Nautica*, published in Italy, and devoted to rowing, yachting, the navy and merchant marine; a handsome paper with a number of excellent illustrations.

The Racine Hardware Manufacturing Co. have recently turned out in their boat department a handsome little cutter from the lines of the Lark, published in Kunhardt's "Small Yachts." The company is making a specialty of small sailing and cruising craft.

The Corinthian Mosquito Fleet has selected May 30, June 25 and Sept. 10 for three regattas, and a number of other races will be held as the occasion occurs. The fleet will devote special attention to the 25ft. s.l. class. Ex-Commodore Sanderson will have a new Gardner boat, shorter, wider, and carrying more sail than Nameless and Smuggler, which with the fin keel of Mr. Kersey will add a new interest to the racing owing to the diversity of types.

The annual meeting of the San Francisco Corinthian Y. C. was held on Jan. 27, the officers elected being: Com., W. A. Stringer; Vice-Com., John W. Pew; Sec'y, E. S. Emmons; Treas., W. F. Dixey; Port Capt., H. E. Bennell; Meas., H. H. Gorter; Directors, B. Hobart and F. E. Baker. Regatta Committee: C. H. Crocker, H. J. Kelly and A. D. Cross. The club has 161 active and 3 honorary members.

The annual meeting of the Buffalo Y. C. was held on Jan. 5, the following officers being elected: Com., F. B. Hower; Vice-Com., Alan S. Chisholm; Rec. Sec'y, F. W. Caulkins; Cor. Sec'y, H. L. Campbell; Treas., W. C. Cowles; Fleet Surgeons, Drs. H. Mickle and E. P. Hussey; Meas., Howard A. Baker. Board of Directors: F. B. Hower, A. S. Chisholm, F. W. Caulkins, H. L. Campbell, W. C. Cowles, H. D. Williams, J. S. Thompson, F. Bennett and L. G. Northrup. Regatta Committee: J. De Zielinski, E. P. Sears and H. P. Pulsifer.

At the annual meeting, on Feb. 9, the Eastern Y. C. elected the following officers: Com., J. Malcolm Forbes; Vice-Com., W. Amory Gardner; Rear Com., Charles A. Longfellow; Sec'y, William S. Eaton, Jr.; Treas., P. T. Jackson; Meas., Arthur H. Clark. Members of the Council at Large: C. O. Foster, Augustus Hemmenway. Regatta Committee: William S. Eaton, Jr., P. T. Jackson, A. N. Rantoul, R. D. Sears, H. H. Buck. Committee on Admissions: R. H. Stevenson, C. F. Adams, 2d, Gordon Dexter, F. E. Peabody and the secretary ex officio. House Committee: Dudley L. Pickman, E. B. Haven, George P. Messervy, T. Wattson Merrill and the secretary ex officio.

One night came on a hurricane.
The sea was mountains rolling,
When Barney Buntline turned his quid
And said to Billy Bowling:
"A strong sou'wester's blowing, Bill;
Hark! don't you hear it roar now?
Lord help 'em! how I pities all
Unhappy folks on shore now."—*Calman.*

The annual meeting of the Indian Harbor Y. C. was held on Feb. 11, the following officers being elected: Com., John Holler, sloop Nirvana; Vice Com., Francis Burritt, sloops Champion and Rival; Rear-Com., M. F. Plant, cabin cat Nellie; Treas., Richard Outwater; Sec'y, R. B. Bruch; Meas., J. N. Cornwall; Regatta Com., F. S. Doremus, E. D. Cowman, D. M. Winne. Delegates to the New York Y. R. A., G. E. Doremus, E. B. Hart, Jr., G. E. Gartland. A committee was appointed to select a site for a club house and to report at a special meeting to be called early in the spring. The annual regatta will be sailed on July 30 or Aug. 6. A special sweepstake race will probably be arranged for the latter part of June. The secretary reported a membership of 55 and 30 yachts enrolled in the fleet.

The brig J. C. Noyes, formerly of Newburyport, built in Calais, Me., in 1875, sailed from Norfolk for Demarara Sept. 11, and as no tidings have since been received, grave fears are entertained for the safety of her crew. The Noyes had the distinction of being the only full rigged brig belonging to any port in the United States, though formerly it was a favorite rig. The Noyes was the last of the edition issued from 1846, to something later than 1850. There were many of this rig owned and sailed from this port. To the ten or twelve owned by the late Capt. J. N. Cushing may be added the brigs Forest, L'Orient, Washington, Arcturus, Millinoket, Calcutta, Adelaide, Camargo, Charlotte and Ark. The last three named loaded in this port for California in 1849, and had the honor of taking many of the "Forty-niners" through the Golden Gate. With the loss of the Noyes the rig becomes obsolete.—*Exchange.*

"In 1831 New York was the leading shipbuilding place in this country, though the business was not large nor the establishments numerous as compared with a later date. There were Bergh & Co., Webb & Allen, Bell & Brown, Fickett & Thomas, Smith & Dimon and Jabez Williams. Later, Divine Burtis, William H. Brown, William Collier, Thomas Collier, John Englis and a few others of lesser note were added. At the earlier date the Allaire and Novelty Works were the only builders of note of marine engines. Later, Fletcher & Harrison, the Morgan, the Phœnix and a few other engine building works were established. In the earlier years the amount of business done at New York varied, owing largely to the frequent passage and repeal of tariff laws, thus greatly unsettling business. But as all or nearly all of the foreign packet ships were built here, there was always something being done."—*Wm. H. Webb in N. Y. Tribune.*

"*West India Hurricanes and the Great March Blizzard.*" *By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.*

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $2.00. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneak-box. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

A TRIP TO THE SOUTH BRANCH OF THE POTOMAC.

FROM observations of the South Branch of the Potomac, made on numerous fishing trips along its lower course, I had often thought what a splendid river it would be to run in a canoe, and had hoped that some day my desire to navigate it in that way would be realized. Last spring, in talking the matter over with my friend John S., who has always been my companion on my fishing trips, we concluded to get an Acme canvas boat and at least make the attempt. Our boat came all right, was set up in a warehouse just to see how it worked, and about the middle of July we started on the B. & O. R. R. for Romney, W. Va., intending to take the river there and work our way down. While at supper at the hotel at Romney we met a gentleman who was thoroughly acquainted with the river above Romney, and who advised us by all means to continue our trip up as far as Petersburg, W. Va., and come down from there through what is called the "trough." We concluded to take his advice, although many of the habitues of the hotel tried, by frightful tales of the dangers of the river, the awful falls and rapids we would have to encounter, to dissuade us from the undertaking. We relied, however, upon the information we had obtained from Mr. G., our acquaintance of the supper table, who had frequently made the trip without any mishap. We hired a team, made purchases of a few articles, including a tin teapot, two quart cups, a gallon pail, two tin plates and a large spoon, some sugar, which we put into a preserving jar, some tea and a piece of fat bacon, and were all ready for an early start in the morning.

Seven o'clock found us well on our way, accompanied by our friend Mr. G., who was driving in his own buggy. After a while he told our driver that he would drive our team and he could take his buggy, as he wanted to talk to us. We soon found out that he was a revenue officer and was on his way up to several of the mountain distilleries to collect the revenue due the Government. We soon drew him out, and although reluctant to talk about his own exploits, we had a most interesting time listening to the narration of his adventures with the moonshiners in the mountains of West Virginia and East Tennessee. He was acquainted with nearly every one we met, most of the men addressing him as Mr. Detective. The scenery along our drives was very beautiful in many places. At Old Fields and about Moorefield we passed through some of the finest agricultural regions we ever saw. Most farmers were hauling in their wheat and threshing it, and all said they had garnered a very large crop. The dwellings through this region are very far above the average farm houses, most of them being double houses built of brick. I noticed one peculiarity in this region that I never saw anywhere else, and that is the tin roofs of the barns and dwellings were left unpainted. When I first saw them I thought that all the farmers around Moorefield had just put on new tin roofs, but was told that it was the fashion not to paint them.

We stopped two hours at the hotel in Moorefield, rested the horses, had dinner, and took a nap. The distance from Romney to Petersburg is 38 miles, and Moorefield is about half way. We discovered here that my friend John had left his watch under his pillow at Romney, and, as I had brought none, we were without the time. We arrived at Petersburg late in the afternoon, and created quite a sensation in that quiet town as we drove through the streets. Mr. Detective was well known, and when he arrived accompanied by two good-sized men the populace immediately supposed we were detectives on a raid on some illicit still that we had heard of. We carried out the deception, and the people did not find out that we were only on a fishing trip until the next morning, when many of them followed us down to the river bank and saw us launch our canoe and say good bye to our detective friend.

On our way up in the wagon we passed through Petersburg Gap. On the opposite side of the road the bluffs arose hundreds of feet high. Quite on the top of one there is a very remarkable representation of a running fox, caused by peculiar formation of the rocks. There is a large bush growing right through the middle of the formation, which makes it appear as though the fox was running behind the bush and gives it a very realistic effect. A little below the fox there is a representation of an ox lying down, that is as perfect as if it had been painted on the rock. The head is particularly good, showing horns, ears and eyes very plainly. We launched our canoe just below the bridge at Petersburg, and after a short trial trip, to see how she would act, we found she was like a duck on the water, very stiff, easy to paddle and easy to steer. We had our fly-rods with us, and, after running a mile down the river, we tried the fishing. We had told the proprietor of the hotel that if he would meet us at the Gap we would give him a mess of black bass. We were fortunate enough to have 16 for him at the time appointed.

Just after leaving him we met with our first and only mishap of the trip. The slate ledges were very bad at this point and we ran upon one, cutting a hole in the canoe. She made water rapidly but we ran her ashore and very soon had a patch on the torn place that stopped the leak entirely. About a mile below this place we suddenly, on rounding a bend of the river, came upon a merry pic-nic party of twenty girls. Not a man with them. They all ran down to the bank to see us, and we stopped with them some time, exchanging fish for ice and ice cream. I noticed one of the young ladies kept looking at me very hard, which embarrassed me no little, being a married man. She finally said to me, "Are you not Mr. R." I was never more surprised in my life to find that a young lady whom I had not the slightest recollection of ever having seen before, should know me in a place so remote from my home. I asked her how she knew me, and she said she not only knew me but that the other gentleman was Mr. S. She gave her name and said that we had stopped at her father's house down the river several years before. Just before meeting the girls I heard my friend John, who was wading and fishing some way below me, call out something about my five dollars, but did not understand what he said until I reached within speaking distance. He then told me my five dollar watch was gone. He had put it in his pocket and had been wading with it on for several hours. I sent it to Moorefield by one of the young ladies, but the jeweler said it was utterly ruined. We spent the night with a Mr. Harper, where we had good beds.

The next day was a red-letter day in our fishing calendar. We started down the river about 6 o'clock, working our way down as follows: I took the canoe first and ran down the river perhaps half a mile, where I drew her up on the bank, leaving John to fish his way down to her. I then took to the water where I left the canoe, and fished down. When John reached where I had left the canoe he took her and ran down past me, leaving her just as I had done, for me to pick up. When I first stopped it was at the head of a long riffle that looked promising, and I soon found I had not been deceived by its appearance. The bass were there and they wanted my flies. How they did rise. When John passed me I had to stop him and empty my creel into the canoe, as it would not hold another fish. I had on a sunbeam and a Seth-Green. The bass bit so furiously that it was next to impossible to get out a long cast; they would rise and take the flies almost at your feet. I caught numerous doubles, but found the sunbeam was the favorite fly. When I picked up the canoe I found John had emptied his creel, and I had to empty mine for the second time. We made a landing at 11 o'clock, hung up some of our clothes that were not perfectly dry, built a fire, made tea, and cooked a couple of bass. After resting quite a while we counted our bass, and found we had seventy-five, most of them of about a pound and a quarter in weight, but quite a number going up to two pounds. We have fished together the South Branch of the Potomac, the Big Potomac, the north and south branches of the Shenandoah, and the Gauley rivers, but never did we have such fishing as we had that morning.

The problem that presented itself to us now was how to get rid of the fish, as we had never wasted one on any of our trips. We resolved not to fish any more that day, but could not resist the temptation of making a cast now and then over some of the extremely likely looking places we passed, but as sure as we did there was a response from below and we had to land another good bass. Seeing a small house on the river bank I hailed and was answered by a native. I asked him if he wanted any bass, to which he replied "How do you sell them?" We gave him to understand that we were not peddling fish, which brought him to the bank in double quick. He said his family consisted of only himself, his old woman, and his daughter. The latter he called and she came with a pan for the fish. She proved to be a perfect picture of rustic beauty, had a sweet lovely face, and retiring modest manners. Like Whittier's Maud Muller,

> A form more fair, a face more sweet
> Ne'er hath it been my lot to meet;
> "And her modest answer and graceful air
> Show her wise and good as she is fair."

She took the fish and presently appeared again with a basket of fine June apples which we appreciated very much.

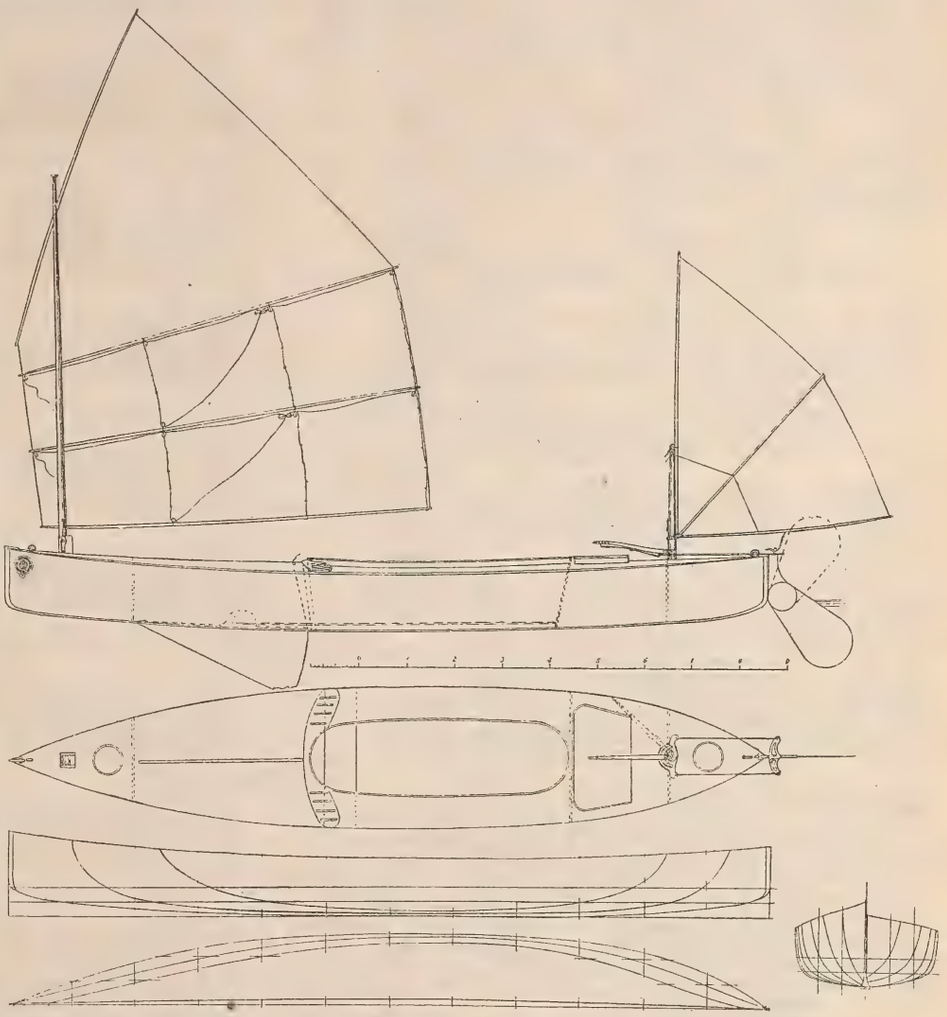
Another native now appeared on the scene, and said he had a very large family, so we gave him thirty bass. A little way below we saw an old colored man standing in the water up to his waist trying to reach with his line a particularly good looking hole. He said he had been fishing all day but had only caught four small ones. We made a landing and gave him ten. Soon after this we came to a point near Moorfield, our approach being heralded by four young misses who were wading on a sand bar. We no sooner came in sight then they commenced shouting "Here come Mr. R. and Mr. S." evidently our arrival about this time had been predicted by our fair pic-nic friends of the day before. John went up to the town to see about the watch, while I hauled the boat out and spread every thing out to dry. A branch of the river comes in here, and where the two come together was such a likely looking place that I could not resist the temptation of trying a few casts. In about five minutes I had seven fine bass, over a pound and a half each. I found they were so thick that I stopped casting, and gave the seven bass to the little girls, who left for home as happy as queens.

After leaving this place we kept steadily on, as we had several miles to make to our next stopping place and most of the way was through dead water. Our objective point was the toll bridge below Moorefield. We had crossed it in going up, and as the toll gatherer came out and we had a good look at him we made up our minds we could not stop there, for he was as dirty a specimen of humanity as I ever saw. But there was no help for it now, there was no other place within miles and we did not care to sleep out as we had no tent and the shores are not favorable for camping.

We determined to make the best of it, and were never more agreeably surprised in our lives. We sat down to a splendid supper consisting of nice light white biscuits, honey, preserves, stewed fruit, delicious pies and good coffee with cream. The woman of the house prided herself on her cooking, and said "My folks won't have nothing but good cookery," and they certainly got it. I told her I had heard that she was the best cook on the river, which pleased her immensely; this was true, for one of the young ladies said she was a fine cook.

On the next day was to occur the event of the trip, running through the "Trough." We had heard so many different accounts in regard to it that we hardly knew what to expect. Some said the trip through was perilous in the extreme; others said it was easy. One man said there was a terrible fall and rapid half way through. Another said we would be swept out of the boat by overhanging branches. Our detective friend assured us that the passage was not more difficult than the rest of the river. At any rate we had made up our minds to try it, knowing that others had gone through without mishap. The "Trough" is so called because the mountains on each side of the river come right down to the shore, making a gorge that there is no way out of for seven miles except by the river. We soon arrived at the head and found that there all the water of the river was confined in a narrow channel of not over 20ft., which caused a fearful rush over a very rocky bottom, ending with a leap of 4 or 5ft., then another frightful rapid of about 50ft. to quiet water.

I fastened a long line to the canoe and let her gently down through this seething, boiling rapid, crawling myself along the edge, which had to be done with much caution, for a misstep would have given me a good ducking, if not something more serious. Once below this dangerous place the river became quiet and deep, and the beauties of the place began to dawn on us. Looking ahead, it seemed as if the river entered some vast cavern and was lost to view. On either side towered the mountains. In many places the walls of rock ran up sheer for hundreds of feet. Again the sides would be broken into terraces that reached step by step to the mountain top. Immense boulders that had detached themselves from the cliffs were strewn along the bed of the stream. The mountains were thickly covered with splendid trees—black walnut, cherry, beech, sycamore, hickory, oak and other varieties. In many places the river ran through a veritable trough hewn out by nature, having sides perfectly perpendicular and a smooth bottom, the water being 6 to 9ft. deep. Half way through some one has built a log cabin (which is not occupied) on the only piece of ground in the whole seven miles that is large enough to build on; that is, above high water mark. We caught lots of fish in the "Trough," and could have caught any quantity; but we were anxious to get through, as we did not know what was before us in the way of dangerous navigation. Besides, the sky had become overcast and the thunder was muttering way back in the mountains. We stopped at the log cabin for dinner, which consisted of fried bass, Albert biscuit and tea.



After dinner we made all the speed we could, as it had commenced raining and we wanted to get through by daylight. We ran into some very deep water, so deep that it was a beautiful blue color, and saw three men fishing from the rocks, who told us that we were about through the "Trough," and that Mr. J. D. Miller's, where we expected to stop, was about a mile below. They said the water where we were was over 30ft. deep. Our trip through was most delightful, the navigation being far better than most of the river, and all the Munchausen tales about the dangers and terrors were either imaginings of the fertile brains of those who have never been through, or were told us for the purpose of seeing if we could not be frightened into giving up the trip. We soon found Mr. Miller's landing, as there were two gentlemen from Pittsburgh stopping there, and who we met on our way up on the train. They were on the shore fishing, and were very much surprised to see us, for when they left Romney we had not thought of going above, but expected to commence our trip there. Mrs. Miller gave us a good supper and a comfortable bed, and we were soon snoring away, much to the disgust of John.

The next morning I got up early, took my rod and thought I would try a cast or two near the house before breakfast. When I caught sight of the river I was astonished and disgusted to find it was up about four feet, and the color of molasses taffy. We knew from experience it would not clear up for a week, and it being Saturday we were very anxious to get back to Baltimore. We carried the canoe up to Mr. Miller's barn and put her bottom up on some poles over on the wagon shed. We then hired the only vehicle to be had, a bark wagon, to take us the thirteen miles to Romney, so we could catch the train for Green Spring and connect with the B. & O. R. R. We will never forget that ride, the roads were abominable, and the wagon had no springs. It rained in torrents, and although we were provided with rubber coats and had on our wading togs, we were very uncomfortable. We arrived in Romney in time to change our clothes, get dinner and catch the train. We arrived in Baltimore at 10:30 P. M., and I arrived at my home at Mt. Washington, a suburban town, at 12 M., tired out.

As regards our canoe she was a second grade Acme 12ft. boat and cost us $20. We were very much pleased with her, found her stiff and strong, withstanding all the hard knocks she got without injury except in the one instance mentioned. We fully expect to continue our trip from Mr. Miller's next summer and finish up the rest of the South Branch.

Before closing I want to give your readers a description of my wading rig, which I think is about as comfortable as any thing I have yet seen described in your valuable paper. I wear very long thick yarn stockings that come half way up my thigh. These I had an old German woman knit for me, three pairs, they cost one dollar and a half a pair. I have knee breeches made from old thick winter trousers. I get my tailor to cut and fit them at the knee, so that they will button snug just below the knee. The stockings are held up by suspender garters that hook over a button sewed on the inside of the waist band of the trousers. I wear good strong large leather shoes laced, with the tongue sewed on both sides so that no sand can get in, soles well covered with hob nails and keep them saturated with castor oil. A flannel shirt, gray felt hat, and suspenders complete the rig. I have waded for years in this costume, never took cold, and always feel warm leaving the water. I generally carry a gossamer rubber cape if there is any appearance of rain to put on over my shoulders, for I have found if you can keep your shoulders and back dry it adds much to your comfort.

EDWARD A. ROBINSON.

DESIGN FOR CANOE OF 36-IN. BEAM.

A WIDE CRUISING CANOE.

WE take from the *Field* the accompanying design for a wide canoe, by Mr. E. T. Holding. She is thus described by him:

The canoe is 16ft. long, 3ft. beam, 13in. from gunwale to keel, and carrying sail area for cruising of not more than 80ft. Such a boat, fitted with centerboard, drop rudder, and sails, apart from camping gear, would not be of greater weight than a couple of men could easily carry for a short portage, and would with a double crew be infinitely more comfortable and drier than the 30in. beam. In her could be stowed with ease and dryness a tent and outside sheet for the same, tent poles, pegs, ground sheet for the tent, complete change of clothes, blankets, sleeping bags, towels, provender, and cooking utensils for a couple of men. These things, together with sketching, fishing, and shooting gear, I have been in the habit of carrying in a 15ft. by 30in. canoe with very little overcrowding, and

such a boat as I am now describing will carry these things, of course, more easily, and leave a greater amount of room for the crew. The watertight bulkheads fore and aft, the space for which one cannot spare in the smaller boat when so much gear has to be carried, can be comfortably fitted to this one, the water-tight chambers being used only for stowing light articles to be kept dry. As shown in the plan, the tiller is placed so as to be worked by the member of the crew sitting aft. For single-handed work, the usual tiller fitting would have to be fixed on locker lid, as a one-man crew would sit too near amidships to work a tiller so far aft.

The tabernacle for mainmast is that described in the *Field* some months ago, which was designed for and used on the Severn. The mizen sail is an idea borrowed from America, giving a very low mast. It is a handy sail for waters where the bridges are so low as to necessitate unshipping a mizen mast of more than 2ft. 6in. in height.

CANOE AND CAMERA.

ONE clear frosty morning early in April last my canoeing friend and I launched our canoes from Coburn's boat house, Lake Quinsigamond, and stepping our cruising sails scudded down the lake before a brisk northerly wind that swept down in cold blasts from the snow-covered hills about the lake. The dark blue water, dotted with small fields of floating ice, looked decidedly frigid and uninviting, but it was its sharp contrast to the snow and ice which had induced us to venture out, for, like the majority of canoeists, we are also amateur photographers.

Three miles from the boat house we landed on Folly Point pretty thoroughly chilled, and to start the circulation in our benumbed limbs we instituted a little war dance in a summer cottage on the point, to which we gained entrance through a small window in the rear.

Then lashing the camera (a 4x5 Hawkeye) securely to a post on the wharf, with the lense pointing out over the lake, a strong black thread was attached to the releasing lever, so that a slight pull on the thread would spring the shutter. The thread was then taken out and fastened to a stick anchored perhaps 40ft. from the camera. Setting sail in our canoes, we approached the stick on opposite tacks. As the Osceola on the port tack flew across the Dart's bow with scarcely a foot to spare, the skipper of the Dart caught the stick and thread, and the little camera on shore answered whith a sharp "click."

Although we had a long, cold, tedious beat in and were obliged to spend some time cutting a channel for our canoes through the drift ice which had choked up the Narrows half a mile from the boat house, we felt repaid for our efforts when we developed that negative, a print from which now forms one of the most interesting photographs in my collection. WHIT.

NEWS NOTES.

Mr. S. R. Stoddard last week delivered a very interesting lecture on the Adirondacks in Glens Falls, the illustrations being stereopticon views.

The canoeists of New York will hold a reception on Feb. 26 at the Harvard Rooms, Sixth avenue and Forty-Second street. Dancing will be the chief feature of the evening.

Knickerbocker C. C. officers: Com., E. C. Griffin; Vice-Com., H. E Whitman; Sec'y, J. E. G. Golden; Treas., James P. O'Shea; Meas., Frank C. Moore. Regatta Committee, W. L. Dudley, chairman; R. W. Gibson and S. T. Wintringham.

The officers of the Red Dragon C. C., of Philadelphia, elected on Feb. 11, are as follows: Com., F. W. Noyes; Vice-Com., Wm. E. Gray; Purser, A. S. Fenimore, 700 Walnut street; Fleet Captain, W. T. Norgrave; Quartermaster, R. G. Fleishman; Correspondent, Dr. F. O Gross.

The annual election of the Buffalo C. C. was held on Jan. 30, the following officers being elected: Com., H. L. Campbell; Vice-Com., E. W. Dunston; Sec'y-Treas., Frank D. Wood, 139 Front avenue, Buffalo, N. Y. The constitution of the New York C. C. as published in the FOREST AND STREAM was adopted with a few alterations to suit the particular needs of the B. C. C.

The annual meeting of the Yonkers C. C. was held on Feb. 4, the following officers being elected: Com. H. L. Quick; Vice Com., P. B. Rossire; Sec'y, Thos. Hale, Jr.; Treas., J. W. Simpson; Capt., Edgar Henriques; Lieut., W. C. Coles. Trustees, H. L. Quick, P. B. Rossire, J. W. Simpson, E. Henriques and D. B. Goodsell. The committees have not yet been appointed. The club is in a prosperous condition, and there will be added in the spring a new racer and four new cruisers. The members are looking forward to a very lively year.

Editor Forest and Stream: I want to suggest to "Cayuga" and "Coburg" that they meet halfway (that will bring them somewhere near Rochester) and sail it out, and while there they can see a little cruiser, the new Priscilla, without spoonbill or overhang, that has all the advantages of the former, and speed enough to stay with the latter, I think. There are six new small boats about completed for Charlotte waters, five centerboard and one 16ft. w.l. keel boat.—PRISCILLA.

At the annual meeting of the Ottawa C. C. the following new outfit of officers was obtained: Com., Francis H. Gisborne; Capt., W. H. Cronk; Sec'y-Treas., H. C. Ross. Members Executive Committee: Henri Roy, E. A. Black and Charles S. Clarke. Auditors, E. King and E. A. Black. Official Meas., A. Adamson. The club has now some seventy members and hopes to have a good season's work, which of course necessarily includes a good representation at the A. C. A. general meet. One or two of the members speak of cruising to the meet or, at any rate, part of the way. The opening event of the season will be the annual club cruise on the Queen's birthday (Jan. 24), there will be another cruise on Dominion Day (July 1), and through the season paddling and sailing races fortnightly varied with an occasional Saturday afternoon cruise. One feature of the Queen's birthday and Dominion Day cruises will be that every man participating must at the evening bonfire either tell a story or else sing a song, a failure or a break-down is immediately followed by a court martial.

Rifle Range and Gallery.

"FOREST AND STREAM" TOURNAMENT

FOR NEW JERSEY RIFLE CLUBS.

SEVERAL times FOREST AND STREAM has received requests to change the dates of matches, and in each case it has refused to do so. It now wishes to impress upon the minds of the shooters that no deviations will be made from the regular schedule excepting in cases where the elements so interfere with travel as to render it impossible for a team to keep an engagement.

As was stated in these columns, the dates for the matches scheduled for Feb. 22 and May 30 will be changed, as shooters do not desire to be bound by engagements on holidays. The matches scheduled for Feb. 22 will be shot on May 31, and those scheduled for May 30 will be shot on June 1. Otherwise than these no changes will be made.

	7 4 4 7 9	—31

The Greenville Rifle Club.

JERSEY CITY, N. J., Feb. 13.—Scores of our regular weekly shoot of Friday, 12th inst., at our range, Metropolitan Hall, 604 Ocean avenue.

*Capt Robidoux	239	*H Chavant	234
C Boag	235	J Cook	223
C Scheeline	232	W C Collins	216
*J Spelm	227	Ed Barr	223
*J J Hill	221		
Jas Dodds	211		
*Geo Purkess	219		
Wm Bromle	209		

* Medal winners in respective classes.

The members of the G. R. C. are the happy possessors of neat and artistically made cartridge boxes, each made to contain 50 cartridges. The boxes show excellent taste and finish in their manufacture, and are really a very useful article to a rifleman. Money cannot buy them, they having been kindly presented by Capt. Robidoux, whose handiwork they are.

W. C. COLLINS, Sec'y.

New Jersey Rifle Shooting.

[*Specially Reported for Forest and Stream.*]

GREENVILLE RIFLE CLUB, Greenville, Friday, Jan. 29.—Ten shots off-hand, 25-ring target, possible 250. The following scores were made in the shoot for weekly class medals:

J J Hill	25 25 25 25 25 25 23 23 23 23—242
W C Collins	25 25 24 24 24 23 23 23 22 22—235
H Chavant	25 25 25 24 24 23 22 22 22 22—234
Capt Robidoux	25 24 24 24 23 23 23 23 22 22—233
H Gotthardt	25 24 24 24 23 23 22 21 21 20—228
C Scheelein	25 25 24 24 23 23 22 21 21 20—228
C Boag	25 24 24 23 23 23 22 21 21 20—226
G Purkess	25 24 23 23 23 22 22 22 21 20—225
J Cook	25 25 24 24 23 23 22 20 19 17—222
J Spohr	25 24 24 23 23 22 21 20 20 19—221
J Dodds	25 24 23 22 22 21 21 20 20 20—218
L Pfeffer	25 24 23 25 23 20 20 20 20 19—217
J Filoramo	25 23 23 22 21 20 19 18 18 16—205

The medal winners in their respective classes were: First class—Robidoux 233, Scheelein 228. Second class—Chavant 234, Gotthardt 228. Third class—Purkess 225, Dodds 218. The members are possessors of neat and artistically made cartridge boxes, showing excellent workmanship and good taste, and are really very handy for riflemen. They are made to contain 50 cartridges. Money cannot buy them, they being the handiwork of genial Capt. W. H. Robidoux, who has kindly presented them. J. J. Hill, one of the club's most enthusiastic members, made an especially good effort to reach the 250 mark. His first six shots were flags, he, however, broke on the seventh shot and then went to pieces, making a score of 242.

"The Palisades team is rapidly improving and will be heard of before the season is over," says Capt. Reinhardt.

The Hansa Rifle Club, of Hoboken, will soon shoot for weekly class medals. The club, which has a membership of 25, will be divided into three classes.

The Friday Night Rifle Club, of Hoboken, will soon inaugurate a tournament among the members. It will consist of a number of 4 men teams. Five have already been made up. Prizes will be distributed to the winning teams.

PALISADE RIFLE CLUB, Jersey City Heights.—Capt. John R Inhardt. The following scores were made, 10 shots, off-hand, 25-ring target, possible 250:

J H Kruse	25 25 24 24 23 23 23 22 22 22—233
A Matz	25 25 25 24 24 24 24 23 22 16—232
G W Graaf	25 25 24 24 24 23 23 22 22 21—231
Capt Reinhardt	25 25 24 23 23 23 22 21 21 21—228
G A Finger	25 24 24 23 23 23 22 21 20 20—227
H Rosenthal	25 25 24 23 22 22 21 21 20 20—224
J Kehrwald	25 25 24 23 23 22 20 19 19 19—219
J Johnson	25 25 25 24 23 22 20 19 18 16—217
F Pfleger	25 25 24 23 22 20 20 19 19 19—216
A Rossy	25 24 23 23 23 20 20 20 20 18—216
W Hartung	25 24 23 23 22 21 21 20 19 18—216
G L Graf	25 24 22 22 21 21 21 20 20 20—216

The customary social session followed. Vocal selections were given by Herman Rosenthal and Geo. W. Graf. The latter is a fine vocalist.

A friendly match between two members of the Greenville Rifle Club took place at headquarters, Jersey City, Monday evening. The contestants were Jas. Dodds and Jos. Kaiser. The scores made were, each man firing 40 shots:

Jas Dodds	225	234	236	231—926
Jos Kaiser	228	231	236	234—929

This gives the victory to Joe by 3 points, from which it may be inferred that he had no walkover. JAY H. KAY.

A Big Cartridge Deal.

IT has been recognized for some time that the Creedmoor Cartridge Company, of Barberton, was doing an immense and profitable business, partly due to its possession of the valuable patents of N. P. Leach, and also in part to the fact that it controlled about the only large factory in the United States which was run independently.

It is understood that the cartridge trade of the United States is controlled by an agreement existing between the various large manufacturers, controlling output and prices. The leading companies in this syndicate are the Winchester Arms Company, of New Haven, Conn.; the Union Metallic Cartridge Company, of Bridgeport, Conn., and the United States Company, of Lowell, Mass. The presence in this city of F. G. Bennett, of the Winchester Arms Company, and of W. J. Bruff, of the Union Metallic Cartridge Company, and their frequent conferences with the stockholders of the Creedmoor Cartridge Company has given rise to the rumor that the latter company has either sold out to the syndicate or had entered into the pool.

These rumors took definite form after the meetings at the Hotel Buchtel on Thursday and Friday of this week, and it was said on the outside that the gentlemen from the East had purchased a controlling interest in the Creedmoor Cartridge Company and that in future the works would be run in the interests of the syndicate, in which case nearly all of the Western trade would be supplied from the factory at Barberton.

C. E. Sheldon, vice-president of the Creedmoor Cartridge Company this morning gave out as an official statement of the transaction the following: "A large block of the capital stock of the Creedmoor Cartridge Company at Barberton has recently been transferred to Eastern parties who will hereafter control its destinies. The directory includes several well-known cartridge makers of the East. These gentlemen are M. Hartley, T. G. Bennett, and W. T. Bruff, all of New York city. The works will be run to their full capacity, and it is expected that the new management will speedily develop this young Ohio industry."

Mr. Sheldon also stated in this connection that all rumors in circulation which differed from this statement were ill-founded and false.—*Akron (O.) Beacon and Republican, Jan. 30.*

Wurfflein Rifle and Pistol Club.

PHILADELPHIA, Feb. 13.—The regular weekly competitive scores of the Wurfflein Rifle and Pistol Association was completed on Friday, Feb. 12, and the following scores were made. Conditions, 10 shots, official target, ¼in. ring, possible 250, strictly off-hand, 25ds., Wurfflein rifles.

H J Mehard	24 25 25 23 25 23 24 24 23 23—241

Savannah, Ga.—First week in May.
Pittsburgh, Pa.—Second week in May.
Brooklyn, N. Y.—Second week in June.
Watertown, N. Y.—Fourth week in June.

The Forester Gun Club Tournament.

DAVENPORT, Ia., Feb. 12.—The tournament held by the Forester Gun Club, of this city, commenced Tuesday, Feb 9, and continued four days. Everything was done by the club to make it pleasant for the visitors, and every one went home with a determination to attend the next tournament held by the Foresters. The weather was cold, with a high wind from northwest, making live birds hard to stop in a 50yd. boundry, and targets hard to hit. Bluerock targets and traps, with North's electric pulls, were used, and gave the best satisfaction in every respect. The office work was done by Mr. Krany, assisted by Kerker, and when the shoots were ended the money was ready, providing the shooter had done his part. Mr. Goos was referee at the live-bird traps and Mr. Racster at the target traps. Owing to sickness Mr. McMurchy and Mr. Marshall were unable to be present, and the team match between Marshall and Heikes vs. McMurchy and Budd was not shot. We can't see why Heikes was not present, something serious or Rot would have been on hand. Among the visiting sportsmen were: John Schick, Mt. Pulaski, Ill.; Baker, Deer Lake, Ia.; Anson, Amboy, Ill.; Schwording, Walcott, Ia.; Fairall, Iowa City; Wooster, Amboy, Ill.; Strawn, Stice and Dunn, Jacksonville, Ill.; Rex, Virginia, Ill.; McKorkle, Philadelphia, Iowa; Stone, West Liberty; Van Devere, Waverly, Ia.; McBude, Victor, Ia.; Shad, Emmettsburg, Ia.; Wilson, St. Paul, Minn.; Jones, Philadelphia, Ill.; Reese, Malone; Laflin, Milan, Ill.; Frazer, Lost Nation, Ia.; Latshaw, St. Louis; White, Geneseo; Battendorf, Geneseo.

The regular events of the day were as follows:

Shoot No. 1, 10 single birds, $2 entrance:

Schick	9	Shadd	8
Budd	9	Schwarding	8

Lively Letter from Oregon.

SINCE last writing the shooters of Portland, Oregon, had their first live bird shoot for a number of years. This shoot was for championship wing shot medal and was won by Carroll E. Hughes on a score of twelve out of fifteen. There were four ties on twelve and in the shoot off Hughes won. The next thing on the tapis is a twenty-five live birds per man, $20 entrance, birds extra. A fine gold medal donated by the genial James Caraher and known as the Caraher medal will go with first money. Following this will be the Tacoma (Wash.) in-doors tournament of two days given by the Tacoma Rifle, Rod and Gun Club. A good many of our boys will probably attend this shoot and a good time is expected. Then comes our shoot for the best all-around trap shot of Oregon medal. This trophy was donated by our County Recorder, Wm. Dudley, a gentleman who is as deeply interested in sport with the rod and gun as one could wish to meet. The medal is a beauty, of solid gold, and emblematic of live bird shooting. It has four very fine diamonds, and will make each of the boys anxious to become the owner. This will be contested for on ten live birds, ten single Peorias and five pairs of double Peorias. Already the names are coming in, and as the entrance is but five dollars, and it is open to the whole State, we expect at least seventy-five shooters.

Judge S. B. Green and the writer went down to the famous Green Lake a few days since and had the pleasure of bagging thirty canvasbacks and about a dozen trash ducks. This lake, like lots of others, has been shot to death by pot and market hunters and unless strong measures are taken will in a short time be a thing of the past as far as canvasbacks goes. The Judge, although not in the best of health, still enjoys the sport, and strange to say his ill health has no effect on his old time shooting form, for he can kill ducks as well as any one that I have ever seen.

I am very anxious to learn more about the great "gathering of the clans" at the World's Fair. I think each State in the Union should be represented in a match for the world's championship. I know that Oregon will be if I have to go myself. SAND HILL.

Connor Heads the List.

THE following scores were made at the shoot of the New London (Conn.) Gun Club on Feb. 12, the conditions being 25 Keystone targets, rapid-firing system. The weather was fair, with a northwesterly wind:

Under the Staufferhead's Shadow.

GREAT TOURNAMENT AT READING.

FOR whole-souled, hearty, open-handed hospitality commend your friends to the good people of Reading, Pa. in general, and to the members of the Reading Shooting Association in particular. Reading itself is a town that is bound to interest a man who has spent his life in and about the metropolis, the majority of the houses, outside of the main business streets, being of the quaint old Dutch style and almost all painted a dull red. Here and there one runs across a row of modern houses, but on the whole the above obtains. The town is exceeding lively either by day or by night, and its manufacturing interests are very extensive. Foundries, rolling mills and blast furnaces abound, as do manufactories of nails, woolen and cotton goods and machinery. Enormous quantities of grain and lumber are brought here and shipped to Philadelphia. Situated on the northeast bank of the Schuylkill River, in Berks county, and with a population of less than 60,000, the town is equal in healthfulness and prosperity to any of its size in Pennsylvania. It has two good theaters and a large number of fairly good hotels. The people are progressive, as is evidenced by the numerous and well appointed street car lines, two of which are run on the overhead electric trolley system. The others use horses.

Boarding one of the East Reading R. R.'s electric cars at the corner of Ninth and Penn streets, the visitor is carried for three miles through a country which for rugged grandeur cannot be excelled. At this season of the year the lofty tops of Mount Penn, Guldin's Hill and other peaks loom up cold and barren, some of them being snow-covered the season through. The terminus of the road is at the foot of the Neversink Mountains, and here is found the Black Bear Inn, a handsome, well-equipped boarding, 40x100ft. with accommodations, and good ones at that, for about seventy-five guests. The present building was erected in 1887 upon the site of an inn of the same name, which dated away back to Revolutionary days, and which was a noted stopping place when merchantdise and passengers were transported between Reading, Philadelphia and more distant points by teams and stages. From the verandas of the hotel some magnificent views may be obtained. Bordered by Mount Penn on the north, the valley through which flows the famous Antietam Creek unfolds to the eye a grand scene. Across this valley rises to the height of 600ft. the crest of Guldin's Hill, while to the southward through a vista of hill and dale is seen the Oley Valley, known as the garden spot of Berks county. The proprietor, Frank P. Esterley, who gives the business his personal attention, is a sociable, genial chap, and immensely popular with all who visit the place.

The shooting grounds of the Reading Shooting Association are on a site directly to the eastward of and about 2,000yds. from the hotel, and while they are admirably equipped so far as shooting house and trap accommodations go, they are not what can be called "big score grounds," the foreground being a sharp incline with numerous ridges, these puzzling a shooter in determining angles. The club has a new and well equipped (although rather small) shooting house, with a shed running out over the firing points, this enabling them to shoot at artificials in all kinds of weather. The upper portion of the house has been converted into a sort of a pavilion, from which a fine view of the shooting and of the surrounding country as well is obtained.

The big tournament of this enterprising organization which opened on Tuesday, Feb. 9, and closed on Thursday the 11th, the last day being at live birds, was without exception one of the most successful and pleasurable events it has been my fortune to attend.

From start to finish President Henry C. W. Matz, Secretary Walter D. Eller and other members of the association worked like beavers to cater to the success of the affair and the comfort of the shooters, and whether they succeeded or not can best be judged from the fact that from 9 A. M. on Tuesday, when the first gun was fired, until 5 o'clock on Thursday afternoon, not a kick, growl or squeal was heard from any one of the big crowd of shooters. When the FOREST AND STREAM representative arrived on the ground he was accorded the warmest kind of a welcome from President Matz in the name of the association, and was at once made to feel that he was "at home."

And what an array of talent was there, and how many familiar faces. I expected, as a matter of course, to meet many of the experts of New York, New Jersey and Pennsylvania, but must confess that their number exceeded my expectations. There was Eddy Collins from West Hoboken, N. J., who can smash pottery or worry pigeons in fast company; Major R. Heber Breintnall, the soldierly expert from the sacred confines of Newark, N. J., and his fellow townsman Wm. R. Hobart, the shooting representative of Von Lengerke & Detmold; Jas. L. Smith, the prosperous grocer, expert shot and master of the art of loading shells, who hails from Hackettstown, N. J.; George Mosher, the blondine representative salesman of the Hunter Arms Co., of Syracuse, N. Y., who skipped up from a hunting jaunt through Florida, "just to see the boys;" Wm. R. Fieles, of Christiana, Pa., who is an adept in running a bolt, judging a dog, shooting at the trap or in the field, or in furnishing first-class pigeons; Enoch D. Fuller, of Springfield, N. J., good for 90 per cent. or better—generally—at either live birds or targets, and who is worth more than 90 per cent. in booming Keystone targets; W. H. Wolstencroft, Philadelphia's pet all-around shot, who is always in a smiling humor; "Doctor" James Wolstencroft, surgical specialist and an exp rt marksman, also from the Quaker City; J. Howard Brouse, Edward David, all of Philadelphia; Wm. Garvin, of Germantown; Neaf Apgar, the expert who looks after the shooting interests of Henry C. Squires; C. L. Terry, J. B. Cleaver and J. W. Evans, of Camden, Del.; Harry Thurman, of the *Sporting Item*, of Philadelphia, an authority on Pennsylvania shooting affairs; John W. Fulford, of Harrisburg, a brother of E. D. Fulford, and an expert as well as nervy shot; Chas. Minard, of the Atlantic City (N. J.) Gun Club; W. D. Filfert, of Womelsdorf, Pa.; E. A. Bower, R. R. Dawson and P. J. Trego, of Berwin, Pa.; S. L. Sharp, of Euphrata, Pa.; Oscar Meliot, of Fleetwood, Pa.; Chas. Lane and John Treadway, of Philadelphia; S. B. Stout, of Moslem Springs, Pa., and many others.

The opening day was a fairly good one, the air being cold and clear, with occasional snow squalls up to 2 P. M., and the wind blowing across the line of traps from the left with a force sufficient to carry some of the targets at a baffling pace, and causing others to perform some very eccentric gyrations. Several times birds thrown from No. 4 trap out of the pit, scaled over the right fence at a pace that caused the shooters to doubt their ability to roll up many clean scores. From start to finish the events were well patronized, and before noon the genial faces of President Matz and Secretary Eiler were wreathed in smiles as they began to realize that the tournament was to be a howling success, which meant that they could count upon a still greater one in August when, under the auspices of their club, will be held the annual tournament of the Pennsylvania State Sportsmen's Association.

The shooting was at Keystone targets, under the ten-trap rapid-firing system, and the targets were thrown low and hard, this, with the undulating foreground, making the shooting extremely difficult. There was no handicap and the events were open to all comers. The division of money was rather peculiar and precluded any possibility of pot-hunting. On each day 5 per cent. of the entrance money in the regular events was set aside for an average fund; 30 per cent. went to the best average exceeding 90 per cent., 30 per cent. to the shooter not exceeding 90 per cent., 20 per cent. to the shooter not exceeding 80 per cent., and 20 per cent. to the shooter not exceeding 70 per cent. Average money was awarded only to those competing in all programme events. The regular prize divisions were 25 per cent. to first, 25 per cent. to second, 20 per cent. to third, 20 per cent. to fourth and 10 per cent. to fifth. All ties were divided. Shooting was under the American Shooting Association rules. On this day first average went to Breintnall, second to Cleaver, third was divided by Brouse and Terry and fourth went to David. The averages of all who shot in the full number of events were as follows:

*Breintnall	883/4	*Terry	69 16
W Wolstencroft	85 12	*Brouse	69 16
Apgar	84 16	Landis	68 16
Fieles	84 16	J Wolstencroft	66 3/4
Hobart	83 3/4	Lane	65
*Cleaver	79 16	Matz	64 16
Collins	76 3/4	Thurman	64 16
Miller	75 16	*David	58 3/4
Smith	75	Green	55 16
Evans	71 3/4	Dawson	44 16

*Winners in their classes.

A glance over the above table of averages with a lingering of the eyes on those of such experts as Breintnall, Apgar, Hobart, Fieles, Collins, W. and J. Wolstencroft, and Miller, should be sufficient to convince the most skeptical that the shooting was far from easy. The shooting lasted until after 5 P. M., over 5,000 targets being thrown.

Below will be found in detail scores of all events:

The First Day.

Regular No. 1, 10 singles, entrance $1:

Hobart	1111111111—10	Ritter	1001110101—6
Collins	1111101111— 9	Sharp	0110111111—8
Breintnall	1111000111— 8	Hall	1111111110—9
Brouse	1101111111— 9	Pfantz	0000100000—1
Terry	1111000111— 7	Apgar	1100111011—7
Green	1110001001— 5	Gechter	0000011100—3
Fieles	1101110100— 6	David	1010001111—7
Thurman	0111001010— 5	Bower	0000110110—4
Smith	1101111111— 9	Melot	0011001011—6
Trego	1010100001— 5	Fuller	1111110010—6
Filbert	0001011011— 5	Cleaver	1111111010—8
Matz	1111211111—10	E D Miller	1111111101—9
Landis	1101111110— 8	W Wolstencroft	0011111111—8
Lane	1111010107	J Wolstencroft	1111110111—9
Dawson	1110101000— 5	Evans	1011110111—8

No. 2, same as No. 1:

Dawson	0011011001—5	Brouse	0011001011—5
Fieles	1101111101—8	David	1100000111—5
Lane	0010100111—5	Matz	1011101110—7
Landis	0101101011—6	Apgar	1111010110—7
Hobart	0011111011—7	E D Miller	1111011111—9
Thurman	0111110011—7	W Wolstencroft	1111111110—9
Breintnall	1111111011—9	Terry	1011111111—9
Collins	1111100111—8	Gechter	1010100011—5
Trego	1100011001—4	Cleaver	1111111011—9
Hall	1001110111—7	Evans	1111111111—10
Green	1101100010—5	J Wolstencroft	1101111011— 7
Filbert	0011010000—3	Smith	0100011111— 6
Pfantz	0100010000—2	Ritter	1111000101— 6
Sharp	0110000111—5		

No. 3, 15 targets, $1.50:

Breintnall	0101111111011011—11	Melot	0111010100010010— 7
Hobart	1111111111011—14	Sharp	1010101111101101—10
Smith	0111111111010—12	Brouse	1010110111101011—10
Fuller	0111111110111—13	Terry	1110001111010110—10
Collins	1111111011111—14	Parker	1010001010100100— 5
Hall	0111111011110—12	Miller	1111011100111000—10
Landis	0100001001011— 7	David	0011110101011011— 9
Lane	1001010111110—9	Apgar	0111111110111—13
Green	1100101111010—10	Gechter	0011100111011011— 9
E D Miller	0111001111011—9	Cleaver	1111111001111—13
W Wolsten	0111111111011—13	Evans	1111111011111—12
Fieles	1001111011111—12	H C W Matz	0111111111111—14
Trego	1001111110000010 — 8		
Dawson	0101011110000000— 6		

No. 4, 10 singles, $1:

Fuller	1110110110— 7	Dawson	0100011011— 5
Breintnall	1111110111— 9	Apgar	1111111111—10
Collins	1100100110— 5	R Miller	0111010111— 7
Hall	0001001110— 4	Melot	0001000101— 3
Hobart	1011101111— 8	Thurman	0110101111— 7
Smith	0111111101— 8	Terry	1110111111— 9
Landis	1110101100— 6	David	1101110001— 6
Lane	1100011110— 5	Evans	1111111110— 9
Green	1001101000— 3	Cleaver	1101111110— 8
E D Miller	1011110101— 8	Trego	1011011111— 8
W Wolstencroft	1011111111— 9	Wilson	0011111100— 6
H C W Matz	1111010011— 6	Ritter	1101011000— 5

Wednesday, the Second Day.

The second day opened with a portentous haze in the air which boded ill for the comfort of the shooters. But the old saying that "all signs fail" etc., proved to be well founded in this case, as along toward 11 o'clock the haze lifted and the sun managed to show its face. It was not a perfect day, however, as the air was raw and damp. The wind, however, was not as strong as on the preceding day, and in consequence the scores were very much higher. A large number of new arrivals were registered, among them being Milton F. Lindsley and his wife, the former the representative of the American Wood Powder Company, of Hoboken, and one of the most popular sportsmen of the day, and the latter the "Wanda" of the poetic world, who is also an expert wing shot; N. A. Hughes, of the Williamsport (Pa.) Rifle and Gun Club and vice-president of the Pennsylvania State Sportsmen's Association; J. H. Worden, of the Harrisburg Shooting Association, and secretary of the State Association; R. C. Millspaugh, of Williamsport; H. A. Penrose, president of the Standard Keystone Target and Trap Company, of New London, Conn. The shooting during the entire day was of the liveliest kind, the entries running as high as forty-one. As on the opening day, the management was perfect, not a single hitch being noticeable. It was getting along well toward 6 o'clock before the last shot was fired.

The following were the averages made during the day by those who shot in all the regular events:

*Miller	93 3/4	*Cleaver	79 13
Apgar	90 13	J Wolstencroft	78 13
Collins	90	Fuller	76 13
*Warden	89 13	Millspaugh	73 12
Fieles	86 13	Minerd	70
Cooper	85 13	*David	69 13
Hobart	80 13	Green	69 13
*W Wolstencroft	79 13	Matz	67 13
*Smith	79 13	Terry	67 13
*Landis	79 13	Mosher	66 13

*Average winners.

PENNSYLVANIA STATE SPORTSMEN'S ASSOCIATION.

In the evening the officers of the Pennsylvania State Sportsmen's Association held a special meeting at the hostelry of H. C. W. Matz, to discuss plans for the tournament to be held on the grounds of the Reading Shooting Association, on Aug. 9-12 inclusive, C. E. H. Brelsford, president of the association, was absent, owing to an attack of the Russian importation yclept "la grippe," and his chair was ably filled by Vice-President N. A. Hughes. Other officers present were Financial Secretary J. H. Worden, Corresponding Secretary W. D. Eller, Treasurer "Dr." James Wolstencroft; and Harry Thurman, H. C. W. Matz and J. H. Millspaugh comprising the Board of Managers. There were also present, on invitation, H. A. Penrose, M. F. Lindsley, John W Fuiford, William Garvin and representatives of the FOREST AND STREAM, *American Field* and *Sporting Times*. A new set of constitution and by-laws were adopted. On a motion made by Jas. Wolstencroft, and seconded by W. D. Eller, the secretary was instructed to have blank applications printed for the use of members. The secretary was also instructed to have the constitution and by-laws printed, and copies sent to each club. Mr. Matz moved that the association make application for a charter under the laws of Pennsylvania. The motion was in accord with the views of the members and was promptly carried. On motion by Mr. Matz it was resolved to ask the Legislature for an appopriation for the protection of game, and to give officers of the association the authority of game wardens. C. H. L. Brelsford, N. A. Hughes and J. H. Worden were appointed a committee to look after the above matter. The matter of prizes for the coming tournament was then brought up, and Mr. Matz, on behalf of the Reading Shooting Association; Mr. Wolstencroft, on behalf of W. H. Wolstencroft & Sons, of Philadelphia; and Mr. Lindsley, on behalf of the American Wood Powder Company; promised to contribute prizes for the comiug contests. This concluded the business of the meeting, and after a sociable hour's chat the members of the party dispersed for their respective hotels.

Thursday, Live Bird Day.

WHEN the shooters crawled out of their luxurious couches (the only kind of couch, by the way, upon which a shooter ever reclines) they felt rather blue, as a snowstorm had found its way to Reading, and had spread a white mantle upon everything out of doors. This did look as though the live bird events scheduled for the day were not to be very successful either in regard to the character of the birds or the number of entries. Nevertheless the thought of quitting or rather of hanging back never entered the heads of one of the lovers of the sport, and ten o'clock found them at the shooting house eager for the fray. The traps were in order, trappers at hand, and about 600 good birds in the crates, with a promise of 600 more to arrive soon after noon, so the party got down to solid business despite the snow which was falling steadily all the while. The shooting was under American Shooting Association rules, except that 12-bore guns were allowed 1¼oz. of shot. The boundary was 50yds. The purses were divided into 40, 30, 20, and 10 per cent., and all ties were divided. The birds, as a whole, were a good lot, the number of good birds exceeding the poor ones. Owing to the large number of entries the shooting was done on the squad system, the shooter moving along the line from number 1 trap the same as in the Keystone rapid firing system for target shooting. As a matter of course each man shot from a known trap.

A number of new comers were noticed, among them being J. Frank Kleinz, the well-known Philadelphia expert; Albert Rust, of Philadelphia, who holds the championship of Pennsylvania for live bird shooting; Elijah D. Fulford, the world famed record breaker; Robert A. Welsh, A. J. Jamison, John Rothaker, A. L. Sheets, and Frank Sheppard of Philadelphia; H. E. Buckwalter, of the Elk Park Gun Club, Royersford, Pa.; R. T. Clayton of Tamaqua, Pa.; W. S. Spicer of Danville, Pa.; O. S. Heil of Bionville, Pa., and W. I. T. Weiler, of the Weiler Gun Club, Allentown, Pa. The trapping of the birds was quickly done, but the gathering was carelessly done, and in a number of instances birds were driven over the line, whereas with a little care they could have been scored. The first event at five birds per man had twenty-four entries; the second, a seven bird event, had fourty-two entries, and the third at four birds each had thirty-nine entries. By the time the latter event was concluded, the supply of birds had been exhausted, and the additional supply promised had failed to materialize, so the sport had to be abandoned.

This was the only cause for dissatisfaction during the entire tournament, and the shooters, many of whom had traveled a long distance to take part in the events at live birds, could hardly be blamed for doing a little good-natured complaining at being shut off with a little over a dozen birds each. President Matz assured the writer that birds had been ordered in good faith, with a guarantee that they would be on hand when needed; so that the shipper and not the club should come in for the blame.

When it was found that no more birds could be procured, the shooters decided to make the best of a bad bargain and complete the day in pulverizing crockery. The result of this determination was that six impromptu events were shot and 1,035 targets thrown, this bringing the total number used during the tournament considerably above 10,000, a big number for a club tournament.

It was about 5 P. M. when the last gun was fired and President Matz announced the formal closing of the tournament, one of the best and most successful ever run by any club in this country, and one which has placed the Reading Shooting Association in a secure position among the foremost organizations of the kind in America.

When the shooters dispersed, each to go to his respective home, they vowed to a man that they would be at Reading in August to take part in the State shoot. The Association is to be congratulated upon its success in this its first big venture, which has given it and its officers and members a warm spot in the heart of every sportsman who enjoyed its hospitality.

Below will be found detailed scores of the live bird events and a summary of the target events which closed the tournament.

Extra No. 5, 20 targets, $2: Apgar 15, Cooper 10, Brower 10, Spicer 11, Fulford 16, Fuller 12.

Extra No. 6 at 10 targets, $1: Lindsley 6, Cooper 5, Brouse 9, Spicer 10, Apgar 10, Baker 6.

Solicitor vs. Hotel Keeper.

HARRISBURG, Pa., Feb. 12.—The live bird race of which I intended to secure the scores came off while I was absent from the city, and I was not able to get detailed score. The race was between A. Miller, county solicitor, and Patrick Russ, of hotel fame. Miller came off victorious by killing 21 to Russ' 14. The birds were of the best, and while Russ grassed his 8 first birds in grand shape with the first barrel in each case, for some cause he failed to keep it up and fell far below his average shooting. As the blood is upon pigeon shooting now you will probably have more to chronicle in the near future. After the pigeon shooting a few targets were shot as per scores below.

Shoot No. 1, 25 singles, $2 entry:

Sullivan	1111111100111101100111011—19
Kinzer	1001111111111101001001101—17
Brelsford	1111111111111100000011011—17
Dinger	1111111001111001101111000—17
McKee	1111110011000110000001110—13

Two moneys. Winners as above.

No. 2, 15 singles, $1.50:

Sullivan	0111111101111111—13	Dinger	1011011111101101—11
Kinzer	0110011100010102— 9	McKee	0010010101000111— 6
Brelsford	0010111111101111—11		

No. 3, 10 singles, entry $1:

McKee	0001000100—2	Dinger	1101101111—8

W.

Hartford Defeats New Haven.

NEW HAVEN, Conn., Feb. 10.—The second monthly club shoot for '92 occurred to-day on the grounds of the New Haven Gun Club. The weather was fine and the attendance the largest that has been seen for fully a year. Sweepstake shooting was enjoyed before the Club medal race, and among the "straights" were Bates, Savage, Wilby, Burbidge and Longdon. At 2:30 the club race opened. A class men shot at 25 singles, expert rules, and B class men at 25 singles, Keystone rapid firing system. The scores were as follows: A Class, 25 singles, expert rules: Willey 21, Longdon 21, Bates 18, Potter 16, Sherman 16, Savage 16, Bristol 16, Cower 16, Burbidge 11. B Class, 25 singles, rapid firing system. Merriman 18, G. F. Clark 19, Folson 15, W. M. Clark 14, Allen 14, Mynx 14, Campbell 13, Kelley 6.

The event of the day, however, was the team match of Hartford vs. New Haven, Hartford represented by Willey and Burbidge, both being members of the New Haven as well as two Hartford clubs. The match came about through a little banter indulged in by the boys some time ago and came to a head by the New Haven boys challenging the Harrfordites. The Capitol City men at once accepted the challenge and left the matter entirely with their New Haven friends to settle as to conditions. Hartford sent her two men to New Haven, where they met and defeated the Elm City boys on their own grounds and on their own conditions. The scores were very poor, but such a hot rivalry has existed that when New Haven had picked her two best men and the Hartford men met them, a feeling of shakiness undoubtedly crept up the spines of the contestants. This may account for the poor scores which were:

Hartford.		New Haven.	
Willey	22	Savage	21
Burbidge	21—43	Bates	20—41

When the match was over Bates remarked to Willey, "Well, you beat us, but I think we'll have another chance at you." If another match is shot the Hartford men will naturally demand that it be shot in Hartford. The match was for $10 a side.

Down in Hunterdon County.

THE following scores were made at a live bird shoot held at Three Bridges, N. J., on Feb. 11:

No. 1, 4 birds, $5 entry:

W Terry	1110—3	J Warford	1101—3
Aug Trust	1111—4	H Milbern	1211—4
J Derby	1001—2	Wm Apgar	1211—4
A Douglas	0121—3	D Terry	1021—3
J Garner	2101—3	T Brantingham	1012—3
L Stryker	1201—3	A Case	1001—2

First divided; second won by Warford on shoot-off. No. 2, same conditions:

Warford	1221—4	Terry	1002—2
Milbern	1101—3	Trust	1102—3
Apgar	2101—3	Derby	1212—4
Terry	0222—3	Douglass	1122—4
Brantingham	1121—4	Stryker	2211—4
Case	1110—3	Gibson	0101—2

No. 3, same conditions:

J Warford	0222—4	J Darby	0120—2
Shaw	1121—4	A Douglas	1010—2
D Terry	2222—4	Wm Terry	1110—3
Ben Gano	0100—1	Aug Trust	0120—2
T Brantingham	0011—2	L Stryker	1111—4
J Garner	1221—4	Milbern	1120—3
Wm Apgar	1110—3	A Case	1001—2
Gibson	0110—2		

No. 4, miss and out, $2 entry: Garner, 111; Stryker, 111; Shaw, 110; Case, 10, Warford, 10; Apgar, 10.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Feb. 3.—The following scores were made here to-day, at the regular club shoot, the events being at Peoria blackbirds, expert rules, 5 traps, 18yds. rises:

Event No. 1: Borst 9, C. Smith 3, Norton 4, Allen 7, Rickman 7, Peck 8, Babcock 7, Foley 1, Allen 6, Truesdale 5, Holton 8, Newton 7.

No. 2: Peck 5, Babcock 7, Byer 6, Hicks 9, Borst 6, Foley 4, C. Smith 7, Allen 6, Truesdale 3, Holton 7, Horton 3, Rickman 4.

No. 3: Babcock 7, Borst 8, Stewart 9, Newton 4, Foley 3, Byer 7, Stewart 6, Babcock 8, Allen 6, Holton 3, C. Smith 5, Borst 8.

No. 4: Peck 4, Babcock 9, Hicks 8, Holton 7, Borst 8, Norton 2, Babcock 6, Hicks 5, C. Smith 4, Byer 4, Meyer 4, Borst 5.

No. 5: Peck 5, Norton 4, Foley 5, Rickman 7, Babcock 9, Borst 8, Truesdale 4, Hicks 9, Allen 9, Byer 6, Holton 5, Foley 2.

No. 6: Babcock 7, Stewart 6, Allen 3, Hicks 7, Truesdale 7, Borst 7, Babcock 6, Borst 6, Rickman 8, Byer 8, Holton 6.

Shooting at Watson's Park.

BURNSIDE, Ill., Feb. 8.—The following is the score made here to-day in sweepstakes at live pigeons, American Association rules. First sweep, 10 birds, $5, divided 60 and 40 per cent.:

W F Quimby.... 2102100110- 6	C E Latshaw.... 1212020212—8
F A Place..... 2122221201—9	R Ingraham ..... 0202222100—6
R O Heikes..... 0112221212—9	

Another of the same:

Quimby..... 2111120201—8	Latshaw..... 1021010121—7
Place..... 0001201122—6	Ingraham..... 2200222222—8
Heikes..... 1121101121—9	

Five birds, $3, divided 60 and 40 per cent.:

Quimby..... 11121—5	Latshaw..... 22121—5
Place ..... 21000—2	Ingraham ..... 20222—4
Heikes..... 11111—5	

Heikes and Latshaw divide first.

Feb. 15.—Scores made to-day by the South Chicago Shooting Club for club medal, 20 live pigeons each, American Association rules:

F Willard00000121002011111122—12	Ben Fogli.11100020202101100111—12
A Reeves:02000010220120001101— 9	P Miller..01101000001200112000— 8

Ties on 12:

F E Willard.....22111—5	Ben Fogli.....11120—4

Same day, for target badge, 30 Peoria blackbirds:

Willard.....11	Fogli.....15
Reeves.....20	Miller.....13

Dick Deadeye.....12

Seven live pigeons, $3, American Association rules:

Willard..... 1101120—5	Fogli..... 1021101—5
Reeves..... 0001002—2	

Same thing over:

Willard.....1002010—3	Fogli.....1112002—5
Reeves.....0101202—4	

Same again:

Willard..... 2002120—4	Fogli ..... 1211221—7
Reeves..... 1200002—3	

For cost of birds:

Reeves..... 1211011211—9	Fogli..... 0122211202—8

Feb 11.—Scores made here to-day qy the Prairie Gun Club for the Johnson medal, 15 live pigeons, American Association rules:

A M Hofmann 201222202210—12	Geb Harris....221221202211120—13

Feb. 13.—Open shoot at live pigeons. First sweep, 5 birds, $2, A. A. rules: G. Kleinman 5, Jim Finn 2, G. Lauterback 2, Bob White 4, E. M. Gardner 4.

Second sweep, 10 birds, $5, A. A. rules: G. Kleinman 9, R. B. Wadsworth 9, A. J. Atwater 10, J. E. Price 8, A. Kleinman 9, Ed Steck 7, C. E. Willard 10, R. O. Heikes 6, M. J. Eich 6, Bob White 8, Jim Finn 7, E. M. Gardner 9, G. Lauterback 5.

Shoot for cost of birds: G. Lauterback 11, Johnnie Mack 11, W. Russell 9.

Third sweep, 10 birds, $5, A. A. rules: A. J. Atwater 9, G. Kleinman 7, M. J. Eich 10, A. Kleinman 9, C. E. Willard 5, R. B. Wadsworth 8, F. C. Damm 7, J. E. Price 6, Bob White 8, Ed Glover w, Wm. Russell 3, G. Lauterback 7, R. Hodson 6, P. F. Rock w, Jim Finn 5, E. M. Gardner 9, R. O. Heikes 8.

In a freeze out match Geo. Kleinman and E. M. Gardner divided the pot after killing 7.

Peoria blackbirds, first sweep, 15 birds, $1, A. A. rules: R. O. Heikes 11, O. von Langerke 13, Dr. Hodson 11, G. Kleinman 12, J. O. Stubb 9, E. M. Gardner 14, Wm. Russell 9, B. White 13, E. M. Steck 13, A. J. Atwater 12, J. T. Glover 12, C. E. Willard 13, Pat O'Neil 12, M. J. Eich 11, R. B. Wadsworth 13.

Second sweep, 10 birds, $1: Steck 10, Wadsworth 9, Hodson 5, G. Kleinman 9, Atwater 9, Von Lengerke 7, Glover 7, Eich 6, Mack 8, O'Neil 7, Damm 6, Heikes 10, White 10, Gardner 7, Barto 8, Willard 8.

Third sweep, 10 birds, $1: Barto 3, G. Kleinman 9, Heikes 10, Mack 5, Atwater 9, Eich 7, Willard 8, White 8, O'Neil 7, Steck 9, Kencicott 10.

Fourth sweep, 25 birds, $2: Heikes 23, Steck 23, Atwater 22, Willard 18, G. Kleinman 21. RAVELRIGG.

Trained Pigeons at John Erb's.

"If you want to see some good pigeons and judge for yourselves as to whether I am in form or not, come up to John Erb's at noon on Saturday," said E. D. Fulford to Eddy Collins and the writer on the evening of Thursday, Feb. 11, as the trio were enjoying "a weed" in the smoking compartment of the "Royal Blue," of the Philadelphia & Reading, which was carrying them toward their homes at the rate of sixty miles an hour. They were all returning from the "very large" tournament at Reading, and naturally the absorbing topic of conversation was the smooth-bore and its work. The writer had expressed the wish to see the noted expert tackle a straight hundred of "hummers," if they could be procured, and his expressed wish brought out the above from Fulford.

"A. Rankin, of New York city," he continued, "told me some time ago that he would wager $200 against my gun on these conditions, I to shoot at 120 of the hardest birds procurable, he wagering the above amount that I would not kill 90 or better in any consecutive hundred of the above number. I told him I would pick up his $200 at the first opportunity; and now that I have plenty of time and feel in a shooting humor, I will see him on Saturday. He wants me to shoot at Fieles's birds, and I'll wire Billy for the requisite number to-night. No matter what the birds turn out to be, if I can't beat 90 I'll eat the crates."

As usual, true to his word, the telephone man was at the "Old Stone House" before noon on the appointed day and was full of shoot. The birds had arrived from Billy Fieles's loft, in Christiana, Pa., during the morning, and what a lot they were, every one blue, with strong, lithe bodies and restless eyes that told plainly that they intended to find the way over the boundary if given a ghost of a show. Accompanying the birds was a letter from Mr. Fieles, which stated that

"I have shipped you 120 birds, as directed, and if I am any judge you will find them the hardest lot that ever left a trap. Truly yours, W. R. FIELES."

And Mr. Fieles made a close guess, not only in my judgment, but in the judgment of older and wiser men in the business, namely, Asa Whitehead, secretary of the Essex Gun Club; Samuel Castle and Charles M. Hedden, all of Newark; John Riggott, of Rockaway; and Mr. Elliott, of the Fountain Gun Club, all of whom witnessed the shooting, and each of whom is qualified by long experience to express an opinion as to the quality of a bird.

It was precisely 1:15 P. M. when Fulford stepped to the score and called "Pull," and as the trap went over out went a right-quarterer that jumped full 10ft. before catching its wings, but quick as the bird was, the eye at the gun was equal to the occasion, and it went to grass about 6yds. from the trap. The second bird, also a right-quarterer, met a like fate 10yds. from the trap. The third went from No. 2 trap like a rocket, trailing at first and then twisting to the right. The first hit him hard, but he was tough and needed a magnificent second, which centered him at full 60yds. on a quick turn. The fourth bird was an awfully fast zig-zagger that turned a dozen ways for Sunday, got both barrels full, and apparently died in the air, but was carried by the wind over the fence, where it fell like a stone.

All this time the weather was bitterly cold and the wind was blowing fully thirty miles an hour, coming with a biting edge straight down from the Orange Mountains, and blowing across the line of traps from the left. Given birds such as these were and allow them a thirty mile right-quartering wind, and it is no wonder that the few spectators present doubted the ability of even Fulford to kill 90 out of 100. I regret very much that I did not keep the flight of every one of these birds as well as the trap from which they were sprung, as I have little hopes of ever seeing a better lot.

His seventeenth and twenty-sixth birds were lightning drivers, each being killed with a fine quick first. Of the first 25 birds he killed 23, and of his second 25 he killed 22. His form was perfect, and of the five birds lost three fell dead out of bounds. His fifty-second was a terror of a trailer that not only had a tremendous speed but an ugly motion. It was killed at full 80yds. with a gallery second. His fifty-eighth bird, like his fourth, was apparently killed high in the air, as it rolled over and over and fell just over the fence.

It was his seventieth bird, however, that capped the climax for motion. He was in No. 5 trap, and as the trap went over all that could be seen was a "glimmer" toward the right fence and climbing. This bird must certainly have sprung fully 10yds. outward and upward before he made a motion of his wings, and then just as he began to work these appendages he secured the assistance of a genuine hurricane that caused him to take a pace that no man could have gauged. Ed's first, quick as it was, was not within 20ft. of catching this rasper, while his second fell still further behind; in fact, the bird was 10yds. past the right fence before the latter load reached the point aimed at.

"How far did I lead him?" said Fulford in response to a query. "Great Scott, man, I led him a mile and a quarter about, and the load struck a mile behind him. That bird was flying forty miles a second!" And Sam Castle agreed with him. His eighteenth bird was another rasper, and was downed with a beautifully timed second. His ninetieth, also a terror of a twister, was hit very hard with a quick double, but managed, with the assistance of the gale, in falling dead as a mackerel just over the fence. Of the first 100 birds he killed 91, and out of the total 120 he grassed 109. His best score for 100 consecutive was 92. He fired at 10 of Mr. Erb's birds, killing 9 of them, thus making a score of 118 kills out of 130 shot at. The score of the shoot is as follows:

Fulford.....	112o1101211211111111111—23
	11111e01e2111111111212—22
	22221212e2221111121012122—23
	22222222211221lo2111212022—23
	20112111122222o'1112222221—23
	11011 — 4—118

He used his second barrel sixty times although there were at the least twenty-five times when its use was uncalled for as the birds were "rolled up like jack-knives" with the first barrels. The conditions of the shoot called for a 12-bore gun, 1¼oz. of shot, 30yds. rise, the inclosure to be the boundary. The writer was impressed into service as referee, while Mr. John Riggott of Rockaway acted as official scorer.

After the above great exhibition a number of "Jersey" sweeps were shot, the conditions being in each case four birds per man, $3 entry, two moneys. The results of the first four sweeps are here given:

	First.	Second.	Third.	Fourth.
Fulford	2121	2111	2121	111i—16
Collins	2111	2121	0112	2112—15
Hedden	1210	2221	2222	1211—15
Hollis	1011	1111	1211	1110—14
Castle	2210	111o	1011	0110—11
Mack	0000	0000	0021	1112— 6

All ties were divided excepting that for first money in the fourth event which was carried over to event No. 5. The next two events resulted as follows:

	Fifth.	Sixth.	Tie.		Fifth.	Sixth.	Tie.
Fulford	1121	1111	— 8	Hollis	1012	0211	110— 8
Hedden	1221	220o	— 6	Brown	o010	0211	10 — 5
Collins	1212	2220	211—10	Castle	1011	1o21	0 — 6
Mack	1111	2120	122—10				

First money from the fourth event, which had been carried forward, was again tied for by the same men, who very sensibly concluded to div. Second money in the sixth event was div. by Collins and Mack on the shoot-off.

The final event, under same conditions as those preceding, resulted in a tie for first between Collins, Hollis and Fulford, and the former, feeling disposed to test his own mettle in hot company, insisted upon a shoot-off. Hollis concluded that the race would be too hot, so he drew his pro rata. How well Collins gauged his ability is best shown by the following figures:

	Seventh.		
Collins	1211—4	Castle	1011—3
Fulford	1111—4	Mack	2101—3
Hollis	2112—4	Brown	1001—2
	Tie.		
Collins	112112111211—13	Fulford	211112111111—13

At this stage of the game the birds were gone and the two leaders concluded to div.—the privilege of paying the difference between $4.67 in the pot and the price of the birds at a quarter each.

Moore Wins the Oregon Shoot.

PORTLAND, Oregon, Feb. 7.—The big live-bird shoot, advertised to take place here to-day, is over, and its merits will be discussed and cussed pro and con for many a day to come. This match was at 25 birds per man, the entrance $20, birds extra. The purse was div. into four moneys. The shooters were mostly on the grounds at 9:30. About 200 spectators witnessed the start. The weather was beastly, with a cold, raw, southeasterly wind, accompanied by a drizzling rain and sleet. Robert Townsend was chosen stake holder, Colonel Houghton was referee and F. E. Richardson and Robert Townsend judges. The birds were as fine a lot as ever flew from the trap, and Messrs. Clark & Caraher are deserving of much credit for the good condition in which they were kept. When first man, E. W. Moore, was called to the score it was ascertained that they had no scorer, and consequently W. A. Storey, who was unable to shoot, owing to the fatigue sustained from his race with la grippe during the past month (and here I will say that the best of his opponent by a very small margin), was pressed into the office.

The shooting then commenced in earnest, and all went as merry as a marriage bell till all had shot down 10 birds per man. Then Mr. Southmayed, of Sheridan, Ore., arrived on the grounds and wanted to shoot in the match. The train had been delared, and as the boys all knew that he intended to come in I should have favored his entering, but the shooters said "no," so the match went on without him. Straightaway, right and left-quarterers were the order, and out of 350 birds we had only 10 incomers, 6 hoverers and 7 towerers. Of twisters there were plenty, and C. C Clark was more fortunate (!) than any one else in getting this kind. Great excitement was created by C. E. Hughes snapping his second barrel at a bird, and then without removing the shells from his gun he showed the referee the primers, and both had been hit by the firing fin. The referee, not thinking anything wrong, said "no bird." This is where he made a mistake, as he should have demanded the shells. Some of the shooters claimed—and in my mind there is no doubt—that both shells were empty and that he had failed to load his second barrel after shooting his previous bird. I saw the shells taken out of the gun, but would not say yes or no, as all of the boys are friends of mine. Mr Hughes maintained that both were loaded, but diligent search failed to discover the loaded shell.

The following is the score of the match:

E W Moore.....	1212012020012012121222—20
Joe Bowles.....	o2112012200co12122210o202—16

W L Dudley.....	2220202200o1o102111212111—17

After this came a pool shoot, 5 birds, $5 entrance, birds extra, three moneys. In this the former referee entered, and Frank Thorn, one of our old-time shooters, acted as referee. James Caraher and Chas. Hoxie made straights and in the shoot off Hoxie won. E. W. Moore got second alone and Evans, Kinzel and Clark tied on three each for third money. As there were no more birds at adjourned hour to prepare for the diamond medal shoot that takes place on the 28th.

The South Plainfield Gun Club.

THE regular shoot of this club was held at South Plainfield, N. J., on Feb. 8, both live birds and targets being used. The results:

No. 1, 4 live birds, $3 entry:

C Smith	1022—3	W Terry	2112—4
Geo Voehl	1121—4	J Darby	1002—2
L B Campbell	1120—3	W Sisty	2223—4
R B Manning	1212—4	W Case	1001—2
T Brantingham	0112—3	A Sopar	0002—1
D Terry	0211—3		

No. 2, same conditions:

Smith	0121—3	D Terry	2010—2
Voehl	1101—3	W Terry	0201—2
Campbell	0031—1	Darby	0210—2
Manning	1010—2	Sisty	1001—2
Brantingham	2211—4	Case	0000—0

Third money shot off and won by W. D. Terry.

No. 3, 10 bluerocks, 50 cents entry, 4 moneys:

Brantingham	1011010111—7	Manning	0010111011—6
Sisty	0010011100—4	W Terry	1100100101—6
Ash Swamp	1010100010—4	Sopar	0111111111—9
Voehl	0010110110—5	Randolph	0110011100—5
C Smith	0011111010—6	Vannis	0111110011—7
Hartmann	0000000000—0	Taylor	1001000003—2
Case	0010010003—2	Teeple	0110011011—6
D Terry	1001101010—5		

Tie for fourth shot off in No. 4 and won by Voehl.

No. 4, same: Brantingham 7, Sisty 6, Ash Swamp 3, Voehl 7, C. Smith 5, Hartman 4, Case 7, D. Terry 4, Manning 7, W. Terry 6, Sopar 7, Randolph 0, Vannis 6, Sanford 3, Teeple 6.

No. 5, same: Brantingham 5, Sisty 4, Voehl 4, C. Smith 5, Hartman 7, Case 6, D. Terry 5, Manning 7, W. Terry 8, Soper 6, Vannis 5, Teeple 7, Darby 5, Squeir 6. Fourth shot off and divided by C. Smith and Dan Terry.

No. 6, 5 bluerocks, 50 cents, three moneys: Brantingham 4, Soper 3, Voehl 2, Smith 2, Manning 3, Sisty 1, Teeple 3, Lindsburg 2. Third shot off, won by Voehl.

DRIVERS AND TWISTERS.

WASHINGTON'S Birthday will be trap-shooters' day all over America, and it is impossible to even surmise the quantity of powder and shot that will be used, the number of targets thrown or the number of live birds trapped. A glance over our column of fixtures will give the shooter a very good idea of where the principal events will be found.

* * *

Last Wednesday, E. D. Fulford, the world famed wing shot, disbanded his working force, and entered upon a vacation which will continue until April 15. During the interim he intends to shoot whenever and wherever he can, and will doubtless have some matches on his hands before many days. On Saturday he informed the writer that he was in receipt of a letter which stated that C. W. Budd, the popular expert of Des Moines, Iowa, was willing to shoot him two matches, one in the West and one in the East, each match to be at 100 live birds, 30yds. rise. Anent this proposition Mr. Fulford authorizes the FOREST AND STREAM to state that he will be pleased to shoot the above matches against Mr. Budd, provided the latter will agree to the following innovation, viz., to have a circle, 12ft. in diameter, drawn around each trap, and each bird that falls inside of said circle to be scored a "lost bird." This will be a decided novelty, and there seems no reason why the innovation should not be accepted by Mr. Budd. There will be no chance in this event, of "plastering" a bird on the trap.

Mr. Fulford also wishes us to state that he will shoot Mr. Budd three matches at 100 birds each, for $333.33⅓, per match ($1,000 in all), and will shoot under either strict or modified Hurlingham, London Gun Club or Illinois State Rules. He is in the field, to shoot until April 15, and is willing to make any reasonable terms for the sake of a match.

* * *

The Perth Amboy Gun Club is coming to the front once more, having announced an all day's shoot at live birds for Washington's Birthday. A monster ox will be contested for in the afternoon. This club is now in a very thriving condition, and has recently purchased the inclosed grounds, formerly used by the Perth Amboy Baseball Club. A fine shooting house is now being built, and a grand house-warming will be held on the above date.

* * *

Feb. 22 will be a great day on the grounds of the Woodside Gun Club, foot of Riverside avenue, Newark, N. J., when the initial shoot of the New Jersey Trap-Shooters League will be held. The chances are that at least twelve clubs will take part, and possibly the number may go higher. The main event will be the team contest for the championship of New Jersey, each team to comprise five men, and each man to shoot at 25 artificial targets, under the rapid-firing system. The grounds of this club are admirably adapted to the sport, and are provided with a commodious and comfortable shooting house. The traps will be in position at 9 A. M., and open sweepstake shooting will precede the team match. This will of course be but one of a series of these contests, as one will be held on the grounds of each club until each has had its turn. The team that wins the greatest number of contests during the series will receive a trophy emblematic of the championship of New Jersey.

* * *

The following is a copy of a letter, that has been sent to each member of the Woodside Gun Club: "Newark, N. J., Feb. 13, Dear Sir: The Woodside Gun Club was lucky enough to draw the first shoot of the new New Jersey Trap-Shooters' League, which will come off on their grounds, Monday, Feb. 22. A practice shoot will take place on Saturday, Feb. 20, and the Brunswick Gun Club is invited for this day. Your presence is therefore very important, as our team will be selected that day by the committee.—Carl von Lengerke." Mr. von Lengerke wishes it to be known that all shooters will be welcomed at the above practice shoot.

* * *

A big time is expected at the "Old Stone House" grounds of John Erb, on Bloomfield avenue, Newark, N. J., on Feb. 22, one of the attractions to be a 25-bird sweep, $20 entry, open to the world. At 12 o'clock John L. Brewer and E. D. Fulford will give an exhibition of high-class shooting. In the 25-bird sweep first money will be fattened by the addition of the entire receipts from the gate. The birds will be furnished by William R. Fieles, of Christiana, Pa., who has been instructed to furnish the hardest lot of flyers procurable. The division of money, in order to insure a big entry list and give everybody a chance, will be on the basis of one money for each four men. The traps will be in position ready for work at 9 A. M.

* * *

The Heightstown (N. J.) Gun Club is one of the latest acquisition to the ranks, and judging from the caliber of its organizers it will soon take a place in the front rank. Its officers are: President, E. E. Anderson; Vice-President, J. C. Norris, Jr.; Treasurer, Edgar Embly; Secretary, W. S. Pullen. The members of the club mean business, and they already talk of sending challenges to the Freehold Shooting Club and Dayton Gun Club.

* * *

The Manhattan Gun Club of New York City, has elected the following officers for the ensuing year; President, Frank Lanbrecht; Vice-President, M. Lichtenberger; Secretary, John W. Bayer; Treasurer, Robert Schmitt.

* * *

At the meeting of the Elizabeth Gun Club, of Elizabeth, New Jersey, held on Feb. 11, the following were elected as officers for the ensuing year: President, Robert E. Chetwood; Vice-President, Robert S. Williams; Secretary and Treasurer, William M. Parker; official scorer, John W. Fulton.

* * *

Mahlon Fox, the "shooting blacksmith," of Trenton, N. J., shot a match at 100 live birds, against James Garner, of Doylestown, Pa., on Feb. 5. The birds were an average lot, and Garner won by a score of 69 to Fox's 68.

* * *

HATHAWAY.—On Sunday, Feb. 14, Charles M. Hathaway, in the 39th year of his age.

The above brief notice, sent to this office on Monday, will be read with regret by trap-shooters all over the country. Charles M. Hathaway, under his *nom de plumes* of "Advance" and "Mutton," was probably as well known as any sportsman in the East, where for a number of years he has wielded his pen in the interests of that class of target and live-bird shooters who shoot for pure love of the sport rather than for the cash to be won, but who, he always claimed, were debarred from doing so by the persistent following up of the professional shots, whom he classed as "pot-hunters." A number of times the writer has had occasion to differ with Mr. Hathaway's views in regard to the expert vs. amateur class of shooters, but despite this one cannot help but admire the pluck of a man who openly and persistently wielded the cudgel in defense of the amateur class, which as a whole lacked the pluck to back him up in his fight. At times he took extreme views, and doubtless made many enemies among the experts; but underlying all there was a sterling worth that commended the man to those who became intimately acquainted with him. An enthusiast in all matters pertaining to field and trap work, he was ever ready to lend his aid in furthering its interests. He was one of the founders of the Claremont grounds and sunk considerable money in that venture. Later he became identified with the New Jersey Shooting Club, which now holds possession of the grounds at Claremont, N. J. At the time of his death he was secretary of the Spring Hill Gun Club, of Blauveltville, N. J. His interment took place at Mamaroneck yesterday.

Inter-State Association.

A MEETING of the Inter-State Manufacturers and Dealers' Association was held at the Astor House Feb. 13, at which were present Chas. Tatham, of Tatham Bros.; Neaf Apgar, of Henry C. Squires; T. H. Keller, of the United States Cartridge Co.; H. A. Penrose, of the Standard-Keystone Target Co. The programme adopted for the year was this: The membership of the Association shall be open to all target companies and manufacturers and dealers in shooting supplies; all members shall have equal privileges in all respects, and shall share equally in expenses and liabilities. Clubs for whose benefit tournaments may be given shall be free to select any targets they choose. The Association shall pay Mr. Penrose a $1,200 salary as manager (to include his traveling expenses), he to provide an assistant, whose traveling expenses shall be paid by the Association. The Association shall pay freight o tournament fixtures and shall make good any losses on guaranteed events. The total expenses, outside of possible deficits on purses, is estimated at $2,000. Members will be asked to pay their proportion of this in advance. There shall be a treasurer who shall serve without pay. (Mr. J. A. H. Dressel, of the U. M. C. Co., was suggested.) Guaranteed purses at a shoot shall not exceed $1,000. There shall be ten or twelve tournaments in the year. In view of the success of last year it is hoped that the Association may have a larger membership for 1892 and the warm support it deserves.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Feb. 13.—At the regular semi-weekly shoot of the Rochester Rod and Gun Club the following scores were made. The shooting was under American Shooting Association rules, 18yds. rise, 5 Peoria traps, 10 Peoria blackbirds, rapid-firing system.

The turn out was rather light, but the day could not have been finer. Cold and clear and no wind. The sun was pretty bright at times and strained the eyes somewhat, but on the whole it was as perfect a day as we have had this winter. Every one present had for once all the shooting they wanted, and the traps were kept going as lively as the boys could load them, one squad shooting its string of 60 birds in 3¼ minutes:

	1	2	3	4	5	6	7	8	9	10

At Michigan's Capital.

LANSING, Mich., Feb. 8.—I send you the scores made by a few of the members of the Lansing Rod and Gun Club at their first practice shoot of the season, on Feb. 5, from 3 traps, unknown angles. First event was at 24 birds, second event at 27 birds, and third and last event at 9 birds. All were shooting 12-gauge guns. Davis, Wright and Whitehead were shooting the N. R. Davis hammerless guns—Whitehead a 7½lb. gun, Davis and Wright 8½lb. guns; Cooley, Schelling, Hall and Nichols were shooting 12-gauge Parker hammerless guns—Hall and Cooley 7½lbs., Schelling 8lbs., Nichols 7¾lbs.

Twenty-four singles:

Whitehead	001010001000100010010101— 8
Nichols	111111101011111110011001—18
Davis	111110111110111011111111—21

Davis	010011101—5		JEN, Sec.

The New Jersey Shooting Club.

THIS club had a strong, cold wind to contend with at the first of its monthly shoot for the Quimby prizes, on Feb. 13. Each contestant shot at 40 targets, as follows: Ten under Keystone system, 10 from unknown angles, 5 pairs and 10 in a walking match. Each man was allowed a given number of points, according to his ability, these being added to his score. "Tee Kay," Keller, of U. S. C. Co. fame, made himself useful by officiating as referee. The result of the contest was as appended:

	Keystone system.	Unknown angles.	Pairs.	Walking match.	Allowance.	Total.
L Vredenburgh	8	5	6	8	6	33
G S Virden	5	6	5	7	8	31
F G Moor	6	7	6	8	8	35
C A Pope	4	7	5	6	8	30
W Purdy	7	4	4	8	2	25
J A Bigoney	5	3	2	10	4	25
G E Greiff	7	4	6	4	8	31
J A Richmond	8	4	2	6	8	28
W S Simpson	7	7	10	9	0	33
A F Compson	8	4	9	9	6	36
Garms	3	3	3	4	5	18

This made Compson the winner of the contest. The series will run for six months.

The following sweepstake events were afterward shot:

No. 1, 10 bluerocks, Keystone system: Simpson 9, Virden 6, Moore 6, Greiff 5, Compson 4, Purdy 6, Pope 2.

No. 2, 10 bluerocks, Keystone system: Simpson 7, Virden 5, Moore 8, Greiff 8, Compson 8, Purdy 9, Pope 8.

No. 3, 10 bluerocks, unknown angles: Simpson 5, Virden 6, Moore 5, Greiff 4, Compson 6, Purdy 6, Pope 4, Dannefelser 5, Garms 3.

No. 4, 5 pair bluerocks, unknown angles: Simpson 8, Virden 7, Moore 3, Greiff 8, Compson 7, Pope 4, Dannefelser 2; Garms 3.

Algonquin Defeats Union Hill.

THE team match at live birds, shot at Guttenberg on Feb. 11, between the Union Hill and Algonquin Gun Clubs, was an interesting affair, and was witnessed by about 200 people. The weather was disagreeable, a snow storm being in progress, and the shooting was hard, J. M. Baker refereed, while the scores were looked after by E. Heffen and J. R. Burton.

The conditions were ten men per team; ten live birds per man; 50yds. rise, gun below elbow until bird is on wing, use of both barrels allowed. The scores:

ALGONQUIN G. C.		UNION HILL G. C.	
Jos Hanna	1001111021— 7	John Mehl Jr.	1111021101— 8
Matt Cox	1012001111— 7	A D Johnson	0122111011— 8
C R Terwilliger	1020120120— 6	H Untereiner	1001210221— 7
Louis Bremer	1111211111—10	A B Collins	1001110121— 7
F G Rinn	0110010100— 4	John Waller	1001120100— 5
Chas Meyer	2111101111— 9	J E Welling	2010112111— 8
G Van Schaick	1021121211— 9	Abe Greenlief	1102111100— 7
H Griswold	1202011110— 7	J H Earle	0202100110— 5
H Kuhnast	1122111111—10	Thos Langcake	2110010211— 8

On the Forest Gun Club Grounds.

GERMANTOWN, Pa., Feb. 13.—Enclosed find scores of a team shoot that took place this afternoon at the Forest Gun Club grounds, Twenty-seventh street and Lehigh avenue. The conditions of the match were 50 targets and 15 live birds per man, American Association rules on both, the losers to pay all expenses of the match and an oyster supper for ten, each shooter to invite two friends. Wm. Garvin was referee and Harry Thurman official scorer. The results follow:

	Targets.	Pigeons.		Targets.	Pigeons.
S Hothersall	32	9—41	J A Mills	40	15—51
J A Adair	37	10—47—92	Wm Morrison	28	13—41—88

Eddy Collins Stacks Against Fulford.

ABOUT two score sportsmen, including locals and those from out of town, were at John Erb's "Old Stone House" grounds on Tuesday, with the expectation of seeing a practice shoot at 100 birds each between Brewer and Fulford. The former, however, was unable to be on hand, so Fulford was left to kill time as best he could. As there were plenty of birds, he and Eddy Collins, the sprightly trap-shooter from West Hoboken, had a friendly "go" at 50 birds each, Collins standing at 28 and Fulford at 30yds. rise, Hurlingham rules governed. The scores follow:

Fulford	1100011022110101111122101201101211111212121106—39
Collins	1010022011212111001101111012111003111201111211—39

Next John Erb offered to wager that Fulford could not kill 94 out of 100 birds, and Chas. M. Hedden offered an even bet that he would not kill 92. The telephone man accepted both offers and lost both bets, as the following table will show:

Fulford	1221102121111131112111223—23
	2111121101120101111212121—23
	0122110112211101111111222—22
	1101111111111221211101110—22—90

The day was cold and raw, with a light wind from the left-quarter, and the birds as a whole were by no means a crack lot.

The Winterset Gun Club.

WINTERSET, Ia. Feb. 11.—About forty-two miles southwest of Des Moines, on a branch of the Great Rock Island R. R., a thriving city of 3,000 people is found, and among the aforesaid 3,000 have been sifted out 10 sportsmen who have organized a club for the purpose of protecting game by insisting on an enforcement of the game laws, and also for the pleasure of its members, as well as their advancement of the art of trap-shooting. A constitution and by-laws have been adopted, and on Jan. 15 they held their initial shoot for the club medal, each man shooting at 11 live birds:

S. H. Dow 8, L. T. Dow 4, W. P. Fagan 9, Dr. Davisson 7, H. Ely 6, H. E. Goshorn 11.

Jan. 22, 15 Peorias: Davison 10, J. H. Dow 7, Goshorn 10, Fagan 10, Ely 5.

Jan. 23, 10 live birds, 2 moneys, entrance 50 cents: M. Fagan 8, W. Fagan 9, Bush 7, Ely 4, Goshorn 3, Davisson 7, Mardis 4, J. H. Dow 9. Second div.

Same day, at 10 Peorias for practice: J. H. Dow 8, Davison 7, Mardis 4, Goshorn 6, Ely 5, Bush 6. W. Fagan 3. M. Fagan 7.

Proposed Dexter Park Shooting League.

LOUIS MILLER, the genial proprietor of Dexter Park, announces that to promote interest in trap shooting, and to bring the many clubs which meet at Dexter Park into a closer bond of good fellowship, it has been suggested to form a union of clubs to be known as the Dexter Park Shooting League; to hold five shoots in March, May, July, September and November; teams of 10 men, 10 birds each; no entrance fee; modified Hurlingham rules. If five or more clubs are willing to form the league, Mr. Miller will donate a $150 trophy, the kind and design to be chosen by the clubs. The highest aggregate score shall decide the winning team; a tie shall be shot off at 3 birds each man. Each club shall send a list of their team and alternates by March 10.

The Amateur Gun Club.

THE Amateur Gun Club held an open shoot on its Fifth avenue grounds in Newark, N. J., on Feb. 13, about half a dozen members being present. The main feature was a team match for a supper, which resulted as below, each man shooting at 25 clay pigeons:

Rist	14	Gehring	17
Lunn	12	McKeone	9
Limpert	8—34	Huxter	10—36

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

H. W. B., New Haven, Conn.—The hooks you send are used for dressing flies on.

W. J. L., Attleboro, Mass.—What would probably be the result of introducing California trout into a small stream which is also being stocked with native trout? Would either species be liable to exterminate or in any way interfere with the increase of the other species? Ans. If the stream is suitable for brook trout it will probably not be adapted to the rainbow, and the latter will make its way down stream and off to see as soon as possible. There is no natural antagonism between the two, but the California trout grows big, has a voracious appetite, and would soon consume all the food supply of the waters provided it remained long enough, which is always a matter of doubt when there is danger of a famine.

DOWITCHER, New York.—1. I have lately become possessed of a 12-gauge, 30in., 7¼lb. breech-loading shotgun which is marked on rib and lock-plates "The Continental," and on the tang of the false breech are stamped the letters "S. J. D." Can you tell me who makes these guns, and if there is any depot or agency for them in New York? I think it is a Belgian machine-made gun. Though cheap, it is a smooth-working, well fitted weapon, and as far as shooting qualities go it is the best gun I have ever shot with. The right barrel is bored cylinder (or a modification of a cylinder) and the left barrel is a full choke, and wonderfully effective. 2. What would you consider a proper charge for such a gun? I mean of black powder. 3. In loading shells, how much pressure is it necessary to put on the wads which cover the powder? Some men I know ram them very hard, while others merely press them home. 4. What size grain of powder is most effective in such a gun? Ans. 1. The gun is Belgian made. The agents in this city are Wiebush & Hilger, 84 Chambers street. 2. 3 to 3½drs. according to game. 3. It is not necessary to pound the wads, but they should be firmly seated. 4. A large, slow-burning powder, such as Dupont's ducking No. 2, or some corresponding size by any reliable powder maker.

CAMPAIGNING WITH CROOK.

THERE are few officers in the army who have had a longer or wider experience of field service in the West—the rough and ready campaigning which so little resembles civilized warfare—than Capt. John G. Bourke, and there are few who have so ready a pen, and can employ it to such good purpose. For this reason, if for no other, his last work, "On the Border With Crook," published by the Scribners, will have a peculiar interest for a large class of readers. There are many other reasons why the book should interest the public. General Crook was to most minds an ideal soldier. He had fought in many fields, for his military service lasted nearly forty years, and all of this, excepting the portion spent in the Civil war, was passed in handling the difficult problems of the Indian question. This was done so successfully as to call forth from General Sherman the statement that Crook was the greatest Indian fighter and manager the Army of the United States had ever had.

The present volume does not profess to be a biography of General Crook, but is rather descriptive of the regions in which his Indian campaigns were carried on, of the people both red and white with whom he was brought in contact, the difficulties which he met with and how he overcame them, and a sketch of the principles which guided him in his intercourse with various wild tribes which he met in his long service.

No man is better qualified than Captain Bourke to write of all these matters, for during all the Indian campaigns made by Crook, as well as in all the efforts which he made to reclaim the Indian from savagery and lead him into the paths of civilization, the author was by his side, a member of his military family. His account of his commander shows that General Crook was not merely a soldier, anxious only for military success. He was also a man of most kindly nature and tender heart, considerate of those whom he had vanquished, and intelligent in his appreciation of the needs and capabilities of the aborigines.

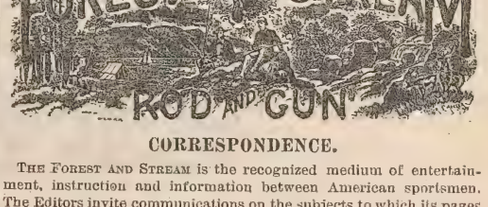
The story here told by Captain Bourke extends over more than twenty years, and for all who desire to know something about the settlement and building up of our Western country will have a deep interest. It tells of scenes and events that sound strangely enough to ears accustomed only to the sounds of civilized life. Here is his description of Old Camp Grant:

"There were three kinds of quarters at Old Camp Grant and he who was reckless enough to make choice of one passed the rest of his existence while at the post in growling at the better luck of the comrades who had selected either one of the others.

"There was the adobe house, built originally for the kitchens of the post at the date of its first establishment sometime in 1857; there were the 'jacal' sheds built of upright logs chinked with mud and roofed with small branches and more mud, and the tents, long since 'condemned' and forgotten by the quartermasters to whom they had originally been invoiced. Each and all of these examples of the Renaissance style of architecture as it found expression in the valley of the Gila, was provided with a 'ramada' in front, which at a small expenditure of labor in erecting a few additional upright saplings and cross pieces, and a covering of cottonwood foliage secured a modicum of shelter from the fierce shafts of a sun which shone not to warm and enlighten but to enervate and kill.

"The occupants of the ragged tentage found solace in the pure air which merrily tossed the flaps and flies, even if it brought with it rather more than a fair share of heat and alkali dust from the deserts of Sonora. Furthermore, there were few insects to bother, a pleasing contrast to the fates of those living in the houses, which were veritable museums of entomology, with the choicest specimens of centipedes, scorpions, 'vinagrones,' and occasionally tarantulas, which the Southwest could produce.

"On the other hand the denizens of the adobe and the 'jacal outfits' became inured to insect pests and felicitated themselves as best they could on being free from the merciless glare of the sun and wind, which latter with its hot breath seemed to take delight in peeling the skin from the necks and faces of all upon whom it could exert its nefarious power." * * *



"Camp Grant was a hotbed of the worst kind of fever and ague, the disease which made many portions of southern Arizona almost uninhabitable during the summer and fall months of the year. There was nothing whatever to do except scout after hostile Apaches, who were very bold and kept the garrison fully occupied. With sickness, heat, bad water, flies, sand storms and utter isolation, life would have been dreary and dismal were it not for the novelty which helped out the determination to make the best of everything. First of all there was the vegetation, different from anything to be seen east of the Missouri; the statuesque 'pitahyas' with luscious fruit; the massive biznagas, whose juice is made into a very palatable candy by the Mexicans; the bear's grass or palmilla; the Spanish bayonet, the palo verde, the various varieties of cactus, principal among them being the nopal, or plate, and the cholla, or nodula, which possesses the decidedly objectionable quality of separating upon the slightest provocation and sticking to whatever may be nearest; the mesquite, with palatable gum and nourishing beans; the mescal, beautiful to look upon and grateful to the Apaches, of whom it is the main food supply; the scrub oak, the juniper, cottonwood, ash, sycamore, and lastly, the pine, growing on the higher points of the environing mountains were all noted, examined and studied so far as opportunity would admit.

"And so with the animal life. The deer of the strange variety called the mule, the coyotes, badgers, pole cats, rabbits, gophers—but not the prairie dog, which for some reason never understood by me does not cross into Arizona, or to be more accurate, does just cross over the New Mexico boundary at Fort Bowie in the southwest and at Tom Keam's ranch in the Moqui country in the extreme northeast."

To call attention to all the interesting scenes from wild life which are so graphically pictured in Capt. Bourke's last book would require greater space than we can give. It treats of history that is recent, and at the same time is ancient in the sense that it can never return. Such history is being rapidly forgotten and we should be grateful to those who record these interesting events. "On the Border With Crook" deserves a wide circulation.

I have seen numerous specimens of our saurian no longer than an ordinary lead pencil; this was in the season of their hatching. I have also seen a few living specimens about 16ft. in length. In the autumn of 1875 I obtained for the late Effingham Lawrence, member of Congress and Commissioner from Louisiana to the Centennial Exhibition, the dried skin of an alligator, which, after at least 15in. had been cut from the snout and skull, still measured 17ft. 10in. in length. Allowing more than 6in. for shrinkage in drying, this monster of his kind alive must have measured more than 20ft. He was killed in the lower part of Bayou Lafourche. Probably the largest alligator ever seen in Louisiana was killed in a small lake on the plantation of H. J. Feltus, in Concordia parish. According to the statement of Mr. Feltus, now of Baton Rouge, this specimen measured 22ft. in length. The great reptile had long been famous for miles around, having destroyed numbers of hogs and hounds owned in the neighborhood of his retreat. He had become so wary, from the number of ineffectual shots fired at him, as to be almost unapproachable. Finally he fell a victim to a long shot fired from a Mississippi rifle in the hands of Mr. Feltus, who persevered in hunting him, having been the greatest loser by his depredations. The huge carcass of this reptile was towed to the bank by a boat. It required the strength of a pair of mules and a stout rope to haul it ashore, where the measurement was made with the result noted above.—*Century.*

In Bald Eagle Township a certain man brought in so many wildcat skins to Squire Rosser that the latter finally began to think that the woods were full of them. The Squire would clip the ears off and pigeonhole them, return the hide to the fellow, and in a couple of days back he would come with another cat. Soon the Squire's suspicions were aroused, and one day when the chap came in with a cat-skin the Squire made a closer examination, and found that it was the same old skin, and that the 'cute individual had been manufacturing ears out of other pieces of skin and sewing them on, and that he (the Squire) had been clipping off the made ears and pigeonholing them.—*Lock Haven (Pa.) Democrat.*

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The Editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Subscriptions may begin at any time. Terms: For single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain.

Foreign Subscription and Sales Agents—London: Davies & Co.; Brentano's; Sampson Low & Co. Paris: Brentano's. Foreign terms: $5 per year, $2.50 for six months.

ADVERTISEMENTS.

Inside pages, 30 cents per nonpareil line. Special rates for three, six and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices $1.00 per line. Only advertisements of an approved character inserted.

Address all communications:

"WITH FLY-ROD AND CAMERA."

By EDWARD A. SAMUELS,

PRESIDENT OF THE MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION.

This superb volume, in the preparation of which author and publishers have been long engaged, is now ready. Of the text, which relates chiefly to salmon fishing on the famous rivers of Canada, it is sufficient to say that it is from the pen of one who is a master of the angler's craft. The vivid pen-pictures of camp life and fisherman's luck are drawn with a firm hand. This is the work of no novice. From the first page to the last it is seen that the chapters have been written out of a full experience.

The illustrations are of a character fittingly to supplement the text. They are full-page reproductions, by a marvelously faithful half-tone photo-engraving process of Mr. Samuels's own invention, from photographic negatives made by the author for this work. They picture all the phases of Canadian salmon and trout fishing, with far-famed scenery and views of the quaint old towns through which fishermen pass on their way to the salmon streams.

The work has been prepared in the most luxurious style, printed on heavy plate paper, and elegantly bound in cloth and gold, with gilt top.

Size of page, 7x9½in.; 477 pages. Price $5.00. Sent postpaid.

FOREST AND STREAM PUBLISHING CO.,

London: DAVIES & CO., 1 Finch Lane, Cornhill. **318 Broadway. New York.**

The Chubb Eight-Strip Split Bamboo Rods are pronounced by Anglers to be the "King of Rods;" they are unexcelled for quality of material, workmanship, beauty and balance. Printed guarantee goes with each Rod which warrants them for one year. Rods are put up in an elegant case.

YELLOWSTONE PARK LEGISLATION.

WITH the opening of the Fifty-second Congress there is the usual gathering in Washington of persons who desire to secure legislation by which money or property belonging to the public shall be turned over to them. Like hungry dogs watching people who eat, they stand in the halls of the Federal Legislature, each ready to snatch for himself the bone which may be thrown to him.

For ten years the Yellowstone National Park has been watched with envious eyes by those eager to obtain control of it, and the attempts to wrest it from the public and to divert it to private uses have been many and oft repeated. Among the bills already introduced in Congress with this purpose, we recognize some old faces, and among them one, in a new dress, which received its quietus ten years ago.

In the year 1882 a syndicate known as the Yellowstone Park Improvement Co. made a secret and audacious attempt to secure from a subordinate of the Interior Department a ten years' lease which should practically turn over the Yellowstone Park to this company as a private farm. The privileges intended to be granted by that lease were enormous, included the concession of everything of value in the Park, and were exclusive. It was to be a great monopoly. The FOREST AND STREAM having learned of this intended fraud upon the public, called the attention of the country to it, and the scheme was defeated, chiefly through the public spirit and energy of Senator Vest, of Missouri.

A project curiously like that of the Yellowstone Park Improvement Co. is now before Congress in Senate Bill 1,963, which was introduced by Mr. Washburne, of Minnesota. Ostensibly this bill incorporates the Yellowstone Park Company and defines its powers; really it turns over to this corporation the whole Yellowstone Park for a period of forty years.

To this corporation the bill grants for twenty years, with the privilege of twenty years renewal, ten parcels of land, of ten acres each, to be by it selected in the most desirable portions of the Park, to be used as hotel sites and for other purposes in connection with its business. For each of these parcels it is to pay an annual rental of fifty dollars, which shall be in lieu of all taxes. The corporation is given the right to operate telegraph and telephone lines, may place steamboats on all waters, run railways propelled by horse, cable or electric power; may manufacture brick, use public stone and timber, graze the cattle, horses and sheep needed in its business, and may in fact do about anything that it wishes to.

The bill gives evidence of great care in the draughting. The enormous privileges granted to the company are distinctly specified, but besides these the bill contains various statements as to the rights of the public and the manner in which these rights shall be guarded, but such references have every appearance of being purposely so loosely drawn as to be incapable of any definite interpretation. No business man—certainly no lawyer—would be willing to trust his interests to the provisions of an agreement so vaguely worded as is this document. While the careless reader might imagine that the public's rights had been cared for, the very reverse of this is true, and the passage of this bill would practically take the National Park out of the hands of the Secretary of the Interior and transfer it to a corporation. The measure is in effect the old Yellowstone Park Improvement Company scheme, disguised, it is true, and modified to suit the times, but still asking for the Yellowstone Park, and encroaching so seriously on the rights of the people that even its introduction must be viewed with real alarm.

It is of course to be expected that the true meaning of this bill will be explained to the Senate, and that it will be defeated if it should come before that body. It ought to be adversely reported by the Committee on Public Lands, to whose hands it went.

The bill has been submitted by the committee to Mr. Noble, who in replying leaves no room for doubt as to what his views are. He condemns the bill unsparingly, and points out that the purpose of the measure is to interfere with government control of the Park, and to establish a monopoly there for forty years. Since Secretary Noble has been directing the Interior Department, he has given us many examples of his wisdom and foresight in matters of this character, and it is no surprise to us that he sees through the purpose of this bill and condemns it. A deep public interest is felt, and has been manifested in the National pleasure ground, and it is not likely that Congress will take so long a step backward as the passage of this bill would be.

As usual our old friend—or enemy—the Montana Mineral Railway bill makes its appearance at this session. It was introduced by Mr. Stockdale of Mississippi, who asked that it might be referred to the Committee on Railways and Canals. Heretofore this bill has always gone to the Committee on Public Lands, and the Speaker so stated to the introducer, who nevertheless persisted in his request, being apparently unwilling to have this bad measure go before the members of the Public Lands Committee, who perhaps know too much about it. Mr. Buchanan of New Jersey seemed to understand what was in Mr. Stockdale's mind, and objected to the proposed reference, so that the bill went to its proper committee. This measure grants to the corporation named, a right of way 60ft. wide through the Yellowstone Park, from the town of Cinnabar to the Clark's Fork mining district. No railway should be allowed within the Park, for reasons familiar to most of our readers, and this bill should suffer its usual defeat.

The Vest bill for the protection of the Park has been introduced in the Senate, and the same bill with amendment in the House. They should come to a vote in each body.

SNAP SHOTS.

OUR correspondent "J. V. B.'s" relation of how he set forth on a boating excursion in quest of an appetite and found it, is a story which might be matched from the experience of many of his readers. It recalls the story in Spence's "Anecdotes," told by Alexander Pope, of a certain Lord Russell, who did not love sport, but used to go out with his hounds every day to hunt for an appetite. "If he felt anything of that he would cry out, 'Oh, I have found it!' turn short round and ride home again, though they were in the midst of a fine chase."

Many of our readers will remember the account of "Winter in Wonderland," published some years ago in FOREST AND STREAM, and copied in such papers as the New York *Herald*, the Philadelphia *Press*, and in fact all over the country. It was a most graphic account of snowshoe travel in the dead of winter through the Yellowstone National Park. Such a trip had never been made before, and the difficulties and dangers to be encountered were unknown. Mr. Elwood Hofer, the FOREST AND STREAM'S special Yellowstone Park correspondent, made the trip, and wrote the delightful account which described it. Of not less interest is the story from the same pen, the first chapter of which we print this week. Some time ago Mr. Hofer was appointed Smithsonian Hunter, to capture living animals in the Park for the National Zoölogical Park in Washington. In the present series of letters he tells how he secured some of these animals, and gives delightful pen pictures of the ways of elk, antelope, deer, bears, both black and grizzly, and other animals. Our correspondent is a keen observer, and he has happily told his story, which is one of deep interest. The occurrence in connection with a grizzly bear, which is described in a later chapter, will strike every reader as most extraordinary.

For some time past there has been a demand on the part of some readers for an advertising column in FOREST AND STREAM in which people should be able to communicate with each other with less formality and at less expense than in the ordinary advertising column. A place seems needed where a man can announce his want and be sure that the want will be seen by some one who may be able to supply it, or where one who has an article which he would like to exchange for something else can insert his brief card and feel sure that those who may desire to obtain what he is willing to part with will learn of it. For the convenience of such persons we have determined to open an advertising column of Wants and Exchanges at a uniform rate of three cents a word. This column will be confined to genuine wants, and will not be allowed to interfere with other advertising. The rate will be three cents a word, all words to be counted, and the money must accompany the order, since it will be impossible for us to keep track of numerous small accounts.

Ornithologists will read with pleasure the chapter on the bald eagle in our Natural History columns, from advance sheets of Captain Bendire's forthcoming book. The account is full and detailed, and touches on many points of great interest in the habits of our national emblem. It is to be noticed that the author does not share the view that the bald eagle is generally a carrion feeder, but credits him with dash and energy enough to capture his game in fair chase. Any one who has ever witnessed an eagle in pursuit knows well enough that when he is in earnest he can fly with wonderful swiftness.

THE DELMONICO WOODCOCK CASE.

ASSUMING that the promise made by the District Attorney's office might be relied upon, the FOREST AND STREAM announced last week that the notorious case of the People against Delmonico of this city for serving woodcock out of season would be tried on Feb. 23. It was not tried on that day. The case has been put into the City Court as No. 6941. The case on hand to yesterday noon was No. 5774. The Delmonico case is a preferred one, however; and District Attorney Nicoll may, if so inclined, expedite it by calling it to trial at once. We trust that he may see his way to do so.

There is absolutely no good reason under heaven why this Delmonico case should be put off month after month and year after year. District Attorney Nicoll owes it to himself to act promptly. He should know that the publicity we have given this Delmonico close-season woodcock suit has drawn to it the attention of citizens of every section of the State. The FOREST AND STREAM speaks for the sportsmen of the country when it demands that the Delmonico case shall be expedited.

REVOLVER SHOOTING.

THE final revolver shoot in this city for the Winans trophy and the amateur championship of America will be shot at the range of the New York Pistol Club, 12 St. Marks place, on Saturday evening, March 5. This will enable several members of the club who were not able to be present at the former shoots to have their records go in with those already made at the gallery on last Saturday evening. "Prof." Loris was a visitor and of course there was much talk of shooting ability, and it finally culminated in an offer to President Oehl, of the club, to have a round at time shooting with the Professor. It was rather free-and-easy time shooting, too, since the contestant raised his arm and drew a bead before he answered the query, "Are you ready?" with the response, "Yes;" whereas he ought to have said yes with the weapon still pointed floorward. At any rate, the President distanced the Professor, and on a second trial the same result was reached. The Professor had been offered his pick of the arms of the clubmen there, and as he went away was warmly invited to come again. "Bring your own arms, your own ammunition, bring anything you wish, only don't bring excuses."

The Sportsman Tourist.

IN THE MUSCALLUNGE COUNTRY.

DO you recollect how sweet the click of a reel sounds as you take out your fishing tackle after a year's rest, and prepare for the summer's outing? It makes you think of the Kingfisher stringing azure loops from tree to tree along the river; of the burnished sheen of the lake where the silver birch gleams as white from its shadow in the water as from its place on the shore; of the smoke curling up from the camp-fire, and drifting away in a blue cloud through the silent aisles of the forest. What pictures and emotions that old reel recall! My wife said it sounded good and she launched off into a vivid description of a big strike she had once on a northern lake and a big fish that got away. But she was not to go with me this time. Indeed I was left to go alone. Tom, the most superb of all camp companions, had gone off to Michigan. Stanley was tied to his bank desk. Ira and Lawrence were wandering amid the glories of Yellowstone and being gloriously bled by the Park hotel keepers.

Being deserted by these I had nothing to do but go alone, for all others seemed skeptical when told of the big fish in Wisconsin. Some of brother Hough's true stories about that region would have palsied them. However, mine was grief with compensation. If you go to the woods companionless, you need not remain so. All wild things come closer to you then. Nature takes you nearer to her heart, and talks to you more plainly. You hear her say things that could not be heard at all if there were the noise of human voices about. Nature is shy and still when man is talking. Then, too, if you are alone in your excursion to the woods and waters, you can camp under any tree you choose, cast your line in the waters that look the likeliest to you, and tell your fish stories when you get home with the sweet consciousness that there is no witness to your little improvements upon the truth.

It was raining straight down when the train brought me to Manitowish, on the Milwaukee, Lake Shore & Western road, early on a late August morning. It was a sodden, determined-never-to-quit kind of rain. The only hotel in the little settlement had a saloon for its front room—not a very congenial place for this writer. The dam at Rest Lake was my objective. This dam makes the largest reservoir in the State. It backs the water up and deepens it in Rest, Stone, Manitowish, Spider, Clear and Island lakes. These are magnificent sheets of water, and the lumbermen have a vast reservoir, on the ice of which they dump their logs in the winter and from which they feed the Manitowish River during the great spring drive.

About 1 o'clock I got my outfit into an old, leaky boat, with a muscular guide at the oars, for a fourteen-mile pull up to the dam. The Manitowish River would be called a creek in Illinois. But then, though an athlete could go over it at one good jump in places, it is clear and often deep. Henry, the guide, thought we might catch a few fish on the way up. This sounded well, and out came an old rod from its wrappings. Ah, what a moment it is when you are just at the gateway of a region famous for its big fish and you joint up for the first cast! The hopes and dreams of a whole year are about to be realized. You tingle to your finger tips with an exaltation of mind and body. You can't get the line through the guides fast enough. You have absolute confidence in your good fortune. You can easily imagine a big fellow lying down there in the swirling depths just panting for a chance at your hook.

We stopped at a place where the water swept under some low-growing bushes—a deep eddy which looked very fishy. Henry tied up the boat and got out to catch some frogs for bait. But he was too big and slow. He tried to cover them with a landing net, a method I have seen commended in FOREST AND STREAM. But it is a poor way. Henry only succeeded in breaking the hoop of the landing net. There is a knack in catching frogs, as in almost anything else. You mustn't be too fast, but you must be fast enough. The very best thing to catch frogs with is what a man is likely to have along with him most of the time, his hand. One can get within reaching distance of nearly any frog if he uses caution. Move the hand out slowly to within about 18in. of the batrachian, then dart it out as swiftly as possible with a grab and the game is yours. Do not try to put the hand down on the frog from above or you will miss him, but start straight at him like a flash. The guide said he had never seen it done that way. We soon had frogs enough. By the way, do you know that frogs eat each other? One day, several years ago, I was filling a bucket with them for a fishing trip when I discovered a big bull sitting stolidly in the sun, on a lily pad, with the feet of one of his smaller brethren sticking out of his mouth. The conclusion was inevitable. Frogs are cannibals. They eat their own kind.

But to get back to the Manitowish River. Where the water swept under the bushes in the bend I dropped a green frog. It had hardly gotten out of sight when there came a good tug on the rod. The fish was fast, and after a fair fight lay in the boat, a three-pound pike. A friend of his escaped with the next frog after being hooked and played for at least five minutes. Then I put on a diminutive croaker, not much bigger than the end of one's finger. It was an unattractive little fellow, but had barely gotten into the water when it was seized. I thought at first I had a bass, but when the fish came into the boat found it was a pike, and out of its mouth came the frog of which I had been robbed a few minutes before. Talk about greed. That pike was an old glutton. He was not content with having been swung around on the cold hook for several minutes, but wanted a second frog with steel sauce. I do not believe, from this and similar experiences, that a fish suffers from being hooked in the mouth. We stopped at several other places, and when evening came had a good string of bass and pike, but were less than half way to the dam. But we reached a place where an Irishman had found a bit of pine land which had been overlooked and had homesteaded it. He was a shrewd son of Erin, had a good sized clearing for a garden, a fairly comfortable log shack, and was building himself the best house I saw in that country. He made us welcome. His good wife cooked us a hearty supper and we spread our blankets on the floor of the half finished new house. The night was frosty. Indeed, they had frost every month last summer up there. That is not unusual. We were not that night, or any other night, troubled with mosquitoes. It was getting too cool for them. Don't go into northern Wisconsin in midsummer. The fish won't bite then and the mosquitoes will. Life will be a burden. You will remember your trip as a nightmare. Camping out you will consider a delusion and a snare, and the joys of fishing nil. But when the frosty nights and clear days of late August and September come on, quit grubbing for gold, get north where the air is bracing and spicy with the breath of the pine woods, and cuddle down on the generous and kindly breast of old mother Earth. You have something to live for if you have never yet been sung to sleep by the northern pines.

The next morning we got an early start up stream. At many of the bends in the river the water has scooped out the sandy bottom and made a hole a few yards square and from 4 to 10ft. deep. The bushes usually hang low over these, and sometimes catch drift. The current slackens at these points, and here are the favorite lurking places of the lustiest small-mouth bass it was ever my good fortune to hook. A green frog dropped above and allowed to float just under the edge of the drift or bushes would, in nearly every case, call forward a bronze warrior of superb fighting qualities. It takes good work to keep these fellows from fouling the line, their life in swiftly-running water seems to make them more muscular than their fellows in the lake. They have the advantage of the current, too, against the rod, and make good use of it, so that the fight with one of them is always a lively one.

We reached the dam about 5 o'clock in the afternoon. When we pulled the fish out for inspection, there were 44 of them. Six were muscallunge, caught in a little lake, really but an enlargement of the river. The heaviest of these weighed 6lbs., and they averaged 3lbs. There were 19 small-mouth bass; the heaviest weighing 5lbs. and the smallest 1¼lbs. There were 19 pike—good fellows—total weight 86lbs. Not bad for a little more than one day's fishing. Indeed, I began to feel that I was something of a fish hog, with that fine string, until I thought of the poor stay-at-homes, and started Henry off down the river to hurry the fish away on the night express to the fellows who could not go along.

At the dam is a logging camp. In summer it is comparatively deserted. But Captain Henry of Eau Claire, one of the genial gentlemen whom it does one's soul good to meet, one of the chief lumbermen of that region, had turned this camp into a sort of summer hotel, so that it was a pleasant, unique stopping place. The Captain's family was there for a few weeks' outing. There was Jack the "clerk" of the hotel, Charley and Johnnie the Jew cooks, Perry, the dam keeper, with several other attachees of the place. There was a handful of guides waiting for the pecunious sportsman. There were several other fishermen there, among the number E. Vliet, general ticket agent of M. L. S. & W., and the American Consul General at Constantinople.

This lumber camp is a peculiar place, a building constructed of huge pine logs—the whole perhaps 70ft. long and 30ft. wide. The comb of the roof is about 12ft. from the floor. The roof runs from end to end of the building, but the building itself is pierced through the middle with an open passage way or "alley." Along each side of the large room are two rows of bunks. The place will accommodate 75 or 80 men in the logging season. With plenty of blankets, and a good bit of hemlock browse for feathers, it was a fine place to sleep. And when the day's sport was over the fisherman and guides gathered about the big stove in the center of the long room, to talk over the haps and mishaps of the day.

Captain Henry and his land-looker, Mr. Smith, came in one day from a trip they took to inspect some timber, reporting that they had found a good sized little lake which was not on any map. Mr. Smith had furnished a hook and line from his pocketbook and the Captain had, with a cranberry for bait, caught a green bass off the shore. With a piece of this for bait he had another in tow when the hook broke. He said they could see hundreds of the ravenous fellows in the clear water, and proposed that we go after them. Loading a boat with tent, blankets, and a generous supply of provisions, we started—the Captain, Mr. Smith, Hugh, the captain's boy, nine years old, and myself. Our way lay through Rest, Stone, Spider and Island lakes, the latter the most beautiful of the group. Then for several miles up the outlet of Big Lake, pushing our way among fallen trees and over shallow places, camping at dusk beside this outlet at the point where we would leave it in the morning to push our way through the timber to the newly found lake. The tent was soon pitched, the coffee boiling, the bacon fried and the welcome supper eaten, not, however, before the floor of the tent had been shingled with plenty of fragrant balsam boughs. The first thing after pitching a tent is to fix a good bed; supper can wait a little, but it is a poor plan to delay in fixing the feather bed.

Lying there that night the Captain told me of the strange life the lumberman leads. In his early life he was a landlooker and cruiser. All winter he and his partner would travel through the woods, sleeping at night in a tent, with the snow for a bed, the mercury way below zero, a simple A tent over them, open at one end to let in the heat from the big fire built in front. The wages of such work were very high, and so he got his start in life. Then he told of the life of the men on the drives in the spring, working fifteen or sixteen hours per day at the hardest kind of toil. It is not the life of a sybarite that these hardy men lead, and if they are rough and reckless sometimes, perhaps the exposure and hardships of their life may have something to do with it. One thing is sure, they have generous hearts, and the sportsman who falls among them is royally treated, provided always that he is not a braggart. The fellow who knows it all and can do it all is as much of a nuisance in a lumber camp as anywhere else.

We were lulled to sleep by the lapping of the little stream beside which the tent was pitched. When the gray dawn came it was raining. Instead of being ready to start at daylight through the timber, it was late before breakfast was over. We could hear an occasional gun up toward Big Lake where the Indians were gathered at the wild rice rice beds. They go every year and harvest the rice. Pushing their canoes among the rice they tie bunches of the ripened heads together, drawing them together from each side, and beat out the grain which falls into the boat. An Indian will gather several bushels a day. We left the tent snugly tied up, hoping no prowling Indian would disturb it. This was not likely, for Captain Henry had blazed his mark into a couple of trees, and most of the Indians would recognize this mark and would not care to incur the owner's wrath. Many of these woodman have a peculiar mark of their own, made up of notches and blazes, which they are sure to leave on some tree where they have camped or worked. Smith led the way through the dripping timber, traveling by compass and breaking brush. After him went the Captain blazing the trees, then sturdy little Hugh, the pason bring up the rear with a bucket of live bait. It's slow traveling in that fashion, and it took us over an hour to go two miles. But it was worth the effort to get there: that little lake was swarming with green bass. We fished only a little while and caught nearly a hundred. If we had a boat and could have gotten out to more favorable places I believe we could have loaded it to the water's edge in a little while. But what was the use. We had all we wanted to carry back to camp; some of them would weigh 1¼lbs.; none weighed much less than 1lb. They were ravenous and gamy.

There are certainly two kinds of big-mouth bass in northern Wisconsin. In the one kind, mainly the sort we caught in that lake, the lines which define the back and belly are much more nearly parallel, and in proportion to their size these fish are not nearly so thick from side to side as the other variety. They have a clearly-defined black line running from gill-covers to tail along the middle of their sides, especially seen when in the water. They have no red ring about the iris of the eye like their chunkier cousins. They always go in schools, and if frightened from among the lily-pads or an old treetop, will dart away and in a minute come cautiously back to see what it was that frightened them. I never saw the other variety of big-mouths act this way, or the small-mouths either. It is the other variety that grow to 6 or 8lbs. in size, and Smith told me of one lake where they ran up to 10lbs., lots of them. I'm going there next summer. Now there is as much difference in these two varieties as between either of them and the small-mouth, and no classification is at all accurate which does not recognize these striking differences.

Our arms and backs ached with the loads of fish when we got back to the tent. It was cold and lowry and we waited till the next morning to return to the dam. It is right certain that the man who is fortunate enough to wet his line in that newly-located lake, next summer, will get all the fish he wants for one day, if he goes about it in the right fashion. How did the fish get into those Northern lakes which have neither inlet or outlet? Perhaps the wildfowl carry the eggs on their feet. Possibly the eagles and fishhawks have dropped yet-living fish into these sequestered waters. In these ways it may be they have been peopled so they now teem with finny clans, to the great delight of the fisherman.

RICHARD GEAR HOBBS.

[TO BE CONCLUDED NEXT WEEK.]

WILDFOWL IN TEXAS.—I.

LAST fall I was seized with an ardent desire for a hunting and fishing trip; and fully realizing the necessity of relaxation from close confinement, decided to visit the winter home of the wildfowl and birds of annual migration on the lower Colorado River and inland waters of the coast of Texas, especially that portion remote from the usual routes of transportation and in a section of country where the market-shooter is at a disadvantage. My hope to be able to answer some of the queries that appear in the FOREST AND STREAM from time time in regard to the whereabouts and scarcity of wildfowl, will be sufficient excuse possibly for giving the readers of my favorite journal the notes and data concerning quite a prolonged trip.

The admirable series of papers contributed by Mr. Hallock descriptive of sport in North Carolina, and the various advantages offered by that section, especially to the sportsmen of the Eastern cities, makes me anxious to remind the lovers of gun, rifle and rod, resident in the cities of the great West, that there is another and a better "happy hunting ground" offered in this great State of Texas, convenient to reach, where sport can be obtained at no great outlay of time, money or personal discomfort. The game of the coast country is abundant and varied, and the climate and scenery such as cannot be equalled; but fitly to set forth its attractions Mr. Hallock's facile pen and habits of observation are needed, for I am more conversant with the gun, oar and sail than with the pen.

Many sportsmen readers have planned hunting trips, some of them of novel character, and a few details of outfit will not be amiss. First in order was a companion, and he was not hard to find, Will V. being strong, willing and patient, zealous about hunting and fishing and with an excellent appetite. (Appetite is to be regarded as one of the prime requisites for a companion, for it leads to cheerfulness and content when gratified, and great desire to have it gratified, which in our position could only be done by personal endeavor, for we worked under the motto of "no kill 'em, no eat 'em." I started on the trip without appetite, but full of years and rheumatism and other isms, which, happily, have departed—except the years—leaving the appetite in their stead).

Next was a suitable boat, one not too heavy for use in a low stage of river, and still strong enough to navigate the coast bays, some of which have open water comparable in area to Long Island Sound, but without its depth. Austin, the city of the great dam and the industrial activity emanating therefrom, was hunted over, and not a mechanic found who was acquaintad with boat work. So tools discarded thirty years ago were again taken up, plans were drawn and a boat was built of ¾in. cypress, 14ft. 6in. over all, 4ft. 10in. beam, 1ft. 3in. least freeboard, with open cockpit of 7½ft., deck and washboard canvassed and painted. The boat was fitted with centerboard, and while having little dead rise was carefully modeled and proved easy to row, and reasonably fast and manageable under sail, as well as a good sea boat. Mast, boom, sprit, sail and oars were procured from Galveston, the nearest large seaport town. By aid of the sprit and a pair of straddles a tent of drilling was arranged over the cockpit, which when tied down furnished complete protection at night and during rainy days, while a small oil stove gave warmth and served to boil coffee and for a little cooking when we were compelled to it by bad weather.

Ample store of bedding and cooking utensils found places in the boat, with guns, ammunition, rods and

lines. The provision supply was limited to bare necessaries, as towns were frequent for part of the route, and time is required for all the various traps to find places in a small boat.

Late in the afternoon of Nov. 18, with cool, cloudy, threatening weather, a start was made, the river being very low. A row of two hours placed us some miles below the charming little city of Austin, when the boat was placed in readiness for a stormy night. The morning opened with rain, which continued at intervals, the intervals filled in with a drizzle, until late evening of the 21st, thoroughly testing the capabilities of our tent cover, waterproofs, tempers and patience; but we worked down stream at all available opportunities.

Below the city of Austin the valley of the Colorado River opens out into a magnificent expanse of bottom land, not subject to overflow and in a fine state of cultivation. This is the home of the quail and rabbit, the only available game in the vicinity of the city, except plover in their season and jack rabbits on the higher prairie. Not much interest in the jacks has been shown, however, since the removal of Messrs. Sweet and Knox, of *Texas Siftings*, with their fine pack of greyhounds. Austin, however, affords as fine shooting for quail, rabbits, doves, plover, and occasionally snipe, as any point in the State; and turkey and deer can be found within 15 miles of the town by the knowing ones.

During the three rainy days quite a distance was made. Very few ducks were seen, for it was generally too misty. Only one sheldrake and two squirrels were killed, and one small fish was caught—a channel catfish.

Sunday, Nov. 22, opened with a roaring northwest wind, rendering dangerous the heavy timber from falling limbs, but scarcity of provisions forced a hunt, resulting in three squirrels, a mallard and a spoonbill. Dropping down the river a short distance, we found a sheltered beach. Bedding and clothing were hung up to dry and air, and preparations were made for a dinner of ducks cooked exactly to the taste of Will V.

In an article concerning wildfowl, I feel at liberty to explain how they should be cooked, as well as to state where they can be found, so will proclaim a secret. In all notes on camping and camp cookery I have failed to find any mention of the bake oven, or "Dutch oven," that indispensable of the indispensables. It bakes bread and pies, roasts coffee, fries meat, boils water, steams pudding, serves for a dishpan, stewpan, washpan and a dozen other things of necessity, and will smother-roast ducks. It is nothing more than a straight-sided, flat-bottomed, cast-iron vessel, with three legs, a handle, or lugs, and provided with a close-fitting cover of cast-iron turned up at the edges, to hold coals and hot ashes—and is the same article our ancestors found indispensable at the hearthstone in the days of open fireplaces.

Nicely dress your ducks, opening on the back, and remove the breastbone; place in each a slice of fat pork (if the ducks are not very fat) and a slice each of lemon and onion. Draw out a moderate bed of good bright coals and heat the oven on it, and when it is hot lay in the ducks, flanked with the giblets and sweet potatoes. The cover heated and filled with coals is placed in position, and then you may take time for the coffee and other concomitants. In the course of five minutes a small cup of water, seasoned with salt, pepper and Worcestershire, should be poured over the ducks and the cover again carefully fitted, and the cup again filled with the same basting, with the addition of a spoonful of flour, and kept handy. From twenty to twenty-five minutes will suffice, with the proper fire, to cook mallards, for ducks of fine flavor should only be cooked, not dried, and the juices should follow the knife. When done turn in the basting and allow it to thicken, and a feast is ready such as was never cooked on any stove yet invented.

The meal is a success. Will V.'s face is greasy and radiant with content, and the writer has found his appetite. The dismal days past are forgotten, and in the genial sunshine a good rest is enjoyed, and hopes of future duck dinners are indulged in, while the blue vapor from our pipes curls gracefully upward.

The natural features of the river have changed, and instead of the open bottoms, flanked by prairie, a heavy belt of timber borders the stream with few exceptions, and the cultivated lands lie some distance back.

Robins, thrushes, wrens and most of the familiar birds of the North are numerous, mingling with the resident feathered tribes, while the air is vocal with the singing, for the thickets with their shining green leaves and twigs red with berries, form a paradise for the smaller birds. The shrill cry of the killdeer and coarse croak of the crow, supplemented with the resounding tapping of the woodpecker, increase the harmony of sound, and silence only reigns an instant as a hawk with harsh cry swoops down. The hawk, however, soon discovers that his presence is not wanted, and retires pursued by the mockingbirds, jays and crows who sing their victory as he retreats. Hark! There is a squirrel barking. But what matters it, for we did not propose this trip to slay, only to observe, and sufficient for our needs is all required. A kingfisher with his clatter darts down at the edge of the bar, and with a silvery fish in his bill returns to a limb over our resting place. His black eyes sparkle as he thrashes his prize on the limb, and he peers down on us and chatters as if to attract attention.

Monday, Nov. 23, was cold in the morning, but proved a very fine day, while the scenery was exquisite. Both above and below the town of Bastrop, at which we stopped for needed supplies, high bluffs, covered in part with pines, border the river. These bluffs, being of white sand rock with iron capping, have been painted by the rains in various shades of red, yellow and brown, and with their covering of sombre pines, mingled with deciduous trees now in their autumn tints, form striking objects of beauty.

On the evening of the 23d and morning of the 24th large flocks of mallards were seen, coming probably from Shipp's Lake, a body of water lying on the Taylor & Bastrop R. R., and a noted resort of sportsmen and ducks. We did not get any of the ducks, but I am positive that they came from the lake, and, in fact, were some of the same ducks we found there last winter; for they exhibited the same judgment and experience in regard to long-range shooting.

Will V. and I had an experience last winter at this lake which explains why ducks are getting scarce in so many of their usual haunts. The evening of our arrival a party of five appeared in a hack and camped near us, and shot next day. They used 500 shells and killed four ducks, three squirrels and four or five quail. All of the ducks were driven out of the lake by noon, and after the short squirrel and quail hunt, the men directed their attention to the poor blue peters, slaying them in myriads, and near night their few remaining shells were expended on stones, tin cans and other "inanimates." The ducks did not return until the second day after the fusilade, and then in diminished numbers. A resident near the lake said that this was the common experience two or three times a week, and always on Sunday, during the season. Another jocose resident when asked about the fishing in the lake, remarked, "It was a right smart place for fish some years ago afore the water got lead pizen'd."

On the 26th we passed La Grange, where we secured a supply of bread, etc., our larder, however, was well supplied, for we had killed two geese and several ducks during the past few days.

During these four days we had been constantly observing the out-cropping of the vast lignite beds of the Texas coal formation, in some places showing 10 to 15ft. of solid coal, and in others forming shoals and rapids in the river, while large blocks had been drifted in piles at times of high water. If the experiments now in progress for the utilization of this lignite are successful, this section of the State, with its vast agricultural resources in cotton, corn and sugar, supplemented with inexhaustible fuel and valuable timber, will become the richest section of the entire South.

Late Saturday evening we reached Columbus, camping just below the upper town, and the next morning observed vast flocks of ducks passing over the town, which is situated in the neck of a great bend in the river. On starting out we made the 15 miles around the bend, reaching the lower town in just two and a half hours, having only progressed 1¼ miles however, which is the distance across the town. A proposed dam and canal across town at this place would create an immense water power available all the year.

Thursday, Dec. 3, we arrived at Wharton, the last point touched by railroad, having been delayed by the tortuous river and extremely high winds, as well as spending more or less time in fishing and hunting for turkeys, in neither of which pursuits, however, did we have great success, for the catfish are spawning at this time of the year, and will not bite, while turkeys had probably retired for the holiday season.

As a point easily reached by rail by visiting sportsmen, I recommend Wharton, for game of all kinds is plenty, and good accommodations can be had. We had not been in town fifteen minutes before we were invited to join a camping party some miles below, who were hunting bear, and had sent in three during the past two days. Advice as to where we could find deer and turkey was freely given, and on the question of ducks, it was apparent that we could not go amiss anywhere below town. Quail, chicken and snipe are too little considered to be regarded as game, but if one be ambitious for a coon or possum hunt the material is at hand. Any one taking my advice and visiting this town I am satisfied will not regret it. Wharton is reached by the N. Y. & Mex. Gulf Railroad, which intersects and connects with all the great railroad systems of the State.

We have now arrived at the most interesting portion of our river trip; gradually the height of the river banks has diminished, while the nature of the timber has changed, showing we are in the lowlands. The soil in its exuberant fertility sustains an enormous growth, in many places rendering walking impossible. Frequent belts of live oak impinge on the river, elm flats with numerous small lagoons and bayous intervening, while the Spanish moss trailing from the trees and the interlacing vines proclaim the southern country.

A few miles below Wharton we passed a lonely cabin garnished with five bear skins, and numerous pelts of coon and possum stretched out to dry. Then we penetrated an apparent wilderness, and at last were in the winter home of the ducks.

Ducks are everywhere, not in hundreds, but literally in thousands, and the morning and evening flights were a sight long to be remembered. Mallards, wood ducks and teal comprise at least 99 per cent. of the number, mallards largely predominating. To provide for our wants (for we made no bags) the stratagems and care exercised on our long trip down the river were no longer necessary, as at any time of day a visit to one of the numerous lagoons bordering the river would result in a shot. The ducks were feeding on acorns, and were in prime condition, and we feasted royally, enjoying at the same time the delightful temperature and the strange scenery of the southern lowlands. We were in the paradise of the duck hunter, who enjoys the sport for the sport's sake; but this section is one to be avoided by the market-shooter, for his shipping point is too remote and ice is scarce and dear.

Deer were plenty, and every day we saw some coming in to drink or playing on the bars, and once I was tempted to a shot, for we carried a rifle, but I am glad to state now that no harm resulted, the ball passing too high and only cutting a tuft of hair from above the yearling's shoulders, not a drop of blood being discernible on the trail, so far as we could follow it.

Some fifteen miles of the lower Colorado is blocked by a "raft" of drifted timber, and is not navigable for any craft except in high water, when a passage can be found through the prairie outside the timber belt; but the water being very low, we hired a wagon and team and made the portage of some twenty miles, going direct to Mutagorda and salt water.

The direct distance from Austin to Mutagorda is about 165 miles, and our route by the tortuous river was probably three times that distance; it was estimated at fully 450 miles, from the record of time kept on the trip.

Although the charms of a salt-water trip were ahead, it was with regreat that we left the river with its game, its novel scenery, its sheltering timber, glorious days, and not least the evening camp-fires.

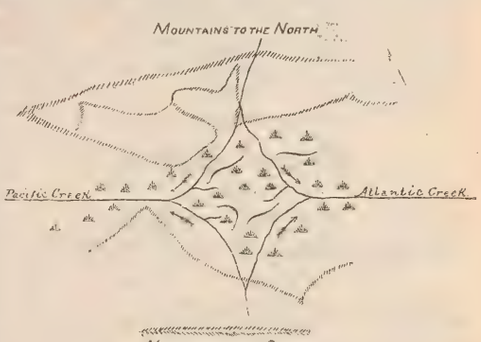
The day enjoyed to its utmost is closing, and rosy bands of light radiating from a gorgeous sunset span the heavens, while under the heavy masses of timber the gloom of night is stalking and the chill of evening creeps over the now quiet river. Then for an ample fire of drift wood, much of it cedar and juniper from the upper country. The spicy aromatic smoke circles through an enormous live oak or elm tree, with its pendant moss swaying in the hot eddying currents of air, while the glossy green leaves of the surrounding shrubbery seem gilded and bordered with pendant gems, as the ruddy flames burst forth in fantastic shapes.

Sometimes the mellow sound of a distant horn could be heard, and faint calls of Flora, Grip, or other dog names, as some negro hunted his favorite game, would reach our ears, followed by the deep music of some old hound, now far, then nearer, and supplemented at times by a bark and yelp as some cur of low degree joined in the chase.

Sometimes the cries would grow fast and furious for a few minutes, then subside into silence, followed by the deep baying of the hound, until the encouraging shout of the approaching hunter was heard.

Possibly some vigorous blows of an axe would be heard, followed by a resounding crash, then a general melee of barks, yelps and shouts. That victorious, clarion, musical shout of the Texas darky—unattainable by the white man—quelling the clamor of the dogs, and quenching through sheer envy the owls who have for some time been hooting their evening congratulations.

AUSTIN, Texas. J. O. B.



THE WATERS OF TWO-OCEAN PASS.

Editor Forest and Stream:

Last year while traveling in Wyoming south of the Yellowstone Park, I was so much struck with the peculiarities of Two-Ocean Pass that I am determined to write you a brief memorandum about it. I do not know whether these peculiarities have ever been publicly mentioned before or not.

Two-Ocean Pass is a very wild and lonely valley, walled in on either hand by steep terraced mountains. The foothills and lower flanks of these mountains are covered with dense evergreen forests, above which jut the naked gray peaks, now lying in the rifts on their northern faces The forest extends on either side down to the level ground of the valley; but the bottom of the valley is wet and open, being covered with a succession of meadows and of low willow thickets.

The continental divide runs at right angles across the valley near its middle point, and from the point where the divide crosses, two streams flow down the valley; one, known as Atlantic Creek, running east to join the Yellowstone, and the other, known as Pacific Creek, running west to join the Snake. A considerable brook flows down

THE WATERS OF TWO-OCEAN PASS.

the southern mountain wall into this valley, and another flows down the northern mountain wall just opposite the first. Each of these two creeks bifurcates before reaching the open valley proper, and each sends down one fork on one side of the divide and one fork on the other. The right-hand fork of the brook, coming down the mountains to the northward, joins with the left-hand fork of the brook coming down the mountains lying southward, to form Pacific Creek, while the other two forks join to form Atlantic Creek. Thus the continental divide at this point really follows the middle of these two mountain brooks; and when their waters divide some of the water from each stream goes through the Yellowstone and Missouri to the Atlantic, and some through the Snake and the Columbia to the Pacific Ocean, so that in times of high water it would be perfectly possible for a fair sized fish to swim from the headwaters of the Pacific Ocean drainage system to the headwaters of the Atlantic drainage basin. As a matter of fact, I have no doubt that the small trout, of which there are numbers in Two-Ocean Pass, often do thus shift quarters. The forks of these two mountain brooks run down into the broad flat in the middle of Two Ocean Pass. This flat is very marshy, and in times of flood must be an impassable morass, with Pacific and Atlantic creeks flowing out of the two ends. Moreover the channels of the two brooks are continually shifting. Each sometimes sends almost all its water down one fork into Pacific Creek, and sometimes sends almost all of it down another fork into Atlantic Creek; and there are a dozen old channels of each, both on the mountain side and in the morass, or flat, wet prairie at the summit of the pass proper. In consequence there are doubtless seasons when the peculiar conditions mentioned above do not obtain, at least to the extent that they did last year. I inclose a rough diagram merely to explain my meaning. THEODORE ROOSEVELT.

WASHINGTON, D. C., Feb. 19.

BIENNIAL SPAWNING OF SALMON.—The question of how often salmon spawn has been tested and set at rest by Dr. W. M. Haines, of Ellsworth, Me. In the fall of 1890 he had fifty salmon weighed and tagged at Green Lake. These were breeding salmon that had come up a brook tributary to the lake to breed. The fall of 1891 none of the salmon tagged came to the spawning beds to breed, though three of them had been caught in the lake below, neither of which showed any signs of breeding. Dr. Haines is thus convinced that landlocked salmon, at least, do not breed every year. The coming fall he will doubtless anxiously watch for his tagged salmon at the spawning beds. It is the opinion of both Commissioners Stanley and Stillwell, I believe, that salmon breed only every second year.—SPECIAL. [The same thing was done years ago by Chas. G. Atkins, whose paper on the subject is to be found in Trans. American Fisheries Soc., 1885, pp. 89-94.]

HOSPITALITY AMONG WOODSMEN.

AMONG the genuine woodsmen in eastern America hospitality to strangers is the most distinguishing trait. By woodsmen is meant those who make their living by chopping and hauling logs, and who live all winter in log camps, half buried up in the snows of a vigorous Northern climate, far away from the outer world. Among these people there is no law against tramps. The solitary hunter or the lonely traveler whom night has overtaken in his journey always receives a cordial welcome, not from one, but from all of the crew.

As soon as the stranger's head is inside of the low door by which the hut is entered, the cook calls out to him to walk in, for it is this functionary who does the honors of the camp. He is then invited to take a place on the "deacon seat," that he may be able better to warm his feet before the fire. The question is then put, "Have you had your supper?" and the wanderer is asked to step up and have a bite; even if he has already supped he will be almost forced to take a piece of sweet cake and to drink a cup of tea. The tea-kettle always sits beside the fire, and on the stranger's arrival the cook gives this "a good boil," for woodsmen want their tea boiled. Some fat pork is cut and put into the pan and is soon simmering over a cheery fire. While the stranger is taking off his moccasins and putting on a dry pair of socks, with which the cook is always ready to furnish him, the cook is plying him with questions as to what is going on out in the settlement.

So soon as the "boss" or owner of the camp and crew come in at night, their day's work over, the stranger is cordially greeted by all; in fact he becomes one of themselves, and is expected to walk up to the bean pot or the frying-pan and to help himself to anything that suits his palate without asking leave from anybody. He not only becomes as one of the crew, but the best place in the berth is reserved for him, some one turning out of it and sleeping on the "deacon seat" (the hewn plank on which the crew sit when eating their meals). Sometimes the deacon seat is preferable to the berth. Many years since, late one stormy winter night, I arrived at Mr. W. Richard's logging camp at the "Otter slide," on the Nashwalk River, New Brunswick. The crew had retired. When I entered the camp Mr. R. raised his head from the fir boughs on which he was lying and said to me, "Come, take this place." I caught at the moment a glimpse of a bed of snow beneath the green boughs. "No, thank you, I prefer the deacon seat." On this I gladly stretched my weary limbs with my boots for a pillow and coat thrown over my shoulders for covering; and yet after all my sleep was sounder and more refreshing than that of one amid all the luxuries of the town. EDWARD JACK.

NEW BRUNSWICK.

Natural History.

THE BALD EAGLE.

From advance sheets of "Life Histories of North American Birds with Especial Reference to their Breeding, Habits and Eggs."

BY CAPT. CHAS. E. BENDIRE.

Haliœetus leucocephalus (Linnæus).
Falco leucocephalus Linnæus, Systema Naturæ, ed. 12, I., 1766, 124.
Haliœtus leucocephalus Boie, Isis, 1822, 548. (B 41, 43, C 362, R 451, C 534, U 352.)

Geographical Range—Whole of North America and across the Aleutian chain to the Commander Islands, Kamchatka.

The bald or American eagle, our national emblem, is pretty generally distributed over the entire United States, and breeds more or less abundantly according to food supply along the Atlantic seacoast, from northern Maine to Florida and from the Gulf of Mexico throughout the total length of the Mississippi Valley and the larger streams and lakes of the interior, as well as British North America, to the Arctic coast. It is quite abundant on the Pacific coast, and especially common at the mouth of the Columbia River, the shores of British Columbia and the Alaska mainland, as well as on all the Aleutian Islands. It appears to be equally indifferent to extreme heat or cold, but in the northernmost portions of its range it is only a summer resident, leaving these inhospitable regions and retiring to a warmer climate as soon as the rivers and lakes freeze up, which furnish it with most of its food supply.

Within the United States, it is perhaps more abundant in Florida than anywhere else. Dr. Wm. L. Ralph furnishes me the following observations on this species, made principally in the immediate vicinity of Merritt Island, Indian River, Florida, during February, 1886, and the two succeeding winters. He says: "Before I discovered this paradise for these noble birds, I would not have believed there were so many east of the Mississippi River as I found there within a radius of a few miles; for I not only saw them in great numbers, but found, with the help of an assistant, nearly one hundred occupied nests and took thirty-five sets of eggs.

"Frequently when returning to the hotel at Rockledge, just before dark, I would while crossing the island opposite the village, a distance of about a mile, see fifteen or twenty eagles, most of them birds in young plumage, roosting in the trees, and it was no uncommon thing to see six or eight in one flock.

"Notwithstanding these birds were so very common, I concluded from the great number of deserted nests found that they must have been more abundant formerly, and, on inquiry among the inhabitants, found this to have been the case.

"These eagles seem to breed earlier than those in other parts of Florida, due no doubt to the immense number of waterfowl, especially coots (*Fulica americana*), that frequent this vicinity during the winter, and which seem to form the principal article of their food, though they will sometimes condescend to eat fish, like their northern brothers and sisters. I have often seen them catch wounded birds, and I visited one nest that contained in addition to two well grown young birds, the remains of thirteen coots and one catfish. Most of their eggs are hatched by the middle of December, and some must be laid as early as the 1st of November, as my assistant found a nest containing two eggs on the point of hatching on Dec. 5, and I found young birds two or three weeks old on Dec. 15. The latest sets I collected were one of two fresh eggs, taken Jan. 26, and another of two, one egg of which was nearly hatched and the other addled, taken Feb. 3. The eggs of this species from this vicinity are more elongated and on the average smaller than the descriptions and measurements usually given of the eggs taken further north.

"From what I could learn these birds invariably lay two eggs, as I never found a larger set, and where I found but a single egg, it was always fresh. On several occasions I found but one young bird in a nest, and as I took quite often a set of two eggs, of which one was addled, I concluded that this was the reason. One peculiarity of the bald eagle that I have never noticed in other birds of prey is, that when a pair are robbed of their eggs or young, they will not lay again until the next season. I watched a great many nests after they were robbed, visiting some close by where I lived every few days for a period of two months or more, yet, notwithstanding I almost always found one or both birds at home, I never succeeded in getting two sets of eggs from the same nest during the same season, though the next year these nests were again occupied.

"The nests are immense structures, from 5 to 6ft. in diameter and about the same in depth, and so strong that a man can walk around in one without danger of breaking through; in fact, my assistant would always get in the nest before letting the eggs down to me. They are

WHITE-HEADED EAGLE (*Haliœtus leucocephalus*).

From Baird, Brewer and Ridgway's "History of North American Birds." (Through the courtesy of Little, Brown & Co., Boston, Mass.)

composed of sticks, some of which are 2 or 3in. thick, and are lined with marsh grass or some similar material. There is usually a slight depression in the center, where the eggs are placed, but the edge of the nest extends so far beyond this that it is almost impossible to see the bird from below, unless it has its head well up. I have frequently found foreign substances in their nests, usually placed on the edges of it, the object of which I cannot account for. Often it would be a ball of grass, wet or dry, sometimes a green branch from a pine tree, and again a piece of wool, bark, or other material. It seemed as if they were placed in the nests to mark them. From its frequent occurrence, at least, it appeared to me as if designedly done.

"I believe these birds have a certain time for laying, and that their eggs are deposited within a few days of that time every year. In the vicinity of San Mateo, Florida, the bald eagle is now quite rare, and I know of but one nest that is occupied by these birds. This season they began sitting on Jan. 31, the earliest date on which I have ever known them to begin here, and, during the several years I have known this nest to be occupied, I do not remember them ever commencing to lay later than Feb. 6 or 7. I also think if one of a pair be killed after they have eggs or young, if nothing further happens, that the remaining bird will perform all the duty of incubation and care for the young.

"Two of my assistants watched the nest previously referred to during the present season, 1891, and on the day the birds were first found sitting both my men had visited the place, and on their return I saw them separately when they both told the following story. They said 'that they found one of the eagles on the nest, and that on pounding on the tree it flew to another near by and gathered a bunch of Spanish moss in its claws. It then flew slowly back over the nest, and when just above it poised for a moment on its wings and dropped the moss, which nearly fell into the nest.' I believe this to be true, for I questioned both of the men very closely and they told exactly the same story, and they know nothing about the habit these birds have of marking their nests.

"Nearly all the nests I found were in pine trees, and generally the highest and thickest the birds could find, but as pines in this locality are not very tall, the majority of the nests were only 50 or 60ft. above the ground. The highest and lowest locations of nests were 75 and 30ft., but these were extremes, at least so far as occupied nests were concerned. The places the bald eagle likes to frequent are forests of tall, heavy timber in the immediate vicinity of some good-sized body of water, and they almost always build their nests in such situations. Both sexes assist in incubation, and are equally solicitous in the care of their eggs and young. They show great distress when their nests are disturbed, but are very careful to keep just out of gunshot, and I can recall but one instance of the bald eagle's attacking any one, and that was a pair which had a nest in a large pine tree near the south shore of Crescent Lake, Florida. These birds would swoop down and almost strike the head of any climber, and were so very savage that one of my party became frightened, and thinking they might injure him, shot the male, which was the fiercer of the two. The nest contained two young but a few hours old, and as I was afraid they would either starve or that vultures or crows would get them while the mother bird was absent after food, I thought I would try and raise them myself.

"They throve splendidly on a diet of meat and fish, and the amount they would consume in the course of twenty-four hours was something wonderful. I would stuff them until I was almost afraid they would burst, in hopes of keeping them quiet for a few minutes; but it was no use, for the first noise they heard would set them yelling as loud as ever. I kept them until I left Florida, a period of almost two months, and they were then nearly half grown, and the family with whom I lived promised me to care for them. Soon after my departure one of them was injured, and died shortly afterward, but the other got along nicely, and on my return next winter I found it still alive. One peculiar thing about this bird was that it never learned to fly, though it was not confined during the first year. Its wings did not grow to the proper length and the feathers on them were twisted in all directions. It had a very rough and dilapidated appearance generally, which I cannot account for, as it was never handled much. While never afraid of man, this bird was a great coward in other respects, and would run from any other animal of whatever size; even a chicken would greatly frighten it.

"It would seem, from what little chance I had of noticing the growth of these young eagles, that unless they grow much faster in a state of nature than in captivity, birds of this species must remain in their nests from three to four months. They are very much attached to their chosen homes, and although their eggs and young may be taken from them for several successive seasons, and even one of the old birds killed, the survivor will find another mate and return to the old eyrie another season.

"The cry of the male is a loud and clear *cac-cac-cac*, quite different from that of the female, so much so that I could always recognize the sex of the bird by it; the call of the latter is more harsh and often broken. Bald eagles are constant residents of this vicinity, as they are of most parts of Florida, unless, as the inhabitants say, they go away for awhile during the summer. This I believe to be true, for there must be a scarcity of food then, when the waterfowl go north, as most of them do early in the spring. I believe the bald eagle does not breed before getting the adult plumage, and that this is the case generally with birds of prey, with few exceptions."

In the vicinity of Corpus Christi, Texas, the bald eagle breeds sometimes on the ground. Capt. B. F. Goss writes me as follows: "Of six nests of this species examined by me, near the above mentioned locality, all within twenty-five miles of it, four were found in trees, but the two others deserve special mention as both were placed on the ground on small islands in Nueces Bay. An assistant, whom I hired to help me in collecting, showed me a nest from which he had taken the two young about five days previously, and had them in his possession at the time. The nest was placed on a small island, not more than 2ft. in its highest part above high water mark, and, with the exception of a little grass growing in the central part, it was a bare sand reef. The nest site, for it could hardly be called a nest, was located in the center of the island. It consisted simply of a few sticks laid on the bare ground, not enough to make a single tier even, and these were covered with bones, feathers, and fish scales, and the ground in the immediate vicinity was littered with the remnants of their food and the excrement of the young. We also found a small armadillo on the island, which was evidently brought there by the eagles to feed their young, who probably found the shell too hard for them to crack, as it appeared uninjured. The owners of this nest were said to have been in the immature plumage, which accounts for the poorly constructed nest, probably being a first attempt.

"About the middle of the month I found another nest of this species on an island in the upper part of the bay, about five miles from the former. This was a massive structure, also built on the ground, at least 6ft. high and 5ft. in diameter. I saw it fully two miles away, and from that distance it looked like a monument. Although out of our course and in a secluded part of the bay, it so aroused my curiosity that I ordered my boatman to pull to it. It contained a single young eagle nearly half grown. This island was larger and also a little higher than the first, and a solitary small tree was growing on it some two rods from the nest. Otherwise it was quite bare. This nest was quite a prominent object and was visible for miles. It was built with surprising regularity, appeared to be a perfect circle, and the sides smooth and almost perpendicular. The top sloped slightly toward the center, where the eagle sat, which viciously snapped at me as I looked over the edge of the nest. It was built of sticks and had evidently been raised to the present height by successive yearly additions, as the lower half had begun to decay, and a few inches on the top had evidently been recently added. Both parent birds attacked us with great fury, screaming and striking at us with their talons; while examining the nest they came within a few feet of me and I was glad to retire. This pair were both adult birds. Some time later, as my assistant was taking the eggs from a nest in a tree, he was set upon by both the eagles, and if he had not had a good stick to defend himself I feel sure they would have struck him; as it was they approached within 3ft. of him. These are the only two instances coming under my observation where any attempt was made to defend the nest."

That the bald eagle shows considerable courage at times in the defense of its nest, even without any provocation, I can corroborate from personal observation. In the months of March and April, 1883, I repeatedly visited a low, marshy swamp at the head of Wood River about two and a half miles northeast of Fort Klamath, Oregon; the object of these visits being to locate the nest of a pair of goshawks, which committed daily depredations among the poultry at the post, and which always disappeared in this direction. A number of large aspens and several dense groves of conifers were scattered through this marsh, as well as a few immense pine trees.

A pair of bald eagles nested in one of the largest of these pines, and at no time could I approach this tree nearer than 100 yards without one of these birds, probably the male, swooping down at me, sometimes as close as twenty feet, lustily screaming, and giving me plainly to understand that I had no business in that particular vicinity.

These eagles seem to nest in trees by preference, and

only where such are wanting will they resort to cliffs or to shelves found occasionally on the river bluffs. They are far more abundant along the seashore than in the interior, but they are by no means uncommon in suitable localities on the larger inland lakes.

At the Klamath Lakes they are especially numerous, and I have repeatedly seen a dozen within a distance of three miles. Some of our earlier writers speak in rather uncomplimentary terms of our national bird, stigmatizing it as a robber and tyrant, and as feeding principally on fish, stolen from the osprey, and on carrion. This is not strictly true. According to my observations the bald eagle lives to a great extent at least on prey captured by its own exertions, principally on wounded water fowl. When engaged in the chase of a flock of geese, brant, ducks, or other water birds, on which it subsists almost entirely when such are procurable, it is by no means the sluggish, lazy bird some writers would have us believe, but the peer in swiftness, dash and grace of any of our Raptores.

While it undoubtedly has occasionally to resort to an exclusive fish diet, some of which is captured from the osprey, this habit is by no means universal, and carrion, in my opinion, is only used when other kinds of food are not available.

On May 1, 1886, Mr. S. B. Ladd found a nest of the bald eagle containing young in Lancaster county, Pennsylvania. The ground directly under it was covered with numbers of land terrapin in various stages of decay. These reptiles had evidently been carried to the young eaglets to feed on, were found unmanageable, and pushed out of the nest; probably but little other food was to be procured at the time.

Sometimes also, when apparently fishing, the bald eagle is after a different sort of game, as the following incident will show. Mr. W. W. Worthington writes me from Darien, Ga.: "The other day I noticed a bald eagle hovering over the sound, much the same as the fish hawk does when about to strike a fish. Suddenly he plunged down and grappled with what I supposed to be a large fish, but was unable to raise it from the water, and after struggling awhile he lay with wings extended and apparently exhausted. After resting a minute or two he again raised himself out of the water and I saw he had some large black object in the grasp of one of his talons, which he succeeded in towing along the top of the water toward the shore, a short distance, and then letting go his hold. He was then joined by two other eagles, and by taking turns they soon succeeded in getting it to the shore. Investigation proved it to be a large Florida cormorant, on which they were about to regale themselves."

Nidification begins early. In Florida and other parts of the Gulf Coast eggs are sometimes deposited in the early part of November, but generally from the 1st to the 15th of December. In the Middle States they nest occasionally in the beginning of February, Mr. Thomas H. Jackson taking a full set of eggs in Lancaster county, Pennsylvania, on Feb. 11. Usually they do not commence to lay till March, and correspondingly later as they advance northward.

On the Pacific coast in California they nest about the middle of February; in Oregon and Washington about April 1; in Alaska about the middle of the month, and in the interior, in the Arctic regions as late as the latter part of May, and occasionally even in June.

As already stated, trees seem to be preferred for nesting sites, and large pines are oftener made use of for this purpose than other kinds. In certain portions of Florida they resort to a considerable extent to the mangroves, to live oaks, and in the West I have seen them nest in huge cottonwood trees.

The height from the ground varies considerably also, the extremes being probably from 20 to 100ft. Cliff and bluff sites are generally used when no suitable trees are to be found in the vicinity, and nests on the ground must be considered as unusual locations and of very rare occurrence.

Incubation lasts about a month and both sexes take part in this duty. The usual number of eggs laid by this species is two, rarely less, and very seldom three; they are laid at intervals of three or four days. One of them is always somewhat larger than the other and occasionally this difference in size is quite marked. But a single brood is raised in a season. The young at the end of the first year are considerably larger than the parents, and were for sometime considered as a distinct species, and named by Audubon *Haliætus washingtonii*—the bird of Washington. In this plumage they are dark brown throughout, mixed with dull fulvous; they do not attain the adult plumage until the third year.

The nests vary greatly in size, and are usually almost flat on top. Some are fairly well lined with dry grasses or seaweed. The eggs are pure white in color, but frequently nest-stained; in very rare instances slight traces of markings are observable of a pale buffy brown, and in the handsome series of eggs of the bald eagle in Dr. Ralph's collection are two such specimens. The shell is strong, granulated, and without any luster. The shape varies from a rounded ovate to an ovate, the former predominating. Eggs from the more northern breeding grounds are considerably larger than those from Florida and the Gulf coast.

Sixteen specimens in the U. S. National Museum collection, principally from the Arctic regions, give an average measurement of 73.5 by 57.5 millimeters, the largest egg measuring 76.5 by 58, the smallest 69.5 by 56.5 millimeters.

Forty-five Florida specimens, all collected by Dr. Ralph, and now in his collection, give the following average: 69 by 53 5 millimeters, the largest egg of this series measuring 74.5 by 55, the smallest 61.5 by 50 millimeters. About a fair average would be 71 by 54 millimeters.

The type specimen, No. 20,697 (Pl. 9, Fig. 7), from a set of two, Bendire collection, was obtained near Alden, Iowa, April 18, 1873, and was slightly incubated when found.

RED SEA SHARKS IN THE MEDITERRANEAN.—A correspondent writing from Nice under the date of Jan. 13, says that the fishermen have caught several very large "red skin" sharks just outside the breakers between Nice and Villefranche. "This is a very unusual occurrence. These fellows come from the Red Sea by way of the Suez Canal, and I understand they have never been caught off this coast before. They have a large head, similar to a catfish in shape, and a correspondingly large mouth with huge teeth. A shark 12ft. in length was brought in last evening, and the bathers are growing very cautious."

CATCHING WILD ANIMALS.—I.

YELLOWSTONE NATIONAL PARK.

Editor Forest and Stream:

An account of how a few wild animals were last spring caught for the National Zoölogical Park may be interesting to your readers. I will first mention the fact that some time ago I resigned the financial consideration connected with my appointment as Smithsonian Hunter. I was willing to devote all my spare time to the work in hand, but reserved the right to engage at any time in the much better paid occupation of guide and packer.

I started out for the campaign provided with a complete camp outfit, provisions, three pack horses and one saddle horse. A thirteen-year boy, Dolph, went with me more for the fun he anticipated than the wages I promised to pay him. Dolph was mounted on a small "buckskin" mare followed by a young colt. He had his little shepherd dog Bobby, and I took my dog Leo, for help and company.

Thus equipped, we started from Gardiner one spring morning, intending to camp at Yancey's, where we could get fresh milk for young animals. We were joined by a lad with a lead horse, on his way to Cooke City. He was very much interested in what we were going to do, and said he would like to ride with us. We passed several camps of men and teams waiting for work on the Government roads. As we were going through the last bit of timber before reaching the upper plateau back of Mt. Everts, we had to drive to one side two hobbled horses that wanted to join our procession. Seventy-five yards from here we came in sight of a large black bear. She was feeding in a hollow close to the road. Intending to give her a scare, we all started toward her at a trot, pack horses with us, and when she saw us she started for the timber on our right, followed by two cubs—little fellows—which we had not seen at first. They had been hidden by the grass and weeds in the hollow where she was digging. At the sight of the cubs, which I wanted, we all commenced to yell and started the dogs. They rushed up to the old one, which stopped to fight the dogs back, to give her young a chance to escape, but Leo ran in and grabbed one of the cubs and began shaking it like a rat. This was not what I or the old bear liked, and I called to him to let it alone. By this time we were getting pretty close to the bear with our horses. She stood erect on her hind feet to take a good look at us, and for a moment I thought she was going to make for us, but the dogs rushed up to her just then, and seeing so many horses and hearing the yelling riders, she decided that there were too many for one poor bear to stand off. She made a dive at the dogs, driving them back a bit, then hurried the remaining cub along toward cover.

The cub Leo had shaken had made for an old log near by, under which he had taken refuge, squalling and crying for his mother. When the old one got her cub to a tree she drove the dogs back while it got safely up. I left one of the boys to watch the cub while we drove the old one away. She was not inclined to go, but we got her away and out of sight in the timber at last and then returned to get the cubs. I had Dolph watch the pack animals, while the other boy was to watch for the old bear for me; I told him to keep a sharp lookout for her while I went up the tree. Just as I dismounted I happened to look toward the timber and there was the bear, not 20ft. from the boy, who was watching me and the cub. When he turned and saw her he gave a yell that stopped her, and I called the dogs, which, like the boy, were interested in the cub up the tree. We made another drive, getting her back in the timber, but she would not stay there, so I called Dolph to drive up the pack horses to me and help the other boy drive the old bear away.

I tied all the animals to small bushes close by, at the same time keeping the cub from getting out of the tree, which he was inclined to do. The other cub just then left the old log and ran to a very large red fir, that was at least 5ft. in diameter. He went up this for about 20ft., clinging to the rough bark like a cat. Just as he had reached a limb he fell over backward to the ground. I expected that the fall would either kill him or knock the wind out of him, but he no sooner struck the ground than he was on his feet again and going up the tree once more. This time he succeeded in getting to a limb, where he rested a moment and then climbed higher. All this time he was keeping up a continuous squall, with more of a note of anger than pain or distress. By this time I had all the horses secured and the boys returned, saying they had driven the old one "way off;" so I concluded to try for the cub again, but cautioned them to watch for the mother. I expected her to return when the other cub should begin to squall and, as I was not armed, I did not care to have her drive me out of the top of the tree.

When I got up where I could look along the road I saw a man coming afoot. I called to him to come up and get on my horse, as I did not think it quite safe for him to be out there. He came soon, but remarked that we had better let that cub alone, as it was against the rules of the Park to catch game. I convinced him of my right and asked him what he was doing out there afoot, and he said he was looking for two horses, the two we had passed. I told him where they were, but requested him to help me a bit before going back. This he agreed to do. He had heard the squalling cub before he came in sight, and knowing what it was, had been a little cautious about going further when I had called him.

As nothing could be seen of the old one I climbed as high as the size of the tree would let me, but could not reach the cub. I happened to look across the gulch in an opposite direction from where the old bear had gone, when I saw a large black bear digging on a side hill. It would raise its head now and then but did not pay much attention to us or to the squalling cub, so I concluded that it was a bear that was not interested in our family affairs. I was surprised at its action. It was but a few hundred yards off, and had been within sight and hearing for a long time. I was satisfied to let it alone if it did us. As I could not reach the cub without the tops breaking by our combined weight, I thought it best that but one of us should take a fall, and, as the other cub was not hurt by his tumble, I thought that this one could stand it. So I reached up as high as possible, and broke the top off with one hand. Down went the cub, head first, through the limbs landing on its back with Leo and the man on top. The man grabbed it by the back of the neck and held it away from the dog. Leo soon stopped trying to get it when I spoke to him. The little savage had to be held up by one hind foot to prevent his scratching or biting. Mr. Fay's—the stranger—hands were both bleeding where the cub had got in its work at first. When I reached the ground I tried to roll him up in my coat but he soon had the lining out of it and was fast making rags of the balance. I had Dolph hold him by the legs while I fastened a quarter-inch line around his neck. With this I could tie him up. I did so, and went to the big fir tree to get the other cub. It had climbed up at least eighty feet and crawled out on a large limb, where it was impossible to reach it. One of the boys offered to try but I would not permit him. I would not take the risk myself or let any one else do so, nor did I want to make the cub fall so far, as that would kill it. I did not want to camp there and wait for it to come down; was satified for the time being with one cub. Mr. Fay said he would take the cub to the Springs for me if I would get it to his camp on Turkey-pen Creek; that he had to take his horses back and go up there. Thinking this was the best way to dispose of the cub, I sent the boys on with the packs, telling Dolph to camp on Goode Creek. I carried the cub in my arms part of the way, but letting it run ahead when I got tired, or it got to fighting me too much. I named him Jack then, and called the other Jill. They both fell enough to be entitled to their names. Jill was crying when I left, but not quite as hard as at first. Little Jack would run ahead of me in the road, his little feet making tracks in the dust like an infant's bare feet. Leo traveled a short distance ahead: after going a half mile the cub would follow the dog when he turned off the road, thinking, I guess, that he was its mother. Jack got very tired, thirsty and hot before we reached water. At the creek I let him have a good swim and drink and he enjoyed it. When cooled off I fastened him up in an oat sack with nothing but his head out. Just before bidding good-by I offered him a cup of water; he drank the whole of it, about a pint; he looked very much like a child sitting up against a tent. He was turned over to Capt. Anderson by Mr. Fay and christened Johnny. I mounted my horse and was soon back to the big fir; Jill was gone. I learned later that a black bear with one cub was seen a mile from there next day.

I continued on to Geode Creek, found the boys in camp. When I asked them if they had seen any elk, they said, "Yes; we have tied up a young one, and saw four more bear before we got here." I asked about the young elk, where it was, and how they found it. Dolph said when they got to the creek, there was a band of cows just on the other side, that they tied up the pack horses and went after the elk, to see if they had young. Under a large fir tree Dolph saw what he thought was a dead calf; he called the other boy to come and see what a bear or something else had killed. When they came close they saw an ear move, then found it was alive. "It was all spraddled out," they said, "just like it was dead." Dolph tied a rope round its neck and to the tree, leaving it there until I could attend to it. Before eating supper I went out and brought it in to camp and tied it up beside the tent. It was as limp as a rag, would lie just where it was placed for a long time. I could not make it stand on its feet. It would lay close to the ground and flatten its ears down, so that it was very difficult to distinguish it from surrounding objects. It was prettily spotted with light yellow spots, its body on the back and sides rather a red with a tinge of gray, rump yellow, and belly quite light but not white. The dogs both thought it a nice pet, would lick it all over, and when made to leave it alone would lie near by, watching it for hours.

After supper the boy went on to Yancey's full of his day's adventures. He had a long story to tell of bear and elk catching. Dolph took it very quietly, but seemed to enjoy the fun. Later he and I went up the creek, looking for game. We saw several elk and antelope, but no young. We saw seven bulls in one bunch. Their horns were over 2ft. long. We watched the cows until dark, and then returned to camp, where the dogs were taking care of the calf. While sitting by the fire we heard a strange noise, and looking up we saw a cock grouse walking toward camp. I spoke to the dogs to be still, to see what the grouse would do. He came on strutting, spreading his tail and making a deep bass noise. At times he would drag the tips of his wings like a turkey cock. When in the fire light he exposed two bright red marks low down on his neck. He made quite an exhibition of himself. Leaving the bright fire light he walked on up the creek, past the tent and disappeared in the brush. I though he was a little familiar, but found him round in the morning, as well as a hen who walked past the camp within 10ft. of the camp-fire and dogs. I was talking to them to make them let her alone.

E. HOFER.

SALAMANDER FROM ARTESIAN WELLS.—Mr. H. G. Zimmerman, of Albion, Ind., recently discovered in a trench leading from an artesian well a good-sized and very lively mud puppy or water dog. This well is eight miles north of Huron, S. D., and is 1,250ft. deep. Everybody was confident that the reptile came from the well, as there is no other water for miles and miles. Its head was shaped like that of our common catfish, its color was similar to that of the catfish, and it had bushy external gills, besides four legs. Many conjectures as to what the animal could be were made; some persons thought it principally fish, others lizard, and the most general conclusion was that the thing was a mongrel between the two. A genus (*Proteus*) belonging to the same family as the above (which we take to be *Necturus*), and found in caves in southwestern Austria, is blind and colorless. Mr. Zimmerman states specifically that the puppy found by him had a good pair of eyes and dark color. Lake Byron, twelve miles north of where this batrachian was found, is said to furnish good fishing.—BON.

A BLIND BLACK EEL.—Mr. V. N. Edwards, of the U. S. Fish Commission, has obtained from Cuttyhunk Pond a very singular eel. The eyes are entirely concealed under the skin and the color is uniformly dark, almost black. In form and proportions it is like the common eel, and may prove to be merely a dark-colored blind example of this species. Trout and other fish become dark in color as a result of blindness, and this may be another illustration of a phenomenon which is often observed by fishculturists. The length of the specimen is about 13in.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will ma free on application a descriptive circular of Mr. Grinnell's boo "Pawnee Hero Stories and Folk-tales," giving a table of conten and specimen illustrations from the volume.—*Adv.*

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

THE NEW YORK GAME BILL.

Editor Forest and Stream:

The fish and game bill which is now before the New York Legislature is in the main like that which was introduced last winter, and which after passing the Assembly failed in the Senate, because of the dead lock. That it did pass one house in about its present form is presumptive evidence that it may again pass. Without knowing the recommendations that the Syracuse convention will make at their session to-day, I wish to call attention to some features of the bill.

Sec. 104 reads: "No fish shall be fished for, caught or killed through the ice in any waters inhabited by trout, salmon trout or landlocked salmon, nor shall any attempt be made to so catch the same, except as permitted by Sections 133 and 142." Sec. 133 excepts Lake Ontario, Lake Erie, the Hudson and Niagara rivers. Sec. 142 excepts the catching by hook and line of bullheads, catfish, eels, suckers, perch, pickerel and sunfish in Lakes Champlain, Seneca, Cayuga, Keuka and Canandaigua. The object of this law is to prevent the catching of trout through the ice while ostensibly fishing for another species of fish, and the intent of the law is commendable, but it is too broad in its application.

Yellow perch are found in many interior lakes that contain lake trout (a year ago the Fish Commissioners resolved that *S. namaycush* should be known as lake trout, but the law-makers still adhere to salmon trout as the name of this fish), and they form an important item in the food supply of the dwellers on the shores of these lakes. They are at their best during the winter months, and catching these through the ice does not in the least interfere with the trout. Should Sec. 104 become a law in its present form, the people about Lake George, Schroon Lake, and other lakes would be deprived needlessly of an important food supply.

In some of the northern lakes whitefish are caught through the ice with hook and line, and they are caught at no other time. They cannot legally be taken with nets and so go on multiplying and filling the water except as they are caught through the ice. This matter, however, is less important than the one of cutting off the winter supply of yellow perch.

Sec. 110 makes the open season for black bass from May 30 to Jan. 1, except in Lake George, where it opens Aug. 1, and in Black Lake, St. Lawrence county, where it opens May 5. This law, as proposed, is a disgrace to a State that pretends to protect its fish during the breeding season. Black bass spawn all through the month of June. Anglers who realize the fact and who desire to protect the bass during the actual breeding season, have procured the passage of special laws covering more than a dozen lakes and streams in the State, and in instances the waters of entire counties in which it is forbidden to catch black bass before July 1. Sec. 110 will undo all this good work if it becomes a law, and Lake George will be the only water in the State in which black bass are protected during the season of spawning.

Sec. 130 reads: No fish, fish fry, spawn or milt, except speckled trout, brook trout, brown trout, salmon trout, rainbow trout, Adirondack frost-fish or landlocked salmon shall be placed in the waters of the Adirondack region unless the fish so placed,* or are non-preying or non-destructive fish, such as usually constitute food for the species above named, *except under the immediate supervision and in pursuance of a resolution of the Board of Commissioners of Fisheries.*" The last sentence of this section, which I have italicized, is the gateway through which those interested in introducing black bass into Adirondack lakes expect they will be admitted. Should the result of such introduction be disastrous to other fishes the responsibility is to rest upon the Fish Commissioners, therefore it will become them to act with caution, particularly as they are given the power in Section 119 to remove all deleterious fish from any waters of the State, and it is for the avowed purpose of destroying pickerel that it is desired to introduce the black bass. It would seem far better for the Fish Commissioners to net out the pickerel from the Adirondack lakes, as was done in Loch Leven, and successfully done, than it would be to put in a more destructive fish.

It will be noticed that in Sec. 130 the sea salmon is not mentioned as one of the fishes which may be planted in the Adirondack region. Loch Leven trout, too, are omitted from the list. Many thousands of sea salmon have already been planted in Salmon River, and Congress has made a preliminary appropriation for a United States hatchery for propagating salmon and whitefish in northern New York, and it is more to the point to provide for this fish than it is to make a close season for moose, caribou and antelope, as Sec. 48 does, when there are none of these animals wild in the State. Sec. 107 provides that "trout of any kind, salmon trout or landlocked salmon," shall not be molested on their spawning beds, and it will be an easy matter to make the same provision for sea salmon, which are as much in need of this protection as the fishes named.

Sec. 137 provides that when lake trout are taken in nets in the Hudson River they must be returned to the water; but there is no restriction against taking codfish with a fly in Adirondack brooks at any time. This should be attended to, for one is fully as important as the other. Sec. 106 provides that "trout of any kind, salmon trout or landlocked salmon" shall not be taken or possessed under 6in. in length. The index to the article, by the way, says 7in.

*This section is quoted literally from the bill. It is meant to read "Unless the fish so placed *are indigenous to the particular water where placed*, or are, etc." The omission of the underlined words being, undoubtedly, a clerical error.

Lake trout and landlocken salmon should not be taken under 13in. in length. The average length of three-year-old lake trout is about 13½in., and this limit in length would put them on an equality with brook trout of 6in.

Article XI. provides for the building of fishways in dams that are already built, and if the article could be made to be retroactive in its provisions, it would be an act of simple justice, according to a decision of the United States Supreme Court, and prove of great value to the fisheries of the State. A. N. C.

GLENS FALLS, N. Y., Feb. 12.

Editor Forest and Stream:

The sportsmen of this section of the State are quite indignant at the unjust discriminations in the proposed game law as prepared by the codification committee. It fixes the open day on woodcock Sept. 1, except in the counties of (see Sec. 149) Lewis, Warren, Saratoga and Richmond.

Why these exceptions? Is it not to favor those who go out for the summer? Richmond county for those who do not leave the city during summer. Saratoga and Warren for those who summer at Saratoga and adjacent resorts, and Lewis for those at Thousand Islands. Let us look at the consistency of the thing a little, taken from the point in fairness to all and also the preservation of game. Three of these counties are among the best breeding places in the State; is this any reason why the open season should be a month longer? Suppose that the opening was the same, which is all we could expect, and that should be as late as Sept. 1—or later—in which section would there be the longest season of shooting? As is well known, but very few birds breed in this section, so about all the shooting we have is what we get during the fall flight, which is but for a few days should we have continued cold weather during that time; so by comparison we find they would have about six weeks shooting counting the flight Oct. 15, while we would have about one week. The same conditions exist in regard to wildfowl. Until we can have a common interest and there shall exist a universal sympathy among the sportsmen of the whole State how can we expect the hearty co-operation of all?

In writing this we have endeavored to bring the question squarely before those interested and state our grievances in as mild terms as possible; and we would be very much pleased to hear from those who propose this law, perhaps there is some very urgent reason for it that we have overlooked. H. W. BROWN.

BINGHAMTON, N. Y.

AN ARKANSAS DEER SCRAPE.

THREE sharp raps on my bedroom door were quite sufficient to awaken me, although it had been little more than three hours since a night express had landed us at an Arkansas station of the Iron Mountain Railway, and we had retired, leaving orders to be awakened at daylight to complete our journey to the camp ground, twenty-five miles into the woods. There were ten in the party. Some went with the two teams, which carried the camp outfit, and the rest—Staff, Byers, Danny, Jake and I—took a freight caboose to a nearer station.

It was the morning of Nov. 3, and proved to be clear and frosty, but from the appearance of the foliage there had not been many such before it. By the time our station was reached the sun was shining brightly, and the solid banks of heavy timber covered with purple and brown foliage, beautiful here and there with large bunches of dark green mistletoe, contrasted most favorably with the bare and broken timber we had seen the day before.

Having completed our geographical calculations on board the freight train, we lost no time in setting our course and starting in the best of spirits on our fifteen-mile tramp through an unbroken forest to our camping ground, where we hoped to meet the others of the party with the teams in the evening.

The noon hour reached and lunch devoured, we separated into a line with Danny at its head, Byers and Jake next, with me at Staff's right—all with orders to dress to the left and march about 150yds. apart. The column had moved thus for perhaps a mile, when suddenly I heard the familiar thrup, thrup, thrup of a deer bounding through the brush almost immediately in front of me. Staff's rifle spoke and Jake's as well; and a moment later another shot was heard further down; and as Danny did not come to us we went to him and found he had clipped it through the shoulders as it was clearing the line. In a few minutes, with our assistance, he had it swung around him shot-pouch fashion and took the lead for camp. As I stood for a moment watching his proud step with the first game of the season, I noticed he was bearing a little to the north of our supposed direction and I remembered afterward reminding him of the fact.

The line of march was again taken up and pushed slowly toward the river, which was reached about an hour before dark at a bend a mile north of our objective point. The teams had arrived and every one was hurrying to get things into comfortable shape at the earliest possible moment. The sun had not shone since noon; a soft, mist-laden breeze from the south was one of the many indications of a rainy night, and one rainy night in Arkansas at this season of the year means another, and perhaps another. Danny had not come in yet. Staff and I stepped down to the bank and fired three shots as a signal for him, which, to our astonishment, were not answered. Thinking that perhaps he was coming and too near to answer, we ate supper, and then renewed the signal with the same result. The idea of leaving a man to pass a night alone in the woods was not so serious, but the mystery surrounding the matter made us anxious. He was one of the best woodsmen in the party and not more than five miles out when last seen, and how could he be out of hearing now? The most plausible solution to my mind was that starting, as he did, too much to the north, instead of being able to correct his error continually led his course more and more to the north, as I have often found myself involuntarily tending to a wrong bearing, requiring a most persistent effort to correct myself. According to my proposition, Paul and Watson joined me in the boat for a trip up the river. We had gone three or four miles, when from away across to our left came an answering shot to our signals, but as my compass indicated it to the north of us we kept on rowing for a mile or so further, when, on rounding a bend in the river, the gleam of Danny's camp fire shone out brightly on the water in front of us. On our way home Danny explained that he had struck the river too far to the north, and thinking he was too far south had started up the river instead of down and traveled until dark. Tired, wet and hungry, the only confort he was able to surround himself with was the roaring fire where we found him, and by which he intended to sit until morning. The return trip, although down stream, was anything but a pleasant one, for the night was perfectly dark and the river, which makes frequent short bends, is filled with logs and tree tops, making anything like rapid progress quite dangerous, particularly so since our little boat was loaded to its full capacity. We made the trip, however, without serious mishap, and found no one in camp too sleepy to shake Danny's hand and congratulate us on our successful find.

There is perhaps no word in the English language that will more suddenly or thoroughly arouse a tent full of sportsmen on the morning of their first day's outing than "Breakfast!" It had that effect on us. We found that the threatening drizzle of the evening before had deepened into an old-fashioned straight down rain. But with hip boots, gum coats and great expectations, most of us were in the woods by the time it was fairly light, Byers and myself going east with the understanding that Fred and Jake would met us at the lick at noon. Finding plenty of sign at an old crossing just north of the lake, I determined to put in the morning there. Seated on a log I watched attentively every movement for a long time, with ear alert to the slightest unusual noise; but as nothing at all occurred to disturb the monotony of steady dripping of the rain drops on the leaves, I was all unconscious of the fact that my vigilance was being supplanted by a mental calculation as to a scheme of forming a syndicate, buying 50,000 acres of that land at $1.50 per acre, building a tramway to the nearest station to transport the timber, and was just about deciding that there were millions or more in it, when I saw a deer moving at an easy lope 80yds. to my right. I succeeded in stopping him with a low sharp yelp or bleat, but as he gave me a very poor sight, owing to some brush and red leaves, I preferred to let him move again, which he very soon did somewhat faster than before, and my second call failed to halt him; but just as I saw his brown coat over the bead the trigger answered my touch, and down he tumbled, a fine young buck with three points. His head mounted on an easel bearing my initials now adorns the home of a friend who is an ardent admirer of art and nature combined.

On the fifth and sixth some turkeys and smaller game were brought in. As Eli was the hero of the next day, I will tell his experience exactly as he gave it to me, and am perfectly willing to vouch for its truth.

He says: "The morning was clear and the leaves crisp with a light frost. Watson and I started south from camp feeling more hopeful than before on account of the weather. Watson having come all the way from Omaha to join our party at St. Louis, and being a new man in the woods, had been placed under my guidance from the first, but up to this time was a little suspicious of being shown any game, knowing that I had placed Staff on a sheep path on his first trip, and evidently expected similar treatment. After going four miles from camp we struck in west from the ridge road and soon found sign. 'I'll stop him!' said Watson, as we stood looking at a fresh scrape. 'Thunder! look at that footprint. I'll bet the buck was a corker that made that scrape. I would be willing to sit here a week for a good shot at him.'

"Leaving Watson at the scrape I went south about 200yds., which was as far as I could trace any indication of a runway. Here I remained motionless for an hour or more. The air was so chilly that I grew quite uncomfortable and, as misery hankers after company, my mind too took a gloomy turn and was filled with gloomy thoughts of home and business. These, coupled with the fact that the moon would be down at 10 o'clock, which hour was fast approaching and was thus reducing my chances of seeing deer to the merest possibility, had the effect so to reduce my spirits that I was really miserable. Here I arose to my feet and in a voice above a whisper (a habit I have acquired while alone in the woods) said, 'Here, Eli, this won't do. This is a moment you have spent months to prepare yourself to take full advantage of. You have not missed a practice meeting for fifty-two weeks, nor an opportunity to talk as long as any one would listen to you about the nice times we had in these woods last year—and year before, and the exceedingly pleasant thing in store for us this—until by your own force of argument you have induced at least one new man to invest $40 in a rifle and to travel a thousand miles to take part in the fun. And now here you are; enjoy yourself!

"As my eye swept a semicircle, I saw to the west a small deer grazing, out too far away for a sure shot, and the wind being from the east, I had an advantage of him. I watched him. His head would go down to get a mouthful of grass, and his tail would wag at the same time. Under such conditions a few steps can be taken toward a deer, which sees nothing except what he is taking into his mouth. When his tail wags again look out, for up comes his head again; and a general survey is taken each time; but he only seems to consider moving objects, after he has masticated his food, and satisfied himself that no enemy is near, wag goes the tail and down goes the head, when a few steps can be gained as before. Following these rules very carefully, I managed to work myself within 100yds., when I fired with the .44 Winchester, aiming behind the shoulder. He ran across a slough up on to a ridge on the other side. At my second shot, away he went through the switch cane as though nothing had happened to him.

"On crossing the slough to where he had made his stand after the first shot, I found blood, then more blood and then lots of blood, from the loss of which I knew he must lie down soon. I moved very cautiously to the top of the ridge and saw him still going, but in a few minutes he keeled over. I owled to Watson, and we soon had him on a pole, and carried out to the blazed road on the ridge leading to camp. It was a second year buck, of about 80lbs. We soon had him hung up out of reach of the wolves, and were just starting out for the river when we met a native. 'Mornin',' said he, 'I see you fellers hev got it, and a nice one too, heap better eating than the big ones. The deer aint in these parts like they used to be, I've see 'em here ten and twenty in a drove, and up on the scatters of Cash River, when I was a young man was a fine range, but they are scarce now, and a power of 'em died last fall with the black tongue, I heve only been

out once this fall, and I got two good standing shots that day, and my old rifle wouldn't bust a cap; dunno what was the matter; she never failed afore.'

"We carried a southwest course about a mile toward the river, when we came into what the natives call the hurricane. Here were thousands of logs, across which had fallen the small and large trees uprooted by a cyclone some years before, leaving the younger growth twisted and bent about them in such a way as to make an almost impenetrable mass. In the midst of this Watson caught a glimpse of some animal moving in the tangle, and by a low whistle and a gesture indicated its direction to me just as a large and extremely vicious-looking wildcat came into my view. A rifle shot brought it half bounding, half rolling, spitting and screaming so close to me that my Winchester could be used only as a club, and that with such light effect that I was obliged to use my hunting-knife as a weapon of defense. A few well-directed blows from Watson's hatchet gave encouragement to me and dismay and finally death to the beast. After we had admired his beautiful form and leopard-like color and appearance for a time, Watson suggested that we had quite enough game for one day."

The war dance at the camp that evening commenced earlier and was marked with more enthusiasm than usual.

A native whom Fred had met in the woods that day told him that the officers were figuring on our arrest for violating that part of the game law pertaining to non-residents hunting in the State. This disturbed us not a little, partly because the law leaves a heavy fine and imprisonment discretionary with the court for this offense (we being entirely ignorant of the law, and thinking the open season was all we had to wait for or consider), and partly because the next day was the 8th, which, according to our camp record, had always been in years gone by a very successful day with us. On the morning of Nov. 8, five years before, some three miles south of this very camp I had killed my first deer, a fine buck, which (being a taxidermist myself) I mounted in full form as an ornament for the safe in my front office, a position which he proudly holds to-day. And in the evening of the same day Eli had brought the running mate into camp, his deer having a wider spread of horns and weighing just 10lbs. more than mine (and the rascal is not through tantalizing me yet over that trifling difference in weight). On a corresponding date, two years later, after Fred and Staff had followed two deer for a long distance through the woods, partly by the tracks occasionally showing in the soft ground, but principally by their knowledge of the particular kind of territory most likely to be selected by the game, finally Fred saw the buck standing at a distance of 100yds., with head erect and nostrils distended, and succeeded in dropping it almost in its very tracks by a single shot from his .32cal. Colts. The report so startled the doe that she bounded several feet above the undergrowth, which obscured her when on the ground, and her white markings glistened in the sunshine much like a fish above the water; and they both declare that Staff's shot was fired before she touched the ground with a broken hip, and a second shot from his .50 express brought her to bag; thus completing a round up that two more experienced woodsman might well have been proud of. These, with many other pleasant recollections connected with that date, were talked over this evening; and we retired early, fearing that the morning would bring trouble, yet hoping it would not.

According to the characters nervously made in my note book under date of Nov. 8, we were astir earlier than usual. Breakfast was not ready, however, when a solitary horseman rode up to camp; and on invitation came in and behaved himself very naturally. Nothing occurred to arouse our suspicions, nor was there anything different from what we might expect from any visiting native, until he refused to eat breakfast with us. Our worst fears were confirmed a few minutes later when he arose to his full height, about 6ft. 5in., and assuming an air of one clothed with authority, cleared his throat to a depth of eleven inches and said, "By virtue of the papers I now hold in my hand I command each and every one of you to appear forthwith before Squire Merideth." And no amount of moral suasion or immoral promises to pay would swerve him from his purpose, so before Esquire Merideth we went, partly because the esquire's office was six miles directly on our way to the station and partly on account of reasons already given. We changed our minds about hunting another day or two, and before the sun was high enough to dispel entirely the gloom that had fallen about us, we had broken camp and were under march with Constable Skipworth in full command. Upon reaching the Squire's home—a double log house joined together by one clapboard roof covering also an entry way between the two cabins—we found his honor not only at home, but expecting company. He was an older man than we expected to find, not handsome, very tall and thin, somewhat dignified in his general bearing, and had determination of character enough to bear up an egg. Besides a long sandy goatee, he wore a pair of large cowhide shoes, quite a distance above which could be seen the frouzled ends of a pair of cottonade breeches of the same color as his sack coat, which came down below his knees and was buttoned from there to his chin, evidently in an effort to cover up the fact that he wore no shirt. He called us to order in a voice that I have had no difficulty in recollecting so far.

The only book in sight was a leather-covered volume, which proved to be a copy of the statute laws of the State of Arkansas, which his honor proceeded to open at a page marked with a seven spot of diamonds, and as my luck never ran with odd numbers a tremor of superstition passed over my entire system. I felt my lower jaw drop, and suddenly realized that all eyes were upon me. I hurried it back into position, but as the card was still in sight I felt it drop instantly, and one motion followed the other so rapidly that my teeth chattered like a chipmunk. At this junction the Squire without removing his glasses arose, and leaving one foot on the hearth planted the other with a sullen thud well toward the center of the floor. With the same motion he placed his left hand (still clutching the book mark) across the small of his back. His right (looking like a 5lb. bass) he held in front of his breast with its fingers pointing directly toward me. Knowing imitation to be the most pleasing of all forms of flattery, I at once threw myself into an attitude as near like the position occupied by the Squire as it was possible for me to do. The excitement of the occasion, together with the business-like proceedings of the justice, had so dazed my faculties that for the moment I had forgotten that it had been agreed with my full knowledge and consent for me to act as spokesman for my nine boon companions, who now stood with me in our deadgrass uniforms trembling in this temple of justice. Realizing that the time for action had fully come, my chest heaved with a latent oratory, dormant since the school exhibitions of my boyhood, and I broke forth with an energy that not only astonished our party, but bowed the form in front of me as twenty years addition to his age might have done; and as my argument closed with a clearly defined course of action for his honor, following a carefully woven network of flattery, his eye was full of moisture when he dismissed court, and asked us to make his home our headquarters while on our next trip, and offered to act himself as special guide and director.

NOCTUS.

THE COUNTRY CLUB.

WE have received from Secretary J. M. Quay, of the San Francisco Country Club, an interesting note of the club's condition. It was organized in the early part of 1890, and ten-year leases were secured of a large territory in Marion county. The preserve contains about 76,000 acres, with 60 miles of ocean front. The roads for driving are all good and the scenery is unsurpassed. There are numerous lakes and trout streams, and an abundance of deer, quail, snipe and duck, with sea fishing and salmon fishing in Tomales Bay.

The club house is situated on the Divide, midway between the entrance to Bear Valley and the ocean, three miles from Point Reyes, the railway station. The building is on high ground, with lawn in front, and is surrounded by large pine trees. The club house consists of a general sitting room, dining room, kitchen, store room, wine room, armory or gun room, bed room, bath room, etc. The building has a covered veranda 150ft. long by 10ft. wide.

Trout Lake (in which fly-fishing will be permitted after April 1) has been stocked with 16,000 New Hampshire trout, and Bear Valley Creek with 2,000; Black Bass Lake, Ocean Lake, Little Lake and Wildcat Lake with black bass. This spring Crescent Lake will be stocked with landlocked salmon. There have been turned out 30 Mongolian pheasants, 24 Arizona quail and 100 Chinese quail. This summer the club will receive from England and Oregon pheasant and partridge eggs, and the experiment will be tried of hatching them out under Bantam chickens.

Since July 4, 1890, there have been killed on the preserve 5 deer (previous to March 31, 1891), 2,825 quail, 1,603 snipe, 19 canvasback ducks, 70 mallards, 134 sprigs, 155 widgeon, 147 teal, 16 black jacks, a total of 541; 1 black swan, 3 geese, 66 rail, 8 wild pigeons, 75 doves, 13 plover, 92 robins, 4,036 trout.

The members who participate in trap-shooting meet on the last Saturday of each month at the club house, in Oakland. The annual picnic and pigeon shoot will occur at Hotel del Monte, Monterey, on Saturday, Aug. 27. Ladies and friends of members are invited to attend.

CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

CHICAGO, Ill., Feb. 13.—Buffalo Jones is in town and has a copy of FOREST AND STREAM in his pocket, date of Feb. 4. The story of the European bison is of especial fascination to him. The engravings of the animals shown impressed him very much.

"I must have a cross from those animals," he said. "Do you know any way in which it can be arranged?"

I told him I supposed FOREST AND STREAM could fix the matter up for him some way with the Czar of Russia, and as Buffalo Jones has a good deal of confidence in the paper, I don't doubt that his wishes will ultimately be realized.

There is a possibility that Buffalo Jones will join forces with Buffalo Bill at the World's Fair in buffalo matters, or at least negotiations to that end are now in progress. Buffalo Bill has been in town for several days, planning for room at the grounds of the great exposition. We saw the ex-scout in his quarters at the Leland. As companionable and pleasant as ever, and as straight and vigorous apparently as in his younger days. Col. Cody's hair now shows signs of gray, and he seems a trifle thinner than the recollections of him on his last visit here. Odd experiences he has had. He showed us a fine photograph of his troupe, taken in the far Orient, with turbaned natives on one side and a group of elephants back of the party of Crow Indians. It was as singular a spectacle as could be conceived.

Buffalo Jones showed me pictures of his buffalo-harnessed to carts and apparently tractable. It is his intention to train them for chariot racing, in which they will be shown at the Fair. The herd has been moved from Garden City, Kas., to McCook, Neb., the headquarters of Mr. Jones's irrigating operations. The animals are all doing well, and photographs of occasional bunches in the herd show unique phases in what Mr. Jones calls his "cataloes" or "cateloes," crosses of buffalo and domestic cattle. This name is of Mr. Jones's own invention, and he thinks it is a pretty good word. The herd will be increased this spring by twelve calves, one a cross of buffalo bull and Galloway stock.

From all this it may be seen that the wilder West will not be devoid of good representation at the great Fair. There will be much, very much, to interest the sportsman and the naturalist.

Next September Buffalo Jones will move to Chicago, buffalo and all. But what is this contained in the following brief floating paragraph?

"The Kalispell *Graphic* says: Chas. Allard, of the Flathead Reservation, will send two carloads of his buffaloes to the World's Fair. Mr. Allard's herd is the largest now in existence."

I confess intense ignorance of this "largest herd in existence." How is this, Mr. Jones?

Mr. Roger Williams, who will be one of the judges in the forthcoming wolf race between the Eastern Barzoi and the Western greyhounds or deerhounds, raises an interesting question when he asks whether "wolf" means coyote, and if not, where shall any better sort of wolf be found. Western Kansas is suggested. There are plenty of coyotes there, but no gray wolves, unless one by mere chance passes through. On the cattle ranges of the Indian Nations the grays have been hunted and poisoned so systematically that they are hard to find. If that now celebrated race is to be decided on a genuine gray wolf basis, the hunt will have to go to a cattle country, and that means either Texas or Montana, the former probably the better country in practical features, though inconvenient for the owner of the Western dogs who lives in Montana. If they jump a regular gray, either a Texas loper wolf or a Montana timber, the contest will be easy of judging if only two dogs are slipped, and the owners would do well to take a basket along to carry back the fragments. Even a big coyote will make a good fight with twice that many good dogs.

It would be pleasant to see this wolf race deferred until it has grown to larger proportions. It is a long way to Montana to see three or four runs. If some of the older wolf hunters of Kansas, Mr. Luse for instance, should become interested, and a few of the old wolf dogs of the greyhound packs be gotten together, we could have a great meeting of genuine sport, new and exciting in its variety. Greyhounds will go to a wolf ahead of either the Russian wolfhounds or the deerhounds, and if the better class experienced wolf dogs of greyhound breed can now be found, they should win in such a contest. The greyhound Yonder He Goes, which is named as one of the dogs Mr. Dougall will enter against the Barzoi, is of recent experience, if any, in wolf killing. In Kansas, before Mr. Luse sold him to Montana, we knew him as fairly fast only, a little crafty on jacks, but a tremendous stayer. He could run all day, apparently. If he has since then been killing wolves, big wolves, gray wolves, he is the dog to put against the wolfhounds. If not, he is simply an unknown factor. The dog which will actually run into and close with a big wolf is a very different animal from the one whose owner thinks he would do so if he had a chance. Two dogs will have a serious time with a gray wolf. I have at my table a fine gray-wolf skin, 6ft. 5in. in length, given me by Mr. D. R. Streeter, whose cattle range is just below Kiowa, on the line of the Cherokee Strip. Two greyhounds ran into and threw this wolf, but he rose and was fairly dragging them both, one on each side, when Mr. Streeter ended the fight with a pistol shot, not wanting to see his dogs cut up. These dogs were a blue and a red fawn greyhound, either of which would weigh over 70lbs., I should think, the largest greyhounds I ever saw. Wolf hunting, if the quarry be the gray wolf, is wild sport enough to make the blood tingle. I should like to see this contest, if it were so handled that a number of good dogs could compete in a practicable country where something bigger than coyotes can be found. But I should not care to see less than four dogs slipped on a gray, for less would not render the fight equal to a point less than cruelty to good servants.

It is often a source of wonder that a gun can burst in a shooter's hands without fatally injuring him, though numberless guns have burst without such result. Not so in the case of J. T. Combs, of Newmarket, Iowa, this week, whose gun burst while we was out with a charivari party. The metal separated, two pieces going entirely through Combs's head, killing him. Others were also hurt by fragments of the metal. The affair seems singular.

My friend the daily reporter describes a horrible murder this week, and discovors that it was done with a "six-caliber revolver."

Mr. Edward Bingham, late of Ohaha, late of Kansas City, is now of Chicago, and on Monday morning goes to work with Montgomery Ward & Co., where he will have to do with guns and loads. Montgomery Ward & Co. are now agents for Henry C. Squires, and have put in a $5,000 stock of Greeners. They will also establish a market for their own hand-loaded and machine shells. It looks as though Mr. Bingham had hit the right place, as indeed every one does who comes to Chicago.

Mr. G. De Long passed East this week after a brief visit with his friend Mr. Hirth, of Spaldings. It is said that Mr. De Long contemplates removing to this city.

Mr. S. D. Thompson, of this city, is said to have the best camping and sporting outfit of any Chicago man. H s usual headquarters are on Gogebic. He has just purchased for use on that lake a 16ft. sailer, built by the Detroit Boat Works on their canvas-lined principle.

Mr. H. B. Tefft, of Milwaukee, was over looking through the dog show with his friend Mr. Dick Merrill, and rejoiced with the latter at the further triumphs of that amiable little dog Paul Bo. Mr. Tefft thinks Milwaukee will have a good contingent over on Washington's Birthday for the shoot at Cumberland Lodge.

Mr. Geo. Andrews this week goes on the Rialto for E. A. Mulford, the railroad ticket man.

Chicago ships live pigeons to Philadelphia for the Riverton Gun Club. Mr. J. Emory Soule, of that club, says they are the best birds they ever shot. Over 4,000 have been shipped, 1,000 in the last lot.

Sweeps at birds and targets held Watson's Park to-day.

Feb. 5 closed the legal selling season for game in Chicago. Beyond the two cases early in the week against Small Bros. and Warder Bros., both on the West Side, Warden Bortree reports nothing.

The directors' meeting of the Kankakee Association last Monday evening adjourned without a quorum on account of bad weather.

Unusually hard weather for February. Snow has fallen off and on throughout the week.

Chicago, Ill., Feb. 20.—A serious accident befel one of the most popular and best known sportsmen of Chicago last week, and one which bids fair to be fatal, although at this writing it is thought that serious danger of so sad a result is past. Dr. J. M. Hutchinson, well known as a physician and as an able and finely educated gentleman, was at Jupiter Point, Fla., Feb. 9, and was fishing from a boat, in company with Mr. J. L. Wilcox and Dr. Peck, also of this city. A flock of ducks came in sight, and Dr. Hutchinson caught up his gun to try for a shot. Pausing to wipe the sea water from the barrels, in some way the gun was discharged just as his right hand was across the muzzle. The third finger was destroyed at the knuckle joint, and the hand sadly injured. The boat was at once hurried ashore. Mr. Wilcox chartered an engine and ran to Lakewood, forty miles, but could get no doctor. Dr. Hutchinson aided himself as best he could, and on the following day the party went by steamer to Rock Ledge, and met there the surgeons from Jacksonville who had been summoned by wire. There appeared in a Chicago daily a later statement that it was feared amputation of the arm would be necessary, but yesterday Mr. Wilcox telegraphed personally that Dr. Hutchinson's condition was the best possible. He

says the third finger and knuckle on the right hand are gone, but the other fingers are uninjured. This, bad as it is, was hailed by the hundreds of friends here as most gratifying news. We hope to see the jolly doctor back again and much himself and living to pull as good a trigger as ever. The sympathy of the entire shooting community here is with the sufferer. Dr. Hutchinson is a prominent member of Cumberland, Fort Dearborn and other Chicago clubs. We can by no means spare him yet. He had been in Florida about a month. His family is now with him.

The following I notice in the local reports from World's Fair headquarters:

"Three Indian canoes from Victoria, B. C., were received at the custom house yesterday for exhibition at the World's Fair. They were consigned to Director General Davis, and are beautifully made.

"Twenty or more families of Esquimaux will be brought to the exposition from Labrador by J. W. Skiles, of Spokane Falls. They will live in huts constructed of the hides and bones of walrus and other aquatic animals. The projectors of this display will also bring reindeer and other animals native to Labrador to give the section inhabited during the fair by the Esquimaux a realistic appearance. The natives will be employed in making spears and canoes."

Two flocks of ducks were seen by the Diana Club men at Thayer, at their club trap shoot, a week ago to-day. The time is drawing nigh.

Mr. Claude King, editor of the clean and bright Rocky Mountain reflex, *Sports Afield*, spent the week in this city. Mr. King is a good sort of man to have in sporting journalism.

Mr. Walter R. Nursey, author of "Ten Years in Manitoba," etc., stopped at my office to inquire the address of his old friend Mr. Charles Hallock this week, and I hope the two will again shake hands.

Mr. John F. Eberhart, of this city, starts soon for a long trip through California. He will go *via* the Iron Mountain route through Texas, and wishes to stop off for a short side hunt somewhere for deer and turkeys. Mr. Fred Taylor, who regularly goes to the Suggs' ranch, in the Kiowa and Comanche country of the Indian Nations, tells me that for such a purpose it would be well to stop off at Texarkana, and go thence to De Kalb, where plenty of deer and turkeys can be gotten at, and where guides, teams, etc., are cheap.

Mr. Taylor himself had the usual fine shooting which he always gets at the Suggs' ranch, though not much hunting was done, he being out to spend the winter. Quail the cowboys would not eat, and ducks were too easy to shoot to give any fun. The cowboys would not eat wild turkey but preferred tame. Mr. Taylor killed three turkeys and 100 prairie chickens the last few days before he came away. Hunters are not allowed in this country, and the government watch is strict.

Canvasbacks are worth $18 a dozen in Chicago now.

City warden M. R. Bortree has arrested Geo. S. Sloan for having in possession after season two saddles of "mountain sheep." He does this under the clause specifying "buck, doe or fawn." He has also arrested David R. Shively for having in possession one antelope, this under the same clause. The arguments on these novel cases come up next Wednesday.

Hearing that plans were making for the importation of antelope from Dakota, Mr. Borfree wrote the Secretary of State of North Dakota thereon. His letter was referred and answered by Assistant State's Attorney T. C. Ransom, of Bismarck, under date of Feb. 10, as follows:

"This State has no game warden. We have game laws on the statutes against the killing of wild game, and every person found with any antelope in possession, from Jan. 1 till Sept. 1 next following, shall be fined $100. It is only a fine, but the Court may imprison for 90 days or not less than 30 days."

A similar letter to South Dakota brought the following from the Assistant Secretary of State, Mr. H. B. Gillett, under date of Feb. 11:

"We would say, this State has no game warden. Will try to be on the lookout for violators, however."

More law than results in Dakota, too.

To-day Warden Bortree searched the premises of Sayre & Waterman, 88 Twenty-second street, for quail, on due information. Nothing was found.

The warden gets many anonymous letters telling him of things he ought to do and could do. This cowardly form of advice is not of much value to sportsmanship. From the Olney Gun Club and from one or two anonymous parties he got something more tangible, namely, the price current of Terrill Bros., of this city. This had, stamped in red ink, with a rubber stencil made purposely for that use, the following:

"Ship us your quail, grouse, etc., long as you can get them. We can use them."

Mr. Bortree searched Terrill Brothers but could locate nothing. Of course not. This game is not kept in the stores, but in the big cold storage houses. Terrill Bros. said it was a mistake that that sheet got out marked in that way! That is a trifle lean for an excuse. They will stand some watching.

The Kankakee Association directors held their meeting at the office of Mr. Abner Price, Friday, Feb. 19, at 3:30 P. M. Mr. Abner Price was elected president of the association, and Mr. W. P. Mussey secretary and treasurer. The committee on fishways are Messrs. Geo. E. Cole, W. P. Mussey and E. Hough of Chicago, and Mr. W. M. Durham of Momence. The committee on protection are Messrs. E. Hough, A. H. Harryman, J. P. Card, A. M. Fuller, Thos. C. Edwards, Henry Ehlers, H. D. Nicholls and R. B. Organ, all of Chicago. The secretary of the Nickel Plate Club was also added to this committee, being first chosen a director, vice Mr. Colby, resigned. The committee on ways and means are Messrs. Abner Price, R. B. Organ, J. P. Card, W. P. Mussey, Henry Ehlers, C. J. Gammon and E. Hough.

It is the intention of the Kankakee Association to finish the fishway work thoroughly, and an appropriation of $75 was made for that purpose, which will be enough. The main work, however, will this year be expended on the upper river, covering the waters and grounds of the Mak-saw-ba, English Lake, Cumberland and Diana clubs. Illegal shooting of ducks, and illegal netting and spearing of fish will be stopped if possible, and a few good cases will probably be enough. The protection committee has $100 still to its credit, and will get most of the funds this year.

The fishway committee was instructed to get a man to run the river on a trip of inspection as early as the ice is out. The committee on protection was instructed to write at once to the Indiana Fish Commissioner, Mr. W. T. Dennis, of Richmond, Ind., inviting him to meet the committee, at their expense, at as early a date as possible at English Lake club house, on the Kankakee. English Lake Club has paid more money than any other into the treasury of the association. The grounds of this club are afflicted with gill nets and bog nets. It is very fit that some work should be done here, and we want to meet the Indiana Commissioner right upon the ground and discuss a general campaign. There will be no let up in the work, so long as funds hold out. The first year's work of the association was remarkable, and it is to be hoped that contributions for this year will be as good. The work depends on the contributions.

My friend, the daily reporter, was at the meeting. He states in his report that "Mr. Geo. E. Cole, the retiring president, made a brief address." Mr. Cole was not there, but the daily reporter couldn't help saying that the retiring president made a brief address. Retiring presidents always do that—in daily press reports.

E. Hough.

THE GAME FIELDS.

Southern Vermont.

RUFFED grouse have not been as plentiful as usual the past season, although a good shot can usually make a very creditable showing. Woodcock are not abundant here. Squirrels are also scarce in some localities. Rabbits are fairly plentiful, and great sport can be had with a pack of well trained dogs. The open season for trout is from May 1 to Sept. 1. In 1888 the law was changed so the open season extended from April 1 to Aug. 1, but in two years it was changed back to its present date. With the season opening May 1 there will be plenty of work for the fish and game wardens, who are few and far between in Vermont. Nearly every spring some anxious fisherman gets tired of waiting for the opening day and the result is that quite a number of trout are caught before the law is off, many of them being below the 6in. limit.

In the fall the open season on woodcock begins Aug. 15, and on grouse Sept. 1. This gives another chance to dodge the law, as a man can very often find grouse while pretending to hunt woodcock, and all do not resist the temptation.

If Vermont would follow the example of some of our neighboring States, we would soon have improved hunting and fishing. What we need are better laws better enforced. Such laws can only be obtained by the united efforts of Vermont sportsmen. I know of no better way of uniting the sportsmen than by forming clubs in different localities throughout the State, and all clubs already organized as gun clubs, rifle clubs and boating clubs will do well to look after the welfare of our fish and game.

The laws will be more respected when backed by organization than when allowed to remain a dead letter. Nearly every summer we have visitors who fish our brooks several days in succession, and keep every trout they catch regardless of size. This will not improve our fishing, and I hope every person interested in the preservation of our fish and game will unite in securing proper legislation and upholding the laws that are passed. The time to do this is now, not after the trout and game are nearly exterminated. It will be too late then.

Southern Vermont.

[Our correspondent and all others interested will do well to communicate with the Vermont Fish and Game League, John W. Titcomb, Secretary, Rutland, Vt.]

The Ducks In Boston Harbor.

Will some one kindly inform me, through the Forest and Stream, where the immense numbers of ducks go to for the night that cover the Charles River between Boston and Cambridge during the day? At dusk they collect into a great flock, and after circling around they fly off a little east or south. During the day they frequently approach within 25yds. of both shores for feed. They can generally be seen within that distance of the Cambridge Bridge and along the shore to the factories, and are apparently as unconscious of the electric cars and heavy teams, within easy gunshot of them, as domestic ducks on a duck pond. Would that they were as tame as this when gunpowder can be burnt! Duck.

Boston, Mass.

[The ducks go to the lower harbor and outside into the bay. However tame they may seem to be on account of their not having been disturbed from the shore, they view the approach of a boat far differently, and it is extremely difficult to get within several gunshots of them if in a boat.]

An Adirondack Hare Hunt.

Rabbits (hares) are very plentiful this winter in this part of the Adirondacks. I had a two-days' hunt under old Raven this winter. Numerically we had three dogs, otherwise they would count about one and a half. My full-blooded English beagle did most of the work. Old 'Lijah Simond's little deer dogs came along. He is a good dog for old 'Lije to still-hunt deer with. He follows a deer far enough but not too far, and being so small the deer are not alarmed. We first tried the swamps. Here a swamp is wooded ground, covered with large or small growth and normally wet. Low, wet ground in an open country is a "mash." The swamps were full of fox tracks and the rabbits had been driven out. We found them on the hillsides in the soft timber in heavy undergrowth. The beagle started the bunnies bobbing through the woods, and as they swiftly loped across a little glade or bounded across a narrow wood road, then or never was our chance for a quick shot. Most of the shooters here hold their pieces with the butt close under the armpit, barrel pointing down and hand on the guard when expecting a shot. Sometimes they sway the gun up and down and plant the feet again, much as an unprofessional at the bat sways his club to get the swing. Many are good game shots, even if their methods are not the same as our own.

We had a good laugh at one of our number. He was expecting a shot every moment, and had his piece to his shoulder, barrel raised above his head, like an elephant with his trunk raised, when he means business. "Look out there! Right behind you!" we called out. He made frantic efforts to get a bead on the rabbit, two feet behind his boot heels, but could not. It was hard to make out whether he was going around the rabbit or the rabbit around him. It made me think again of that puzzling question of the man with a gun and the squirrel in the tree. He said the rabbit was almost too near to focus, but if his gun barrel had not been so long he thought he could have got a shot.

Some, perhaps, have seen a buck fight, but I wonder how many have seen a buck-rabbit fight. Just before dark there was heard the "awfullest squallin'" near the house. The house is nearly surrounded by woods and rabbits live all about. Little Scotty ran out and said "Two rabbits were having it out and were squallin' and bitin' and clawin'. He is in the habit of picking up his tame white rabits by their ears, so did not hesitate to take his favorite hold. He brought one into the house and the other scampered off. They both were young and small and inexperienced. I doubt if an old buck rabbit would allow himself to be lugged off by the ears. Nik.

Bay Farms, Essex county, N. Y.

Elk in Jackson's Hole.

There is, at this date, only about 14in. of snow here. All kinds of game are doing well. At a rough estimate, there are about 3,000 elk in sight. Sounds rather "fishy," but all the same they are here for every one to see who wishes to come here this winter. Fred. E. White.

Raintuck P. O., Idaho, Jan. 30.

Cohasset Coot Shooting.

The three Crehore cousins, well known Harvard boys, have a nice shooting box at Cohasset, Mass. They go down there as often as the shooting is good, and as often take their friends with them. They are very fond of shooting, and their blinds are very admirably arranged. Fortunate is the shooting friend who gets an invitation and accepts it. They started with a party on Monday evening.

Special.

A SHAWANGUNK WILD BOAR.

ON Thursday, Jan. 21, a party, among whom were Charles B. Stearns, of Oakland Valley, and that well-known sportsman, Lew Boyd, of Hartwood Park, were out to hunt the wild boar and succeeded in killing one. Following some tracks these two gentlemen came upon two of the animals in their nest—a very large boar and a young sow, apparently about a year and a half old. The hogs took the alarm when at too long range to be killed, but Boyd selected the boar for his game and sent two loads of buckshot after him, wounding him, as the blood-stained trail proved. Mr. Stearns reserved his fire and the sow, having turned about and changed her course toward the hunters, he fired both barrels and killed her. She ran about 100 yards after being shot and fell dead. Her weight was about 215 pounds, being about the size of the wild hog killed by Judge Crane in October, 1890.

On Friday morning the party took up the bloody trail of the big boar again and pursued it all day but failed to overtake the animal. It is a peculiar characteristic of these animals that when aroused they keep on running for a long time and travel many miles before stopping, unlike the deer, which, if not pursued, will soon stop to reconnoiter and rest. At last accounts all but Boyd had abandoned the trail. That worthy girded up his loins with the remark, "I want that boar's head," and those who are acquainted with the man perceive the boar to be in imminent danger unless a fresh snowfall hides the trail. Lu is a long stepper, and with the present depth of snow, something less than two feet, a tramp of ten or fifteen miles is a mere constitutional with him.

B. T. Henley.

Port Jervis, N. Y.

A WORD ABOUT HOODLUMS.

Editor Forest and Stream:

The last of Mr. Ames's entertaining letters, "In the Maine Woods," leads me to say something which I have refrained from for a long while out of respect to our fair friend, for I think we may call her so, Miss Hardy; and that is, that this illegal destruction of game is not due to the visiting sportsman, but to the pure inherent "cussedness" of the ignorant, envious, country "hoodlum."

I have known the animal well for more than half a century, and my first recollection of him dates from my boyhood, when an old friend of my mother's sent her son, a boy of 12, up into the country to spend the summer and recruit from over study in the Boston Latin school. Now, coming from the sea side, he naturally wanted a boat, and we soon had one on the river. I think it cost the enormous sum of $2; but what a time we had to keep it. The village hoodlums stole the oars, sunk the boat, filled it with mud, and committed other atrocities on it, until it became more plague than profit to keep it, and pleasure with it there was none. I have been running athwart this same noxious animal all my life. It is he who puts pickerel and "hornpout" into the trout ponds, who limes the brooks or doses them with *Cocculus indicus*, and would rather make a big haul by foul means than enjoy a decent catch by fair ones.

During my years of experience as game warden and fish commissioner I have run across him or his tracks everywhere. I have found the stakes to which gill nets had been set at the mouth of springs emptying into choice trout ponds; I have come across places in the woods where the shovel and hoe had left the marks of their use in damming brooks during the low water of summer, so as to scoop out all the finny inhabitants, and I met a lovely specimen of the breed up at Connecticut Lake half a dozen years since, who attacked me on the tavern porch with a volley of abuse of the Fish Commission and the State Government and preached "Democracy" at me with all the energy of a "Tammany heeler," until I told him "if he did not stop his talk I would stop it for him," and the man whom he had been "guiding" (?) seeing that I meant what I said, seduced the brute off with another drink, of which he had too many already.

Now, this animal is not the much-abused foreigner, he is neither Irishman nor "Canuck," but pure native American, and he gets his brutality and his bad manners from the same English stock immortalized by Punch in his "Sketches of the Black Country;" "Say, Bill, who's that chap?" "Don't know; not of these parts. 'Eave 'arf a brick at him!"

Now, there are plenty of good fellows in the most rural districts, and I have many good friends among them, some of whom I hope to meet again another summer, but as in all semi-civilized frontier countries, there is in the backwoods of New England an element as untamed and brutal as in any of the new counties of the West and Southwest, and it is these fellows who murdered the game warden and tore down the weirs at Sebago Lake in Maine, and who attempted to destroy the hatchery and rob the ponds at Sunapee Lake in New Hampshire, who are continually poaching on the lakes of northern New York.

Their antipathy to the game laws may be inherited from ancestors who were really oppressed by the severe forest laws of the feudal ages, where all game was reserved for the King and his nobles, and is not likely to be mollified by the establishment of extensive club preserves; but I fear it will take some time to teach them that such opposition should not be extended to laws made by the people, and for the benefit of the whole people, of which they are but an integral part.

Still, while they take the attitude they do, I have no sympathy for them, with all due respect to Miss Hardy.

VON W.

CHARLESTOWN, New Hampshire.

WHERE ARE THE QUAIL?

WHAT has become of the quail (or partridge) in Rhode Island? This has frequently been asked here this year.

For ten years past I have been out with dog and gun in different parts of the State. We reside in the country a few miles from the city of Providence, on a peninsula about three miles long by one broad, which is owned by a few individuals who have agreed to protect game birds as far as possible. Several years ago I procured a number of live quail from Virginia, kept them with success through the winter, and in April turned them out on the end of the "Point." They, with the other quail that were there, prospered. Better quarters they could not wish for, and they were left undisturbed and guarded for two years. Excellent shooting was the result. In one afternoon we shot twenty-two from five coveys, leaving half of each covey to breed from. To-day it is almost impossible to find a single quail on the "Point." Why is this? Simply because the game laws of the State are a dead letter.

I was at a large dinner given at a leading hotel in Providence, at which over 200 quail were served. This was in February. The game dealers in Providence sell game openly all the winter. There are snares laid all the year round in all places where the birds are. We have destroyed a number of them. Being almost invisible they are hard to detect. Most snares are made with a horsehair formed in a slipnoose and placed near a pond or brook that quail frequent; a few grains of corn or oats are scattered near. Hunters wait for a snow storm, and when the quail are huddled together for warmth and protection they sneak up and take a "pot" shot at them. Lately I have heard of sixteen being killed at one shot—this out of season. The law reads that "having quail in possession is *prima-facie* evidence to convict." I have been unable to find any case in the State where a fine was imposed and collected for illegal sale or killing. We have game wardens and a Game Protective Association, but they must be asleep.

Perhaps some of the readers of FOREST AND STREAM can suggest some provision for the preservation of game birds throughout the State, before they have been entirely exterminated. I have heard that a movement is on foot to have a large game preserve, the farmers themselves to act as wardens, and to be paid to protect game birds, each member to pay to the farmer over whose ground he shoots a certain sum for each bird killed by him. This rumor seems to have some foundation, but is the plan feasible? Would the farmers agree to it, and if they did, could we rely on their carrying out their agreement, knowing, as we do, that every farmer has his own farm to look after? OLD SUBSCRIBER.

FEB. 15, 1892.

JACK RABBITS GALORE.—Young O'Connell tells me that a few years ago when in California looking up sand lots they visited the new town site of St. James, near Los Angeles. They found at St. James but one building and an electric light. At night this light attracted jack rabbits by the scores, and they were easily killed with a club. Many were captured in this way.—BART.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

TROUTING IN THE CASCADES.—XI.

THE MOLALLA COUNTRY.

WE had determined to spend the 7th around camp, resting up and preparing for a hard trip to the unknown regions of the North Fork. Early in the morning, Uncle Billy Vaughn (the first white settler of the Molalla Country) rode up and throwing his rein over a bush, greeted me cordially, and after an introduction to the other members of the camp, sat down on a log for a chat. Having heard that I was camped near Hungates ford he had sought me out, and I was glad enough to see him, for I knew he could give me some information about the regions we were about to visit. "So you are going to the North Fork of the Moolalla, are you?" said he, strongly accenting the "Moo" (as he always does), "well," he added, "you will find it terribly rough, and you must keep your senses well about you, for you will find that the upper Moolalla is no slouch." He said we could follow the trail all right to the forks, but after that we would have to rely on our own judgments and the dim and uncertain deer paths. He thought that the best plan, after reaching the forks, would be to go directly up on the divide between the North and South forks, and then down to the river, for from the mountain we could get the lay of the country, and besides, he was not sure that we could follow the North Fork up from its mouth.

As he mounted his horse he intimated that we might run across Indian Henry, who was somewhere back in the mountains, who could give us fuller information, and again admonishing us to be careful as "the North Fork was no slouch," he touched his horse and rode away.

We shouldered our guns, whistled up the dogs and went out into the crab-apple bottom for birds. Harry and George fairly out-did themselves, as covey after covey whirred out from under their very feet.

"See, from the brake the whirring pheasant springs,
And mounts exulting on triumphant wings:
Short is his joy; he feels the fiery wound,
Flutters in blood, and panting beats the ground."

The whole camp went over to the Molalla in the afternoon, and we had a jolly time fishing and romping like a lot of school children turned loose. When anybody hooked a big fish all hands came to watch the sport and help to land him. Everything went pleasantly until Billy undertook to cross a rapid, and get over to the shady side of a deep pool that nestled under the bluff invitingly. When at about mid stream, the loose round stones melted out from under him, and in an instant away went Billy, rod, creel and all, floundering down the rapid and plump into the deep pool. Everybody else roared, but Billy was wet and mad, and besides his creel had opened and his fish went sailing off down the Molalla. A few of the fish revived and disappeared, but Billy and the balance of the fish were properly rescued. The more we laughed the madder was Billy, and he finally went dripping and disgruntled to camp. Of course this little incident placed Billy hors-de-combat for at least three days; in fact, I am not sure that he ever entirely recovered, for he gets just about as mad when the incident is mentioned to-day as he was at the time it occurred.

By daylight next morning we were chatting along up the trail that led to the Forks. The dogs were wrestling around in the brush nosing out rabbits and sleepy pheasants, but as we were unarmed, except with our hunting knives and hatchets, we kept straight on our way. We carried, besides blankets, wire broiler, salt, pepper, baked beans, bread and coffee-pot, and felt prepared for almost any emergency, except encounters with cougars and bears. This was to be a red-letter trip, and we were all on our mettle. Seven o'clock found us sitting on a log at the Forks. Either arm seemed about as large as the main stream, but the North Fork was more impetuous and noisy. The South Fork evidently carried more water, but the North Fork was certainly large enough.

We were right in the monntains. On every hand bald buttes and narrow cañons, tilted strata and gnarled pines; and we felt that Uncle Billy Vaughn was correct in his estimate of the country, and that "the Upper Molalla was no slouch." With some difficulty we crossed the North Fork, and found the dim trail made by the deer in their wanderings between the grassy parks of the mountains and the sparkling waters of the Molalla. On and up we climbed to the divide that overlooked the junction of the two streams and the verdant valley of the Lower Molalla. We sat down to rest and survey the country. The view alone from that airy height was worth all the toil of the trip. Off to the east, mountains rising upon mountains until lost in their own cumulus splendor. To the south, the weird chasms and lonely cañons that cradled the fretful waters of the unexplored South Fork. To the west, the dim outline of the far-away Coast Range. To the north, the rugged waters of the lower North Fork, and further on the valley, half hidden in the haze of the young Indian summer. It required a full hour to work down the mountains to the seething waters of the North Fork, and no doubt we all asked ourselves the question, How in the world we were ever to get back? But here we were at the sputtering, fuming torrent, and we soon forgot all the tribulations of the long, tiresome tramp. It was the most reckless stream I ever saw. Nature seemed to have gone mad and torn her very hair. There being three of us, we were company for each other and the wild, fantastic solitudes were endurable. Nature herself tendered little consolation to sensitive nerves.

What a lovely rapid! On and up into the very bosom of mystery, and Harry and George went to work at once among its swirls and solemn boulders, while I, instinctively, took to the still pool below. I approached with that curious anxiety peculiar to the angler about to test the character of unknown waters. I was not disappointed. A flash, a gleam of spotted light, and away he went, my line paying out with lightning rapidity and my reel buzzing as if it would burst. A yell above, and I turned to see George standing like a monument on a boulder, bracing himself against the tugs of a giant that was trying to get down to the pool, while Harry, still on above, was fighting with two big fellows, one of whom was already in the landing net.

We three! What a picture for the irrepressible Kodak! One, two, three and three times three answered to my casts into the still pool, and then I joined the boys among the rocks of the rapid. We fished as if the reputation of the Molalla depended upon the result of that day's work, ignoring the demands of our hungry stomachs and utterly oblivious of the weird surroundings. The boys kept pretty well ahead until, on turning a bend of the stream I observed them perched like two crows on a log that projected out below a gloomy, lean looking cañon out of which the stream jumped with an ominous roar.

"Ah, my boys," I exclaimed, "you are weakening a little, are you?" "Well," said George, "that may be one name for it, but it is my opinion that we are all up a stump." "I'll bet my dog against yours," said Harry, "that you don't fish above here to-day." Sure enough, the stream at this point was bounding out through a crevasse, the walls of which were so perpendicular that they leaned a little in, and so high that we could only see a faint streak of the blue sky above. Another victim for the Kodak, thought I, as I sat down on the log and stared at the obnoxious hole in the wall.

Nature had handicapped us and my ambition to see the falls which Frank had seeen when last in the mountains was not to be gratified this trip. There was some satisfaction, however, in the fact that it was about time to camp for the night. While the boys started a fire and put the coffee on I took advantage of the opportunity to investigate this freak of nature. It seemed to be a crack or split through the solid rock, with the ragged walls and jagged points worn smooth by the rushing waters. Tying a heavy lead to my line I sounded the narrow current and found that it was twenty-five feet deep and so clear that we could see the glistening sands at the bottom where the surface was not too much vexed by swirls and foam. I could see up through the crevasse about fifty yards, during which distance the stream seemed to fall twenty-five or thirty feet. A good, hasty supper of broiled trout, bread, baked beans and coffee made us feel rather satisfied with both ourselves and provoking nature, and we lit our pipes and laid down on our blankets between the echoing walls to rest and rehearse the events of the day.

Although tired enough, there was little sleep in store for any of us. The cold draft of air that poured persistently down through the crevasse kept us rustling wood for our fire most of the night, and then, too, the hollow echoes of the narrow cañon troubled our sleep with demoniacal laughter and calls.

Wet, cold and blear-eyed we hovered over our morning coffee, while the shivering dogs looked at us reproachfully for getting them into such a scrape.

With sore muscles, strained tendons and cracked bones we started on the return march well satisfied not to try to catch all the fish in the country, as Billy expressed it.

Appreciating the tiresome trip ahead of us, I doubt if there was one of us that did not in his heart envy circumspect and prudent Billy in his comfortable quarters in camp. But anglers, as a rule, are unreasonable creatures; always seeking after difficulties, only to be half provoked at themselves for finding them.

The trout must have heard about the new flies of the North Fork, for the water seemed to fairly swarm with great big fellows, anxiously awaiting their turn.

Of course we had kept no small fish, and now decided to throw back all but the very largest. We found that, as Uncle Billy Vaughn had anticipated, we could not follow the North Fork to its mouth, and so we were forced to climb the mountain again and find the deer trail that led down to the forks.

In this country the rank ferns, sal-lal brush and vines render the mountain sides next to impassable, so that one must stick to the creeks or follow the ridges if they expect to make any progress through the mountains. It was nearly night when we again rested on the crest of the mountain from which we had the day before surveyed the country.

It was a tired crowd that sat there that August evening looking wistfully down the Molalla toward camp, which was six miles away. Thank goodness it was all down hill; and after a good rest we trudged along, but rather more solemnly and silently than when we came up. It was a long, tiresome trip, but about 10 o'clock P. M. we staggered into camp, hungry, weary, foot-sore and heavy-laden.

My wife, Billy, Mr. and Mrs. Fyrer were all out waiting for us, and their anxious interest in our physical welfare and comfort was manifest in the savory burden of the groaning table—for which we felt exceedingly grateful—and to which we at once proceeded to pay our most hearty and profound respects. S. H. GREENE.

PORTLAND, Oregon.

ANGLING NOTES.

AT this season of the year the anglers who are in the habit of snelling their own hooks and making their own flies and leaders are looking into the gut question. The manufacture of silk worm gut has already been fully described in an illustrated article written by Charles F. Imbrie, and published in FOREST AND STREAM June 5, 1890. But what interests amateurs most is the question of strength and the sizes best adapted to the different kinds of fishing.

The first thing that anglers will notice when they buy gut this year is that the price has advanced materially. This comes from the fact that for two years the crop in Spain has been short. The sizes usually sold by dealers, the price and the strain in pounds an average strand will stand, are as follows:

"Regular" or trout size.....	price per 100,	.60;	will stand 3	lbs.
"Padron 2d" or heavy trout....	"	"	.75;	"	" 3½ "
"Padron 1st" or black bass.....	"	"	.90;	"	" 4 "
"Marana 2d," heavy black bass	"	"	1.50;	"	" 5 "
"Marana 1st," salmon size... .	"	"	4.00;	"	" 6 "
"Imperial," extra heavy..	"	"	9.00;	"	" 8 to 10 "

The average length of good gut in a strand is about 11in. The gut should be "pearly" white and round, not yellow or cream color, as some writers state.

The strength of gut after being made up into leaders is a very different matter. Anglers often find that when a leader is made from gut that tested, say, 4lbs., it will break at a strain of perhaps 2lbs. This may be caused by one of two things—either there was an imperfect strand in the leader or the gut was knotted before being perfectly soaked. If it breaks in the knot, the latter is of course the reason. A leader is never as strong as the original gut, owing to the fact that even the most carefully tied knot weakens the gut.

Fishermen differ very much as to the proper color of leaders and snells. Some insist that the gut should be dyed black, others that it should be left white; but a medium course is safest, and a neutral or mist color is generally preferred by experienced anglers.

The size of gut is the most important matter to take into consideration. When the streams are clear and shallow, flowing gently over a smooth bottom, the gut cannot be too thin and light. In over-fished waters trout are very suspicious, and are more afraid of the shadow cast by the leader than of the leader itself. It is therefore necessary to use the finest of fine gut if one wishes to meet with success. But on wild and rarely-fished waters or at night it is a waste of time and material to use them, and stouter leaders will answer even better.

Gut when dry cannot be tied into a knot, as it is very brittle; it should be well soaked first, and a dry leader should never be used. Good gut, if kept in a cool, dry place, will hold its strength for several years.

SCARLET-IBIS.

THE POPULARITY of domestic cigars is growing every day, and it is believed that it will continue to increase. It is not so very many years since people thought that a "weed" manufactured in this country must necessarily be a bad one, but nowadays as many domestics are consumed as imported. This is probably due to more careful and better manufacture, and perhaps in a measure to improved methods of tobacco cultivation. At all events the domestic cigar is to-day extensively used, and it is noticed that at many of the clubs the brands manufactured by D. Hirsch & Co. are extremely popular and are preferred by many smokers to those which are imported.—*Adv.*

PICKEREL FISHING THROUGH THE ICE.

THE eye now discerns no difference between the rapids of the rippling brook and its slack water, nor discovers aught of the overhanging bank at the bend, where in the sunshine of the summer the beautiful trout loves to hide. Boreas has escaped from his northern home, and has hushed its liquid melody in his icy embrace, while wrapping the earth in the ample folds of his snowy mantle. Human enactments are now in harmony with Nature's laws, and the sportsmen erstwhile must forego the pleasures of rod and gun, and content himself with reminiscence and indifferent substitutes. The lowing kine may not add beauty to the landscape, the leafy copse may not give back the varied notes of its feathered songsters, nor the fern yield its fragrance to the trampling foot; and yet the gentle savage within him may not be wholly repressed though the highest canons of sportsmanship be offended in its gratification. The choice five ounce split-bamboo must be laid away, and the delicate fly of many and gaudy hues be relegated to the fly-book, for to-day we must be content with the inelegant tilt and the lively minnow.

The wind has veered around to the south and the day grows sunny and warm with the passing morning hours. A trio gather about the fire; and soon a fellow feeling prompts an adjournment to a neighboring pond some few miles away. As midday approaches Messrs. Seeley, Le Noir and the writer, well tucked up in fur robes, with four dozen tilts and a generous supply of all other things needful, sally forth behind the merry music of the jingling bells for an encounter with the pickerel in his native haunts.

It might be well to explain that there was some difference of opinion at the outset as to where Messrs. Esox were most "at home," but the junior member of the party parts his hair in the middle and not yet having encountered many of the adverse storms of life his face is generally decorated with a ten-gauge smile, which he is in no hurry to part with by applying himself to the serious consideration of such difficult problems, so he is apt to do as did Ruth of the Scriptures, "Whither thou goest I will go," so he is no longer a factor to the contention. The other member of the party, while smallest of stature and carrying only a light load of years, has scaled the crater of Vesuvius, climbed the Matterhorn, carved his name on the Pyramids and confronted the bloodthirsty New Jersey mosquito in his native haunts. He never failed to recognize the superior qualifications of the patriarch of the party, and to accord the respect due gray hairs, until in an unfortunate hour in the wilds of Maine he became the victim of misplaced confidence and found he had only a baby pathfinder in the person of the patriarch for guide, when he lost a blazed trail and floundered about for a long time in an almost impenetralble windfall jungle. So he is now disposed to be more exacting and critical, and it was not without the use of many of the nice persuasive words of the dictionary that he consented to the plans of the patriarch.

Arriving at our destination we find the ice of only moderate thickness, and have our first tilt set as the steam whistles in the city are sounding for 1 o'clock. We succeed in getting but a few tilts set when the game of the big fish and little fish begins, and soon the red flag flying at the masthead announces the usual result—that the big fish has devoured the little fish, who in turn surrenders to a greater enemy and not less relentless. We hurry up in the work of setting tilts, but have to desist before we have half our number in. Callers we have fast and furious.

We eat our lunch while traveling from tilt to tilt, keenly enjoying the beautiful calm, sunny winter's day, its stillness broken only by the jollity of the fishermen, the click of the tell-tale tilt or the sharp report of the distant woodsman's axe. We are out for a good time, and a good time we have, every condition being favorable. Our pile of fish has grown rapidly, and their black, gold and green blend in harmony and make a pretty picture on the ice. We do not want all the fish in the pond, and so pull up at 4 o'clock and return to the city with an elegant string of forty-four fish that weighed as many pounds.

GEO. MCALEER.

WORCESTER, MASS.

Mr. C. E. Barret, of Barret Bros., Boston, went with a friend "down on the Cape" after pickerel last week, to a pond in Wareham, one of the best for pickerel in that section. The day was stormy and they did not have the best of luck, the score being only 23 pickerel; but the size was good, and Mr. Barret thinks they did not do as badly as they might have done, especially on a stormy day and a day when he hesitated about starting at all. They stopped at the house of Mr. A. Z. Bumpus, and they speak highly of Mr. Bumpus as a guide and entertainer.

It was a very jolly party of pickerel fishermen that left the Boston Chamber of Commerce last Friday afternoon for Lake Winnepesaukee. The party was made up of H B. Moore, of J. E. Soper & Co.; Geo. C. Moore, of North Chelmsford, Mass.; Calvin Austin, General Manager of the Bangor & Boston Steamship Co.; Irving Powers, of Powers Bros.; J. A. Ashworth, local agent of the Delaware Mutual Insurance Co.; A. E. Aldrich and Will Shapley, of Cambridge. They left Friday P. M. for Alton Bay. They went across from Alton Bay three miles to a well-known camp on an island in the lake. When they left Boston the sun shone bright and the air was mild, but the weather looked dubious. This caused Mr. Austin and Mr Ashworth to back out, both being nearly on the sick list from colds, and perhaps it was fortunate for themselves that they did so. Before reaching Alton Bay it was evident that the weather was cold. The mercury was evidently 10deg. lower than in Boston, and the wind was blowing from that cold quarter in New England, the northwest. Arriving at Alton Bay by rail, they found a four-horse team in waiting to convey them up the lake to the camp. It was here that their troubles began, and to say that the boys "nearly froze to death" on that five-mile trip, facing the nor'wester, would be putting it mildly. Scarcely one of the company had ridden a dozen miles in cold weather for the winter. But they reached the camp at last, where a good fire brought them to a state of activity, and they found no limbs had been actually frozen.

The thing to do next morning was to cut out the lines, which were still set in the holes, some 150 of them. This they started out to do, but the weather was so blustering that they cut off the lines as well as the ice, and as for clearing out the ice so that the flags would work, why, that was about as difficult as it usually is when the mercury is down about to zero and the snow sifting into the holes under the influence of a strong nor'wester. They found fish on several of the lines that had evidently been on for a week. They got some fifteen lines clear at last, and caught lake trout, some of fair size. They also caught cusk, something of a new fish to some of the Boston boys. But they got no pickerel, much to the surprise of all. The probabilities are that the weather was too cold and blustering. The trip down the lake Saturday evening was made around by land, in order to avoid the wind, and it was a pleasant ride. The boys speak of the aurora borealis—everybody observed it that evening—purple and high in the heavens, as something magnificent beyond description. They were all back to their grain tables at the Chamber of Commerce on Monday, except Harry Moore, the champion of the fishing party, and of many another such party, and well known to the readers of the FOREST AND STREAM. He came in, but the chill he got on the ice of Lake Winnepesaukee, with a thirty-mile sweep of the wind, was sufficient to send him home for a half day.

Mr. Irving Powers, of the Harry Moore party to Lake Winnepesaukee for pickerel, staid over till Tuesday, and it proves that he is the lucky boy of the crowd. He brings back a 12lbs. lake trout, which he had the pleasure of catching in 15ft. of water. He was on 'Change Tuesday noon, seeming much pleased with his success.

SPECIAL.

SALMON IN CANADA.

THE movement, in the form of a petition to the Canadian government, asking that the time the salmon netters are allowed to have their nets in position be shortened, is meeting with a great deal of favor, not only among the lessees and owners of rivers in the United States, but it also seems to be meeting with a good deal of favor with those best posted on the subject, even in Canada. The petition has already been published in full in the FOREST AND STREAM. Mr. David Blanchard, of Boston, the originator of the petition, is meeting with encouragement on every hand. Names of the lessees and owners of rivers are being signed to the petition and are coming in by the score. Indeed it is now assured that the names of nearly all of those most interested will soon be attached to the petition. No difficulty has been encountered in obtaining the signatures of those interested, except in one or two instances. In one case the reason for withholding signature mentioned was that the "petition asks for too much." But the friends of the movement explain this on the theory that they have asked none too much for the best good of all concerned—even the salmon netters themselves—and if the Canadian government, in its wisdom, sees fit to grant less than asked, no harm will have been done by the asking.

Mr. Blanchard already has a letter from His Honor, S. P. Bauset, acting Deputy Minister of Fisheries at Ottawa, saying that the petition may be presented at any time, and that it shall receive due consideration. But Mr. Blanchard and the friends of the movement are much pleased and encouraged to find that already their case has a warm advocate in Mr. Samuel Wilmot, Superintendent of Fish culture for the Dominion. In the Annual Report of Fish Breeding and Hatching for the Dominion, for 1890, Mr. Wilmot makes his position very clear. It seems that a petition of the net fishermen on the Quebec side of the Bay des Chaleurs was sent to the Minister of Fisheries, setting forth among other things:

1. That their compliance with the Sunday close time is injurious to them by reason of the fishermen on the New Brunswick side of the bay being allowed to fish unmolested through this close time.

2. That the annual open period for netting salmon is too short, and it should be enlarged.

3. Because they are compelled to lift and tie up their nets from Saturday night till Monday morning, while the New Brunswick fisherman is permitted to keep his nets down and to fish them at this time.

4. That the decrease of the salmon fishery by nets is brought about by the abuse of fly-fishing up the river.

These complaints were referred to Inspection Officer Wakeham, of that division, who reported adversely to these petitioners' views, and Mr. Wilmot fully indorses that report, and now in addition enters more largely into the general subject of the salmon fisheries of the Bay des Chaleurs by saying that:

1. The complaint of the petitioners that "their compliance with the Sunday close time is injurious to them," is no doubt correct, when they see their brother fishermen on the other side of the Bay are permitted to fish during this close time, and in violation of the regulation forbidding it. To obviate a continuance of this complaint by the Quebec fishermen they should either enforce it against all, indiscriminately, by strictly enforcing the weekly close time, or that your Department should enforce it against all fishermen alike. But to allow the weekly close time to be wholly set aside would mean absolute ruin to the salmon fisheries of the Bay des Chaleurs and its tributary streams within a sooner or later period of time.

2. The request of the petitioners for a change in the regulations for lengthing the annual fishery season, is simply to obtain for themselves more extended facilities for capturing fish, while it would also add very greatly toward bringing about the destruction of salmon fisheries by giving additional help to the ruinous effects from the non-observance of the weekly close time.

3. With regard to the complaint "of nets being injured from tying up for the Sunday close time"—this is but an excuse to gain a point. This was never thought of in former years, when all fishermen tied up their nets alike, but since the introduction of the trap-net, which is somewhat more difficult to tie up, a pretext is made by the Quebec fishermen that keeping the Sunday close time so injures their nets that they should be allowed the same privilege as the one usurped by the New Brunswick netters, who, in violation of the law, keep their nets down during the weekly close time. The not only absurd, but selfish statement made, that "the salmon which escape the nets by keeping the Sunday close time, are caught further up on Monday," goes to show the true inwardness of these lower netters, who, in fact, say: "We want all the salmon, you upper netters and river fishermen shan't have any, if we can help it." Not only do they have the first chances of taking the incoming salmon, but so avaricious are they that they petition for a privilege which means, "no salmon shall pass us to the benefit of our brother fishermen above, nor reach the spawning grounds to the river for breeding purposes."

4. The petitioners allude to the "decrease of salmon being brought about by the abuse of the right of fly-fishing in the Restigouche River." Captain Wakeham meets this fallacious statement pretty clearly; but to this statement should be added others bearing more conclusively, in contradiction of the prejudiced ideas entertained by these netters in the tidal waters, whose dependence upon maintaining their catch of salmon for the future rests largely upon the protection given to the rivers by the fly-fishermen. The net fisherman, from the nature of his calling, is in no way whatever the protector; he is the destroyer of the salmon. The ambition and calling of the tidal fisherman is to invent and apply the most destructive engines possible for intercepting, capturing and killing the incoming "runs" of salmon on their migrations from the sea, on the coast line, to their native rivers to produce their young; and if it were not for the restrictive regulations as to the times and modes of fishing, these netters would so bar the passage of the salmon to their rivers, by extending their nets out in the bay and across the estuaries of rivers, as to wholly forbid the possibility of sufficient numbers reaching the spawning grounds to keep up their species. The whole legislation in Canada, in Britain, and throughout the whole world, so to speak, has been to make laws to keep within bounds the avarice of the net fishermen from exterminating these migratory fish, whose nature it is to travel together in "runs" or "schools," within certain short periods of the year, to their spawning grounds. In England and Scotland, after centuries of experience, the matter has been so restricted in the use of the destructive engines which were formerly in use there that at the present time many of the more important rivers continue to uphold almost their original standard of fish, thus actually benefiting the tidal fishermen, the river proprietors and all concerned.

It must also be borne in mind that the tidal salmon fisherman is destructive, not protective in his calling, as before stated. He renders no support whatever, pecuniary or otherwise, for the guardianship of the rivers and the nurseries which produce for him the supplies of salmon which come to his net to enrich him. It is the upper proprietors of the rivers and the anglers who lease them at high rentals, who bear the whole burden of guarding the rivers against the invasion of the poachers, and who are compelled to protect the parent salmon and the spawning beds. The result of which is that the netter gets the lion's share—and what is this share? If the record of the angler's catch of salmon on the Restigouche River and its tributaries is taken and placed in comparison with the catch of the netters below in the estuary and coast it will show that while the netter gets some 95 or 96 per cent. of the salmon caught on their migration to the spawning grounds, the angler takes but 4 or 5 per cent. It will be quite within bounds when it is said that the cost of every salmon to the ordinary angler will amount to $1 per pound, while the cost per pound to the netter will not exceed 1¼ cents per pound.

Mr. Wilmot then goes on, in the report, to give some calculations, based upon actual records, in proof of his position. He shows that the capture of, say, 2,000 salmon by the anglers involves an expenditure of at least $45,000, while the capture of the same number by the netters involves an outlay of not above $930. In addition the angler will have to pay his proportion of the cost of guarding the river, while the latter pays nothing. The outlay of the angler is all spent among the people in the way of labor, fares, etc. He takes little away with him; he generally gives away he fish, even.

The above is the reasoning of the Superintendent of Fish Protection and Culture in the Dominion, and the petitioners, owners and lessees of salmon rivers for angling purposes, feel that he is on the side of right and even justice to all.

SPECIAL.

SHAD FLY-FISHING SOUTH.

Editor Forest and Stream:

Can you tell me anything about line fishing for shad in the South. For two seasons past I have been shooting in the vicinity of the Waccaman River in South Carolina, and am going again in about ten days. It is clear water above the mouth of Bull Creek (which is the main outlet of the Pedee). Shad are very plentiful, and if they can be caught with hook and line in Connecticut, why not in South Carolina? Can you tell me how to prepare the bait, the method of fishing and the kind of tackle to use. Have read the article on shad fishing in the "Sportsman's Gazetteer," but as the book was published fifteen years since I take it for granted that better information is now to be had.

C. C. C.

[We do not know any successful form of bait-fishing for shad, but have caught the river alewife, whose feeding habits are similar, with small pieces of cut fish, such as a strip of the belly of the butterfish and scup. Shad do not come into rivers to feed, hence they seldom notice any kind of bait; but in a few localities, notably Washington, D. C., and Holyoke, Mass., they have been captured with small and light-colored flies, like white-miller or white and ibis, dressed on hooks corresponding in size with No. 6 or 7 Sproat. There is opportunity for interesting experiments with flies for shad, as the subject has received little attention, but a relative much resembling this fish, and known as hickory shad, has proved very ready to rise to the fly. Mr. A. F. Dresel, of Baltimore, Md., has caught a few with the Montreal in moderately strong water from 30 to 60ft. below the dam at the Relay House. Mr. John J. Donaldson has been very successful on the Patapsco under conditions of weather suitable for other kinds of fly-fishing. On April 21, 1885, he basketed 36, ranging in weight from 1½ to 2lbs. His largest single catch since that year was 10. The killing flies were the Donaldson, the Pennell golden salmon fly and a red and white fly called the Dukehart. We should use a good fly-rod about 11½ft. long and weighing 8½oz. Your fishing must be done at the surface, and if you prefer bait the range of choice is small; it will lie between small pieces of silvery fish or a small bright minnow and some of the little shrimp and water fleas upon which the shad is known to feed.]

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

SUDDEN INCREASE OF BLACK BASS.

THROUGH the courtesy of Mr. True, Curator in charge of the National Museum, permission was obtained to publish in FOREST AND STREAM the following interesting letter from Mr. Duval, written to Prof. Goode shortly before his departure for the Mediterranean. The increase of noble fishes in any locality inhabited by anglers is always gratifying, and in the case referred to below there is the addition of a little mystery which patient investigation may soon clear up. It may be found that the electric lights attract the small fishes upon which the black bass feeds; we have published in these columns accounts of successful fly-fishing by electric light and have referred to the good results obtained by the U. S. Fish Commission in surface collecting by means of the same appliance:

DEPARTMENT OF JUSTICE, San Antonio, Texas, Dec. 1, 1891.—*Prof. G. Brown Goode, Smithsonian Institution.*—DEAR SIR: I know of no reason why I should apply to you for the information I am about to seek except the fact that I am the owner and ardent admirer of your book on the "Game Fishes of the United States," and the subject that interests me just at present relates to one of those same "game fishes." In the city of San Antonio we have a little stream, called by courtesy the "San Antonio River," which rises two miles from the post-office and runs through the heart of the town in a serpentine course. It is about 40ft. wide, clear and cold, but necessarily more or less contaminated with the refuse and filth of back yards abutting on it. For some reason or other the bass (the big-mouth) are very abundant, even in the heart of the town. I have taken as many as twelve or fifteen in an afternoon with artificial bait. The stream is full of moss and aquatic weeds and the bass are abundantly fed with young crayfish; but it has only been within a year or two that they have become so abundant, and I am at a loss to account for it. A naturalist here makes the following statement. He says the greatest enemy of the bass in these waters is an amphibious beetle—a beetle that lives in the water in the day time and flies about at night, returning to his aqueous bed in the morning—that his technical name is *Belostoma americana*, that he attacks the bass by introducing himself under the gills and slowly undermining his vitality by blood-sucking; that since the establishment of electric lights along the river the beetle has been in a great measure destroyed by his habit of coming out at night and singeing his wings, and that by consequence the bass finding a comparative immunity from their natural enemies within the radius of these electric lights, have congregated within the limits of the city. All this sounds like a "fairy tale" to me and I seek through you for some information on the subject. Can you give it?—B. G. DUVAL.

"DIPPING" FOR BLACK BASS.

ONE of the most popular fishing resorts on the shores of Lake Ontario is Irondequoit Bay, near Rochester, N. Y. The bay occupies a secluded position among high wooded hills and is a most enjoyable spot for an outing. The shores are picturesque and covered with a growth of trees and shrubs, which add to the comfort of the angler and the beauty of the scene. The water is deep in the middle of the bay, and until recently has been cold and clear, but the city fathers of Rochester have seen fit to allow a considerable part of the sewerage from the eastern side of that city to be drained into the bay, with the result of contaminating the water and endangering the health of the people living on the shores.

The Oswego bass is the principal fish found in the bay, although pike, calico bass, and other game species occur. In addition to the usual ways of fishing, a favorite method of enticing the Oswego is called "dipping." The best sport is had in the morning and evening near the edges of the cat-tails, which grow luxuriantly in certain places. Minnows are used for bait, and a long pole and a short line are employed in "dipping." While one person rows the boat carefully around the edges of the cat-tails, the other "dips" his line into the deeper places where the Oswego is found to go to feed, and large catches are often made in a short time in this way.

Recently fishing has not been so good as formerly, owing to the pollution of the water by the sewerage, and also to the fact that the pollen from the cat-tails has rendered the water "rily." The fish are thought to be as plentiful as ever. X.

THE LEMON SOLE.

ON May 21, 1891, we published a brief notice of the "lemon sole," which has attracted so much attention during the past year off the New England coast. Judging from the descriptions furnished us at the time and from the statement that the fish could not be caught with a hook, we supposed the species to be identical with the famous pole flounder of the deep waters off shore. Specimens have recently come to us, however, from Mr. Eugene G. Blackford, and we find that the flounder of the beam trawl men is the winter flounder or flat-fish so well and favorably known to anglers for its free biting and its excellent table qualities. In the nineteenth Report of the New York Fish Commission, page 245, plate I., Dr. Bean has described this flounder among the fishes of the Great South Bay. The large fish are spawning now on the banks along our New England coast, and will continue during February and March. The flesh is delicious and, in our opinion, superior to that of the European fish bearing the name borrowed for our winter flounder. To the angler this flounder is especially interesting because it is in season so early in the year, at a time when most of his favorites are hibernating or absent from northern waters.

AN ALBINO LOBSTER.—Capt. Joseph W. Collins, Chief of the Department of Fish and Fisheries at the World's Fair, has received a remarkably interesting and beautiful lobster from Mr. E. A. Holmes, of Eastport, Me. The length of the curiosity is 11in.; its color on the back is a rich cream, the sides and belly are almost white, as are also the claws and legs. It is the nearest approach to a white lobster seen for many a day, and the great size of the animal will make it even more attractive to visitors.

SOME of the Albany friends of Mr. W. W. Byington and others are urging his appointment as Commissioner of Fisheries in the place of Mr. Burden, resigned. Mr. Byington projected and organized the Anglers' Association of the St. Lawrence River, acted as its secretary for four or five of the first years of its existence, and by his energy and knowledge placed it on a good footing. He is a genuine sportsman, energetic, and it is thought would make a most excellent Commissioner.

WHITE WAX—Take two ounces of the best resin and one quarter of an ounce of beeswax, simmer them together in a pipkin for ten minutes; add one quarter of an ounce of tallow, and simmer for a quarter of an hour; then pour the mass out into a basin of water, and work it up with the fingers until perfectly pliable. A very useful and tenacious wax.—*Francis Francis, Book of Angling.*

FISH IN A PUMP WELL.—I have a fish story for you which my son sends me from New Jersey, as follows: "The Trenton Iron Company in winter time get their supply of water from a creek that flows through the center of the city, and about a quarter of a mile away from the works. One day last week the supply of water stopped, and on telephoning to the man at the pump he replied that the suction of the pump was stopped up and it would not draw any water. A gang of men was sent down to see what was the matter, and on disconnecting the 8in. pipe and hoisting it out of the pump well, the strainer openings were found to be full of fish of various kinds. We took out about 10lbs. of small fish. There were eels, catfish and young black bass, a few of them nearly as large as the palm of a man's hand. Some were dead and some were alive. The creek was very high, and the fish, to escape the muddy current, had taken refuge under the pump house, in the quiet pool, and had so been drawn against the strainer, which held them so tightly that they could not escape. There must have been several hundred of them. We had to rig up a wire netting about the strainer to keep them off."—VON W.

SALMON STREAM TO LEASE.—The attention of salmon anglers is called to the advertisement in another column in which the Crown Lands Department of New Brunswick offers for sale the exclusive fishing rights (with the rod only) of some of the most important streams in the Province. The sale which takes place at Fredericton, N. B., on March 23, is likely to be well attended. Salmon rivers in these days do not go begging.

TARPON.—St. James City, Fla.—The first tarpon of the season was taken on Feb. 9, by Mr. J. Boyd Nixon of Bridgeton, N. J. It was Mr. Nixon's first day's fishing this year. He played the fish from a stationary boat, and brought it to gaff in nine minutes.—ST. AUGUSTINE.

Fishculture.

"FISCHZUCHT."—The authorship of the celebrated German treatise on fishculture, entitled "Fischzucht," was through inadvertence credited in our issue of Feb. 11 to Herr von Behr. We have referred to it so often in FOREST AND STREAM as the work of Herr von dem Borne that our readers have doubtless already applied the correction.

The Kennel.

FIXTURES.

DOG SHOWS.

Feb. 23 to 26.—Sixteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Supt.

March 1 to 4.—First Dog Show of the Keystone Kennel Club at Philadelphia, Pa.

March 8 to 11.—Washington City Kennel Club, Washington, D. C. Fred. S. Webster, Sec'y, 738 Broadway, New York.

March 15 to 18.—Second Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Sec'y.

April 6 to 9.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Sec'y.

April 13 to 16.—Third Annual Dog Show of the Continental Kennel Club, at Denver, Col. B. W. Isenthal, Sec'y.

April 20 to 23.—Fourth Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.

May 4 to 7.—Annual Dog Show of the California Kennel Club, at San Francisco Cal. Frank J. Silvey, Sec'y.

Remember the entries for Washington dog show close Feb. 27, with Frederic Webster, 711 Fourteenth street, Washington, D. C.

THE JACKSON DOG SHOW.

THE show opened in the Assembly Hall, Jackson, Mich., with every detail properly arranged for exhibition and the commencement of the judging at 10 o'clock A. M. on Tuesday, Feb. 16. It is to be regretted that the energy and skillful effort of the management did not meet with the success which they deserved. The gate receipts were light, and must have been much short of paying expenses. Unfortunately for the show, it so happened that each day or night there was some unusual attraction or entertainment, which lessened the attendance at the show.

The show was well managed. Proper cleanliness was observed and it was kept free from any unpleasant odors.

All classes were expeditiously judged by Mr. John Davidson, and his decisions were well made on the whole, although he erred on the liberal side, giving prizes to many dogs which were undeserving of them; in fact about one-third of the second prizes could have been properly withheld, and also a number of firsts. It is encouraging to an owner to have a winning dog. So far an undeserved prize does no harm, but it gives a dog a misleading record, and therefore has a tendency to injure breeding interests in place of improving them. However, there was one feature which Mr. Davidson enforced with commendable persistency, one which a number of judges would do well to follow. He required the handlers to show their dogs as they really were.

The judging was all done on the first day before 5 o'clock. There were 174 entries, a few of which were duplicates. There were about 20 absent. Mr. C. W. Sarvis was superintendent, and he was most attentive and efficient. Dr. E. L. Kimball and Mr. Chas. H. Rubl, officers of the club, were also efficient workers. The dogs which arrived from the Chicago show were transferred and cared for by the management till their show opened on Tuesday.

The dogs were fed on Austin's dog bread.

MASTIFFS.—Challenge dogs or bitches had no entry. Elkson was far away the best dog in the class of four. As he won at the Chicago show he has already been described. Second went to Prince Cola, light in eye, poor head, too light in bone and high behind, lacking in character. Dougal the reserve, and Robin Hood, vhc., were both faulty and inferior, and did not deserve notice. Two bitches competed, Lulu Minting and Leo's Nell, the former winning easily. Nell has a very poor head and coat, is light in bone and ordinary in quality. Four puppies competed, Duke of Ragusa winning first. He is quite a fair puppy, good in body, legs, feet and has a fairly good head. Martha, second, Mack, reserve, and Golden Queen, vhc., were a poor lot, being leggy, light in bone and body, poor skulls, narrow heads and inferior in quality.

ST. BERNARDS.—In the class for rough-coated dogs, Othello had a walkover, his competitors, Casper and Rover, being absent. Theben, first in bitch puppy class at Chicago, won first easily over Bonnie Doon, long and light in body, bad forelegs, head fairly good. The latter also won second in the puppy class, her competior, Royal Vixen, beating her in body, bone, legs and general symmetry. There were two entries in the open dog class for smooth-coated dogs, both of which were absent.

GREAT DANES.—The single entry, Paul, did not appear for judgment.

DEERHOUNDS.—The only entry was Alan Breck, winner of second at Chicago. He was shown in good form.

GREYHOUNDS.—Master Rich and Miss Rare, the challenge class entries, were absent. Yonder He Goes, vhc. at Chicagago, won over Keno, too flat in ribs, yet a fairly good greyhound. In bitches, Lady Olivia won easily over Gertie, light in bone and weedy in appearance. King Dick, the only puppy shown, was coarse and loose in build; he deserved about c.

POINTERS.—The classes were light in numbers and quality, and were badly arranged according to the catalogue, as one open dog and open bitch class were for pointers under 55lbs., and the puppy class was for pointers under 55lbs. instead of for puppies under twelve months of age. Trinket's Chief was absent; he was the only entry in the challenge class. Chief Ammo, vhc. at Chicago, won in the open class for dogs over 55lbs. without competition. Under 55lbs. had three entries, of which Osborne Ale II., fourth at Chicago, won first, although inferior in many respects to Wonderful Lad, winner of second. The latter is somewhat cheeky and heavy in skull; he might also be a shade lighter in neck; he is better in shoulders, legs, feet, body and general symmetry than the winner. In bitches, under 55lbs., Rose, first, has a good body and is fairly well made otherwise. Beauty, second, is plain in head, straight in stifle, good in legs, neck, body and feet, and was very close in merit to the winner of first. The two puppies shown were very common.

ENGLISH SETTERS.—Paul Gladstone had no competition in the challenge class. He was looking remarkably well. In open dogs, Toney Gladstone was an easy first, the rest of the class, four in number, being ordinary in quality. In bitches, Nia won over Susan B., a very superior bitch, excellent in quality, well-shaped head, neck of good length and well set on good shoulders, body well ribbed and made; good legs and feet on which she stands squarely; she was the best bitch in the class. Fleetwood had no competitor in the puppy class.

IRISH SETTERS.—Dick Swiveler was in good enough condition to compete alone in the challenge class. There were six dogs in the open class, and they were of good quality. Tom Owen, the winner, is somewhat straight in stifle, good color, stands squarely on well made legs and feet, has a good head, and a strong back and loin. Mike, second, is not so good in bone, shoulders or neck as the winner. The bitch class was better in quality than the dogs, and there were four competitors. Litta, first, is too short in neck and light in bone, excellent body and back, well made head, and feet close and good; too heavy in shoulders. Goldie, second, is better in quarters than the winner, but is flat in body, not so good in loin, and is only fair in symmetry.

GORDON SETTERS.—Only two dogs competed in the open class, the winner, Buck, being a dog of unusual merit in general appearance, but he is cow-hocked and slightly out at elbows. His head and body are excellent, and his color, the black and the tan, is unusually bright and correct. Rube, second, showed some topknot, long and poor coat, head not clean cut, and he hardly deserved second. There was but one bitch, Fly, in her class.

IRISH WATER SPANIELS.—Barney C. had no competition. He is well built, showed good symmetry, but his coat is too straight and woolly.

CLUMBER SPANIELS.—Three were shown, Punk, the only entry in the dog class, winning without competition. Our Joan, first in bitches, is well made, good in head, body, legs and feet. The winner of second, Our Judy, is inferior, but being young will improve with age.

FIELD SPANIELS.—There were but three field spaniels. Rideau Bob, first, was better in head, body, coat, bone and general symmetry than Snap, winner of second. Pansy, Jr., the reserve, is a poor specimen and did not deserve notice, and the same might be said of Dude, high on legs, poor head and deficient in spaniel character.

COCKER SPANIELS.—Bessie W. and champion Rabbi were first and second, in the order named, in the challenge class. Seven dogs competed in the open class, first going to Jersey Boy. Second, which should have gone to Adam, was won by Lad O, too high on legs, inclined to coarseness, and inferior in character. The former has a better head, is not good in forelegs, but has better cocker type and character. The letters awarded to the others should have been withheld, as they were very ordinary. There were four bitches, an inferior lot, hardly deserving the prizes, and the same was true of the three puppies shown.

BEAGLES.—Jnue M. had a walkover in challenge class. Five dogs appeared for competition, two of which were disqualified for being oversize. First went to a fairly good hound, a trifle light in bone, and in expression like a foxhound. Twinkey, second, is only a fair hound. Finder, the reserve, had a lump on the upper jaw under the eye, which marred the appearance of the head. He is symmetrical and well shaped, but too fine for a working type; in fact many of the beagles shown at all shows are bred too fine for rough work, although they may run well on certain favorable sections of ground. Snow, first in bitches, is bad in front and poor in head. The rest of the class was ordinary.

DACHSHUNDE.—The winners, Windrush Rioter, first in challenge, Janet, Superbus II. and Zulu II., the first two being first and second, the last vhc., were noticed in the Chicago report last week.

FOXHOUNDS.—They were few in numbers and coarse in quality. Toot, first, is a coarse common hound, and hardly deserved the prize. Lady Fair, second, had a better head and foxhound character than first prize winner.

COLLIES.—Only two competed in the dog class, Rover and Grampian, the former winning, although he was cow-hocked, poorer in texture of coat and was inferior to Grampian in head and expression. The latter was somewhat out of coat. There were five bitches. Bernice, although out of coat, won easily. Sable Gauntlet, heavier in coat, but inferior in head and character, won second.

BULLDOGS.—A formidable appearing animal in shoulder harness appeared for the prize. He was active, muscular, and had the appearance of being a good "business" dog, but he was no bulldog, and therefore he left the ring prizeless. His admirers said he could whip any dog in that section of country, and therefore was a genuine bulldog, but he will learn better as his experience enlarges.

BULL-TERRIERS.—The classes were not large, but several good dogs were shown. Attraction was absent. Carney won somewhat easily over Sanfoin, which arrived late in the day and was allowed to compete, although by so doing the club violated one of its rules. In the bitch class there was a close competition between Aromatic and Edgewood Fancy, the former winning. She was too fat to show her proper form. Tom Beverly had a walkover in the puppy class.

SCOTCH TERRIERS.—Two were shown, one in each class. Kilbar, shown at Chicago, won in the dog class. Rainhill Thistle, an inferior specimen, was awarded first in the bitch class.

DANDIE DINMONT TERRIERS.—The only two shown, King of the Heather and Heather Madge, are now well known, and they were at Chicago.

FOX-TERRIERS.—They were an indifferent lot in point of quality. Poco, out at elbows and lacking in bone, won over Pedro, the only other entry and an inferior one. Rowton Safety had a walkover in the bitch class. The two puppies shown were not deserving of any prize. There were three wire-haired fox-terriers. Eskdale Broom, winner of first at Chicago, and Nettle Stopper, bad in forelegs but the better in coat.

IRISH TERRIERS.—Dunmurry and Boxer IV., both competitors at Chicago, were the only entries present.

BLACK AND TAN TERRIERS.—But one was shown, Ruby, poor head, bad in tan and color.

PUGS.—Penrice, well known, had no competitor in the challenge class. Banjo G., a trifle large in size, won over Dr. Jingles, bad in head and muzzle and poor in color. In bitches, Lady Law won easily over Tickle, a poor specimen.

ITALIAN GREYHOUNDS.—Two good ones, Star and Spring, both winners at Chicago, won without competition in the dog and bitch class respectively.

WHIPPETS.—May, a rough-haired whippet, won over the only other entry, Maggie, a smooth whippet of greyhound type, of which the winner had but little.

MISCELLANEOUS.—Two Dalmatians of inferior quality were the only competitors in this class. B. WATERS.

PRIZE LIST.

MASTIFFS.—No challenge entries.—OPEN—*Dogs:* 1st, Dr. E. L. Kimball's Elkson; 2d, G. E. Holcomb's Prince. Reserve, E. V. & S. W. Smith's Dougal. Very high com., Dr. E. L. Kimball's Robin Hood. *Bitches:* 1st, G. E. Holcomb's Lulu Mining; 2d, E. V. & S. W. Smith's Leo's Nell. *Puppies:* 1st, S. H. Sliper's Duke of Ragusa; 2d, G. E. Holcomb's Martha. Reserve, C. B. Bush's Mack. Very high com., E. V. & S. W. Smith's Golden Queen.

ST. BERNARDS.—ROUGH-COATED—No challenge entries.—OPEN—*Dogs:* 1st, Dr. Dunlop's Othello. *Bitches:* 1st, Chas. Hauschildt's Theben; 2d, Dr. J. W. Dunlop's Bonnie Doon. *Puppies:* 1st, Royal St. Bernard Kennels' Royal Vixen; 2d, Dr. J. W. Dunlop's Bonnie Doon.—SMOOTH—Entries absent.

DEERHOUNDS.—1st, G. Macdougall's Alan Breck.

GREYHOUNDS.—*Dogs:* 1st, G. Macdougall's Yonder He Goes; 2d, Julian Bennett's Keno. *Bitches:* 1st, C. W. Sarvis's Lady Olivia; 2d, Burt Bradley's Gertie. *Puppies:* 1st, C. W. Sarvis's King Dick.

POINTERS.—CHALLENGE—Heavy weights absent.—OPEN—*Dogs:* 1st, J. G. Earle's Chief Amo.—UNDER 55LBS.—OPEN—*Dogs:* 1st, H. Waruf's Osborne Ale II.; 2d, Kalamazoo Kennels' Wonderful Lad. *Bitches:* 1st, Joseph Grones's Rose; 2d, A. Spencer Johnson's Beauty. *Puppies:* C. Clippinger's Lansing Boy; 2d, J. C. Thomas's Lem.

ENGLISH SETTERS.—CHALLENGE—*Dogs:* 1st, Boggs & Lewis's Paul Gladstone.—OPEN—*Dogs:* 1st, Boggs & Lewis's Tony Gladstone; 2d, F. E. Fisher's Captain. Reserve, Jay P. Lee's Lee's Captain. Very high com., Northern Kennels' Flash Gladstone. High com., Chas. Kanngiesser's Sport. *Bitches:* 1st, Boggs & Lewis's Nia; 2d, Kalamazoo Kennels' Susan B. Reserve, Boggs & Lewis' Maud N. Very high com., Frank Oltney's Lill S. Com., H. Waruf's Cincinnatus Bess.

IRISH SETTERS.—CHALLENGE—1st, Kildare Kennels' Dick Swiveller.—OPEN—*Dogs:* 1st, Dr. F. K. Owen's Tom Owen; 2d, John Shumacher's Mike. Reserve, Joseph Grone's Dash. Very high com., George S. Bennett's Luzearn. *Bitches:* 1st, Geo. Meister's Litta; 2d and reserve, Fred J. Nall's Goldie and Bessie. *Puppies:* 1st, J. E. Winney's Fred W.

GORDON SETTERS.—*Dogs:* 1st, Winthrop Worthington's Buck; 2d, D. O. Dyer's Rube. *Bitches:* 1st, Geo. Meister's Fly.

IRISH WATER SPANIELS.—1st, Mrs. W. S. Cobb's Barney C.

CLUMBER SPANIELS.—*Dogs:* 1st, W. S. Cobb's Punk. *Bitches:* 1st and 2d, W. S. Cobb's Our Joan and Our Judy.

FIELD SPANIELS.—1st, C. E. Fenton's Rideau Bob; 2d, Geo. Miller, Jr.'s Snap. Res., Chas. Wolberty's Pansey, Jr. and C. A. Gates's Dude.

COCKER SPANIELS.—CHALLENGE—1st and res., C. T. Sackett's Bessie W. and Rabbi.—OPEN—*Dogs:* 1st, Chas. Backus's Jersey Boy; 2d and very high com., A. W. Pancoast's Lad O. and Little Prince. Res., C. T. Sackett's Adam. High com., Blake and Hebertson's Brownie B. Com., Geo. Miller, Jr.'s Kespie. *Bitches:* 1st, Blake and Hebertson's Jessie; 2d, A. W. Pancoast's Ditton Brevity. Res., C. T. Sackett's Eve. Very high com., Geo. Miller, Jr.'s Woodstock Dot. *Puppies:* 1st and 2d, Geo. Miller, Jr.'s Toledo Flirt and Juno B.

BEAGLES.—CHALLENGE—1st, Middleton Kennels' June M.—OPEN—*Dogs:* 1st, Guy D. Wilton's Pomp; 2d and reserve, L. S. Hudson's Twinkey and Finder. *Bitches:* 1st, Middleton Kennels' Snow; 2d, Guy D. Wilton's Vanity. Reserve, L. C. Hudson's Lady Countess. Very high com., Middleton Kennels' Lucy. High com., Boggs & Lewis's Stella.

DACHSHUNDE.—CHALLENGE—1st, E. A. Manice's Windrush Rioter.—OPEN—1st, 2d and very high com., E. A. Manice's Janet, Superbus II. and Zulu II.

FOXHOUNDS.—*Dogs:* 1st, E. Etienne's Foot; 2d, W. S. Cobb's Daniel C. *Bitches:* 1st, Thomas Parker's Lady; 2d, T. J. Strait's Fan.

COLLIES.—*Dogs:* 1st, E. Peters's Rover; 2d, Thyne & MacFadden's Grampian. *Bitches:* 1st and reserve, Thyne & MacFadden's Bernice and Ruth; 2d, very high com. and high com., L. Liddicoatt's Sable Gauntlet, Buff Gauntlet and Wingas.

BULLDOGS.—*Dogs:* 1st, Dan Torpy's Adam.

BULL-TERRIERS.—OPEN—*Dogs:* 1st, Frank F. Dole's Carney; 2d, D. Maclean's Sanfoin. *Bitches:* 1st, D. Maclean's Aromatic; 2d, Frank F. Dole's Edgwood Fancy. Very high com., F. W. Moulton's Lonsmont Kit. *Puppies:* 1st, Frank F. Dole's Tom Beverley.

SCOTCH TERRIERS.—*Dogs:* 1st, Henry Brooks's Kilbar. *Bitches:* 1st, Mary D. Spencer's Rainhill Thistle.

DANDIE DINMONT TERRIERS.—CHALLENGE—*Dogs:* 1st, Edward Brooks's King o' the Heather. *Bitches:* 1st, Edward Brooks's Heather Madge.

FOX-TERRIERS.—OPEN—*Dogs:* 1st, D. Webster's Poco; 2d, C. H. Ruhl's Pedro. *Bitches:* 1st, Boggs & Lewis's Rowton Safety. *Puppies:* 1st, Dr. Campbell's Snipe; 2d, J. B. Miller's Kutchy.—WIRE-HAIRED—1st, Hendrie and Muir's Eskdale Broom; 2d, D. Maclean's Nettle Topper.

IRISH TERRIERS.—CHALLENGE.—1st, W. J. Comstock's Dunmurry.—OPEN—1st, W. J. Comstock's Boxer IV.

BLACK AND TAN TERRIERS.—1st, Blake & Herbertson's Ruby H.

PUGS.—CHALLENGE—1st, Howard Kennels' Penrice.—OPEN—*Dogs:* 1st, Howard Kennels' Banjo G; 2d, Wolverine Pug Kennels' Dr. Jingles. *Bitches:* 1st, Howard Kennels' Lady Law; 2d, Wolverine Kennels' Tickle. *Puppies:* 1st, Howard Kennels' Penrice Boy.

ITALIAN GREYHOUNDS.—CHALLENGE—1st, Boggs & Lewis's Star.—OPEN—1st, Boggs & Lewis's Spring.

WHIPPETS.—1st, N. Peppin's Tip; 2d, Campbell & Blake's Maggie.

MISCELLANEOUS.—1st and 2d, Hudson & Osgood's Spottie and Burt.

BULLDOG CLUB MEETING.

THE second annual meeting of the Bulldog Club of America was held at Madison Square Garden, Feb. 23, 9 P.M. The meeting was called to order by the president, Mr. John H. Matthews. Those present were John H. Matthews, Chas. D. Cugle, C. P. Lawshe, H. D. Kendall, John Coles, A. J. Hatch, Renshaw Mason-Jones and W. F. Hobbie. Minutes of the last meeting read and accepted. Treasurer's report submitted, audited and accepted.

A communication from Mascoutah Kennel Club referred to executive committee.

Resolved, That the clause in constitution and by-laws relative to Boston terriers be stricken out and the medals be offered at the Boston show.

Resolved, That a committee of three be appointed to reconstruct the constitution and by-laws and have copies printed for distribution to members.

Messrs. Jones, Hobbie and Matthews were appointed as the committee.

Resolved, That the contemplated standard be laid on the table for future action.

Resolved, That sincere thanks be extended to Dr. Rowe for his kind donation of a silver cup to the club, and to Mr. James Mortimer and the Westminster Kennel Club for courtesies extended, and that Messrs. Rowe and Mortimer be placed on the membership list as honorary members.

Election of executive committee resulted in Messrs. John H. Matthews, Charles D. Cugle, F. W. Sacket, H. D. Kendall, E. A. Woodward, W. F. Hobbie and D. L. Haight being elected. They, going into executive session, elected as officers for the ensuing year, President, John H. Matthews; Vice-President, Charles D. Cugle; Secretary-Treasurer, E. A. Woodward. On motion adjourned.

CHAS. D. CUGLE, Sec'y.

THE NEW YORK SHOW.

THE show is a great success. This is conceded on all sides. No such management has been seen before in this country, and in an experience of several years of W. K. C. shows we never remember one that could equal this in the clockwork nicety with which everything is running. All the benching was ready by Monday morning and about half the dogs arrived that day. Judging commenced promptly at 10 A. M. on Tuesday in the four rings provided, and owing to the expeditious manner in which they were served there was no delay. The public began to pour in at an early hour and all the first day the aisles have been crowded.

A good deal of interest naturally centered round Mr. Raper's ring, and the businesslike way he went about his duties showed at once that the W. K. C. had made no mistake in engaging his services. From 10 A. M. till 6:30 P.M. he never sat down excepting for a few minutes at noon for luncheon, and got through all his classes with the exception of some of the terriers and the pet dogs. Setter and pointer men were in their element all day in two of the rings, and of course some grumbling is, as usual, to be heard.

Dr. Glover, the veterinarian, remarked to us that he never saw such a clean bill of health among the dogs, and that the exhibitors had now become educated to the fact that their dogs must be in proper shape for public gaze.

It would be impossible to give the names of all the well-known dogmen at the show, but those from a distance that we noticed round the aisles were John E. and Bayard Thayer, Blackwood Fay, E. H. Moore, T. G. Davey, R. McEwen, Dr. Wesley Mills, Dr. Hartman, John Moorehead, Jr., J. H. Winslow, W. S. Diffenderffer, C. D. Cugle, Jas. H. Whitney, J. M. Avent, Patrick Henry, P. H. O'Bannon, Dr. Rowe, J. P. Willey, S. C. Bradley, Harry L. Goodman, Geo. Bell and others whose names escape us at the moment.

The quality of the dogs is, on the whole, quite equal, if it does not surpass, that of last year. The pointers and setters, St. Bernards, bulldogs, bull-terriers and fox-terriers being especially strong.

The W. K. C. dinner at Delmonico's on Tuesday evening passed off in a very pleasant manner and was a very representative gathering of exhibitors and those interested in dogs. The list of awards is as follows:

AWARDS.

MASTIFFS.—CHALLENGE—*Dogs:* 1st, Wyoming Kennels' Sears' Monarch.—OPEN—*Dogs:* 1st, J. L. Winchell's Beaufort's Black Prince; 2d, Mrs. Chas. Wallack's Merlin; 3d, Caumsett Kennels' Hans Sachs; 4th, Trimount Kennels' Duke II. High com., Miss K. A. Dana's Chancellor. *Bitches:* 1st, Mark H. Hubbell's Duchess; 2d, Ernest Voigt's Lucy II.; 3d, A. C. Weiher's Nellie; 4th, William Burchart's Lady Orson. *Puppies:* Prizes withheld.—NOVICE—1st, C. Lambley's Grandee; 2d, Ernest Voigt's Lucy II. Reserve, Samuel M. Robinson's Roscoe.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—*Dogs:* 1st, New York St. Bernard Kennels' Kingston Regent; 2d, Wyoming Kennels' Plinlimmon, Jr. *Bitches:* 1st, E. H. Moore's Lady Livingston; 2d, New York St. Bernard Kennels' Republican Belle. Reserve, Wyoming Kennels' Nanon.—OPEN—*Dogs:* 1st, Wyoming Kennels' Sir Bedivere; 3d, E. H. FOREST AND STREAM EXTRA.

Report of the New York Show.

A FOREST AND STREAM EXTRA, eight pages, fully illustrated, will be issued Friday (to morrow) morning, and will be on sale at this office and at the Dog Show. It will contain a full report of the show, with criticisms on all the classes. The classes judged by Mr. Raper will be reported by him for FOREST AND STREAM exclusively, and his report will be given in the Extra. There will be portraits of all the judges and portraits (from photographs) of typical specimens of the several breeds. This material will be published in the Extra in advance of its publication in our regular issue of next week. Price of the extra by mail, ten cents.

DACHSHUNDE.—CHALLENGE—*Dogs:* 1st, E. R. Manice's Windrush Rioter; 2d, L. & W. Rutherfurd's Rubenstein.—OPEN—*Dogs:* 1st and 2d, E. R. Manice's Zulu II. and Superbus, II.; 3d, Dr. F. Lang's Lorbass. High com., IC. Pfizer Jr.'s, Sepp. *Bitches:* 1st, M. J. Asche's Pollywog; 2d, E. R. Manice's Janet; 3d, S. D. Ripley's Diane Von Beverrode. Res. Mrs. Ladenburg's Seiglind. Very high com., Mrs. Ladenburg's Tony and Mrs. C. F. Havemeyer's Thelma. High com., Mrs. Ladenburg's Miss Muck and E. R. Manice's Venus II. Com., H. B. Kan's Whimper and C. Pfizer, Jr.'s Kate. *Puppies:* 1st, Mrs. Ladenburg's Begonia; 2d, H. B. Kane's Whimper. Very high com., S. D. Ripley's Rudolph Von Beyenrode.

BEAGLES.—CHALLENGE—*Dogs:* 1st, Rockland Kens' Roy K.; 2d, W. S. Gates's Frank Forest. *Bitches:* 1st and 2d, Glenrose Beagle Kennels' Lou and Twintwo.—OPEN—*Dogs:* 1st, Rockland Kennels' The Rambler; 2d, Somerset Kennels' Whalebone; 3d, Forest Beagle Kennels' Hunter. Reserve, P. Dorsey's Lee II. Very high com., Glenrose Kennels' Porte. *Bitches:* 1st and very high com., Rockland Kennels' Emeline and Lady Vic; 2d, 3d and high com., Forest Beagle Kennels' Forest Queen, Lady Lee and Daisy II. Reserve, Mount Washington Kennels' Stella. Com., Waldingfield Kennels' Lulra. *Under 15in.:* 1st, Dr. H. T. Foote's Clochette; 2d, Nut Swamp Kennels' Rye II. *Puppies:* 1st and 3d, Somerset Kennels' Whalebone and Somerset Helen; 2d, Dr. H. T. Foote's Clochette. Reserve, W. S. Gates's Rattler IV. Com., Waldingfield Kennels' Thunderer.

FOX-TERRIERS.—CHALLENGE—*Dogs:* 1st, Blemton Kennels' Lucifer; 2d, L. & W. Rutherfurd's Raffle. *Bitches:* 1st, J. E. Thayer's Dona; 2d, Blemton Kennels' New Forest Ethel.—OPEN—*Dogs:* 1st, J. E. Thayer's Starden's King; 2d and 3d, Blemton Kennels' Blemton Rasper and Blemton Reefer; 3d and com., L. & W. Rutherfurd's Warren Daysman and Warren Laird. Reserve, Morey Kennels' Raby Trigger. Very high com., J. E. Thayer's Brockenhurst Tyke and Harry Northwood's Painter. High com., Toon & Symonds's Ebor Spendthrift. Com., C. Rathbone's Beverwyck Punster and H. C. Graef's Fijalo. *Bitches:* 1st and 4th, L. & W. Rutherfurd's Dusky II. and Resume; 2d, J. E. Thayer's Miss Dollar; 3d, Blemton Kennels' Spinster. Reserve, Edward Bird's Tuxedo Beauty. Very high com., J. Sheldon's Vixen. High com., J. A. Logan, Jr.'s Verdict and Seacroft Kennels' Damson.—PUPPIES—*Dogs:* 1st, L. & W. Rutherfurd's Warren Daysman; 2d, W. C. Cushman's Vandal; 3d, J. Mortimer's Suffolk Surprise. Reserve, C. Rathbone's Beverwyck Punster. Very high com., D. Munro's Sparkler; J. A. Logan, Jr.'s Oriole Sullivan and E. W. Irwin's Ruxton. High com., J. E. Thayer's Hillside Gamester, T. J. Fitzsimmon's Pewter and C. Rathbone's Beverwyck Catcher. Com., W. E. Smith's Sheffield; J. Moorhead, Jr.'s Harvard and A. D. Shepard, Jr.'s Choker. *Bitches:* 1st, C. Rathbone's Beverwyck Moonray; 2d, F. R. Close's Bonaly Belle; 3d, withheld. Very high com., Seacroft Kennels' Seacroft Boaster.

FOX-TERRIERS.—WIRE-HAIRED—*Dogs:* 1st and 3d, Jas. Mortimer's Suffolk Teazel and Suffolk Grip; 2d, R. Lyon's Ebor Snowbery. Very high com., W. V. Cranford's Wakefield Whisk. High com., J. L. Taylor's Phasa. *Bitches:* 1st and 3d, J. L. Taylor's Brittany and Capsicum; 2d, Jas. Mortimer's Suffolk Tassel.—NOVICE—*Dogs:* 1st, 3d and reserve, Blemton Kennels' Blemton Rasper, Blemton Voile and Blemton Reefer; 2d, L. & W. Rutherfurd's Warren Daysman. High com., J. E. Thayer's Hillside Gamester and Hillside Ruffian. Miss F. K. McLane's Rox, C. Rathbone's Beverwyck Punster and Beverwyck Catcher. *Bitches:* 1st, J. L. Taylor's Brittany; 2d, Woodale Kennels' Woodale Refusal; 3d, Blemton Kennels' Blemton Valeria. Reserve, F. R. Close's Bonaly Belle. Very high com., L. & W. Rutherfurd's Warren Symbol and Jas. Sheldon's Vixen.

IRISH TERRIERS.—CHALLENGE—1st, Walter J. Comstock's Dunmurry; 2d, Chestnut Hill Kennels' Breda Bill.—OPEN—*Dogs:* 1st and 2d, Walter J. Comstock's Boxer II. and Hanover Boy; 3d, Toon & Symonds's Jack Briggs. Res., John M. Hughes's Bruce. Very high com., John Welsh's Parnell. High com., John M. Hughes's Jack. Com., Trimount Kennels' Rags. *Bitches:* 1st, John M. Hughes's Red Rag; 2d, John Welsh's Erin; 3d withheld.—*Puppies:* 1st, Geo. F. Newhall's Roslyn Patrick; 2d, Thos. Wise, Jr.'s Colleen Rue. Com., Trimount Kennels' Trimount Racket.

BLACK AND TAN TERRIERS.—CHALLENGE—*Dogs:* 1st, Rochelle Kennels' Broomfield Sultan. *Bitches:* 1st, Toon & Symonds's Matchless.—OPEN—*Dogs:* 1st, Toon & Symonds' Prince Regent; 2d, F. P. Comstock's Salisbury. *Bitches:* 1st, F. P. Comstock's Louie; 2d and 3d, Rochelle Kennels' Broomfield Madge and Rochelle Carmencita. Very high com., Toon & Symonds's Rosette. *Puppies:* 1st and very high com., Rochelle Kennels' Rochelle Majestic and Rochelle Mamzelle; 2d, F. P. Comstock's Mizpah; 3d, Mrs. H. T. Foote's Rochelle Madgelein.

WELSH TERRIERS.—2d, Hornell-Harmony Kennels' Mephisto Dick.

DANDIE DINMONT TERRIERS.—*Dogs:* 1st, Edward Brooks's King o' the Heather; 2d, John Ferguson's Sir Robert. *Bitches:* 1st, Edward Brooks's Heather Madge; 2d, G. M. Carnochan's Heather.

BEDLINGTON TERRIERS.—CHALLENGE—1st, W. H. Russell's Tick Tack.—OPEN—*Dogs:* 1st, Martin A. Thellberg's Qui Vive; 2d and 3d, W. H. Russell's Chemist and Editor. *Bitches:* 1st and 3d withheld; 2d, W. H. Russell's Polly Warkworth. High com., Harris R. Childs's Grey Bess.

SKYE TERRIERS.—CHALLENGE—1st, C. A. Shinn's Sir Stafford; 2d, Huddersfield Kennels' Lovat.—OPEN—*Dogs:* 1st, W. S. Lieber's Sir Roger; 2d, Mrs. A. P. Smith's Bruce; 3d Huddersfield Kennels' Pedro. *Bitches:* 1st, C. A. Shinn's Bessie; 2d, W. S. Lieber's Alaire.

SCOTCH TERRIERS.—1st and 2d, Toon & Symonds's Scotch Hot and Kilstor; 3d, T. H. Garlick's Glenelg. High com., Henry Brooks's Kilbar.

YORKSHIRE TERRIERS.—CHALLENGE—*Dogs:* 1st, Toon & Symonds's Toon's Royal. *Bitches:* 1st, Toon & Symonds's Venus.—OPEN—*Dogs:* 1st and 2d, F. Senn's Flash and Bright; 3d, P. Cassidy's Twig. Reserve and very high com., Huddersfield Kennels' Prince and Charlie. *Bitches:* 1st, Jos. Bell's Duchess; 2d, Mrs. F. Senn's Nellie Darling; 3d, P. Cassidy's Blossom. Very high com., F. McCarthy's Daisy. High com., M. Rothschild's Jessy. Com., E. Emery's Lady Vi.

TOY TERRIERS (Other than Yorkshire, under 7lbs.).—1st and 3d, Morris Rothchild's Jerry and Minnie; 2d, Mrs. C. Harrington's Rosie. Very high com., H. Stoetzel's Gyp. High com., Miss E. Goodridge's Mite.

PUGS.—CHALLENGE—*Dogs:* 1st, Mohawk Kennels' Sprake; 2d, Dr. M. H. Dryer's Bob Ivy. Very high com., Eberhart Pug Kennels' Eberhart's Cashier. *Bitches:* 1st, Almon E. Pitts's Beauty III.; 2d, Mohawk Kennels' Bo-peep II. Very high com., New York Pug Kennels' Nelly Bly.—OPEN—*Dogs:* 1st, Almon E. Pitts's Bonsor; 2d, Seminole Kennels' Kash, Jr.; 3d, W. N. Haverstick's Waddles. Very high com., Miss Marion E. Bannister's Saxon. High com., Mrs. John Feulner's Otsego Duke and Seminole Kennels' Wink. *Bitches:* 1st, Mohawk Kennels' Toadie; 2d and 3d, Eberhart Pug Kennels' Sara Bernhardt and Mable E. High com., Seminole Kennels' Perle des Jardin and Mrs. M. Marshall's Nellie M. *Puppies:* 1st, withheld; 2d, R. Schreyer's Bady; 3d, Mrs. E. S. Moore's Beauty.

TOY SPANIELS.—CHALLENGE—*Dogs* (any variety): Frank P. Comstock's Nank-i-Poo; 2d, Mrs. Samuel Shipley Blood's Milwaukee Charlie. *Bitches:* No entries.

KING CHARLES SPANIELS.—*Dogs:* 1st, Mrs. F. Senn's Romeo; 2d, Mrs. H. Le Grand Cannon's Prince, 3d, F. G. Boesger's Ben d'Or, Jr. Very high com., Plavford Kennels' Prince. *Bitches:* 1st, Mrs. James R. Franklin's Lady Hillary; 2d, Jno. J. O'Brien's Wings; 3d, R. P. Forsbaw's Topsy. Very high com., Mrs. B. Rothschild's Jessy.

BLENHEIM SPANIELS.—1st, A. Bernstein's Murilla; 2d, A. W. Lucy's Exeter Earl; 3d, Geo. W. Wambach's Tiney.

PRINCE CHARLES AND RUBY SPANIELS.—1st, A. W. Lucy's Marguerite; 2d, Mrs. F. Senn's Bell; 3d, F. G. Boesger's Ruby. Very high com., A. Bernstein's Ruby Prince.

JAPANESE SPANIELS.—*Dogs:* 1st, Mrs. E. Clark's Kioto; equal 2d, A. A. Vantine & Co.'s Prince Yodo and A. B. Hilton's Joss II.; 3d, A. B. Hilton's Punch. Reserve and high com., A. A. Vantine & Co.'s Shujo and Tokio. *Bitches:* 1st, Miss Coudert's Cheguo; 2d, Mrs. F. Senn's Tamah; 3d and reserve, A. B. Hilton's Ki-Ku and Momo. Very high com., A. B. Hilton's Maimee, Mrs. E. Clark's Ootan and A. A. Vantine & Co.'s Hama. High com., A. B. Hilton's Judy and Mrs. F. Senn's Yokie. Com., Mrs. E. Clark's Kura and A. A. Vantine & Co.'s Princess Yodo.

ITALIAN GREYHOUNDS.—1st and 2d, Mount Washington Kennels' Star and Spring; 3d and very high com., Jacob Boombach's Golden Rod and Pansey.

SCHIPPERKES.—1st and 2d, F. W. Conolly's Sophia and Dorothea Stanley.

MISCELLANEOUS.—LARGE—1st, Geo. C. Whiteman's Beauty; 2d, Toon & Symonds's Sheffield Lad.—SMALL—1st, Mrs. L. De G. Hurd's Pippo; 2d, Miss Orme's Topsy.

THE IRISH SETTER CLUB.

AT a meeting of the Irish Setter Club held yesterday, at an hour after this journal had gone to press, the following reports were read:

PRESIDENT'S REPORT.

To the Members of the Irish Setter Club:

GENTLEMEN—The year just finished has been an important one to those interested in the development of the Irish setter. Heretofore the energy of Irish setter breeders had been devoted mainly to the development of a typical show dog without especial reference to field qualities. The result has been a great average improvement in the breed, and it can be truthfully said that the Irish setter of to-day breeds more uniformly to type than any other breed, excepting the English greyhound. It was in response to the feeling that the Irish setter was not receiving the proper development in the field that your club appointed at its last annual meeting a field trial committee to devise means to hold a field trial open to Irish setters. This committee, in connection with your Executive Committee, was successful in securing from the Eastern Field Trials Club the privilege of its grounds at High Point, N. C., for the week following the Eastern trials, and while the history of the success of these trials is familiar to you all, a short account of them will not be out of place here.

The Derby Stake closed with thirteen nominations, eleven of which filled and ran. The first prize, $150 cash donated by the club, $50 donated by E. B. Bishop, $50 donated by E. B. Bishop to the handler, excepting the English greyhound. In was in response to the feeling that the Irish setter was not receiving the proper development in the field that your club appointed at its last annual meeting a field trial committee to devise means to hold a field trial open to Irish setters. This committee, in connection with your Executive Committee, was successful in securing from the Eastern Field Trials Club the privilege of its grounds at High Point, N. C., for the week following the Eastern trials, and while the history of the success of these trials is familiar to you all, a short account of them will not be out of place here.

The Derby Stake closed with thirteen nominations, eleven of which filled and ran. The first prize, $150 cash donated by the club, $50 donated by E. B. Bishop, $50 donated by E. B. Bishop to the handler, excepting the English greyhound. In the Philadelphia *Item*, was won by Nugget (Redfern—Gypsey Maid), owned by H. B. Anderson, Glenview, N. J.; second prize, $75, won by Coleraine, owned by E. B. Bishop; third prize, $50, won by Elcho's Maid, owned by George E. Gray.

The All-Aged closed with nineteen nominations, fourteen of which filled and ran. The first prize, $200, donated by the club, and the Elcho cup, donated by Dr. Wm. Jarvis, was won by Sedan, owned by M. Flynn, Jr.; second prize, $125, was won by Coleraine, owned by E. B. Bishop; third prize, $75, won by Edna H., owned by Dr. Wm. Jarvis. To the untiring efforts of Secretary Davis the club is indebted for much of the success of these trials.

The treasurer's report herewith shows the financial condition of your club to be in excellent condition, and with the precedent of a successful trial last year the indications point to a much more successful one for 1892.

There are several questions to which I would call attention, and ask that some action be taken upon. Our constitution at present does not call for any initiation fee, and I would recommend its amendment to provide for one. Also the advisability of joining the A. K. C. At the last annual meeting it was decided to ask for admission to that body, but as we had no constitution at that time and our funds were so low the matter was allowed to go over. I also favor having a club medal designed, to be awarded at one or two of the principal bench shows.

I would suggest that a vote of thanks be passed to the Eastern Field Trials Club for the use of the grounds, to Messrs. J. B. Stoddard, Luke White and J. M. Taylor for their services as judges. Regretting my inability to be present at your annual meeting I remain very respectfully, WM. H. CHILD.

SECRETARY'S REPORT.

To the President and Members of the Irish Setter Club:

GENTLEMEN—Your secretary has the honor to submit the following report of the operations of the club during the past year. In pursuance of resolutions passed at our last annual meeting, a committee consisting of Messrs. Glover, Blossom and Contoit was appointed to draft a constitution. This was done, and after being approved it was printed and copies sent to all members. A committee consisting of Messrs. Child, Rowe and Davis was also appointed to provide for the holding of field trials. The history of these trials is familiar to you all. In addition to a cash subscription amounting to $869, the following donations of special prizes were obtained: One hundred dollars from E. B. Bishop, Esq., one-half of which was for the winner of the Derby and one-half for the handler; a large silver punch bowl from the proprietors of the Philadelphia *Item* for the winner of the Derby; a solid silver cup, known as the Elcho Cup, presented by Dr. William Jarvis to the winner of first in the All-aged Stake, and a prize of three guineas received from the Rev. Robert O'Callaghan, of England, for the winner of the Derby.

In pursuance of instructions from the executive committee the secretary had printed an appeal for contributions. These were distributed. The field trial committee in conjunction with the executive committee, succeeded in obtaining sufficient money and making such arrangements that they were enabled to run the trials to a successful end. The club is deeply indebted to the Eastern Field Trials Club for their kindness and courtesy in allowing us the free use of their grounds, likewise to Messrs. Luke White, Major J. M. Taylor and J. B. Stoddard, who acted so efficiently and satisfactorily as judges without charging anything for their services. J. Otto Donner, Esq., who had kindly consented to act as one of the judges, found it impossible at the last moment to do so, owing to his enforced absence on business. The success of the trials was largely due to the kindness and aid extended by these gentlemen.

At the last annual meeting eight new members were elected, making about twenty active members in all. This membership could be largely increased by a little effort. The financial outcome of the trials has been such as to lead me to hope that in the near future there will be such a surplus that we will be enabled to give proper encouragement to the exhibition of our favorites at the dog shows. Let us all bear this object in view and work with increased vigor to make our coming trials a success. In concluding the secretary would like to express his high appreciation of the uniform kindness with which his efforts have been met and the generous aid he has received from the members of the club and many others in the discharge of the duties of his office.

G. G. DAVIS, Secretary.

TREASURER'S REPORT FOR 1891.

Dr.

Amount received from outgoing treasurer		$ 45 05
Dues collected for the year 1891		100 00
Field trial contributions		469 00
Entrance and starting fees:		
13 Derby entries	$130 00	
19 All-Aged entries	190 00	
11 Derby starters	110 00	
14 All-Aged starters	140 00	
		570 00
Interest on deposits		3 71
Total receipts		$1187 76

Cr.

Advertising and printing	$ 89 00
Postage	8 76
Prize money	800 00
Field trial expenses	106 05
Total expenditures	1003 81
Balance in the club's treasury	$ 183 95

G. G. DAVIS, Treasurer.

ST. BERNARD CLUB MEETING.

A MEETING of the St. Bernard Club was held in the Madison Square Garden, Tuesday evening, Feb. 23. There were present Messrs. W. H. Joeckel, Jr., president, in the chair; J. O. Thurston, secretary; E. B. Sears, treasurer; W. S. Diffenderffer, T. M. Burke, W. H. Walbridge, O. W. Volger, John Keevan, D. Mann, J. Ruppert, Jr., W. C. Reick, F. E. Lamb, Miss A. G. Chandler, Miss A. H. Whitney, Miss A. C. Goodenow.

Treasurer Sears read his report and it was adopted:

TREASURER'S REPORT.

Amount on hand Feb. 22, 1891		$244 18
Received from membership		100 00
Received from membership		275 00
Total		$619 18
Expenditures.		
Whiting Mfg. Co	$255 70	
W. H. Joeckel, Jr (postage)	10 18	
A. K. C. dues	10 00	
Metcalf & Co	2 00	
		$277 88
		$341 30
Receipts.		
Cash on hand from persons applying for membership to-night		$80 00
Total on hand		$421 30

Amount due for dues, $200, $50 of which is due for 1891.

E. B. SEARS, Treasurer.

Mr. Sears reported that at the Chicago show he had made a special effort to bring new members into the club, and as a happy result he presented the applications of the following: Chas. T. Lindsey and Irving A. Sibley, South Bend Kennels, South Bend, Ind.; also the South Bend Kennels; Frank S. Anderson, Chicago; E. Sauerhering, Maysville, Wis.; N. S. Salisbury, Whitewater, Wis.; C. C. Same, Chicago; E. C. Preble, Parkside, Ill.; C. C. Gockey, Bremen, Ind. and W. C. Hickox. Other new names were H. S. Chambers, Port Jervis, N. Y.; Knowles Crosky, Phœnixville, Pa.; Edward Booth, New York; W. Hepner, New York; Mrs. Smyth, Germantown, Pa. All were elected to membership. Several resignations were accepted.

Secretary Thurston suggested an amendment of Rule 6 (which provides that before a member may receive a special awarded at a show, a photograph of the dog must be forwarded to the club secretary, for the club album). It has been found difficult to secure satisfactory photographs, the rule has been for the most part honored in the breach, and there are several specials not yet delivered to the winners because this rule had not been complied with. Mr. Keevan pointed out that the logical result of failure to comply with the rule would be expulsion, a penalty which he thought no one would care to enforce or be subject to. President Joeckel, Mr. Walbridge, Mr. Sears, Mr. Reick and Miss Whitney spoke of the difficulties in the way of complying with the rule; in some cases the dogs had changed hands or had died.

On motion of Mr. Sears, amended by Mr. Walbridge, Rule 6 was so amended as to require the photograph "if possible" to supply them.

By unanimous vote the Secretary was directed to cast a ballot for these officers: President, W. H. Joeckel Jr.; Vice-Presidents, Jacob Ruppert, Jr., R. J. Sawyer and Miss A. H. Whitney; Secretary, J. O. Thurston; Treasurer, E. B. Sears; Board of Governors, Messrs. Reick, Moore, Volger, Rennie, Sibley, Wells, Johnson, Hopf and Walbridge.

At the last annual meeting Mr. Hopf had reported that a pedigree (of Betsey Bobbett) which had been found incorrect by the club committee had nevertheless been admitted to the A. K. C. stud book; and at that meeting a committee

of three, with Mr. Hopf as chairman, had been charged with the duty of investigating the affair. Mr. Reick called for the report of the committee, and this not being forthcoming, it was voted that the chair should appoint a new committee to investigate Betsey Bobbett's pedigree.

NATIONAL GREYHOUND CLUB.

A MEETING of the National Greyhound Club was held at the Madison Square Garden Tuesday evening. There being no constitutional provision as to a quorum, the question was referred to the Board of Directors, who decided that seven should constitute a quorum, and an adjourned meeting was then called. There were present the following members: Messrs. Page, Schumacher, Osborn, Pope, Drake, Van Hosen, Whiton, Wade, Lewis, Watson, Vacheron, Stewart, Black and Huntington. The treasurer reported $13 balance and $34 stud book fund, with all debts paid. The committee on prizes reported contributions received, $365. The committee (Messrs. Wade and Huntington) appointed to ascertain the correct designation of the dog variously known as barzoi, psovoi and Russian wolfhound, reported progress. The committee is in correspondence with Gen. Tschebishoff (a recognized judge in England), Gen. Balderef, Lieut. Tarnoviski, Messrs. Korsch (editor of the Moscow sporting paper) and Kareiff (breeder of Argoss).

The former mail vote of the club as to an official list of judges resulted in a vote of twenty-one to eight in favor of there being such a list. At a subsequent special meeting this mail vote was overruled. At the meeting Tuesday night it was voted to sustain the vote of Sept. 22, 1891, providing for an official list of judges. A committee of three consisting of Messrs. Osborn, Watson and Whiton was appointed to investigate the qualification of judges, to report the same to members and to call for a mail vote.

Mr. Whiton, who had been appointed to consider the project of a bench show for this fall, reported progress and asked that the committee be appointed.

Three directors were elected for a term of three years, Messrs. N. Q. Pope, J. E. Thayer and C. F. R. Drake. Mr. Watson being no longer on the board of directors resigned his office as keeper of the stud book. The Vice-Presidents elected were Messrs. N. Rowe, C. S. Wixom, H. Osborn and Roger Williams.

WASHINGTON DOG SHOW.

Editor Forest and Stream:

The second annual bench show of the Washington City Kennel Club, which takes place March 8 to 11, promises to be one of the best of this year's circuit in point of numbers and quantity of the exhibits. You have ere this received our premium list, the amount of which aggregates nearly $2,500. The special prizes are not yet half in and they will amount to nearly $1,200 more. The financial success of our enterprise last year warrants a very liberal and increased appropriation and expenditure. One of the most important features of the new arrangements for this year will be fully appreciated by both exhibitors and visitors. The entire great hall will be substantially floored over with strong boards in order that the best of care of man and beast may be secured. All of the inconveniences of last year will be done away with. The ventilation and temperature of the building will be perfectly regulated. More space will be devoted to the exercise of the dogs. The committee have arranged for every item that was overlooked and necessarily inconvenient last year.

Applications for entries have been coming in for over six weeks, and we are very sorry that the premium lists have not been ready earlier. All of the important kennels of the country will be represented. There will be 650 benches provided, and we regret that the building will not hold 1,000. The superintendence and care of the dogs will be in charge of the veteran John Read. The committee has spared no expense to have the show of 1892 a memorable one, and a credit to the city of Washington and to the management. Our list of classes has been increased to 141, an addition of 27. Novice classes have been added, and the puppies are honored with places as before.

Miss A. H. Whitney will be given her former classes of St Bernards, Newfoundlands and pugs; Maj. J. M. Taylor, setters; W. Stewart Diffenderffer, beagles. Jas. Mortimer will have his hands full in taking care of the pointers and all other breeds.

Those who favored us with their entries and were present in 1891, can attest to the universal interest manifested by the throngs of representative people who were in the city, and who were in daily attendance. Nearly 15,000 people attended and there were two unpleasant, rainy days out of the four. Congress had adjourned on March 4, but this year being a longer session it will be in full swing during this year's show. It is more than probable that the attendance will reach 25,000. Washington has demonstrated that it is a show city in more ways than one. Many good dogs have been bought during the year past in consequence of the interest and admiration caused by the canine visitors. This year Prof. Hampton will give the youngsters a treat with his dog circus. Every effort has been made to make our show worthy of the support of the doggy men of the country, and if you desire to show your dogs to the greatest number of wealthy people who are in attendance from all over the world we would impress upon your mind the fact that there is no other city in the land so favored and fortunate in this regard.

At the annual meeting, held Feb. 3, the following officers were re-elected for the coming year: Pres., S. W. Stinemetz; Vice-Pres., Joseph H. Hunter; Sec'y, Frederic S. Webster; Treas., H. E. Barrett.

FREDERIC S. WEBSTER, Sec'y.

WASHINGTON, D. C.

THE DOGS SHOULD WORK TO THE GUN.

Editor Forest and Stream:

"Points and Flushes" in last week's issue, by Mr. Waters, is worthy of the writer, and I think I am safe in saying it echoes the sentiments of nine-tenths of all practical shooting sportsmen in America. Like Mr. Waters, I want a good speedy dog, or better still, one that will give me a good gait from morning till night and work to the gun at all times, obey all commands promptly without any extra noise; in fact I never speak to my dogs in the field, they must be tender retrievers at all times, and for the past fifteen years I have hunted over and broken dogs for my own use, and they all retrieve by force, and I have yet to see that it broke their courage in any one case. Canadian Jester and Westminster Drake are both perfect retrievers, and they won second and third at the late International field trials; in fact every broken dog in my kennel can retrieve, and I consider no dog a broken dog until he is a good retriever. I fully agree with Mr. Waters that a well broken dog is handicapped at our field trials as now conducted, but I feel satisfied that it will only take time to show the handlers themselves that they cannot sell half-broken dogs in the near future.

T. G. DAVEY.

LONDON, Ont., Feb. 13

The joke of the dog show is a "Spectre" one. Mr. Bryce's English setter Spectre, taken in by Mr. Fiske, was among those early sent out by the judge. This did not suit, and Mr. Osborn took the dog in again and —— was given reserve in a strong class. Much as we may deprecate this sort of thing, it is a capital way of finding out a thing or two.

DOG CHAT.

IN the arguments set forth in a circular sent out by the National Greyhound Club there is only one to which any serious objection can be made. "Members of a specialty club should never be appointed as judges of the breed represented by their club, because they may be called upon to judge dogs they have bred or owned. This is manifestly unfair." This is a poor compliment to the integrity of the judges. Does the Greyhound Club suppose that it is the custom for judges to consult the catalogues and ascertain the breeding, etc., of every dog entered in their classes? There are no judges worthy of the name that will do that. If a man cannot go into a ring and give an honest decision, whether he has owned, bred or been in any way interested in a dog, fairly and honestly to the other exhibitors, then that man should very quickly be put on the retired list. It is just as bad for a man, because he knows such and such a dog is owned by a friend, in close competition, to give the friend's dog a trifle the worst of it for fear of ungenerous remarks. Perfect fairness is what we must have in the ring nowadays. Another point that may be touched on in this connection—that is, the appointment of men to judge sporting dogs at dog shows whose experience with these dogs has been gained almost entirely, if not altogether, in the field. These men very are apt to be biased in giving their decisions by remembering that lovely sunny morning when so and so made that clever point cross wind, etc., and the brilliant heat he ran in trying weather. It is impossible to judge nose in a bench show. Many of the dogs that have been placed high up in the prize list have not possessed that beauty and uniformity of points that alone should claim recognition in the bench show ring, and they are often shown in "raspy" field condition and placed over dogs whose owners have given them a careful bench-show preparation. To take up the other question again. There is an idea abroad that FOREST AND STREAM is opposed to specialty judges. This is too broad an assertion. It is opposed to specialty judges who are chosen simply because they are members of the club, because, in many cases, this omits the names of several men quite competent to handle their breeds. A specialty club's list of judges should not be a conservative one, but should be one that will prove a guide to the bench show committee, so that they can choose their judges from men who are acceptable to the greatest number of clubs, and in doing so, expect and should receive the support of the specialty clubs every time. Experience teaches us that, as a rule, when specialty clubs make an extra effort to appoint one of their "pet" judges and make a special showing of entries, there has been more genuine dissatisfaction and none the less vigorous aggravation, because it is in many cases indulged in *sotto voce*.

The metropolitan correspondent of the *Fanciers' Journal* wonders how it was the bulldogs imported by Messrs. Morgan and Hobbie—Pathfinder, Cardinal Woolsey, Salem, Carrie and Lady Regent had not been chronicled. With the exception of the two last named we have noted the other importations from time to time in Dog Chat.

English papers to hand are full of anticipations for the Waterloo Cup that was run off Feb. 17 and following days. The London *Field* gives a very exhaustive description of the dogs that will run and attempts to give a forecast of the result. But before giving opinion on this hazardous question "Allan-a-Dale" quotes a letter from Mr. Dent, the trainer of the great Fullerton, in which he says: "Fullerton had a spin Feb. 10, and raced right into his hare." He also adds that "he hardly fancies the old dog is going quite so fast as in previous years, but that he is as true as steel, and if he gets over his first course will be sure to run well." The *Field* writer then says that a fourth season dog like Fullerton will hardly be able to stand the strain of six courses, especially if one should be a long one, and that he will look to some of the youngsters to supply the winner, and from these names Patrick Blue, Neston, Great Fly and Full of Mischief, and among full age dogs, Fullerton, Boss o' the Shanty, Simonian, Woodcote Green and Jolly Colleen, as likely performers, pinning his final choice to A. F. Pope's Patrick Blue and J. F. Salter's Neston.

Mr. James Hinks, the bull-terrier man, must be imbued with a good deal of the courage of his terriers, for he recently, owing to the refusal of the veterinary surgeon to act, removed a tumor from a lion's eye, in a menagerie, and as our contemporary, *Stock-Keeper* (Eng.) facetiously adds, "afterward physicked the whole menagerie from the big elephant to the humming birds."

The first numbers of *The British Fancier* were put in our hands by Mr. Raper, who, as their reporter-in-chief, will do a critical report of the New York show for his journal. The paper is excellently edited and gives promise of being an interesting addition to canine literature. On the front page of the first issue is a pleasing picture in colors of the Queen's favorite dog, the Pomeranian Marco. There is another good feature about the new journal—the reports of the shows are very full and more critical than the general run of such work in England. As a guide to Americans this is especially interesting. We wish the new journal every success.

When you need a friend don't pick out the man whose dog never wants to follow him.—*Ram's Horn.*

The noted St. Bernard Mount Morgan, litter brother of Lord Bute, left Liverpool on Friday, Feb. 12, on the steamship Tauric for New York and arrived here on Tuesday last. He has been quite successful on the bench, although he is not quite as tall as his brother; he shows lots of quality. Mount Morgan has been purchased for the stud and will head the St. Bernard kennels at Yonkers, which will bear his name. Mr. W. Ohlrich is the manager.

The gathering of Japanese spaniels at New York is likely to be the best ever seen at a dog show. A. A. Vantine & Co. have imported several very high-class "Japs" recently, among them are Tokio, Shujo, Chosi, Princess Yodo, Fusiyama and Hama. They are all bred by N. Naka, Tokio, Japan, and represent the "Inus" in a perfection of form that will be a delight to the connoisseurs of the breed. This quaint, lively and intelligent pet dog seems to have taken a firm hold on popular fancy, and it looks very much as if they will become keen rivals to the Yorkshire and pug in the fancies of the gentler sex. There are 25 "Japs" entered at New York, Mrs. Eugene Clark, Mrs. F. Senu, Albert B. Hilton and A. A. Vantine & Co. being the principal exhibitors.

The famous collie champion Charlemagne died Feb. 6. This dog was whelped Jan. 4, 1879, and was by Trefoil out of Maude. He was perhaps the most wonderful collie of the age. He was bred by Mr Bissel, and was first brought out at Bristol, according to a communication to the English *Stock-Keeper*, and his career for some years was a most victorious one. To show what a wonderfully good dog he was, it is only necessary to state that after several years of retirement he was brought out again, nearly as good as new, at the Collie Club show in 1890, where, besides winning in the veteran class, he had a shy at the Collie Club's trophy and won it, beating such grand dogs as Metchley Wonder and Christopher. His record as a sire is equal to that on the bench, as most of the crack dogs of the day run back to him on one side or the other. The great Eclipse was his most illustrious son, and two other good ones were Trefoil and Monteith. The death of such a dog is a matter of regret to collie fanciers on both sides of the water.

The great meat purveyor, Mr. Armour, gave several of the visiting dogmen at the Chicago show an experience that they will not readily forget. Invited to inspect his immense offices in the city, where Mr. Armour himself did the duties of chaperon, carriages were afterward placed at our disposal to convey the party to the stock yards to see the killing processes. Under the guidance of one of Mr. Armour's bright young men, Mr. Waldrop, who we must remark, *en passant*, neglected no opportunity to render our visit most enjoyable, the party traversed the "porker's" fatal path from the moment it was yanked up by the hindleg from the pen to where his brethren who had gone before him hung in rows of steaming, succulent Frankfurters, so dear to the German heart. So quickly is the process manipulated that it was with difficulty we could keep ahead of piggy in his numerous lightning changes. The same applies to the cattle and the sheep, and the result was that the party was still further impressed with the greatness of the country and incidentally the firm of Armour & Co. Among those who were interested spectators of the novel scenes were E. B. Sears, Harry Northwood and friend, Alfred Heald, B. F. Lewis, Tim Donoghue, W. B. Rothermel, to whose good offices the visit was in great part made possible, Roger D. Williams, the writer and others. To give an idea of the vast interests of the concern we may mention that the firm's telegraph bill is $100,000 per annum, ten thousand men are employed at the yards, and one man's whole time is occupied in signing checks—this man was an object of great interest. Returning to the dog show, three cheers were given for our hospitable entertainer, and filled to repletion with scenes of blood and—sausages, we turned not unwillingly to the more peaceful aisles of the dog show.

We have before made mention of Cruft's show, that was to take place in London on Feb. 10 to 12. English papers tell us that the enormous record entry of 3,025 was the result of Mr. Cruft's efforts. Opinions differ as to the good to canine interests such an immense show will have, but the fact remains that on occasion the English fancy can turn out royally. Speaking of royal reminds us that several of the Royal family exhibited dogs, notably the Queen, Prince of Wales, the Czar of Russia, etc. Despite the great task set before the judges we are told that marked catalogues were issued the second day. We have not space to spare to enumerate all the good dogs in different breeds that were exhibited, but in St. Bernards the cracks Siegfried and Marvel met, the former being placed first, and a good young dog of this breed was also introduced to the public. Mr. Raper was one of the judges, and left for this country as soon as his duties were over.

The Keystone Kennel Club entries number 425, and about 380 will be benched. Everything promises a successful show.

Mr. Lamb is getting over another good St. Bernard bitch, Sunol, by Novar out of Lady Roseberry. It is said to be a good one, and has already made something of a record, having won first and special in puppy classes at Cruft's show. She was bred to Sir Hereward before coming over, and sailed last Saturday on the S. S. Anchoria.

It is rumored that Mr. Sprague, the late secretary of the English Bulldog Club, has come to the United States; if this is the case he has not turned up at the dog show.

Mr. George Raper arrived in the best of condition on Sunday last on the Etruria after a fairly good voyage. Several dogmen were present to give him welcome as he touched ground in the New World. He brought over with him Mr. Reick's new St. Bernard bitch Lady Bountiful, the wire-haired fox-terrier Brittle and a young black and tan terrier for Dr. Foote. After "clearing" he was given a luncheon, and it was noted on all sides that he seemed to drop into the customs of the new country as if to the manner born, and it was speedily voted that Mr. Raper "will do." By the way, terrier men are enthusiastic over the brass model of a fox-terrier that this gentlemen brought over. This is the model that the German Fox-Terrier Club had designed recently.

Mr. A. W. Smith, of Buffalo, N. Y., makes a point of never missing the W. K. C. dog show, but this year his enjoyment is considerably lessened through the loss of his black and tan terrier bitch, the noted Buffalo Lass. She was found dead in her crate on arrival at the express office here, having been smothered. The crate is her usual traveling box with wire windows at each end, so that to exclude the air the intelligent express messenger must have completely packed it round with other boxes. Mr. Smith has our sincere sympathy.

Mr. Belmont made a good suggestion at the W. K. C. dinner when he said he thought it would be a good plan to have an annual exhibitors' dinner and smoking concert. This would tend to draw the exhibitors closer together and give an opportunity to exchange ideas on dogs, renew friendships and generally discuss dogdom during the past year. He thought to secure a room in the building would be better than going to a hotel, and we believe is trying to make some arrangement to this effect for Friday evening.

The premium list of the Washington City Kennel Club lies before us. The judges selected are Miss. A. H. Whitney for St. Bernards, Newfoundlands and pugs; Major J. M. Taylor, pointers, English, Irish, Gordon setters; W. Stewart Diffenderffer, beagles; James Mortimer, all other breeds. The list of prizes is on a basis of $12 and $8 for challenge classes, and $12, $8 and $4 in the open for the large and popular breeds, including setters and pointers, collies and fox-terriers. The others have $10 and $5 in challenge, and $10, $5 and $3 in open, with the exception of the rough-haired terriers and pet dogs, which have $8 and $4. The entry fee is $3, and entries close Feb. 27 with Mr. Webster, 711 Fourteenth street, Washington, D. C. The club gives kennel prizes, ranging from $10 to $15, for several of the important breeds. Puppy classes are also provided for those under 12 months old. The new rule, we believe, goes into effect after the Westminster Kennel Club's show; so that the puppies shown at this show must be over 6 months old. The attention of the W. C. K. C. is drawn to this fact. In another column a letter from the secretary gives every information regarding the improvements the club have made and intend making for their coming show. The efforts of the Washington people should be well received, as that city is an eminently good one for the exhibitors who show either for pleasure or profit. A number of valuable specials have been donated by specialty clubs and individuals, and the following new classes added: Irish terriers, Class 118, challenge, dogs and bitches, $8 and $4; 118a, dogs, $8 and $4; 118b, bitches, $8 and $4. Bloodhounds, Class 23, dogs, 23a, bitches, $10, $5 and $3.

"I've got the grip awfully," said one newspaper man to another. "It seems to have settled in my head."

"Is that so?" said the other, sympathetically. "Well, it always catches a fellow in his weakest place."

ASSOCIATE MEMBERS OF THE A. K. C.

Editor Forest and Stream:

In your issue of Jan. 28 appears a letter under the above caption, signed James Watson. Now, I beg leave to use a small portion of your space to reply to the same, as my name is mentioned. I agree with Mr. Watson when he says "the great thing in our vote is the question of delegates." No, we do want delegates that will attend the regular meetings. Mr. Watson states in his communication, "Now, neither Dr. Perry nor Mr. Whitman attended one meeting of the executive committee during the entire year." In reply to this assertion of Mr. Watson, I will reply for myself, and say that if he takes his authority from the reports as published in the official organ, the *Kennel Gazette*, and also the reports of the meetings published in the sporting papers, I will have to plead guilty; but the fact is I attended the meeting of the A. K. C. at the Madison Square Garden, in February, 1891, at which meeting I failed to see Mr. Watson, although he was a delegate and was at the show reporting the same.

When the club resolved itself into an executive committee I remained, supposing I was a member thereof. When the official proceedings were published in the club's official organ, the *Kennel Gazette*, and the sporting papers, the report of the regular meeting gave as present, to represent the associate members, Mr. James L. Anthony and myself. In that portion of the report referring to the meeting of the executive committee, both Mr. Anthony and myself were ignored, from which I concluded that the delegates from the associate members were not considered members of the executive committee.

I was never undeceived in that matter until recently. I received from the secretary of the A. K. C. a communication asking my vote in ratification or otherwise of the proceedings at a former meeting, and in my reply thereto I so stated. Dr. N. Rowe will bear me out in this statement, as I told him it more than once.

I could not see the sense of my going to the expense of so long a trip and spending so much time in going to New York to attend the meeting of the club, and after it resolved itself into an executive committee not to be a member thereof.

Now, in reference to the tickets being sent out for votes. The Western ticket is exactly the same as the present officers, and as there were no nominations made, surely there was no great harm done in sending out a ticket naming the present incumbents for re-election; and if I remember aright Mr. Watson himself placed some of the above in nomination for a previous election. Another thing: At the last meeting of the associate members a resolution was passed appointing a committee of three to devise a plan for nominating candidates for office, and the secretary send a copy of such plan to the associate members for their approval. Now, I have never heard anything from the secretary or from that committee, and I suppose no other associate member has; therefore what are we to do?

As the associate members have their annual meeting during the New York show I think it would be well for the said meeting to instruct its secretary to each year, on or before Dec. 31, notify the members either by mail or through the sporting press, that nominations are in order, and if done publicly we will all know who are nominated, and those so desiring can have time to decline. I see Dr. Perry declined a re-election Dec. 15, 1891, and we only heard of it through the sporting press in the issues of the week ending Jan. 30, nearly forty-five days after.

How in the world are we to know who to vote for in such cases?

I have taken up much more of your valuable space than I intended, but I desire to set myself right with my friends in this matter. L. F. WHITMAN.

CHICAGO, Ill.

POINTS AND FLUSHES.

CHICAGO, Feb. 19.—One of the daily papers of this city mentions that steps were taken by the Silver Spray Kennels, of Clay City, Ill., to form a field trial association of the sportsmen of southern Illinois, and to establish a coursing track at Saylor Springs, Ill. The report further said that the aforementioned kennel had contracted for a large tract of land and had already erected costly kennel buildings.

An abuse, which is rapidly attaining to the importance of an evil, is the artificial and often silly posing practiced by some handlers at bench shows on the dogs in their charge, while under judgment. The handler himself not infrequently indulges in fantastic attitudes while manipulating his dog, all of which tend to mislead beginners, in that they are led to infer that a dog to win must go through some mysterious concatenation known only to the handler.

The posing and manipulation have grown to such proportions year by year that they have become both harmful and farcical, harmful to the advancement of beginners and farcical to those who know the true value at which these acts should be placed. A handler will boldly attempt to correct or conceal the worst faults or blemishes in a dog before the eyes of the judge and public, without the least attempt even of secrecy, the practice almost being a recognized custom. Assuming the dog to be a pointer, if his elbows project outward, contrary to correct form, the handler will push them in as they should be; then he straightens the cow hocks. He next drops on his knees by the dog's side, gathers a fold of dewlap in one hand, holding the dog's head well up in a majestic attitude, then catches the tail at the tip and extends it to full length, thus taking out any twist or bad carriage. As the dog is trained by many lessons to stand in any attitude in which he is placed, he is immovable for the time being. The handler meanwhile gazes intently at the judge with an expression which says: "This is the dog as he is, judge him quick." The judge is supposed to see the dog only as he is when everything is in readiness, as indicated by the final pose and look of the handler.

This fixing, adjusting and manipulating always has in view the concealment of some defects or the presenting of an appearance of beauty and worth which the dog does not really possess; and indeed it sometimes appears to be effective, as some dogs of inferior quality appear to succeed better when so manipulated.

It has a most pernicious and misleading effect on spectators, since they naturally conclude that a good jockey is as important a factor as a good dog.

In all fairness to everybody, and to the end that the dogs should be judged as they really are, this silly and harmful practice should be discontinued. To judge a dog set in artificial position, and so held by both hands of a handler, is to judge the dog not as he is naturally. It may be that these efforts at deception do not often deceive the judges, but there is a strong undercurrent of belief that they do. Considering the real purposes of a show, these extra capers are ridiculous.

As the ideas of all practical men are of value in pointing out the drift of public sentiment, or in furnishing valuable information for improvement, I quote the following paragraphs from a letter received from a well-known writer. "A Scrub," of Alma, Kan., who has distinguished himself by his communications on field trials and field work. He says:

"I take the liberty of calling your attention to one peculiar feature of field trial club management. Instead of holding the annual club meeting at the time and place of holding the trials, where those directly interested are necessarily present, the United States Field Trial Club and others hold such meetings at a time and place where very few can atttend without sacrifice of time and money devoted to that express purpose.

"Business of importance is transacted at annual meetings where only those attend who are more interested in bench shows than field trials. The patrons of such shows, as a rule, are an entirely different class from the major portion of field trial patrons; but their voices count on questions of vital importance where they have only a selfish interest. Club meetings should be held at the time and place of holding the trials. If not, why not?"

Perhaps some of the readers of FOREST AND STREAM can give some good reasons for the postponement of the meeting until after the trial, such as the impossibility of knowing the financial resources of the club till the stakes and expenses are all paid, the presence of but a few club members at the trials, etc.

In the catalogue of the Mascoutah Kennel Club I notice that in the open class for bulldogs King Lud and African Monarch were entered as follows: "Will compete for kennel prizes only," yet they won first and second prize in that class. It also seemed as if the owners had not fully agreed on a firm or kennel title, as "William Mariner and E. A. Woodward" and "E. A. Woodward and William Mariner" were the titles used to denote the same firm as owners of different dogs. Undoubtedly it was a mistake in the entry or an oversight on the part of the club in allowing two of Messrs. William Mariner and E. A. Woodward's (or *vice versa*) dogs to compete, when entered to compete for kennel prizes only. They, however, made a strong kennel and won the kennel prize. B. WATERS.

NOTES AND NOTIONS.

A REFORM in dog show book-keeping would be in order. It is quite common for an owner to make entries at shows and the handler assume entire charge of the dog, the owner not attending the shows or seeing the dog during the circuit. It is evident that in such cases all entry papers should be in possession of the handler, as he constantly needs them, yet in nine cases out of ten the show officers send these papers to the owner, who is obliged to send them to the handler, and time is always necessarily short in which to do this. As far as the show is concerned the handler is the more important party when the owner does not attend, and the name of the owner is only important to clearly identify the dog. To avoid this trouble, entry blanks should embody the owner's name in the body of the entry, with the name, age and other identifying data, and leave the signature to be made in the name of the handler.

* * *

Kennel interests show a solid advance of late, not in the large entries at important shows, or the high prices of dogs, but in the multiplication and success of small shows such as Charleston, Gloversville, etc. Large shows and high prices may be ephemeral, fashion may stimulate them and fads foster them, but multiplicity and success of small shows indicates local and wide spread interests in dogs, the only sure foundation for prosperity. In this point of view, commending this or that show for the quality of the exhibits, is a great mistake, unless it is shown that the quality is local. If it proceeds from entries from a distance, it only shows that professional exhibitors took an interest in this show, and the "quality" is simply the usual every-day one we see at large shows. A good entry of fair dogs, owned in the immediate vicinity of the show is the feature promising well for kennel interests. THE ONLOOKER.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

M. S. V., Philadelphia, Pa.—I have two fox-terrier puppies whose eyes are very bloodshot, in fact, have been so ever since they were born. Now, while their eye sight does not appear to be at all affected, I should like very much to know what can be done for them. Ans. Apply the following lotion to the eyes four times a day with a piece of sponge: Boracic acid 1 drachm, burnt almonds ½ drachm, water 6 ounces.

J. S. R., New York City.—I have an English setter bitch that scratches the hair off herself. She has no sores or fleas. Please let me know what remedy to apply? Ans. Treat for worms, and then give the following powders: Precipitated sulphur 1 drachm, sulphate of magnesia 2 drachms, bitartrate of potash 1 drachm, mix and make twelve powders; give one twice a day mixed with the food. Wash the dog once or twice a week for two or three weeks, adding to the water 3 drachms of creolin.

D., Boston.—I have a hound pup seven months old. His eyes are mattery in the morning and at times he appears about blind. He draws his hindlegs under him and keeps his tail between his legs as if he couldn't draw it tight enough and can't seem to move it away. His hindparts seem stiff and at times hardly able to sustain his weight. When trying to rub his eyes he will at times pitch forward in a heap. When lying still he will whine and at times yelp as if he had griping pains. He does not seem thirsty and anything he likes he will eat with a relish. He digs his lips and throat. He does not seem sensitive to the touch and passes his water all right. No matter how much he eats he does not gain in flesh. I think the trouble is worms and have been doctoring him for them. I have hunted over my files of FOREST AND STREAM and have treated him as suggested in one case, except that I gave him Spratts' worm powder after using oil instead of areca nut. He passed some small worms in the morning and in the afternoon knots of worms between 3 and 4in. long. The oil stays down when given him, but the powder he throws up no matter how I give it to him. Ans. Treat for worms, again using some of the advertised pills instead of powders, and then give the following mixture: Dialysed iron, 1½drs.; tincture of nux vomica, 1dr; liquor arsenicalis, 1dr.; water, 6oz. Give one tablespoonful a day. Also give some cod liver oil at midday, or cod liver oil cakes. Feed well, allowing plenty of meat. To the eyes apply this lotion: Sulphate of zinc, 1scr.; tincture of opium, 2drs.; water, 6oz. Apply frequently with a piece of sponge.

Words of Appreciation.

Allow me to congratulate FOREST AND STREAM on its improved form. For years I have considered it the best sportsmen's journal published. Now it is better than the best.—THOS. CLAPHAM.

I AM delighted with the appearance of the new volume of FOREST AND STREAM. The paper is forging ahead continually. Mr. Townsend's drawings seem to me among the most accurate duck studies I have ever seen; there is something truly Japanesque and also Kodakesque in the truth-at-any-price attitudes and groupings of his ducks in air and afloat.—E. E. THOMPSON.

The remarkable growth of public sentiment in favor of legitimate, intelligent sporting, demanded of its representative journal more than had heretofore been given. This the FOREST AND STREAM will be able to comply with in its enlarged and improved form. It will also be able to establish itself more firmly in the West than heretofore. The education of the sporting classes in the West is being allied more closely than heretofore with that of the East, and the cosmopolitan features of FOREST AND STREAM recommend it to every true sportsman who takes the least interest in rod, dog or gun.—*Geneseo (Ill.) Republic.*

REMEMBER!

That the Erie lines have the following to offer:

Solid trains between Chicago and New York.
No change of cars, any class of tickets.
Vestibule limited trains.
Pullman dining and sleeping cars.
Pullman sleeping cars to Boston and to Columbus, O.
Fare $2 00 less than by lines offering same service.

If you are thinking of making a trip East, it will pay you to call at the Chicago office of the Erie, 242 Clark Street, Grand Pacific Hotel Building.—*Adv.*

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $2.00. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

A CORRESPONDENT this week alludes to the deficit in the A. C. A. treasury due to the last meet, and suggests as the possible cause the small sums contributed by the divisions to the general treasury. That this is not the true cause of the trouble may be seen in a moment by taking the figures for any recent year and dividing the net expenses of the meet by the number of members present. It will be seen that the cost per head to the A. C. A. is entirely too great, ranging from $5 to $10. In addition to this sum the individuals pay all their living expenses, for all lumber and labor on docks and tent floors, and usually a considerable sum for transportation between the railroad station and the camp, and for cartage of goods about the camp. This sum represents only the cost of preparation of the ground, water supply, headquarters tents and flags, and the very inadequate camp launch or steamer, and there can be no question that the results are entirely disproportionate to the expenditure.

While we appreciate fully the work done and the private sums expended by the officers in arranging for the meets, we cannot overlook the very obvious facts that the faulty arrangements, mainly in the matter of mess and transportation, are at the bottom of the trouble.

With a well arranged camp site that may be reached without the loss of time and more or less heavy expense that has attended the meets at Bow-Arrow, Stave Island, Jessup's Neck and Willsboro Point; and with a fairly good camp mess, the gross outlay should be no greater than at present, while the attendance should run up to 400 in place of 150 to 200. This would mean an added income from camp dues, a larger and more regular patronage of the mess tent and A. C. A. steamer, and a very decided lessening of the cost per capita. Such an experience with the mess, or in getting a load of duffle from Sag Harbor or Point Kent to its final destination on the camp ground as many have gone through with of late years, will have a perceptible effect on the attendance at the meets for several seasons, and will at once decrease the receipts while having no similar effect on the expenses.

THE question of amateur standing in canoeing, alluded to elsewhere, is a very difficult one, and as yet no definition that has been suggested has been at all satisfactory. Canoe racing is closely allied to both rowing and yachting, but the definitions of an amateur in these two sports differ so diametrically that any attempt to apply both to canoe racing, can only result in the conclusion that every canoeist who races is a professional. Racing for money, in large and small amounts, is recognized by all yacht clubs, and under a reasonably strict inquiry it will be found that many good canoeists have sailed yachts and taken money prizes. By the rules of boat racing, any man competing for a money prize becomes a professional, as does every man who may in the future compete in a race with him. Of course such an absurdity would not hold in practice, and what will best suit the case is a specific definition of an amteur in canoeing, regardless of the usages in rowing and athletics. To frame such a definition would be no easy task, and it would be far easier to pass a decision on each case, which comes up according to the circumstances. If it appears that a man has raced for any material gain or remuneration, whatever form it may take, he certainly should be classed as a professional; but fortunately there are few of this class in canoeing. Perhaps some of our readers may feel inclined to make suggestions as to a proper definition, in which case we shall be glad to publish them.

A FEW RANDOMS FROM THE EAST.

ANENT the change of the name canoeist to canoeman. I do not believe in it. Mrs. Newberry of Detroit is having a large steam yacht built. She will, I think, find it difficult to be called a yachtswoman. This is only for an analogy, and the terms canoemen and canoewomen are bulky and far from euphonious. The word canoeist so neatly expresses the fact of the branch of sport to which one belongs, that I for one enter a plea for its retention. Although comparatively small in numbers to day, the feminine branch of our sport is bound to grow, and hence the necessity of keeping a term equally applicable to both sexes.

Your illustrations of a 36in. canoe make me think of several of our Eastern canoe yawls. They are 16½ft. ×36in., and are unexcelled in their class. The *Field's* correspondent speaks of shifting the position of his tiller when one man sails the canoe alone. This we find unnecessary in our yawls, as they are designed to carry their weights well aft under any conditions.

The Puritan C. C. have elected officers for 1892 as follows: Com., Edw. S. Gilmore; Vice-Com., Josiah S. Dean; Rear-Com., J. E. Hill; Sec'y, Jas. W. Cartwright, Jr., P. O. Box 1239, Boston; Treas., Lathrop Hedge. The first race will be sailed on Fast Day, April 7. At the last meeting the Puritan C. C. elected six new members, making the total membership forty-one.

Unpleasant as the words may sound, the fact remains that the A. C. A. is in debt nearly $500. At the same time its several divisions are in good financial standing. To be a financially strong division of a financially weak association is truly not a pleasing position. The present situation indicates one of two things, mismanagement in the past, or that the proportion of income of the divisions paid to the general fund is not large enough. I am inclined to believe the latter to be the trouble. If this is not the rock upon which the A. C. A. has bumped, how otherwise can one explain the phenomenon of a rich division of a poor association. I should propose that at the end of the present year the divisions each contribute a share, not lend it, but give it outright, for the purpose of paying off this debt of the A. C. A.

The Newton Boat and Canoe Club held a very pleasant stereopticon show on Feb. 20 at their house on the Charles River at Riverside. Vice Com. Cartwright held the wand and described the views, which covered the Lake George, Stave Island, Jessup's Neck and Willsboro' Point meets. This club, one of the best and largest canoe clubs in the E. D., is a regular paradise for A. C. A. missionary work. There is much good paddling material in the club and it is to be hoped that some of it will be heard from in the near future. ILEX.

NEWS NOTES.

Commodore Winné, on his recent visit to Toronto, was entertained by the Corinthian C. C. at an informal dinner at the Albany Club, and a very enjoyable evening was spent. Judge Dartnell, commodore of the Whitby C. C., was also a guest of the Corinthians. The A. C. A., the Northern Division, and the meets past and future, were the chief topics of conversation.

The U. S. Coast and Geodetic Survey has just issued Chart No. 565, covering the Passaic River from Newark Bay to Belleville Bridge, above Newark, the price being 25 cents.

A. C. A. MEMBERSHIP.—Eastern Division: Henry Sanderson, Edward N. Richards, Springfield, Mass.*

FIN KEELS IN CANOES.

BOTH in England and in America at the present moment considerable attention is being given to "fin" keels. Of all the "contraptions" ever put to a vessel the lead "fin keel" is one of the most successful as a racing machine adjunct, and is the worst *qua* seamanship and market. For racing, the isolated fin carries its weight to the lowest pitch, acting at once as a most perfect generator of lateral resistance and the most effective augmenter of the curve of stability. Its very isolation piles up good for racing, in that both fore and aft of it there is nothing; the boat, the deadwoods all cut away, has reduced the wetted surface to the smallest possible area, and at the same time introduced the most perfect turn-about sort of figure-skating qualities. But stand clear of all shoals, warps or whales, if a craft so fitted is to be used for cruising. If you put her ashore for a scrub, she not only needs legs to keep her upright, but crutches at each end to keep her from turning head or stern over heels. If unsuccessful or outbuilt in racing, what market is open to her? The fin keel, however, had its day long ago, actually with canoes, and before centerplates became general, from about 1871 to 1876. It is more than likely this little bit of history will now be repeated in the half-rater, one, and two-and-half class of "yachts." There is bound to be a squall. Those who own fin boats will not be pleased to see centerplates come in and clean sweep the course; but so it probably will be. Last season, though the centerboard boats in the half-rating class were of two extremely opposite types, they each took such strings of prizes they are sure to be followed up; and, when a centerplate boat is outbuilt at racing, she can well go into the market as a useful cruiser. The fin keel used on the canoes of the R. C. C. twenty years ago was called a "rocker" keel. The general shape was almost exactly that of the present fin; the rocker was of cast iron, from about 50lbs. to 80lbs. weight (Nautilus had one of yellow metal 82lbs. weight). The keel was slotted and capped inboard, the only easy way of getting a groove in which to bolt the head of the rocker. The fin or rocker was cast tapering from its lower edge in thickness till, at the upper edge, it was the thickness of the wood keel of the canoe, *i. e.*, about 2½ or 3in.; the casting also formed a ridge piece or tongue, along the top, which fitted into the keel slot, and was secured by screw-nutted bolts through the keel horizontally. The putting on or taking off of these rockers was a work of time, labor and "cussing;" but it was not long before the centerplate not only showed advantages in cruising work, but sailed at least level in matches, and the rocker disappeared as suddenly as it had fashioned. The rocker keel was not merely tested in smooth water up river, for in those days the R. C. C. annually sailed matches on the lower reaches at Erith and Greenhithe, and lumpy water was there then as it is now when the breezes blow.—*Field.*

[When racing under sail first became popular in America, in 1879 80, there were no centerboard canoes, and the "rocker" keels, of 3 to 5in depth, were used, many being fitted to unship for paddling and cruising. In 1881 Mr. Whitlock planned to put an 18in. fin of a patent alloy then being introduced by another canoeist, Mr. G. L. Morse, on one of his canoes; but the new rules of the A. C. A. prohibiting keels over 3in. deep, prevented the carrying out of the idea. The same rules now prohibit the fixed fin keel, but we look to see them evaded sooner or later if the larger fin keel boats prove successful.]

AMATEURS AND PROFESSIONALS.

Editor Forest and Stream:

I write for information on a complicated case that has arisen in our club. An ex-member of our club some years ago (since 1880) rowed in a race for money; thus by the rule of the National Association of Amateur Oarsmen and by the A. C. A. rules makes the aforesaid member a professional, and any one racing with a professional becomes a professional. Some of us, in ignorance of the fact that he had so raced for money, sailed in several races against our professional brother; after that some of us attended A. C. A. meets and sailed in races against some of the most noted canoe sailors of today. Are we and they, and all they have since raced with, professionals?

2. I understand that some of the canoe clubs have races for sweepstakes; among these I understand is the Royal C. C., of England. Does a race for a sweepstake make a man a professional? It is certainly racing for money.

3. Does sailing a canoe, skiff or boat for money make a man a professional? One constantly reads accounts for yacht races for money.

4. Is there any way of recovering an amateur standing after once becoming a professional?

AMATEUR (?).

[1. Under a literal construction of rowing rules, all racing canoeists would be professionals. 2. Accepting a money prize, or any valuable consideration, would constitute a man a professional in canoeing. The question has never been decided whether the acceptance of a trophy purchased with a money prize of small value would deprive a man of his amateur standing. 3. Racing for money prizes does not deprive a yachtsman of his amateur standing. 4. There is no recognized way by which the standing of an amateur may be restored after being forfeited. There is no satisfactory definition of an amateur in canoeing. The subject was discussed in the FOREST AND STREAM of Oct. 10, 1889.]

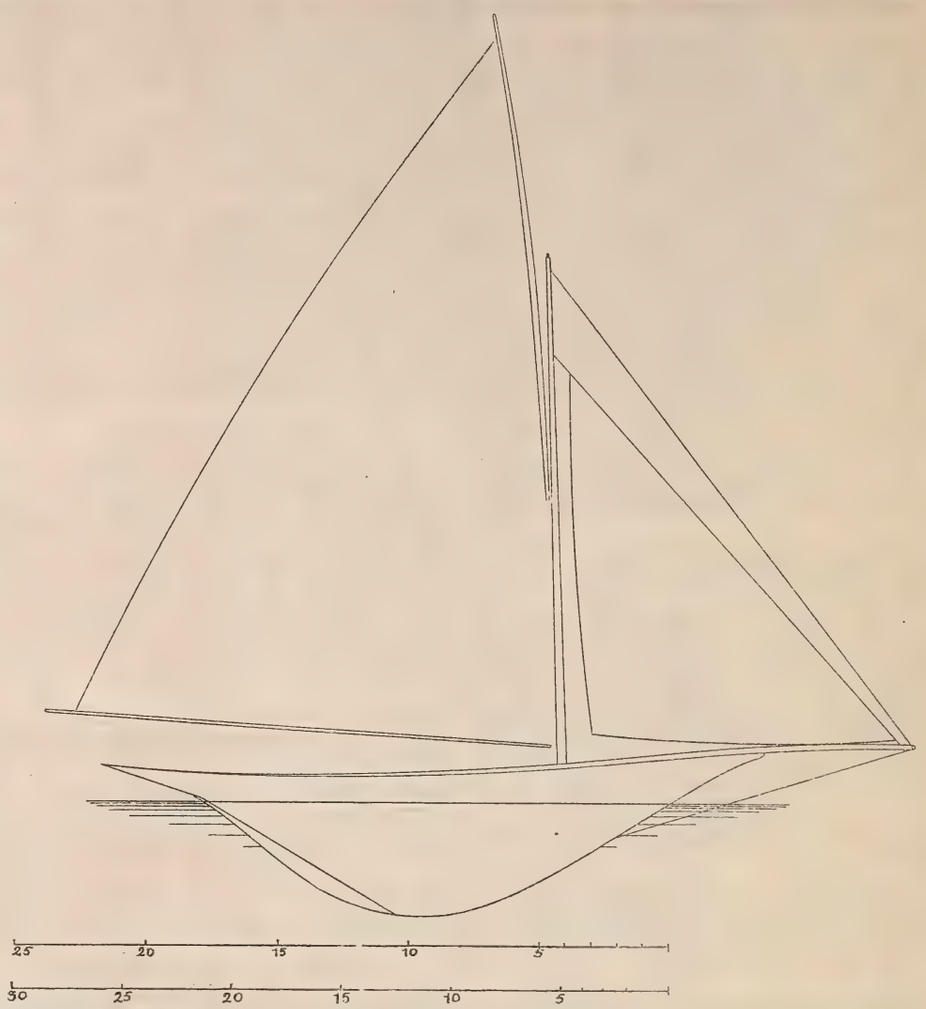
RED DRAGON C. C.

THE regular monthly meeting of the Red Dragon C. C. was held on Feb. 11, at the residence of Mr. Fred Noyes, No. 1428 Columbia avenue. After the regular routine of business, through the hospitality of our host, a great quantity of the "weed" was burned. Conversation relative to the coming season's events was indulged in until a late hour.

We are anticipating a brighter season than the last, and hope to arouse the enthusiasm of our members, which has become somewhat dormant, owing to the severe and depressing trials the club has experienced, viz: two fires. To add to our ill luck this winter we have met another discouraging event, this time in the shape of a robbery. Our house was broken into and the lockers emptied of their valuable contents. The prompt action taken in the affair by our commodore-elect and the lieutenant of the police district, caused the arrest of the suspected party. The culprit "squealed," and in consequence he and his two accomplices are at present held on bail. Through the pleadings of a relative of one of the offenders, and under a promise that all the stolen goods will be replaced and the lockers and furniture restored to their former condition, the prosecution will not be presented.

We hope to let you hear more from us soon, but in the nature of cruising and sailing.

The following gentlemen were elected to office for the ensuing year: Com., Fred Noyes; Vice-Com., Wm. Gray; Capt., W. F. Norgrave; Purser, A. S. Fennimore; Quartermaster, R. G. Fleischman; Correspondent, F. O. Gross.



PHILADELPHIA, Pa.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $10. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

THE best news that has been heard for some time in the 46ft. class is that Messrs. G. C. and C. F. Adams have purchased the centerboard 46-footer Beatrix from Messrs. Prince and Bryant, and will race her next season. This gives a reasonable certainty of three boats, Gloriana, Wasp and Beatrix, in the class, with a possibility that some of the others may fit out for racing. There is no question that Beatrix last year came very near the top of the class, and under her new ownership she is likely to be well handled and regularly started. Messrs. Adams have built and raced Pappoose, Baboon and Gossoon of the 40ft. class.

A HOT controversy is now in progress in the English papers over the measurement of small craft, as those sailed with live ballast and little lead are able to gain considerably through the actual load waterline in racing trim being much longer than the light waterline at which the boat is measured with no one on board. The latest proposal is that in all classes from 10-rating downward (inclusive) the official measurement shall be taken with crews on board. As a part of this plan it is suggested that a fixed weight of crew be assigned to each class, this weight to be placed on board in the form of pig metal or of cans filled with water when the boat is measured.

LE LEZARD—SAIL PLAN.

MODEL COMPETITION.

A VERY instructive and interesting exhibition of models will be held next month by the London (Eng.) Sailing Club at their club house at Hammersmith, on the Thames, prizes of seven and three guineas, with possibly others, being offered for the best model of a centerboard sailing boat, such as used by the club, of not over 1.0 rating. Mr. Dixon Kemp will act as judge of the models, and the question of finish will not be considered, the judgment being on the merits of the design alone. The conditions are as follows;

No application for entry will be received after Saturday, Feb. 20, 1892.

The model, packed in a box containing drawings and measurements referred to below, and also the entrance card inclosed in a sealed envelope, marked on the outside "Entrance Card," must be delivered at the club house on or before March 11, 1892.

No exhibitor will, under any circumstances whatever, be awarded a prize in respect of any models or drawings on which his name or identity (except in the sealed envelope) is in any way disclosed.

REQUIREMENTS.—Half model of centerboard sailing boat of 1 0 rating Y. R. A. to the scale 1in. equals 1ft.

There may be deposited with each model the following drawings:

(*a*) Sheer plan.
(*b*) Body plan.
(*c*) Half breadth plan and the following particulars:
  (*a*) Displacement.
  (*b*) Weight of proposed ballast inside and on keel.
  (*c*) Fore and aft position of center of buoyancy to be noted on sheer plan.

The drawings and particulars are required by the judge to enable him to form a correct estimate of the models; supplying them is, however, optional on the part of the competitors, but they must understand that the merits of a design may fail to be observed if a model only is placed before the judge.

The club will give a first prize of 7gs. for the best boat according to the judge's award, a second prize of 3gs., also certificates of merit. A third and further prizes will be given if, in the judge's opinion, the exhibits, owing to the number or other circumstances, warrant recognition.

The committee of the club will take every possible care of the drawings and models under exhibition, but they undertake no legal liability whatever for any loss or damage.

The decision of the committee, except in the award of prizes, on all matters of dispute arising out of the competition and exhibition will be binding and final on all competitors.

The honorable secretary of the club is Mr. G. Terrell, London Sailing Club, Lower Mall, Hammersmith, S.W.

THE SEAWANHAKA RULE.

THE "length and sail area" rule, commonly known as the Seawanhaka rule, and which has just been adopted by the Hull, Beverly, Massachusetts and Corinthian clubs for all classes, is as follows:

The waterline length shall be taken from point of immersion forward to point of immersion aft. In cases where any portion of the rudder or rudder post projects above the water, such portion shall not be included in the waterline length.

The crew need not be aboard, but if aboard must be stationed amidships.

The sail area is to be ascertained by taking a perpendicular along the after side of the mainmast, from the underside of gafftopsail block or sheave on topmast, to the upper side of boom, when resting on the saddle, or on the lowest part of gooseneck, the distance of which point from the main deck or house deck is to be recorded by the measurer, together with the other points used in measurement. In all yachts, the forward point of measurement of the base line shall be midway between the intersection of the bowsprit and jibtopsail stay, and the center of the tack cringle of the jib or flying jib, when set. In all cases where the extreme length of the spinaker boom exceeds the distance from the forward side of the forward mast to the forward point of measurement, such excess shall be added to the base line. The after point of measurement shall be the end of the main boom in schooners, cutters and sloops, and of the mizen boom in yawls. The maintopmast shall be measured from the hounds of the lower mast to the lower side of the topsail halliard block or sheave, and 80 per cent. of this length shall be taken from the extreme length of the main gaff, measured from the inside of the jaws to the after end, the remainder of the gaff being added to the base line, as measured above. The area from these figures is obtained by multiplying the corrected base by the perpendicular and dividing by two. To the square root of the area, as ascertained, add the waterline length and divide the product by two. The result is the measurement for time allowance.

In measuring boats without topmasts the perpendicular is to be measured to the highest point of attachment of the uppermost halliard block on the mast, and in such boats the point of attachment of the throat halliard block shall be the point of measurement, corresponding to the hounds. In measuring boats without head sails the after side of the forward mast is to be taken as the forward point of the base line.

No change of spars shall be made on the day of a race, except in case of accident, in which case notice of change shall be given to the regatta committee before the preparatory signal, and the new spars shall be of the same length as those for which they are substituted.

The measurer, at the time of making his measurement, shall make a distinctive mark at each end of the waterline.

NEWS NOTES.

Mr. C. H. Stacy, of Haverhill, Mass., requests us to state that he is not the secretary of the Haverhill Y. C. nor a member of the club.

A meeting of delegates from Detroit, Toledo, Sandusky, Cleveland and Buffalo to complete the organization of the new association will be held in the latter city on March 7.

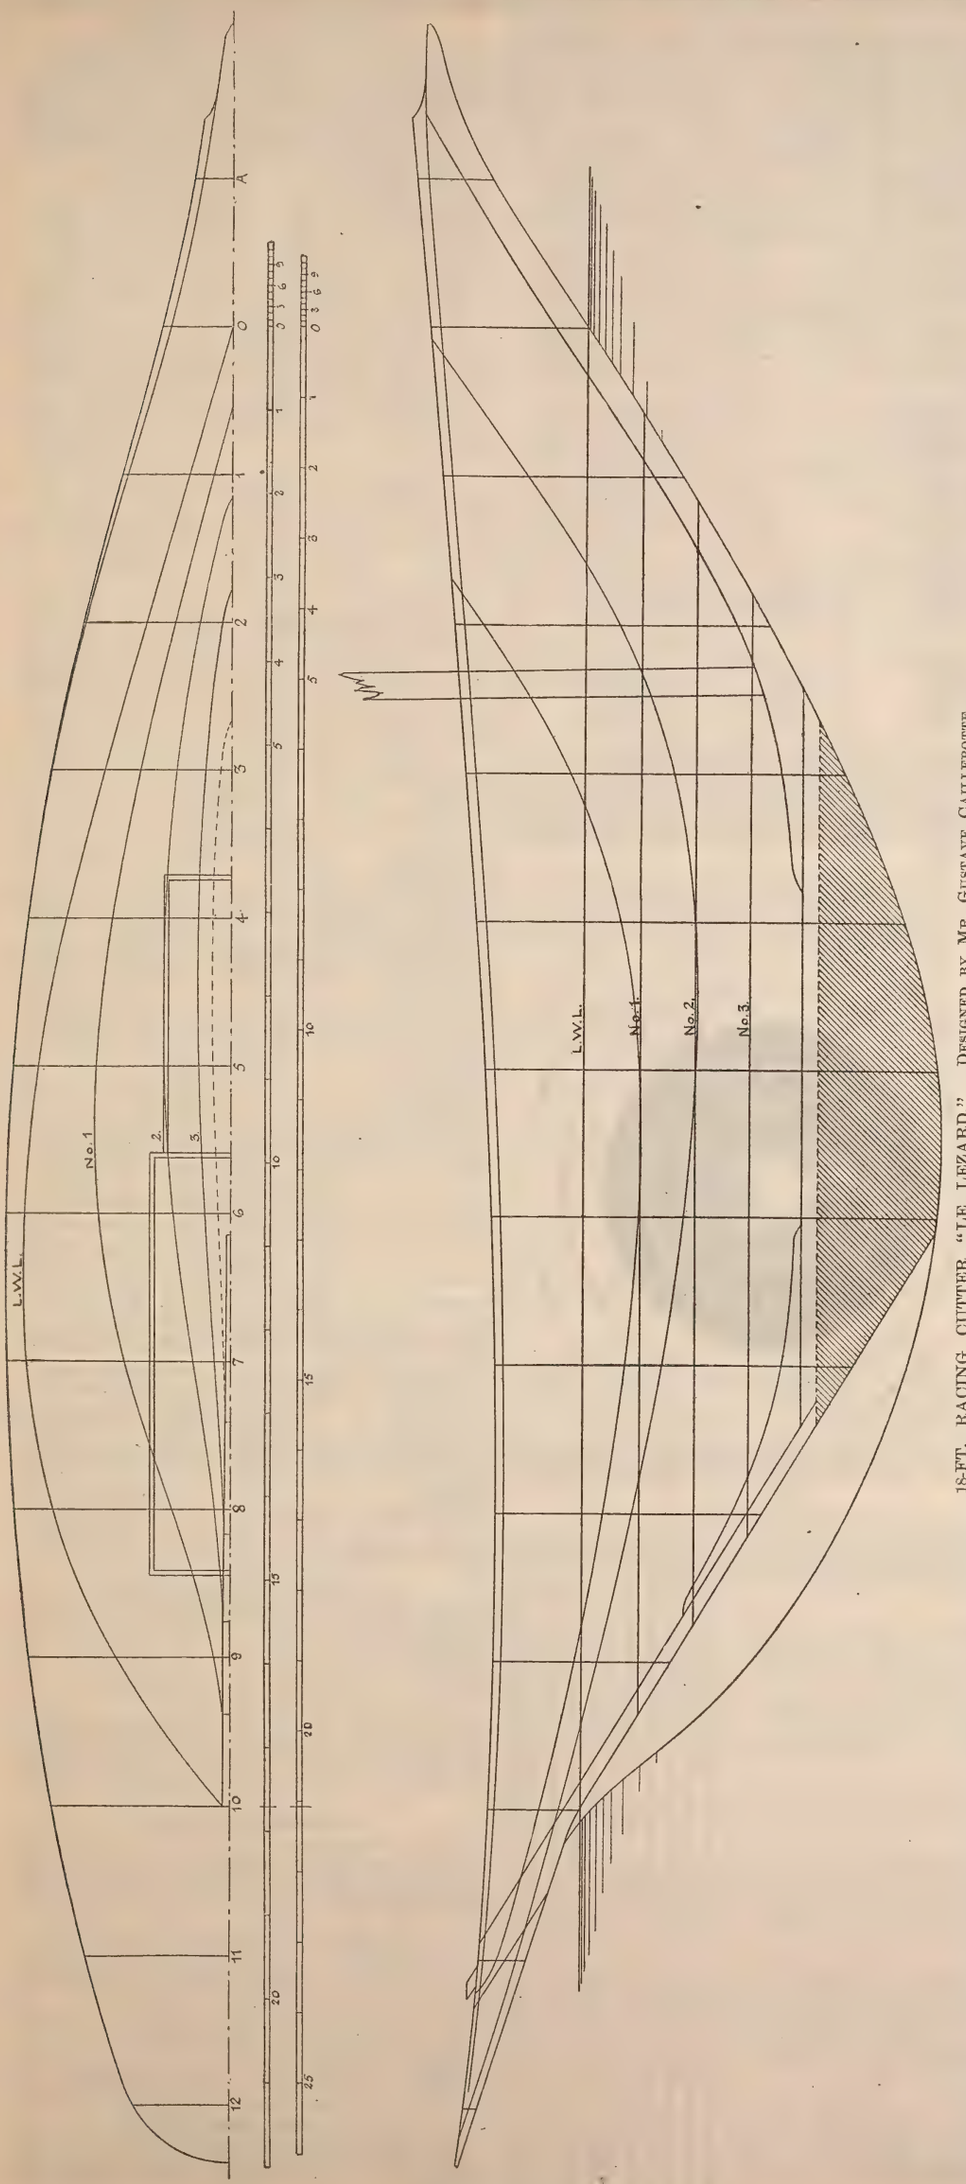
Sybilla, steam yacht, was at Norfolk from Philadelphia on Feb. 17. Wild Duck, steam yacht, Mr. J. M. Forbes, arrived at Nassau on Feb. 10 and sailed for St. Thomas on Feb. 14.

Another of the older British schooners, Guinevere, a contemporary of Cambria and Livonia, and once a noted racer, has been converted into an auxiliary by the addition of compound engines.

The Jeffries Y. C. has elected the following officers: C. L. Davenport, Com.; W. B. Pigeon, Vice Com.; C. L. Joy, Fleet Captain; A. A. Martin, Meas.; W. S. Lauthlin, Treas.; C. A. Braynard, Sec'y.

Sagamore, steam yacht, Mr. W. A. Slater, after leaving Bermuda at noon on Jan. 21, arrived at Funchal, Madeira, on Feb. 3, after a run of twelve days, nineteen hours. She will sail shortly for the Mediterranean.

At the annual meeting of the Cherry Diamond Y. C. on Feb. 15 the following officers were elected: Jas. C. Summers, Com.; Ferdinand P. Eearle, Vice-Com.; C. A. Loring, Rear-Com.; Chas. A. McCulloh, Sec'y and Treas.



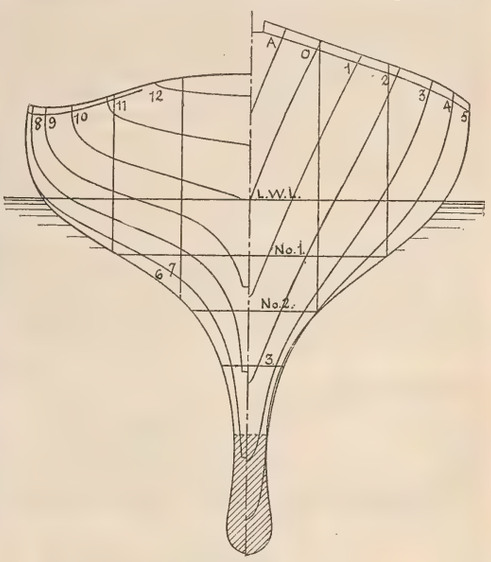
A movement is on foot to further improve and systematize the racing in the small classes about Boston by removing the obsolete classification of keels and centerboards, and racing all boats of the same measurement together, regardless of type or rig.

At the annual meeting of the Larchmont Y. C. on Feb. 17 the following officers were elected: Com., Caldwell H. Colt; Vice-Com., Joseph H. Sterling; Rear-Com., Edward J. Greacen; Sec'y, Chas. C. Little; Treas., Wm. Murray; Trustees for three years, G. C. W. Lowre, and Oswald Sanderson; Trustee for two years, C. Munro; Trustee for one year, David I. Jackson.

On Feb. 19 the Coronet Y. C., of Brooklyn, was incorporated by the following yachtsmen: Thomas F. Rooney, Edgar Dentor, Thomas J. Ruper, Joseph Thompson, Joseph H. Webb, William F. McDonnell, Charles Donnell, J. C. Davis, Alexander R. Gage, James E. Davis, Walter R. Peers, William O'Byrne, Harry H. Webb, William J. Morris, Francis W. Stevens, William E. Heyer, Jr., Charles E. Mercready, Ole Kahun, Wallace S. Mercready, Frederick Stock, Joseph C. Ledoux, James F. Curley, John Smith, John McGreal, Daniel E. Eagan and Daniel McNulty.

Sing Sing Y. C., officers 1892: Com., Ralph Brandreth; Vice-Com., Francis Larkin, Jr.; Rear Com., Charles S. Raymond; Sec., Robert T. Dennis; Treas., Joseph Thompson; Meas., William E. Haff. Regatta Committee, Col. B. Stuyvesant Gibson, chairman; Dr. E. B. Sherwood and Charles S. Gowan. House Committe, Joseph Thompson, chairman; Robert T. Dennis, Benjamin L. Beattys, James Bedell and William L. Hull. Committee on Admission, Col. Franklyn Brandreth, chairman; W. I. Townsend, Francis Larkin, Jr., Edwin L. Todd and Joseph Thompson. Auditing Committee, S. Olin Washburn, Chairman; Gilbert M. Todd and T. Henry Calam.

The French yachting committee, having fulfilled its object of encouragement of French yachting, has dissolved itself, and handed over its challenge cup to the newly-formed society the Union des Yachts Français. This cup is open to 20 tonners, and it would do the yachting of both countries an immense amount of good if an English 20 tonner (measured by the French rule) paid the French coast a visit next year and won the cup. There are at least eight famous international challenge cups in existence, and not one appears capable of producing a match. One would think that they were all hedged in by legal documents like the America cup, but that is not by any means the case.—*Field.*



18-FT. RACING CUTTER "LE LEZARD." DESIGNED BY MR. GUSTAVE CAILLEBOTTE.

The Seawanhaka Corinthian Y. C. has in preparation a lecture which promises to be specially interesting, the subject being "Yacht Designers and Yacht Designing." In addition to a very full description of the technical side, which will be illustrated by a number of special models, drawings and diagrams, the lecture will include a review of the history and progress of designing. The whole subject will be treated from a somewhat novel point of view; which, it is hoped, will make the lecture interesting to the casual hearer, as well as to those familiar with the subject. The date will be Tuesday, March 8, at 8:30 P. M.

A meeting of the Seawanhaka Cor. Y. C. was held on Feb. 23, with Vice.-Com. Stanton presiding. The race committee announced that the date of July 2 had been selected for the annual regatta, and that on June 11 a special competition between Corinthian crews would be held off the new club house. Two or more yachts will be anchored and the crews will set, reef and stow sails and perform various other maneuvers, appropriate prizes being given to the members of the winning crew. Races for various classes will be held during the season. An amendment to alter the sailing rules so as to prohibit luffing after an overlap has been established, was laid on the table in the absence of the proposer.

LE LEZARD—FRENCH RACING YACHT.

WE are indebted, through the kindness of our contemporary *Le Yacht*, to the courtesy of the designer, Mr. Gustave Caillebotte, for the accompanying design of one of the smaller class of French racing yachts which has proved very successful during the past season. Although the French yachtsmen were in the beginning indebted to America and England for both designs and vessels, the wide and shoal New York centerboard being even more numerous than the extreme narrow cutter, a point has at last been reached where French designers and builders are turning out craft of original design, and in many cases with the most gratifying results. The class to which Le Lezard belongs is one of the smallest, the limit being a total sail area of 30 square metres or 323sq.ft.; this class being a favorite one at Argenteuil, the racing ground of the Cercle de la Voile de Paris. Le Lezard is one of a number of yachts designed for this class by Mr. Caillebotte, and in which he has devoted special attention to the construction. One of her most interesting features is

BODY PLAN.

the anticipation of the fin-keel shown in the widening of the lead, by which the weight is disposed at the lowest point. This indicates the method of construction which would be adopted should any rule be made prohibiting the new fin-keel. The dimensions of Le Lezard are 17ft. 8in. l.w.l., 5ft. 5in. beam and 4ft. 4in. draft; the original scale of feet on the drawing being supplemented by a second scale for 21ft. l.w.l., the complete dimensions for both scales being as follows:

DIMENSIONS AND ELEMENTS.

Length over all	26ft. 11in.	39ft. 5in.
l.w.l.	17ft. 8in.	21ft.
Overhang forward	3ft. 7½in.	4ft. 4in.
aft	4ft. 3½in.	5ft. 1in.
Beam, extreme	5ft. 5in.	6ft. 5in.
l.w.l.	5ft.	5ft. 11in.
Freeboard, bow	1ft. 11¼in.	2ft. 4¼in.
least	11½in.	1ft. 1½in.
stern	1ft. 6in.	1ft. 9½in.
Draft	4ft. 4in.	5ft. 1½in.
Displacement, long tons	1.60	
Ballast	1.00	
Ratio of ballast to displacement	62½	
Mast from fore end, l.w.l.	4ft. 3in.	5ft. 0¾in.
deck to truck	19ft. 6in.	23ft. 2in.
Bowsprit beyond fore end, l.w.l.	9ft. 6in.	11ft. 3in.
Boom	19ft. 4in.	20ft. 3in.
Yard	18ft. 8in.	22ft. 5in.
Mainsail, sq. ft	241	355
Jib	82	116
Total area	323	471
Sailing length, S. C. Y. C. rules	18ft.	21ft.
Rake of sternpost, degrees	58	
Spacing of stations	1ft. 9⅜in.	2ft. 1¼in.
waterlines	8in.	9⅞in.

The above displacement includes a crew of two men.

The yacht was built by Luce, at Petit-Gennevilliers, in the spring of last year. Since then Mr. Caillebotte has designed another for the same class, but slightly shorter and with a trifle less displacement, the lateral plane being still closer to a triangle.

NYSSA.

THE keel sloop Nyssa, well known about New York and Boston, has lately come to an untimely end, having been abandoned on Jan. 23, near Onancock, Va., on Chesapeake Bay. The owner, Charles E. Welborn, and the crew, Herman Solsburg and Edward Landblock, the latter acting as engineer, reached shore safely after the yacht grounded, and nothing further is known of her fate, but it is supposed that she floated off the beach and sunk.

The story came to light through the arrest of Welborn at Norfolk, Va., for robbing the offices of the Florida Central & Peninsular R. R. of $3,000 worth of tickets. It appears that Welborn bought the yacht of A. M. Stanton, of Bridgeport, Conn., giving worthless notes to the amount of $2,500. Nyssa is known to the readers of the FOREST AND STREAM, her lines having been published on May 1, 1889, and later in "Small Yachts." She was one of the early keel sloops built in Boston about the beginning of the cutter-sloop controversy, boats both wide and deep. She was built by Wood Bros. in 1882, and was 30ft. 4in. over all, 26ft. 9in. l.w.l., 10ft. beam, and 5ft. 7in. draft.

She was originally named Gleam, but her name was changed in 1883 by Mr. J. L. Wall, who bought her and brought her to New York, where she has since remained under various owners. Last spring she was fitted with an Ofeldt naphtha engine, a small screw being fitted in the deadwoods, and she was using this auxiliary power in the course of her last cruise.

AMERICAN MODEL Y. C.

IN the years 1872-3-4 a boat house for model yachts at Prospect Park Lake, Brooklyn, L. I., was under consideration. The Prospect Park Club, which was the parent organization, the Long Island and the American—all three clamored for recognition by the Park Commissioners, but their claims for special favors caused the Park Commissioners to become disgusted with the whole affair, and the matter fell through; the clubs being left to shift for themselves as best they could.

After an interval of 20 years the officers of the American Model Y. C., partly from necessity and want of accommodations for the growing accumulation of models, signed a petition to the presen

Park Commissioners for a boat house suitable for at least 45 models, the basis of the petition being, that a new drive has been constructed, to be thrown open to the public this season, passing as it does between the present quarters and the launching float, necessitating the crossing of this drive to reach the latter, thereby endangering the lives of horsemen and those driving in carriges by the slatting in the wind of the sails of the yachts as they are transported across said drive.

The Park Commissioners have kindly considered the matter, and it will be acted upon at once, a boat house being constructed to be ready for the club about the middle of May. It will be situated on the shore line of the Lake, and will be an ornament to the Park. The dimensions will probably be 100ft.×20, with 13ft. head room.

The American Model Y. C. is the strongest and most complete club of its kind in the United States. Two or three members of the old clubs of 74 are among its members.

About 50 models will in all probability be in commission this season. Wonderful progress has been made in the designing and constructing of model yachts, a number of its members being expert designers and draughtsmen, and having turned out some fast crafts which have beaten all the old rule of thumb boats of former years, they intend to turn out some to beat last year's boats in the races to come this season. Three 40, three 46 and one 48in. being planked and decked ready for masting. F. Nichols.

Rifle Range and Gallery.

"FOREST AND STREAM" TOURNAMENT

FOR NEW JERSEY RIFLE CLUBS.

The Volunteer Rifle Club, of Newark, has withdrawn from the Forest and Stream tournament owing to lack of interest among its members. All matches scheduled for this club will be declared void.

Complaints have reached this office that some of the clubs in the tournament insist that the time limit for matches is one hour for each team. This is an erroneous impression, as the rules state distinctly that *each man* is limited to ten minutes for his ten shots. The rule was very plainly printed in our issue of Jan. 31 and could not be misconstrued. Two minutes time is also allowed from the firing of the last shot on one string to the firing of the first shot on the succeeding string. With five men shooting this must not consume more than fifty-eight minutes. If one man should complete his score in two minutes the fact still remains that the next man must fire his first shot within two minutes of the time the last shot of the preceding score strikes the target. Time allowance is made only as stated in Rule 3

Another point on which there seems to be a diversity of opinion is in regard to the appointing of officials. Rule 4 states what a judge *may* do, but nowhere in the rules is there a clause saying that there "must be" a judge. This is left to the captains, who must mutually agree as to whether or not they desire judges. The captains may act as judges if they choose to do so.

Essex Amateur Rifle Club vs. the Hudson Rifle Club, shot on Essex Amateur range:

ESSEX AMATEUR R. C.

Neuman	24 23 20 24 23 21 23 24 21 25—228
Snellen	24 25 25 23 25 22 24 22 24 23—237
Cooper	23 25 23 22 22 23 23 25 22 25—233

Garden City Rifle Team.

The Garden City rifle team met for their weekly contest Tuesday evening, Feb. 16, at Geo. McCune's shooting gallery, 146 South Halsted street, Chicago. Conditions were: 25yds., 25 shots each, open sights, off-hand, Massachusetts paper target, possible 300:

W J Gibbs	267	Martin Tatro	260
Thos Ford	257	Geo McCune	263
H S Burley	258	Roy Taylor	255
C A Hankle	262		

Empire Rifle Club.

New York, Feb. 16.—The following scores were made by members of the Empire Rifle Club:

Wm Rosenbaum	232	B Zahn	219
W Fetzer	216	C Zettler, Jr.	231
W Misholder	219	G Hillmeyer	199
A Rosenstraus	228	H Fetzer	219
J Diehl	191		

Empires will enter two teams in the Zettler Rifle Club shoot.

Lischke Rifle Club.

The regular weekly shoot of the A. Lischke Rifle Club, 25-ring targets, distance 110ft.:

A Lischke	25 25 24 24 23 23 22 22 22 21—231
R Reicherz	25 24 24 24 24 22 22 21 19 17—222
J Scharly	24 24 23 23 22 22 21 21 20 19—219
A Paetzold	23 23 23 22 21 19 19 19 19 16—204
H Strater	24 22 22 21 21 21 20 19 18 16—204

The Zettler Tournament.

The team shoot for handsome prizes, arranged by the Zettler Rifle Club, took place at its gallery, 219 Bowery, this city, last Monday. It was open to all, with a $5 entry fee. The Excelsior Rifle Club's five-men team and that of the New York Independent Schuetzens tied for first prize with scores of 1,199 each out of a possible 1,250. The first was, however, awarded to the Excelsiors, their team having scored the most "flags." The Independents had to content themselves with second prize, a rifle. The first prize was also one. The third prize, a handsome bronze statuette, was won by the Miller Rifle Club, of Hoboken, by a score of 1,196. This is the club that leads in the tournament arranged for New Jersey clubs by the Forest and Stream, with seven victories and no defeats. The excitement throughout the day was intense, each club bringing a large contingent of well-tried "rooters." Fifteen clubs were entered, but several did not finish their scores, as they saw there was no possible chance for them to secure a prize. Those teams who fired their whole 50 shots are appended below, together with the individual scores, out of a possible 250:

Excelsior R. C.

W H Hallowell	25 25 25 24 24 24 24 24 23 22—240
Wm Weber	25 25 25 25 25 24 24 23 22 22—240
W J Channing	21 24 24 25 25 25 25 25 25 25—244
W J Hennessy	23 23 23 24 24 24 25 25 25 25—241
L P Hansen	25 25 24 24 24 24 23 23 22 20—235—1199

New York Independents.

G Zimmerman	25 25 25 24 24 24 24 24 24 23—242
M Dorrler	25 25 25 25 24 24 24 24 24 23—243
F Simmon	24 24 24 24 23 23 23 23 23 23—240

Hegeldinger	224	G Fetzer	215	Wettenfeld	231
	1150		1129		1082

A unique cup was offered to the shooter making the highest score during the shoot. It was won by Ward Channing, of the Excelsiors, who made the good match score of 244 points. So it can be seen that the Excelsiors were in good trim, they winning first prize and the highest individual score cup. The Albigs, of this city, tied the Our Own Club, of Newark, for fourth position with a score of 1193. That the shoot was an immense success cannot be denied.

J. H. Kruse.

Excuse the Error, Mr. Bauder.

Below will be found a cut of a target made by John Bauder on the Our Own range, in Newark, on Feb. 3. This target, which

shows a score of 248 out of a possible 250, should have been shown in the issue of Feb. 11, under the caption of "A Fine-Looking Target," instead of which another party's target was inserted.

The Cincinnati Rifle Club.

Regular practice shoot of the Cincinnati Rifle Aesociation at their range, the Four-Mile House, on the Reading Road, conditions off-hand, 200yds., Standard target:

New Jersey Rifle Shooting.

[Specially Reported for Forest and Stream.]

Excelsior vs. Greenville.—The Excelsior Rifle Club's ten men team met and defeated the ten men team of the Greenville Rifle Club last Wednesday evening on the latter's range. Wm. Weaver, W. Hallowell and L. P. Hansen of the Excelsiors, and C. Scheelein of the Greenvilles were tied for high score. This was the first of a series of best two out of three. The next one takes place at the Excelsiors' headquarters. The scores made were: Ten shots off-hand, 25-ring target, possible 250:

Excelsior Rifle Club.		Greenville Rifle Club.	
Capt L P Hansen	238	Capt Robidoux	231
Ward Channing	235	C Boag	221
Thos Hughes	229	H Chavant	231
Geo C Yarick	224	C Scheelein	238
J Speicher	218	H Gottfardt	230
C Bauchle	224	W C Collins	212
W Hennessy	230	J Cook	217
C L Pinney	230	J Kaiser	231
W Hallowell	238	J Dodds	219
Wm Weber	238—2299	G Purkess	220—2250

This gives the first match to the Excelsiors, they winning by 49 points. Refreshments were served both during and after the match. "Cully" Boag assured the visitors that the Greenville's would win the next match. Songs were rendered by members of both teams, and speeches were made by Captains Hansen and Robidoux and "Cully" Boag.

A match took place last Saturday between Louis Thiebault and Thos. Wright, of Hoboken, both unattached. Each man fired 50 shots, Mr. Wright being the victor by four points. The scores were:

T Wright	242 243 236 235 243—1199
L Thiebault	242 244 235 233 241—1195

Miller Rifle Club, Hoboken, Captain, Richard W. Dewey, Wednesday, Feb. 17.—The scores made to-night in the regular weekly shoot for class medals were:

D Miller	239	F Brandt	231
W Forkel	223	F Laudolt	237
Capt Dewey	229	H Seltenreich	218
A Meyns	236	R Zoch	228
H F Meyer	208	F Liell	233
H D Heneken	227	F Dunsteadt	203
L Sohl	233	F Kloepping	224
F Kammel	201	E Fischer	232

The medal winners in their respective classes were: First class—David Miller, 235. Second class—F. Laudolt, 237. Third class—Henry Seltenreich 218. The club is having its headquarters put in to a more presentable shape in the rear. They have purchased a fine desk. It looks like a desk one generally sees in a police court. Tickets have as yet not been issued for the club's annual spring shoot and festival which takes place at the Union Hill Schuetzen Park on May 30 (Decoration Day). Six hundred dollars will be distributed in prizes to the marksmen attending. A team was entered in the Zettler Rifle Club's team shoot, which took place last Monday (Washington's Birthday), at the Zettler Club's range, 219 Bowery, New York city.

Palisade Rifle Club, Jersey City Heights.—Capt. John Reinhardt. Thursday, Feb. 4. The following scores were made, 10 shots, off-hand, 25-ring target, possible 250:

A Malz	235	J Kehrwald	220
G W Graf	223	A Rossy	215
Capt Reinhardt	227	W Hartung	211
C Benk	226	B Newman	210
G A Finger	225	J Johnson	210
G P Herrschaft	220	J Tresoutuck	208
H Rosenthal	220		

The club held its regular monthly meeting last night. The regular routine of business was attended to. Adolph De Rossy was elected sergeant at-arms. Refreshments were provided by genial Capt. John Reinhardt.

Blencker Co. No. 39, Capt. Albert Moehmking, Germania Schuetzen Bund, S. N. J., give a medal and prize shoot at headquarters, 223 First street, Hoboken, on March 20. Valuable medals and money prizes will be contested for by the keen-eyed schuetzens.

Excelsior Rifle Club, Capt. L. P. Hansen.—Jersey City, Tuesday evening, Feb. 16. The following scores were made in the weekly shoot for class medals, 10 shots off-hand, 25-ring target possible 250:

W H Hallowell	242	L P Hansen	235
C Boag	241	Wm Weber	235
Wm Robidoux	237	C Bauchle	226
W J Hennessy	226	J Hughes	225

The medal winners were: Class A, W. J. Hennessy, 236; class B, Wm. Robidoux, 237; class C, Colin Boag, 241.

The Friday Night Club, of Hoboken, President August Guerber, is just now holding a series of team contests between teams of four men each. The scores made a week ago Friday were:

No. 1 vs. No. 2.

Team No. 1	203 215 215 193—826	Team No. 2	215 220 221 221—877

No. 1 vs. No. 3.

Team No. 1	215 225 230 200—870	Team No. 3	204 208 200 195—807

No. 2 vs. No. 3

Team No. 2	223 216 218 207—866	Team No. 3	185 192 174 224—775

No. 2 vs. No. 4.

Team No. 2	223 220 224 201—868	Team No. 4	223 218 220 207—868

No. 1 vs. No. 4.

Team No. 1	215 205 206 204—830	Team No. 2	220 215 207 207—849

No. 1 vs. No. 4.

Team No. 1	224 210 220 191—845	Team No. 4	215 214 216 211—856

The winning teams will be presented with handsome prizes donated by the club.

Judge George F. Seymour defeated J. R. Havens last Saturday evening in a shoot for $25 a side, at Hoboken, each man fired 100 shots. The scores made were:

G F Seymour	236 242 244 244 246 237 242 239 239 233—2402
J R Havens	245 240 234 237 237 231 237 235 244 235—2381

A match followed between Louis Thiebault and Counsellor Jacob Bretzfeld. The legal luminary succeeded in being defeated by 50 points, each man firing 50 shots. The score is appended below:

L Thiebault	233 233 238 237 232—1173
J L Bretzfeld	227 222 222 231 221—1123

The Excelsiors had their shooting clothes on last Monday.

An interesting 10-men team match will be that between the Palisades and Jefsens.

The Metropolitan Hall Range.

Jersey City, N. J., Feb. 20.—The official scores made by the members of the G. R. C., on their range, Metropolitan Hall, 604 Ocean avenue, Feb. 19:

Capt Robidoux	231	*Ed Barr	225
*Geo McPkess	228	*C Scheeline	238
H Gotthardt	223	J J Hill	218
C Boag	234	J Spahn	212
J Boag	231	*J Kaiser	241
J Cook	220	*J Dodds	237
*W C Collins	235		

* Medal winners in respective classes.

Our members feel confident that the Volunteer Rifle Club, of Newark, would have met with disastrous defeat on the 19th inst., had they still been in the tournament. But the fact that they had withdrawn was unknown to the G. R. C., whose team came, saw, and were told for the first time that such was the case. The disappointed team returned home. W. C. Collins, Sec'y.

The Revolver at Conlin's.

Conlin's Shooting Gallery, corner Thirty-first street and Broadway, New York.—There will be a revolver contest for the championship for 20yds. about March 1, to decide who is the champion for New York and vicinity. All revolver shots are cordially invited to participate in this tournament. Full particulars can be learned by visiting the gallery. Jas. S. Conlin.

New York Revolver and Pistol Club.

The following record scores were made by the members of the New York Revolver and Pistol Club at their regular weekly shoot, held on the 12th inst., at 12 St. Mark's place:

A Stein	264	B Walther	249
F Hecking	199	H Oehl	258
A Bertrand	215		

Above scores are the first five for each member, no sighting shots, distance 20yds., standard American target.

Feb. 20.—Same conditions:

A Stein	260	G L Hoffman	236
F Hecking	215	B Walther	256
Dr Bell	223	A Bertrand	181
H Oehl	252		

F. Hecking, Secretary.

Coppersmith Bests Snellen.

These two cracks shot a match on Feb. 15 on the Essex range, 10 strings of 10 shots each, 25yds.:

Snellen	247 238 242 241 235 243 242 242 243 241—2414
Coppersmith	245 245 241 243 248 240 240 243 238 241—2423

Wurfflein Rifle and Pistol Club.

PHILADELPHIA, Feb. 20.—Official scores of the Wurfflein Rifle and Pistol Association for the week ending Feb. 19, 25 shots, off-hand, 25-ring target, Wurfflein rifle, E. Travis's score of 245 being the best official score that has been shot on the range:

E Travis	25 25 24 24 25 25 23 25 25 25—246		
J G Dillin	237	Dr Gardiner	230
H J Mehard	235	A J Mergey	230
J J Mountjoy	235	R L Dobbs	229
W Wurfflein	231	J C Wurfflein	228
E O Goddard	223		
J H Benner	218		
L Wood	215		

The Chicago Rifle Club.

CHICAGO, Ill., Feb. 13.—On Lincoln's birthday the following scores were made by members of the Chicago Rifle Club. The conditions were 200yds., 10 shots per string, on the Standard American target:

J Macauley	59 57 62	W H Holden	57 56 58
N H Warren	59 69 67	W H Gleason	61 61 62
M J Steffens	51 58 59	R D Garden	63 62 71
R H Aiken	73 65 84	W K Forsyth	54 60 62

Match Shooting at Marion.

ON Washington's Birthday the following scores were made in a match shot on the ranges of the Hudson Rifle Club, at Marion, N. J. The conditions were 100 shots per man, $5 entry, one money, 25-ring target, 75ft.:

J Rebhan	225	229	234	234	235	236	232	223	230	236—2319
A Braun, Sr	220	226	228	229	240	227	230	236	239	230—2302

Shooting on the Howard Range.

THE following scores were made on the range of the Howard Rifle Club, in Newark, on Feb. 19:

Chapman	232 234 237 244 239—1189	Bauder	238 234 238 236 243—1189
Burger	232 234 230 234 230—1161	Watis	241 238 239 235 233—1186
	2350		2375

Tray Shooting.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Feb. 23-26.—Toronto Gun Club tournament, at Toronto, Canada.
Feb. 25-28.—Louisiana Gun Club's tournament, New Orleans, La.
Feb. 26-27.—Live bird tournament, at Frenchtown, N. J. On the first day a contest will take place between teams of ten men each, representing Hunterdon and Mercer counties, respectively, each man to shoot at 10 live birds for $100 a team.
Feb. 27.—South Side Gun Club, weekly shoot at artificials, Newark, N. J.
Feb. 27.—Amateur Gun Club, weekly shoot at artificials, Newark, N. J.
Feb. 27.—Sewaren Land and Water Club, team and individual contests at artificials, at Sewaren, N. J.
Feb. 27.—John Erb's Old Stone House grounds, live bird sweeps open to all, 1 o'clock P. M., Bloomfield avenue, Newark, N. J.
Feb. 27.—Sweepstake shooting at Watson's Park, Burnside, Ill.
Feb. 27.—New Jersey Shooting Club, weekly shoot at artificial targets, Claremont, N. J.
March 2.—Union Gun Club, monthly prize shoot and open to all tournament, at Springfield, N. J.
March 5.—Boiling Springs vs. Union Gun Club, team match, at Rutherford, N. J.
March 5 —Notman vs. Starkey, 21 live birds each, for $50 a side, at Streator, Ill.
March 9.—Atlantic Rod and Gun Club, monthly shoot at West End, Coney Island.
March 9.—Parkway Gun Club, monthly shoot at Dexter Park, Long Island.
March 10.—Newark Gun Club, monthly prize and open shoot, at live birds, John Erb's, Bloomfield avenue, Newark, N. J.
March 15.—Class vs. Helgins, 100 live birds each, at Dexter Park, Long Island.
March 15-16.—Union Gun Club tournament, one day at targets, second day at live birds, Springfield, N. J.
March 17.—Essex Gun Club, monthly prize shoot, at live birds, for members only, Jersey City Heights Gun Club grounds, Marion, N. J.
March 22.—Glenmore Rod and Gun Club, monthly club shoot, at Dexter Park, Long Island.
March 24.—Emerald Gun Club, at Dexter Park.
March 30.—Glenmore Rod and Gun Club, monthly shoot, at Dexter Park, Long Island.
April 7-8.—Union Gun Club tournament, at Springfield, Ohio.
April 19-21.—Elk Park Shooting Tournament, two days at artificials, third day at live birds, Royersford, Pa. Address H. E. Buckwalter, Royersford, Pa., or Harry Thurman, Germantown, Pa.
April —.—Ridgewood Gun Club tournament, at Ridgewood, N. J.
April —.—Territorial Sportsman's Association, first annual tournament, at Las Vegas, N. M.
May 2-7.—Fifteenth annual tournament of the Missouri State Fish and Game Protective Association, Kansas City, Mo. W. V. Reiger, Sec'y.
May 4-6.—Canton Shooting Club tournament, at Canton, Ill.
May 10-12.—The Ohio trap-shooters' annual tournament, Columbus, O.
May—.—Capital City Gun Club's tournament, Washington, D.C.
May 10-13.—Nebraska State Sportsmen's tournament, Grand Island, Neb.
May 17-20.—Annual tournament of Kansas City State Sportsmen's Association, at Council Grove. G. W. Cleck, Sec'y.
May 24-26.—Iowa State Association tournament, at Des Moines, Iowa.
June 6-11.—Eighteenth annual tournament of Illinois State Sportsmen's Association, at Chicago. W. L. Shepherd, Sec'y.
June 13-18.—New York State Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.
July 5-7.—Atlantic City Gun Club's tournament, at Atlantic City, N. J.
Aug. 9-12.—Pennsylvania State Sportsmen's Association's annual tournament, Reading, Pa. Walter D. Eller, Sec'y.
Aug. —.—Hacketstown Gun Club tournament, at Hacketstown, N. J.
Aug. 24-27.—Barnes & Gillman's tournament, Des-chre-shos-ka Island, Detroit, Mich.
Manufacturers' and Dealers' Association tournaments:
Baltimore, Md.—Second week in March.
Staunton, Va.—Second week in April.
Savannah, Ga.—First week in May.
Pittsburgh, Pa.—Second week in May.
Brooklyn, N. Y.—Second week in June.
Watertown, N. Y.—Fourth week in June.

DRIVERS AND TWISTERS.

AFTER the Class—Lumbreyer match at Dexter Park there was any amount of "shoot talk" indulged in on all sides. The most of it came to naught, as usual, although there was one match which was made. This was between L. Helgins, of Brooklyn and Frank Class, of Pine Brook, who will come together at Dexter Park on Thursday, March 15, in a match at 100 live birds each for $100 a side. Each man will shoot from the 30yds. mark. Class will use a 12-bore and Helgins a 10-bore.

* * *

E. D. Fulford and Frank Class also arranged to shoot a match at 100 live birds for $250 a side, the contest to take place to-day on the Marion grounds, but this has been postponed as Fulford, on Monday, started for New Orleans to take in the Mardi Gras festivities and also to shoot at the big tournament to be held there. This match was announced by the lay press all over the country and the chances are that a great many people will make a "wild goose" chase to Marion. Fulford had no intention of going away until last Saturday, when he suddenly resolved to make the trip, although he had previously arranged to shoot at John Erb's on Washington's Birthday in company with J. L. Brewer. As a result he has caused disappointment at two different places this week. He has pledged himself to shoot a match with Class upon his return, which will be within three weeks.

On all hands one may hear expressions of approval in regard to the action of the Interstate Manufacturers and Dealers' Association in refusing to confine clubs to the use of any particular target. This will not only enlist more clubs, but will also attract to the Association a larger number of members than could have been secured under the old rule. With Hal. Penrose at the helm, I predict for the Association the most thriving season in its history.

* * *

The third monthly shoot of the Union Gun Club will take place at Springfield, N. J., on Tuesday, March 2, and a big tournament is expected for the prize contest, at 25 Keystone targets per man. In connection with the club shoot are seven programme events, as follows: Ten singles, $1 entry: 5 pairs, $1; 15 singles, $1.50; 10 singles, $1; 5 pairs, $1; 15 singles, $1.50; 20 singles, $2. This gives an abundance of shooting to all who attend. The 10:10 train on the D. L. & W. road from New York drops visitors at Millburn in good time to hack to the grounds and enjoy the sport.

* * *

To-morrow and Saturday will be big days at Frenchtown, N. J., when a live-bird tournament will be held by William Apgar, of Apgar's Hotel. To-morrow's big attraction will be a contest between teams of ten men each, representing Hunterdon and Mercer counties respectively, each man to shoot at 10 live birds, under Hurlingham rules, for a wager of $100 a team. This is expected to be a "werry" warm contest, as each county will turn out its best talent. An abundance of live birds are at hand and a royal good time is assured to all who attend.

* * *

What a mustering of the clans there will be at Baltimore week after next at the initial shoot for 1892 of the Interstate Manufacturers' and Dealers' Association. And what a ge-lorious chance for those whom Br'er Hough ironically terms "space writers" to fill up se-ver-ial pages a day in the lay press anent the opinions, pro and con, on the new classification! But who cares a straw how many shekels are gathered in by the aforesaid "space writers" so long as they succeed in contributing a bushel or two of advertising a day to the Association.

* * *

The members of the Roseville Gun Club, of Newark, N. J., who have a well-appointed house and grounds in rear of John Erb's on Bloomfield avenue, are enthusiasts in trap work. On Feb. 17 half a dozen members gathered at the grounds, and after forming two teams they proceeded to demolish clay pigeons, the understanding being that each man was to shoot at 50 targets, and the losing team would have to "pony up" for suppers for the party. The result is here given:

Albert Whatton	33	Chas Hughes	29
Alfred Whatton	33	B A Rist	28
Jacob Gantz	31—97	Geo Huff	23—80

The suppers were eaten at Rist's Hotel.

* * *

Half a dozen enthusiastic members of the Leonia (N. J.) Gun Club spent Washington's birthday in shooting at artificial targets on the club grounds, the party comprising Captain Henry R. Goesser, P. P. Cluss, Geo. Gladwin, Dr. Welchan, Wm. Ely and H. W. Thompson. They shot about fifteen events in all, the honors resting about even. A number of straight scores were run up, notwithstanding a tricky northeast wind, this blowing across the grounds. A good lunch was at hand, and taken as a whole the affair was a very enjoyable one.

* * *

The grounds of the Roseville Gun Club, in the rear of John Erb's Newark grounds, were the scene of some lively work at clay-pigeon shooting on the anniversary of the birthday of the immortal George. A number of ten target sweeps were shot in which the scores ran as follows: M. Fuerth 6, 7; S. Castle, Jr. 8, 5, 9, 7, 10, 6, 9; M. Barley 5, 3, 4; J. Barley 6, 6, 5; Alfred Whatton 9, 6, 7, 8, 7, 6, 8; J. Gantz 7, 4, 6, 7, 6, 4, 7; Irving Castle 6, 7, 9. Refreshments were at hand and everybody had a pleasant time.

* * *

On Washington's Birthday a sort of a let-us-go-to-the-country-and-get-a-breath-of-fresh-air feeling possessed a half-dozen members of a prominent social club of Newark and prompted them to drive out over the Bloomfield to Pine Brook Turnpike, until they found themselves in front of the popular hostelry of Frank Class. Of course they had to stop and warm their toes in front of Frank's big range, and so inviting were the accompaniments that the teams were stabled and the party proceeded to enjoy their outing. Everybody that goes to Frank's becomes imbued with a shooting fever, and the aforesaid party was no exception to the general rule, so the best part of the afternoon was spent in and about the shooting-box, which is on the opposite side of the road from the hotel. The scores cannot be given in full, owing to the fact that the work of some of the party was of such a high order that, were the scores published, the shooters would be deluged with offers to give exhibitions. What was in reality a fine exhibition of high-grade shooting was that of the Berry brothers, who in former years are said to have been gay and festive Western cowboys During the afternoon Captain Jones, of Newark, and Frank Class, of Pine Brook, had a friendly race at 30 birds each, for practice. The birds were a fine lot, and needed "a lot of killing" before they would stop, needless Class grassed 28 to Captain Jones's 26. Taken as a whole, the party pronounced the day one of the most enjoyable they had ever spent in the country at this season.

* * *

Charles Antoine, of the Chicago sporting goods firm of Von Lengerke & Antoine, has been in New York and vicinity for several days, making friendly calls on his old friends and acquaintances. "Charley" is an old Hoboken man, a genial, wholesouled chap, a first-class wing and trap shot, an enthusiastic fisherman, a hustling business man, and what more need be said. A man with these qualifications needs no other introduction in any country and company. He and Oswald Lengerke, the old-time manager of the New York store of "V. L. & D." are doing a thriving business in the windy city, beside which they semi-occasionally face the traps and hold up their end in great style whether shooting at feathers or crockery.

* * *

And speaking of the Von Lengerke boys "just reminds me!" I wonder if there is on this terrestial sphere a quartette of brothers that could carry the trap-shooting honors away from Herman, Justus, Oswald and Carl either at live birds or artificials? Or in the field either? I doubt very much if they are in any danger of being defeated in a contest, as families, with "four boy shooters" are few and far between.

* * *

A wish has been expressed for an open sweepstake at 25 live birds per man, $20 entry, to take place at John Erb's "Old Stone House" grounds in Newark, N. J., on some day other than on a holiday or a Saturday, a number of lovers of the sport being unable to leave their business on either of those days. I am pleased to state for the benefit of the fraternity that such a contest will take place at the above place on Thursday, March 31, beginning at 1 o'clock P. M., and that it will be open to all comers. The birds will be good enough to suit the most fastidious. It is expected that a number of Connecticut and Pennsylvania men will be present on the above occasion.

* * *

The last issue of the *Sporting Times* published a splendid picture of Jacob Pentz, the veteran journalist and secretary of the Newark Gun Club.

* * *

The match between Elias Helgins, of the Parkway Rod and Gun Club, and Frank Class, of Pine Brook, to take place at Dexter Park, Long Island, on Tuesday, March 15, is attracting considerable attention in trap-shooting circles. Helgins is conceded to be a fine one-barrel shot, and as he will use a 10-bore gun from the same mark as his opponent, who uses a 12-bore, a close finish is anticipated.

* * *

In last week's issue we announced the election of officers of the Elizabeth (N. J.) Gun Club, and now we have to chronicle the formation of the Elizabethport Gun Club, which will hold forth for live bird as well as target shooting on the grounds near the Elizabethport station of the Port Reading Railroad. The club was organized on Feb. 18 with the following officers: President, J. J. Liddy; Secretary, D. Sullivan, Treasurer, T. F. McBride; Trapper, D. Clark. The club held its opening shoot on the 22d inst. and some scores were made.

Rochester Rod and Gun Club.

THE fellowing scores were recently made by the members of this organization, at 10 Peoria birds, 5 traps, 18yds, rise, expert rules. C. Smith 5, Peck 9, Truesdale 4, F. L. Newton 7, J. Morris 5, W. Rissinger 4, Babcock 5, Hicks 9, Holton 6, J. Rissinger 7, Fulton 4, Barhite 5.

CHICAGO TRAPS.

CHICAGO, Ill., Feb. 20.—When Col. Felton counts two targets which he made a couple of days ago at Watson's Park, with his own and only Scott gun, he will smile. Then he will laugh and hug himself, and decide to publish the targets. He will start toward the door, but will pause, looking puzzled and then troubled. Then he will grow anxious, and will wear out a pencil trying to see how many times 650 goes into 409, or something like that. As figures cannot lie, he will see plainly that he has put about 160 per cent of the entire charge inside of the 30in. circle at 47yds. When convinced of this, he will say. "If it had been any other gun but my Scott, I wouldn't have believed it."

The facts about Col. Felton's target are as follows: He thought he would target his gun, and so announced. He tacked up his paper and turning, walked in toward the score. Shooting was going on about the place all the time. Roll Organ—whom somebody will lay for yet—stood behind a shed, and unseen by Col. Felton, fired a charge point blank into his target. Col. Felton took careful aim and fired also, although he didn't know it was also shot. The Colonel could scarcely conceal his joy, but he thought he would try it again so as to make sure there was no mistake. The second target was better than the first, for Mr. Organ repeated his trick. Then Col. Felton confidently announced that he had the best gun on earth.

"I'll give you $500 for that gun," said Roll Organ; "I never saw a pattern like that."

"Sir," said the Colonel, "$1,000 of the best money on earth would not purchase that gun from me at this moment. I consider it phenomenal."

It is a little phenomenal. To-day everybody in Chicago knows this joke except Col. Felton, from whom it has been kept religiously.

Roll Organ once served Geo. Hofmann identically the same lowdown trick, when he was targeting his gun in just the same place. To this day George never would believe it, and he can't understand the lack of enthusiasm over his phenomenal target.

Next Thursday Fort Dearborn Club, of Chicago, will entertain the Milwaukee shooters at a banquet, Thursday evening, local shooters are also invited.

I mentioned that Mr. Shepard and Mr. Dicks went over to Milwaukee last week. They won one and lost one tray. The weather was cold, with wind. It being a regular club day the birds ran short, and instead of a 50-bird race Messrs. Shepard and Friese shot at only 25 birds. Dr. Carmichael scored a victory over Mr. Dicks for Milwaukee, but Mr. Shepard evened matters and brought out the Chicago flag ahead. Following are the scores, which got in too late for this week's paper:

First Match.

Dr Carmichael. .1100111111111110011010110111101010111111010011111—37
C B Dicks .....0111101101011011111010101010011110100100011110111111—32

Second Match.

Friese.....1110010111000101011110111—16
Shepard.....1111101110101110111111111—21

The birds in the last match were retrieved by dogs, and this fact lost Mr. Shepard a bird or so.

A very pleasant time is expected when the Milwaukee boys are here this week.

Mr. J. F. Thompson, of the Fountain Gun Club of New York, has spent some days in Chicago this week, and it is thought he is an emissary sent to spy out the character of the John Watson's birds, possibly for club purchasing and possibly for match making reasons. The papers announce that he represents Mr. E. D. Fulford, but I have no assurance of that. In an earlier item sent in but not yet published, I believe, I stated that the Riverton Club, of Philadelphia, had been purchasing a number of birds here lately. As this has been done in several lots the inference is that they were found good. The total number so purchased so far is 3,150.

The study of the quality of birds is an interesting one, but after all, quality is an unknown quantity. I have been much interested in studying the scores made by Mr. Fulford as shown in the issue of FOREST AND STREAM for Feb. 18, especially in view of the remarkable statement made in the issue preceding that, to the effect that Mr. Fulford had been seen to kill 99 out of 100 of "as hard birds as ever left a trap," and that when "using his second barrel four times only." We may, perhaps, do well to look at the performances of Mr. Fulford on Saturday, Feb. 13, when he is reported to have said to friends, "If you want to see some good pigeons and judge for yourselves whether I am in good form or not, come up to John Erb's at noon on Saturday;" also on Thursday, when, as stated, "the day was cold and raw with a light wind from the left-quarter, and the birds as a whole were by no means a crack lot." The report of the Saturday shoot states of Mr. Fulford that "his form was perfect."

Shooting in the above races, Mr. Fulford scored, counting in his first string, 130 birds, entire, precisely at a gait of $90^{10}/_{13}$ birds to the 100, and used his second barrel 60 times, or oftener than once to each 3 birds. Counting in Tuesday's shooting with the above, when Mr. Fulford lost the two matches against 94 and 92, and tied Mr. Collins, it is seen that in the three strings Mr. Fulford shot in all 280 birds. He killed in all 247. His average was $88^{3}/_{14}$ per cent. He used his second barrel 109 times, or once in every $2^{4}/_{5}$ birds, say. These were, some of them, as hard birds (may we presume?) as ever left a trap, and Mr. Fulford was in form.

We in the West, having been brought up without many advantages, don't know much about pigeon shooting, or how to get up a match, but we are the best-natured people on earth, and are willing to learn; and we do love, in our rude way, to see a good, pleasant, friendly, gentlemanly contest of skill at the traps. It is regretted that it now seems unlikely that we shall see such a one between the East and the West. It will be none the less interesting, however, to cast a backward glance at the three scores which brought Geo. Kleinman, the proposed Chicago man, into prominence, those with which he defeated Mr. Elliott three times. These scores were 91, 92, 91, I believe, or an average of $91^{1}/_{3}$ birds to the 100. One of these races was shot in a gale of wind, on birds which in the West are called hard.

Of course, this brings us back to the original question as to the actual quality of birds that are called hard. This cannot be established. What John Watson could do at carefully picking 100 birds or more is not known. The birds bought by the Riverton Club were bought on the market. Market birds are not much shot at Watson's Park. We are left much in a quandary as to what is the natural home of the hard bird, what its territorial restrictions and what its actual unit value. Therefore, equally involved in obscurity must remain the question of the relative values of Geo. Kleinman and Mr. Fulford, had George kept his health and form and had the two met here.

There is little talk of the proposed match between Mr. Fulford and Mr. C. W. Budd, at 35yds., any bird gathered less than 12yds. from traps scored lost. With the last clause off, the match might be arranged. Much pow-wow is weariness. E. HOUGH.

Excelsior G. C. Beats Closter G. C.

AN interesting team shoot took place at Pearl River, N. Y., on Feb. 10, between teams of 12 men each from the Excelsiors, of Pearl River, and the Closter Gun Club. Each man shot at 25 artificials. The scores are here given:

Excelsior Gun Club.		Closter Gun Club.	
F Post	20	J Hoffman	14
J J Blauvelt	15	P Cottignon	9
W H Jersey	13	Fenner	10
C Friedmann	22	W Lindermann	18
E Debaun	18	E Ferdon	17

No. 8: Blauvelt, Jr. 9, Van Riper 8, Post 7, Debaun 7, Striffler 3, Eckerson 3.

Knoxville Gun Club.

KNOXVILLE, Tenn., Feb. 15.—The second regular monthly shoot of the Knoxville Gun Club was held Feb. 13. As the day was cold and raw only a small attendance was present. Our club is the largest in East Tennessee, having fifty-one active members. Our financial condition is strong; treasurer reported at our annual meeting, Jan. 12, the sum of $4000 cash on hand and no outstanding debts. With this surplus as a "nest egg" we contemplate a big three-days' tournament some time in the latter part of May—dates will be announced later—at which we hope to have the pleasure of seeing here a large number of our brother sportsmen, and guarantee they will have a royal time, as we are—modestly speaking—noted for the success attendant on all our meetings. We guarantee good purses as well as merchandise prizes, and do not take out a big per cent for individual averages. Our aim is to make the "pot fat" and not have the usual complaint, "No money even if I shoot a 90 per cent. rate, as the 'pot' is small and can't get my entrance money." So, brother sportsmen, look for our dates and be with us, and if you do not have value received for your money and time, the fault will be with you or "your gun or shells not properly loaded." May is our most beautiful month, the weather fine and strawberries in their prime, and spring vegetables in abundance. "Let's all go," did I hear you say?

We have adopted a scheme for special class prize contests for 1892, and which we think will prove of advantage to any gun club, namely, all members divided into three classes. Class 1 shoot expert rules, equal 90 per cent. men; Class 2 shoot known traps but unknown angles, equal 90 to 80 per cent.; Class 3 shoot known traps and angles, equal under 80 per cent. Shoot 25 targets each man, and the first 25 shot at by a member when he comes on the grounds to be his score from which to determine his yearly average. This average is determined by the executive board at the end of the year, taking the shooter's seven best scores and this average wins first, second and third money in each of the three respective classes. Any shooter making above his average twice advances him to the next higher class and he carries his scores with him. This protects the poorer shooters left in class to fight it out among themselves. All shooters subject to an advancement if the board see they are playing in any class for positions, as this scheme is to promote good marksmanship and not to win money except by merit.

The following scores were made Feb. 13, 5 expert traps, electric pull, gun held any position: Class No. 2, unknown angles but known traps:

A E Bread.....1101110011010101110101110—17
S Van Gilder.....1111101101111111111111011—22

JACQUES, Sec'y.

The Jeannette Gun Club.

THIS enterprising association held its monthly shoot at Dexter Park on February 19, 20 members coming to the scratch for the club shoot at 10 live birds, handicap rises. The weather was cloudy, with a light wind. The birds were a fine lot and no clean scores could be secured. Owing to the scarcity of birds, the ties for the club's class medals will be decided at the next regular shoot. The scores:

C F Offerman	1101210211— 8	H W Coodle	1101210201— 7
F Baar	2200211120— 7	H Hooper	0113011002— 6
G Brunie	1020101001— 6	A J Christer	1101111101— 8
H Winter	1001102111— 7	J F Rottman	0110121111— 8
W Bornhoeft	0111002110— 6	J H Krueger	2100910211— 6
J Vagts	2010111100— 6	W Burger	2010001000— 3
C Boesch	0000010201— 3	C Mayer	0210212222— 8
G E Loeble	0211012121— 8	C Mohrman	2012120100— 6
J Bohling	1120010110— 6	H Reichardt	0100101010— 5
H Otter	1122010210— 7	A Detlefsen	00 withdrew.

C. F. Offermann was referee. The following contests took place on the same day and grounds. Match, 10 birds, $10 a side:

J Vagts	1111101111— 9	J H Krueger	1111110011— 8

Miss and out, $1 entry: Hotten, 222121, won first pot; Baar, 212210; Bornhoeff, 11220; Loeble, 1210; Vagts, 10; Mohrman, Reinhardt, Rottman and Mayer each went out on the first round.

Harry Smith Wins Another Pot.

SATURDAY was a disagreeable day, the weather being cold and raw, and the rain falling in torrents the greater part of the day. Despite this fact, a number of hardy lovers of pigeon shooting wended their way to Wiedenmayer's Park, in Newark, N. J., to take part in an open-to-all sweepstake at 15 live birds arranged by William Kraemer of the Woodside Gun Club. The contest began at 2:30 P. M., the entry fee being $10, and there being eight entries. The birds flew strongly in spite of the depressing atmosphere, and no clean scores could be made. The results:

H E Smith	121112122111c22—14	F Hilfers	1222212222210005—11
E Collins	21212221021212—13	W Hollis	2102211c2000010— 9
P Cockefair	21c2212c2122110—12	H C Koegel	0121020c2121200— 9
W Hassinger	01111105c221111—11	G L Freche	2001220220100302— 8

A five bird sweep followed, the entry fee being $5, with 3 moneys.

Collins	11111—5	Cockefair	11220—4
Smith	21122—5	Hollis	11c20 3
Hassinger	21011—4	Hilfers	10202—3
Koegel	12120—4		

Hollis and Hilfers shot off for third money, in a miss and out. Hilfers killing 5 straight.

In a four bird sweep, $3 entry, Hassinger and Smith took first on 4 each; Hilfers and Cockefair second on 3.

Frank Class in His Old Form.

A COUPLE of hundred people journeyed to Louis Miller's Dexter Park on Jan. 18 to see the return match between Frank Class, of Pine Brook, N. J., and Fred Lumbreyer, of the Larchmont Y. C. The day was as perfect as if made to order, the air being soft and balmy and the sun shining clear and bright, while the wind was just fresh enough to make a bird feel frisky. It was just 2 o'clock when the match began, the conditions being 100 live birds each, Hurlingham rules to govern, for $250 a side, E. Francis, of the Central Gun Club of Branchport, was referee; Jacob Pentz official scorer, while the traps were pulled by E. D. Fulford. The birds were fairly good on the first quarter; on the second and third quarters the majority were very fast, but on the last quarter they were a lot of veritable "duffers," not over a half dozen having ambition enough to fly, even after they were "balled up."

The honors were even on the first 25, each man killing 22, the luck of the birds being in favor of the Pine Brook man. After this the luck ran more even. On the forty-seventh round, when Lumbreyer was two birds behind, his gun broke down and he was obliged to borrow Neaf Apgar's Greener. This is a fine shooting arm, but as Apgar is left-handed the stock is "cast off" to suit him, the result being that it seriously handicapped Lumbreyer. It was the only gun available, however, and he was obliged to take his chances.

Class was in fine fettle, and killed 46 against Lumbreyer's 43 on the half of the race. On the third 25 Lumbreyer "went to pieces," killing but 15, while Class grassed 23. On the last quarter Class killed straight and Lumbreyer got 22, the race ending with a score of 94 for Class and 80 for Lumbreyer. This was the same total made by Class in the first match, shot at Marion, Lumbreyer on that occasion killing 89. In both of these matches it seemed as though a "climbing" bird was a "Jonah" for Lumbreyer, bird after bird of this kind going over the fence.

The scores of the match are given below:

J Frank Class.....0202122210122122111121—22
1221112121221222111112012—24
2102221112202222122232112—23
2121211112212111222111l—25—94

Fred Lumbreyer.....0211222021222121221111—22
1212122211110011012220222—21
2012222120c02220020120c22c2—15
1022222212121220c22212121—22—80

The direction of flight was as follows: Class.—Right-quarterers 18, left-quarterers 17, right-quartering drivers 20, left-quartering drivers 6, right-incomers 5, left-incomers 6, drivers 5, incomers 6, hoverers 6, circlers and twisters 10.

Lumbreyer.—Right-quarters 16, left-quarters 17, right-quartering drivers 14, left-quartering drivers 9, right-incomers 11, left-incomers 7, drivers 3, incomers 2, hoverers 11, circlers and twisters 10.

Class lost 1 right-quarterer, 1 right-incomer, 1 left-quartering driver, and 3 circlers.

Lumbreyer lost 1 right and 1 left-quarterer, 1 driver, 3 right-incomers, 8 right-quartering drivers, 2 left-quartering drivers, and 4 circlers.

Class used a 7lb. 10oz. Greener, 12-bore, hammerless ejector; 3½drs. Schultze powder and 1⅛oz. No. 7 chilled shot in both barrels; Squires' "Tournament" shells.

Lumbreyer on the start used a Scott 7¼lb. 12-bore hammer gun; 3½drs. E. C. powder and 1⅛oz. No. 7 shot in both barrels; Squires' "Tournament" shells. After changing to Apgar's Greener gun he used the same ammunition as above.

Jennie Smith Wins the Medal.

QUITE a number of sportsmen, including such well-known trap shooters as Vane Cockefair, of Bloomfield, John Riggott, of Rockaway, and Fred Lumbreyer, of New York, went to the popular hostelry known as the Pine Brook Hotel, at Pine Brook, N. J., on Wednesday, Feb. 17, to spend a day with Frank Class, the proprietor, and to indulge their taste for pigeon shooting. Fred Lumbreyer took a couple of hundred good flyers along with him. The day was cold and clear with a stiff wind that would make a poor bird good and a good one better.

Previous to the live bird events there occurred a contest at artificial targets which brought to the front a young lady who may possibly become a dangerous rival of Annie Oakley and other famous champions, in the art of breaking artificial targets. Short, and of a chunky build, with hair of raven blackness and magnificent dark eyes that sparkle with humor, Miss Jennie Smith has proven herself to be a cool, calculating shot and well able to hold her own in the company of high class experts. Up to six months ago she had never fired a shot from a gun, but all winter she has been receiving tuition from Frank Class, and that she has proved an apt pupil is shown by the fact of her having broken thirty-five out out of forty keystone targets in a contest for a gold medal on the above day. Miss Smith's opponent was Dan Neafie, one of Boonton's veteran experts. The scores of the match follow:

Jennie Smith.....1001110111111111111111111111101111111101—35
Dan Neafie.....1100011010110101010111001111111101111—28

Shortly before this the following scores had been made in a practice shoot at 50 keystone targets each:

Jennie Smith,...0101010010101111111111011111111111111111111111—42
Dan Neafie.....1100111101101111101111011111011100111011110—38

Next in order after the medal contest came the sweeps at Fred Lumbreyer's selected "screamers." The sweeps were all at 5 birds each, $3 entry, with two moneys. The scores:

	No. 1.	No. 2.	No. 2.
Class	11111—5	11101—4	11111—5
Neafie	10101—3	11001—3	10000—1
Cockefair	11011—4	10010—3	11101—4
Lumbreyer	10111—4	11101—4	11110—4
Francis	11110— 4	11011—4	00001—1
Campbell	11000—2	11001—3	01100—1
Riggott	10001—4	11011—4	11111—2

In the fourth event Riggott and Cockefair killed straight, Lumbreyer and Class three each, and the party dispersed.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Feb. 17.—At the regular semi-weekly shoot of the Rochester Rod and Gun Club the shooting was conducted under the N. Y. S. A. rules. The traps were Keystones and the birds used were Keystones and bluerocks, unknown angles, five traps. The day was bright, but a little windy, and the attendance about up to the average, four strings of birds being shot at:

	First.	Second.	Third.
St John	1010111111—8	1110111111—9	1110110011—7
Weller	1000010011—4	1110111111—8	1101010111—7
Hicks	0011111001—7	1111111010—8	1111111100—8

Perry	6	7	8	6	..						

J. B. MULLAN, Sec'y.

Lakeside Gun Club.

GENEVA, N. Y. Feb. 19.—I send you the scores made by a few members of the Lakeside Gun Club yesterday. The day was delightful, but the number of contestants very small.

First event, 10 kingbirds:

Stacey	1010110011— 6	Stevens	1111100010— 6
Markham	1100001110— 5	Banks	1111111110—10
Robinson	0011111100— 6	Dorman	1010010010— 4

Badge shoot, 9 singles and 3 pairs doubles:

		Class B.		
Robinson	011101100 00 10 11— 8	Banks	111011111 11 01 11—13
Stacey	010010111 10 10 11— 9	Markham	100111001 11 01 01— 9
Stevens	000011100 10 10 11— 7	Dorman	111111101 10 10 11—12
Dey	111011010 10 11 11—11		

Sweepstake, 9 single and 3 pair kingbirds, entrance 80 cents, 4 moneys:

Dey	111111111 10 10 11—13	Robinson	110111111 11 10 01—12
Stacey	111101101 10 10 10—10	Markham	110110110 11 01 01—10
Banks	111111111 11 11 10—14	Dorman	111111100 11 10 10—11
Stevens	110111110 11 10 10—11		

Tie for fourth, won by Dorman.

J. GEO. STACEY, Sec'y.

The Independents Lead the Field.

WASHINGTON'S BIRTHDAY was a great day for trap shooters all over the country, but nowhere was a better time enjoyed than on the grounds of the Woodside Gun Club, in Newark, N. J., where was held the first team contest and open tournament of the recently organized New Jersey Trap Shooters' League, an organization that comprises in its membership nearly every target club in New Jersey, with an aggregate individual membership of over 2,000. This organization was formed by the projectors of the Trap Shooters League of Essex county, N. J., which had such a successful career during 1890, and which was disbanded as per previous agreement when its series of shoots was completed. Judging from the initial contests in which eight club teams were entered, the league is assured of a successful future.

The grounds of the Woodside Gun Club are situate on the banks of the picturesque Passaic at the foot of Riverside avenue; about a hundred yards to the left is Second river and on the opposite side of the Passaic can be seen Kearny Castle, the old home of "dashing" Phil. Kearny, the hero who met his death at Chantilly, and whose memory is revered by men of arms the world over and by Jerseymen in particular. Further down the river looms up the tallest chimney stack in America, that of Clark's Thread Works, which can be seen for miles. The grounds of the club are not noted for phenomenal scores, the shooters being obliged to face the river on the opposite side of which rise the wooded Kearny Hills, when shooting, this giving at times a peculiar foreground. So far as the equipment of the ground is concerned, the term "first-class in every respect" will suffice. There is a well-built, comfortable, and commodious shooting-house, the door of which is always invitingly open when the Woodside boys are around, and through the portals of which Carl Von Lengerke, Ernest O. Geoffroy, Marcus Fuerth, Ferd VanDyke or some other enthusiastic member is always ready to conduct a visitor, whether an active or non-shooter. And the boys have such a persuasive way of asking a visitor to "try a few shots with my gun" that he will soon become a convert to the sport of crockery smashing.

Monday was a glorious day on which to give a good send off to a new organization. The air was cool, but its edge was tempered by the rays of a bright sun, so that one could comfortably loll about the grounds between shots. The wind was a little tricky, and as a consequence the bluerock targets flitted hither and thither at their own sweet will, quarterers becoming drivers and drivers something else. But it was a great day for all that; everybody had a splendid time; the team contests were close enough to keep every one guessing; there was an abundance of refreshments at hand; the Woodsiders were hospitality itself and the officials in charge were untiring in their efforts to make the affair run along without friction. This they accomplished, as is evidenced by the favorable remarks from the out-of-town visitors.

The principal event of the day was of course the team contest, the first of a series for the State championship trophy, to go to the team winning the greatest number of contests out of the entire series, the number of contests to be regulated by the number of clubs that enter, one contest to be held on the grounds of each club until each has had its turn. The conditions called for teams of five men each, each man to shoot at 25 bluerocks, under American Shooting Association rules, the 5-trap rapid-firing system being used. The following clubs entered; Independent Gun Club, of Plainfield; Boiling Springs Fish and Gun Club, of Rutherford; Woodside Gun Club; East Side—Mutual Gun Club, of Newark; East Orange Gun Club; South Side Gun Club; Maplewood Gun Club, of Maplewood, and the New Jersey Shooting Club, of Claremont. The contest was a close one, the Independent Gun Club finally securing first honors, "Little" Neaf Apgar and "Tom" Brantingham pulling them through in great shape by breaking 24 each. The Maplewood team, which won first honors in the Essex County League came in but three birds behind the leaders, while the Woodsides were a dangerously close third.

After the team contest fourteen sweepstakes were shot, all but one of them being at 10 bluerocks per man, $1 entry, two, three and four moneys, according to the number of entries. The 15 bird event had four moneys, the entry being $1.50. Below will be found detailed scores showing the result of every shot fired during the day:

Highland Gun Club.

DES MOINES, Ia., Feb. 16.—Highland Gun Club's regular monthly shoot. The day was rather unpleasant and the attendance light. The following scores were made:

No. 1, 12 single targets, entrance 50cts.:

Langley	1	1	1	0	1	1	1	1	1	1	0	—10
Lowe	0	1	0	1	0	1	1	0	1	1	1	—8
Budd	1	1	1	1	1	0	1	1	1	1	0	— 9

No. 2, 6 singles and 3 pairs, entrance $1:

Langley	1	1	1	1	1	0	—6	Chase	1	1	1	0	1	—5
Howard	1	1	1	0	1	0	—5	Searight	1	1	1	1	1	—5
Kirsher	1	1	0	0	1	1	—4	Allerton	1	1	1	1	1	—5
Budd	1	0	1	1	1	1	—5							

No. 3, 6 singles and 3 pairs, entrance $1:

Langley	0	1	0	0	1	1	—4	Budd	1	1	1	0	1	—5
Howard	1	0	0	1	0	0	—2	Kirsher	1	0	1	1	1	—4
Searight	1	1	0	1	0	1	—4	Allerton	0	0	1	1	0	—3
Budd	1	1	1	0	1	1	—5							

No. 4, medal shoot, 15 single targets:

Langley	1	1	1	1	1	1	1	1	0	0	1	1	1	0	—12
Allerton	1	1	0	1	1	0	1	1	1	1	1	1	1	1	—13
Kirsher	1	1	1	0	1	0	0	1	1	1	1	1	1	1	—12
Searight	0	1	1	1	1	0	1	1	1	1	1	1	1	1	—13

Ties on first medal, won by Searight; ties on second medal, won by Allerton.

No. 5, 12 single targets, entrance $1:

Langley	1	1	1	1	0	1	1	1	1	0	1	—10
Chase	1	1	1	1	0	1	1	1	0	1	1	—10
Howard	1	1	1	1	1	1	1	1	1	1	1	—11

Yearnshaw 0 1 0 1 0 1 1 0 1 0 1 1 —7
Hicks 1 0 1 0 1 0 0 1 1 1 1 —7
Budd 0 1 1 1 1 1 1 1 1 1 1 —11

No. 6, 10 single targets, entrance $1:

Budd	1	1	1	1	1	1	1	0	—9	Langley	0	1	0	0	1	0	1	1	0	—5
Kirsher	1	0	1	1	0	1	—8	Howard	0	1	1	1	0	1	1	1	1	0	—9	

Special match between Yearnshaw and Howard, 15 live birds, for a purse of $20. The birds were first-class and some splendid second barrels were made:

Yearnshaw	2	2	1	1	2	2	2	0	1	1	1	0	2	—13	Howard	0	1	2	0	1	2	1	2	1	0	0	1	1	2	—11

Another match will shortly take place between these gentlemen for a good-sized purse. C. W. BUDD.

Good Birds and a High Wind.

THE "Old Stone House" grounds on Bloomfield avenue, Newark, N. J., drew a big crowd of people on Feb. 22, the majority expecting to see an exhibition shoot between E. D. Fulford and J. L. Brewer. The former, however, had departed for New Orleans and the latter was probably at Clayton, N. J., hence the crowd was disappointed. They were well repaid for their trouble, however, by seeing some good shooting at first-class birds. The opening events were "Jersey" sweeps, 4 birds per man, $3 entry. In the first three there were two moneys and in the final three three moneys. The scores are shown thus:

Smith	0020	1212	1220	2121	11o1	1121—19
Erb	1110	2110	1211	2111	1111	1122—22
Hedden	2121	1110	0112	1122	2222	1122—22
Hollis	1011	0101	1120	1120	1121	1101—18
Castle	1110	0110	1100	1112	1111	1202—18
Collins	....	....	1212	1102	2111	2211—15
Vermoral	....	....	....	1111	0110	0122— 9
Epsen	....	....	....	1121	0011	0021— 8
Canon	....	....	....	....	....	0220— 2
Zeglio	....	....	....	....	....	1121— 4

Then came the big event of the day at 20 live birds per man, $20 entry, Hurlingham rules to govern, with four moneys, these being respectively $55, $41.25, $27.50 and $13 75. The result:

Collins	1	1	1	1	2	1	2	1	2	2	1	2	2	2	2	0	2	2	2	2	—22			
Erb	0	1	1	1	0	1	1	2	2	1	2	1	1	1	1	0	1	2	2	2	—21			
Vermoral	1	2	1	2	1	0	2	1	1	0	1	0	1	0	1	0	1	2	1	0	—16			
Canon	0	0	2	2	1	1	0	1	2	1	0	0	0	1	2	2	1	0	0	1	—15			
Smith	1	1	1	1	1	0	1	1	1	1	1	1	1	1	1	1	1	1	1	1	—24			
Hedden	1	2	1	2	1	2	2	1	2	1	2	1	1	0	2	1	2	0	2	0	—23			
Castle	2	1	2	1	1	1	1	0	1	2	1	1	1	1	1	1	0	1	1	1	—23			
Zeglio	0	0	2	1	1	2	1	1	1	2	2	1	2	2	2	2	2	2	2	2	—23			
Hollis	1	1	2	0	1	2	0	0	1	0	1	0	1	0	2	1	1	0	2	1	—15			
Griffen	2	2	0	1	2	0	1	2	1	0	2	1	2	1	0	2	1	0	2	0	—18			

The next event was at 5 birds, $5 entry, three moneys. The scores:

Collins	1	2	1	2	1	—5	Griffen	0	1	1	2	2	—6											
Castle	2	1	1	1	1	—5	Hedden	2	2	0	1	0	—5											
Smith	2	2	1	2	1	—5	Erb	1	0	1	1	1	—4											
Morris	1	1	0	2	2	—4	Fuerth	1	1	0	0	1	—3											

Then came a few friendly miss-and-out events, $2 entry each, between Smith and Collins, of which the scores follow:

Smith	0	2	1	0	0	0	1	2	1	1	2	1	Collins	0	1	1	2	1	0	2	1	1	1	0

Syracuse Scores.

SYRACUSE, N. Y.—Regular semi-monthly medal shoot of the Onondaga County Sportsmen's Club on their grounds at Maple Bay. A strong and cold wind from the northwest drifted the snow and made everything uncomfortable. The shooting under the circumstances was good. The score:

Class A.

C H Mowry	1	1	1	0	1	1	1	1	1	1	1	0	1	0	1	1	1	1	1	1	1	1	1	—43
Courtney	0	1	1	1	1	0	1	0	1	1	1	1	1	1	0	1	0	1	0	1	1	1	1	—40
C Becker	1	1	1	1	1	1	1	0	1	1	1	1	1	1	0	1	1	1	1	1	1	1	1	—43
Holloway	1	1	0	1	0	1	1	1	0	1	1	1	1	1	1	1	0	1	1	0	1	1	1	—41
Hookway	1	1	1	0	1	1	1	1	0	1	0	1	1	1	1	1	0	0	1	1	1	1	1	Withdrew.
C Walters	1	1	1	1	1	0	1	1	1	1	1	1	1	0	1	0	1	1	1	1	1	1	1	—43
Chase	1	1	0	0	1	0	1	1	0	0	1	0	1	1	0	1	1	1	1	1	0	0	0	—31
Mosher	1	0	1	0	1	1	1	0	1	1	1	1	1	1	1	0	1	1	1	1	1	1	1	Withdrew.
McMurchy	1	1	0	1	0	1	1	0	1	1	0	1	1	1	1	1	1	1	1	1	1	1	1	Withdrew.
Ashton	0	1	0	0	0	1	1	0	0	1	1	1	0	1	0	1	1	1	0	1	1	0	0	Withdrew.

Class B.

King	1	0	1	1	1	1	1	1	0	0	1	0	1	1	1	0	0	1	1	1	0	1	1	—38
Le Strange	1	1	0	0	1	1	1	1	0	1	0	1	1	1	1	1	1	0	0	0	1	0	0	—25
J Dennison	1	0	1	1	1	1	1	1	0	0	1	1	0	1	1	0	1	0	1	0	1	0	1	—36
Thompson	0	0	1	0	1	1	0	1	0	0	1	0	0	1	0	0	1	0	0	1	0	0	0	—25
McMasters	0	1	0	1	0	0	1	0	1	1	1	1	1	1	0	1	0	0	0	1	0	1	0	—29
D Walters	0	1	1	1	1	0	1	0	1	1	0	0	1	1	0	1	1	0	1	1	1	0	1	Withdrew.
Williams	1	0	0	1	1	1	1	1	0	1	1	1	1	1	0	1	0	1	1	0	1	0	1	Withdrew.
Petit	1	0	1	1	1	1	0	1	0	0	1	1	1	1	1	1	1	1	1	0	1	1	0	Withdrew.

In Class A the shoot-off was very close and exciting to the finish Mowry finally winning by one bird:

Booker	1	1	1	1	1	1	0	—9	1	1	1	1	1	1	1	0	—9							
Mowry	1	1	1	1	1	1	1	—9	1	1	1	1	0	1	1	1	—9							

C. Walters also scored 43, but having already won a medal he was handicapped 2 birds; King won Class B medal.

Team Shooting at Plainfield.

ON Feb. 17 half a dozen members of the Independent Gun Club, of Plainfield, N. J., gathered at the club grounds to test their nerves by shooting at Keystone targets. The weather was very cold and a strong wind bothered the shooters in holding on to the light saucers. The main event was a contest at 25 targets per man between two teams of three men each, the targets being thrown from three traps, at unknown angles. Warren Squires was referee. The result of the contest is best shown by the following figures:

Voehl's Team.		Trust's Team.	
Geo Voehl	11	Gus Trust	13
C Smith	15	T H Keller	19
Wm Force	10—36	Wm Pierson	13—45

Voehl's team was not content to yield the palm to the conquerors, so the contest was repeated, the result being reversed as follows:

Voehl's Team.		Trust's Team.	
G Voehl	13	Gus Trust	11
C Smith	16	T H Keller	17
Wm Force	17—46	Wm Pierson	9—37

Oneida Gun Club.

ONEIDA, N. Y., Feb. 22.—Side shoot, Captains Petrie and Markham, match at 25 singles, five traps, unknown angles:

Petrie	1	1	0	1	1	0	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	—20
Maxwell	0	0	0	1	1	1	0	1	0	1	0	0	0	0	1	1	1	0	1	0	0	0	0	—13
Ransom	1	1	1	0	1	0	1	1	1	1	1	1	0	0	1	1	1	1	1	1	1	1	1	—21
Bailey	0	1	0	1	0	0	1	0	0	0	1	1	0	0	0	0	0	0	0	0	0	0	0	—8
Markham	1	1	0	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	0	—22
Devereux	1	1	1	0	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	0	—23
M Cavana, Jr	1	1	0	1	0	1	1	1	1	1	0	1	0	1	0	1	1	0	1	1	0	1	1	—18
Carter	0	0	0	1	1	1	0	1	0	1	1	0	1	0	1	0	1	0	1	1	1	1	1	—14—77

J. M. MARKHAM, Sec'y.

The Union Hill Gun Club.

THE Union Hill Gun Club held their regular shoot for their club badge on the grounds opposite the race track, at Guttenberg, on the 22d inst. The club members were on hand in full force, and did honor to themselves as well as to their guests. This is a young club, having shot in public as a club but a few times, but the scores below will show that they have among their number several that may well rank with older and more experienced clubs. There was in the earlier part of the shoot a strong biting wind from the traps, left-quartering toward the shooters' score, that made some of the shooting very difficult, for the birds would jump at the pull of the string and be several yards away before a gun could be placed to the shoulder. This club deserves especial credit as being one among the few clubs that shoot under Long Island or, as we claim, American rules. Gun below elbow until bird is on the wing, and under no circumstances a bird to be shot unless in the air. Under these circumstances the scores are more than good. Hughes, Waller, Underneyer, 27yds.; others 25yds. Mr. Benson filled his part as referee to the satisfaction of all. After the shoot the club and their guests betook themselves to the hostelry of Mr. Sullivan, a member of the club, where a generous collation awaited, both solid and liquid. Some spicy speeches were made, and Mr. Burton favored the good-natured assembly with several songs, that were repeatedly encored. Score:

J Woolington	0	2	2	2	1	2	—9	C Woolington	0	0	1	1	2	1	3	2	—7							
J Hughes	1	0	1	2	0	2	—6	I Berkerey	0	2	1	2	0	1	1	1	—8							
J Waller	2	1	2	1	1	2	0	—8	A Johnson	1	0	1	1	1	2	2	—9							
J Mehl	1	0	1	0	1	0	1	1	—6	L Bremmer	1	1	1	1	2	1	2	1	—10					
L Westervelt	0	1	2	0	1	2	0	0	—5	F Rinn	0	1	1	2	0	0	1	1	—6					
Dernneck	2	1	0	0	2	1	0	0	—6	J Moylan	0	0	1	2	1	2	0	1	—5					
H Underneyer	1	2	1	1	1	1	1	0	—9	T Lennon	0	1	0	0	0	1	1	0	—4					
T Hughes	0	1	1	1	2	2	2	2	—9	P Sullivan	1	0	1	2	2	2	1	0	—6					
I B Collins	2	1	1	2	0	1	1	0	—9															

Previous to the club shoot a match at 10 birds each was shot between J. J. Maher and under-sheriff of the county, and Mr. Sullivan, proprietor of the Guttenberg hostlery. That attracted considerable attention, in fact, drew a very respectable crowd from the Jersey City Heights part of the city. Mr. Maher won the match and was decorated with a flaming badge of green and gold that nearly covered his manly front. Mr. Berkerey shot a 5½ hammerless and Mr. Collins made some more than good shots with a $10 gun that had been thrown aside as played out years ago.

Auburn Gun Club.

AUBURN, N. Y., Feb. 19.—Inclosed please find the scores of the last two badge contests held by our club, 20 singles:

Class A.

Devitt	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	—20

Fly-Fishing & Fly-Making

FOR TROUT, BASS, SALMON, Etc.

By J. HARRINGTON KEENE.

With plates of the actual material for making flies of forty-eight varieties. Illustrated, second edition. Revised and enlarged. Price, $1.50.

This is a new edition of a work that has already proved a great success. It is first of all practical; the instructions are plain and full. Numerous illustrations make every step clear. The actual specimens of materials show precisely what the fly-tyer requires.

FOREST AND STREAM PUBLISHING COMPANY,

PAWNEE
HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

"WITH FLY-ROD AND CAMERA."

By EDWARD A. SAMUELS,

PRESIDENT OF THE MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION.

This superb volume, in the preparation of which author and publishers have been long engaged, is now ready. Of the text, which relates chiefly to salmon fishing on the famous rivers of Canada, it is sufficient to say that it is from the pen of one who is a master of the angler's craft. The vivid pen-pictures of camp life and fisherman's luck are drawn with a firm hand. This is the work of no novice. From the first page to the last it is seen that the chapters have been written out of a full experience.

The illustrations are of a character fittingly to supplement the text. They are full-page reproductions, by a marvelously faithful half-tone photo-engraving process of Mr. Samuels's own invention, from photographic negatives made by the author for this work. They picture all the phases of Canadian salmon and trout fishing, with far-famed scenery and views of the quaint old towns through which fishermen pass on their way to the salmon streams.

The work has been prepared in the most luxurious style, printed on heavy plate paper, and elegantly bound in cloth and gold, with gilt top.

Size of page, 7x9½in.; 477 pages. Price $5.00. Sent postpaid.

FOREST AND STREAM PUBLISHING CO.,

London: DAVIES & CO., 1 Finch Lane, Cornhill. **318 Broadway, New York.**

The Chubb Eight-Strip Split Bamboo Rods are pronounced by Anglers to be the "King of Rods;" they are unexcelled for quality of material, workmanship, beauty and balance. Printed guarantee goes with each Rod which warrants them for one year. Rods are put up in an elegant case.

Price each, $15.00.

All lengths, weights and styles are described in our New Chubb Catalogue of Fishing Tackle for 1892. The Catalogue also contains elegant Lithographic Plates of Split Bamboo and Lancewood Rods, and over 100 varieties of Artificial Flies in colors, and describes, illustrates and gives prices of Fishing Tackle used by anglers of to-day.

THIS number consists of thirty-six pages, four extra pages being added to make room for a very fully illustrated report of the New York dog show.

THE NEW YORK GAME BILL.

BY a piece of gross stupidity on the part of somebody in the post office, a special-delivery stamped copy of the New York Game Bill, mailed to us from Albany on Tuesday and plainly addressed, turns up at the last moment before we go to press. It bears the legend "Missent." This was mailed to us fresh from the printer's hands, and we had hoped to give all the important sections in full to-day. Owing to the postal blunder, we are compelled to substitute for the full text a hasty summary. The sections relating to game, fish, birds and animals will be printed in our issue of March 10.

From the digest given on page 200 it will appear that the Assembly Committee has adopted many of the recommendations made by the Syracuse convention. There yet remain many of the original features, of which disapproval was then strongly expressed by the sportsmen of the State. For instance, while the general woodcock season is made to open Sept. 1 in certain favored counties, the date is put a month earlier, Aug. 1. The Syracuse convention asked for the entire abolition of spring shooting; the bill permits shooting to March 1, and on Long Island to May 1. The convention asked that robins should be protected at all times; the bill permits them to be killed; so with does.

On the other hand, very many and most important suggestions were adopted, and the Gould bill as reported by the committee is distinctly a more reasonable, adequate and effective measure as a direct result of the Syracuse meeting. So much a hasty examination discloses, not only in the outlined portion of the bill, but as well in the sections providing for prosecutions. The practical experience of such organizations as the Anglers' Association of the St. Lawrence River and the Anglers' Association of Onondaga has demonstrated the strong and the weak points of this part of the law, and the Syracuse recommendations adopted by the committee are such as will render game and fish protection more effective when this bill shall become a law.

Next week we shall present a careful comparative analysis of the Gould bill and the existing statutes.

The Committee of Fifteen delegated by the Syracuse meeting to present the recommendations of that meeting before the Assmbly committee were given a hearing on Wednesday evening of last week. There were present Messrs. MacGregor, Chase, Van Cleef, Hookway, Pond and Gavitt. Representatives were present from Long Island, Albany and elsewhere. Mr. MacGregor and his associates made a strong and forcible plea for the adoption of the changes urged by the convention, but were no less strenuous in asking for the adoption of the Gould bill even if its final form should be a compromise. They reflected in their addresses the spirit which animated the convention—protection, all practicable, for the general good.

"BOSS McLAUGHLIN SAYS SO."

THE Long Island game season provided by the Game Bill, as reported from committee, will open on Nov. 10. The adoption of that peculiar date has been explained to us by this little story:

At a recent hearing before the Assembly Committee on Game Laws, a certain well-known lawyer from New York city was arguing for Nov. 1 as the opening date on Long Island. He might as well have spent his breath on the towers of the Brooklyn Bridge. "Boss McLaughlin wants the season to open Nov. 10," said one of the committee, interrupting him, "and whatever Boss McLaughlin says is going to be done."

In theory game laws are founded upon the necessity of protecting wild creatures in their seasons of breeding, immaturity, weakness, helplessness or unfitness for the table. In practice, the sportsmen of Long Island have their game laws determined by the arbitrary and impudent dictation of a political "boss."

Is not this a pretty kettle of fish?

CHEAP AMMUNITION.

IT sounds odd for any one having the least knowledge of rifle matters to suggest the use of two various sorts of ammunition for the same gun, one to act as a sort of practice firing, the other being reserved for real work. Yet this is just what the English rifle authorities are doing at present and against which there is a very proper protest on the part of some of the shooters. The Martini-Henry ammunition for the service arm is supposed to have 85 grains of powder behind a 480-grain ball, and yet when the London *Field* took 150 charges scattered over the official output of six years, from 1886 to 1891, it found but fifty-four with the standard powder charge, the others varying from 87 grains max. to 80 grains min. Of the bullets only twenty-eight were of exact weight, the others varying from 483½ to 476 grains.

All these objections, serious as they were, became emphasized in the coiled brass cartridge cases which are flimsy and easily twisted out of shape, leaving air spaces between the side of the shell and the chamber, and these are issued simply to save the cost of solid cases, which it is explained are reserved for use in actual warfare. This means that at Bisley, where experts gather in competition of skill, they are compelled to take pot luck with a lot of cartridges which are good for grouping shots on a 6ft. square target, while all the time there are waiting and wasting away by deterioration in the arsenals, and the moment a call is made to arms, the soldiers find themselves supplied with a different make of cartridge, and at once distrust their shooting with any uniformity alongside the scores already made with the practice ammunition.

The man who is practicing wants the very best charge going, in order to get the maximum record from his arm. The soldier before the enemy wants the very best charge in the very best arm if his morale is to be preserved; in other words, inferior charges may be set aside for Fourth of July hurrahs, where noise is a requirement, or for crow shooting in a cornfield, where noise plays a big part; but for an official body to countenance such a short-sighted bit of economy, as the use of a second-rate cheap cartridge to men who are working for records and expect that such practice is of the least value as preparation for real work with another ammunition, is the very extreme of absurdity, and is a penny wise, pound foolish policy, hardly fitting our notions of hard British common sense.

SPRING SHOOTING.

THE poet Whittier said the other day that if he were a young man he would enlist under the banner of some great moral reform, no matter how desperate the fortunes of that cause might now appear, and devote himself to laboring for its success. One of the younger generation of sportsmen now coming on to the stage might enroll himself on the side of the spring shooting abolitionists with perfect confidence in the ultimate triumph of their principles. Nothing in the entire field of sportsmanship is more clearly demonstrated by passing events than that the sentiment against spring shooting is gaining strength. It is stronger to-day than it was ten and five years ago; it will be stronger five and ten years from now than it is to-day. It is gaining ground in a wider territory than ever before. No one who intelligently notes the trend of opinion in relation to such affairs can fail to be convinced that this is the situation with respect to the shooting of wildfowl flying northward to their feeding grounds in the spring of the year.

SNAP SHOTS.

THE fish protectors on the lakes in Central New York have time and again been thwarted in their pursuit of illegal netters by the refusal of keepers of boat liveries to supply boats for their use. To overcome this, the Syracuse convention sought to have incorporated in the game bill a section requiring such boat keepers to furnish boats to the protectors, upon payment of the customary fee for hire. The section, however, the Assembly committee rejected as unconstitutional. This proposed remedy then has failed; but there must be some other, and no one who knows the temper of Mr. Henry Loftie of Syracuse and his associates in the Onondaga Anglers can doubt that they will discover a way to get ahead of the netters and all their allies.

We owe apologies to a large number of persons who have sent to this office asking for special numbers of the enlarged FOREST AND STREAM, and whose orders we have not been able to fill. Since the first of January we have been obliged each week to increase the number of copies of FOREST AND STREAM printed, and each week before the succeeding day for publication we have found ourselves without a single copy of the paper in the office. We have not been able to gauge the additional orders so as to keep the supply up to the demand. This week we are printing 1,300 copies more than last week, and we trust that this will enable us to fill all orders which we may receive before next Thursday.

We print to-day in advance of its official publication the current report of the Minnesota Game and Fish Commission. The document is of added interest because it is the first report given of the Commission's work since the scope of that work was so widened as to comprise also the enforcement of the game laws. The limitations hampering protection in Minnesota are shown to be substantially those which govern elsewhere—public indifference; the greed of those who find profit in inciting to unlawful acts; the obstructions put in the way of the law by officers sworn to execute those laws.

The tarpon season has so far been moderately successful at St. James City, Fla. More fish have been taken at Fort Myers, the score there up to Feb. 23 counting thirty. A correspondent suggests that visiting anglers will do well to make their headquarters at St. James City, going thence by daily steamboat to Fort Myers, or engaging one of the many very good sloops, which will accommodate four, and living on the grounds.

Chief Game Protector Pond reports that the stories of destruction by the men employed in building Dr. Webb's new Adirondack railroad are without foundation; there has been no crust; the protector has employed special detectives for service in the North Woods; Dr. Webb has coöperated in this; and the tales of slaughter are declared to have been canards.

WESTERN NEW YORK ASSOCIATION.—A bill introduced at Albany by Senator Parsons, from the Cheaper Food Fish Association, of Rochester, incorporates Wm H. Adams, of Cayuga; Wm. Rumsey, of Bath; W. S. Gavitt, of Lyons; John T. Little, of Lockport; E. Bloss Parsons, of Sodus Point; John B. Sage, of Buffalo; Wm. Hamilton, of Caledonia; John H. White, of Albion; Wm. E. Holly, of Holly, and Geo. F. Danforth, Halbert S. Greenleaf, Hulbert H. Warner, Daniel W. Powers, Wm. Purcell, Charles H. Babcock, Lewis P. Ross, George Raines, Wm. F. Cogswell, Wm. S. Kimball, Charles S. Baker, Cornelius R. Parsons, Richard Curran, John A. Reynolds, Wm. F. Balkan, Nathaniel Foote, John R. Fanning and Frank J. Amsden, all of Rochester, as the Western New York Protective and Propagating Association for food and game fish and song and game birds, for the purpose of enforcing the laws relating to the taking and killing of fish and birds, and the promotion of the culture and propagation of fish and birds and the introduction of new species and varieties of fish and game, and the publishing and dissemination of information relating thereto.

The Sportsman Tourist.

A HUNTER'S SONG.

WHEN the icy breeze through the leafless trees
Whistles and shrieks amain,
And breaks their boughs in his wild carouse,
And laughs if they groan in pain;
Then it's oh! to be where he whistles free,
O'er the hollows and steep inclines,
And in boisterous rout whirls the snow about
Where the deer lie under the pines.

There is music to some in the reel's shrill hum
As the line cuts the limpid tide,
And the pheasant's whirr makes the cold blood stir
As he speeds from the brooklet's side;
But it's oh! to hear the echoes clear,
Through the forest's tangled lines,
When the rifle rings and the bullet sings
Where the deer lie under the pines.

When the morning breaks o'er the frozen lakes
And the stars shine pale and cold,
When the moon in the west sinks down to rest
And the night grows gray and old;
Then it's up and away in the breaking day
To the barrens' dim confines,
With pulses steady and rifle ready,
Where the deer lie under the pines.

Let them sing who may of the tropics gay,
Where flowers forever bloom,
And, cloudy or fair, the sultry air
Is heavy with rich perfume;
But it's oh! for the land where the Norways stand,
And through thickets and tangled vines,
The north wind howls and the gray wolf prowls,
And the deer lie under the pines.

ALLAN WOODRUFF.

IN THE MUSCALLUNGE COUNTRY.

[*Concluded from Page 170.*]

ONE day I thought I would go down the river and try the deep holes again. The day promised well, but deceived me sorely. The sun was shining brightly when I started. With rod and camera I pointed my boat down stream. A patriarch of a pike tried conclusions with the No. 6 Skinner in the little lake below the dam, the troll coming out first best. The breeze ruffled the water just right. A better fishing day could not have been imagined. Rowing rapidly to reach a little lake further down and with only a few yards of line out, a 4lbs. smallmouth dashed at the spoon, which was being jerked with great speed through the water. How he fought! For a long time I could not see what I had. He kept up a steady, swift run round and round the boat. It was not a spasmodic fight, but he seemed to take the cold steel in his jaws with the determination to get away from it by a steady pull and fast swimming. The lancewood tip was given all the strain I thought it would bear. The circus went on. That is what it seemed to be. I was ring-master, and the fish flew around the ring. But when he did give up he gave up all over. He suddenly came floating to the top with his spirit broken and his strength gone. He could hardly make a motion after that. About now the sky was cloudy and it began to drizzle. Reaching the lake where I had taken six muscallunge a few days before and had hooked as many more there did not seem to be a fish in the waters. The thunder or something else had sent them to the bottom or into the weeds or had frightened their appetites all away. I got out on the shore and slopped along in the wet grass looking for frogs, a few of which were captured for still-fishing and casting. But the rain came down now in a sharp shower. I drew my boat up under an overhanging pine tree. Near by was an old stub with the heart burned out for about 5ft. from the ground. It leaned away from the storm and made the coziest kind of a tent. In front of it I hastily built a fire and then sat down for an hour or two as comfortable in my narrow quarters as ever I was in my life.

The storm passed, and a hundred yards down stream I caught three magnificent small-mouth bass. They would average 4½lbs., big enough for superb sport. Going back there was an ugly rapid to be surmounted. I went at it *sans culotte*. The water was not cold but the air was, and the stones terribly sharp. The boat was remarkably perverse and it began to rain again. By the time the top of the rapids was reached I was wet to the skin, chilled to the marrow, and badly disgruntled. Why is it that a man does not take his death of cold under such circumstances? He is not likely to, though at home he gets the sniffles if a little draft strikes him.

While we were sitting at the breakfast table one morning the cooks stampeded from the kitchen. It was a little thing that had driven them out. As we cautiously peeked in at the door we were not surprised that Charley and Johnnie the Jew had fled in holy terror. A pretty creature with a small body and lots of hair, glossy black slashed with white, was nosing about in the corners and soon began eating very composedly from the swill bucket. No one seemed inclined to disturb him. He seemed thoroughly at home. He had a certain confidence of bearing which commanded instant respect. When he got ready he went out. Johnnie the Jew said he had seen five early that morning about the camp. I proposed that in the evening we tackle the litter. They had, nearly every night, given some strong intimations of their proximity. Just at dusk one of them came into the "alley." As he went out and around to the warehouse I fired a charge of duck shot at him and missed. It did not seem to frighten the others, however. Going out at intervals during the evening we found and killed seven. I worked the shotgun and the cooks carried lamps with reflectors. It was snap shooting. There was not the best of light, and a moving mark in semi-darkness is not easy to cover, but I had the satisfaction of hitting oftener than I missed. Pity these beautifully marked cats smell so badly. The next morning the boys gathered up the fragrant remains and and had them laid out in a row on the grass. There was a placid look on the face of Johnnie the Jew, as much as to say, "I am not going to be run out of the kitchen by a skunk to-day." There were no mourners for the dead. Their funeral rites were celebrated with rather more joy than sorrow.

With Jim Lawson for guide I went to Pappoose, some ten or twelve miles away. It is the prettiest lake in that region. The trees come close down to the water's edge. There are innumerable arms and bays cutting back into the timber to surprise and delight you as you troll along the shore. To reach it there is a three-mile carry. We had planned to leave our boat in Clear Lake and hire a man living on its shore to carry his birch bark over to Pappoose. This man is one of the characters of that region. He was once a locomotive engineer. Drink lost him his place on the footboard. He has a squaw, a strapping big wench, and a family of little half-breeds. As we came up to the man's clearing the children were on the shore, the oldest a pretty girl of perhaps fourteen, with a pappoose held upon her back by means of a shawl. They acted like frightened young partridges and edged off toward the bush. When we asked for the father they pointed along the shore. After much talk we made them understand that they were to go for him. Into the birch bark canoe they all tumbled, the baby dumped down in the middle, and you should have seen them paddle. If they had been in a race with the best blades of the country I believe they would have held their own. Their father came out of a swamp where they were cutting cedar for a root house, and we were soon ready to start on the trail. Jim had a good-sized pack and was ahead. The man came next with the birch bark canoe on his head. It was a good load for him. His squaw followed carrying a frying pan we had borrowed from her. We couldn't see what she came along for. We soon found out. About half way over, or near a mile and a half from where we started, the man saddled the canoe on the squaw. In about three minutes she swept around Jim and in ten minutes was out of sight down the trail. We couldn't keep up with her. She wasn't a female giant for nothing.

It was late in the afternoon when we put the birch into Pappoose Lake. We were after big muscallunge. Jim thought we would surely get a few good ones. The mellow sunshine of the autumn afternoon was lying across the beautiful sheet of water, making it gleam like diamonds where the breeze ruffled it, and shining upon the distant tree-bordered shores that looked like banks of emerald. So wild and sequestered did the lake look that one could well believe, what is true, that few beside the dusky-skinned Indians have ever launched their boats upon its waters. Under Jim's steady paddle the birch bark glided quietly along the lee shore, and the spoon spun like a bit of whirling sunshine in and out of the shadows cast by the thick standing pines and birches which formed so brilliant a setting for this jewel of a lake. The fish perhaps had caught the spirit of the dreamy, autumnal day. Possibly they were taking a siesta, swinging in grass hammocks down there in the crystal depths and too lazy to touch a troll. Certainly they did not betray their presence to us, save one old patriarch of a small-mouth bass, who found the barbed steel and silk line too much for even his long unmastered strength.

We pitched our tent at night on a point covered with huge pines. A good fire was soon roaring in front of the tent, driving shafts of flickering light among the grim old giants of the forest. How Jim did snore that night! He would have lifted the tent from its stakes if the whole front had not been left open. This let the roaring noise out, and no great harm was done except that I slept little. Aside from Jim's nasal performance the night was painfully still. No breath of wind stirred the mighty pines. Some wild thing, perhaps a porcupine stealing about stealthily in the brush, could be heard distinctly. The wood in the dying fire would snap and fall with a noise that sounded strangely loud in the stillness. The loon's lone note came like a lost soul's cry through the darkness.

Before the sun could get a look over the treetops the coffeepot was boiling and the bacon frying. We were not long in getting ready to tempt the warriors of the waters in combat. But they were not in a fighting mood. In and out of the coves and bays went the birch bark. Along the shore was many a fallen treetop where it seemed the fish might lurk. Casting about them with all the skill I could muster, I failed to get a rise. Toward noon we had worked around the long shore line to the islands near where we first entered the lake. Here we began to find some fairly good small-mouths. On my light split-bamboo they made great sport. Until this morning, I had never used anything but a heavier jointed Japanese cane rod. I had brought along a split-bamboo, quite light, but feared it would prove too frail in hands unused to its lighter weight. But I will never go back again to the heavier rod. In trolling the fish are less likely to hook themselves on the light rod, there can be no doubt about this. But the sport when they are hooked is all on the side of the lighter weapon. Going around one of the islands there came a strike which made me think the grandfather of all the fish in the lake had tackled my spoon. For many minutes he surged about the boat. He would not come close enough to the top of the water to show what he was. Pappoose Lake has some big pike in it, and, from the way in which he kept out of sight, this fish must have been a monster pike. Whatever he was, when he had tired the angler's arm he went his way without asking leave to. The total catch that day was not enormous. A dozen or fifteen bass, that would average 3lbs., was all. No, this was not all, for as we trudged back over the trail that afternoon I remember the hours on that beautiful lake as among the happiest of my outing. The mental pictures which one carries home from the lakes and forests are the most abiding treasures. The day before in Clear Lake we had caught a score or more of pike still-fishing, so that though we did not get the big muscallunge we had gone after, we did not go back empty-handed to the dam.

The very best fish that were caught by the writer and others fishing at the dam at the same time, were taken near at hand. One muscallunge weighing a little less than 20lbs., was taken within a 100yds. of where we left our boats. Every fisherman had rowed past that point twice every day, and hardly thought it worth while to try for anything there. I caught several 'lunge in this lake when I did not want to go far from camp, and they were the best I got, averaging about 8lbs.

Mud Lake, a little despised sheet of water, lying between Clear and Stone, and connected with both, is a good place for everything but pike. I took a number of bigmouth bass there, and can confirm what your correspondent S. W. S. said last week anent the big-mouths fighting qualities. In clear cool water he is vigorous and gamy. It would be impossible for any man to tell which species of bass he had hooked until the fish breaks water. Both will tug like a broncho on the line, leap gamely from the water, and viciously shake the head while in the air until the spoon rattles like castanets in the effort to throw out the hook from the jaws.

The day came at length for unjointing the rods for the last time. It is a melancholy tune when the sport has been good and the appetite for it yet unsatisfied. We bade the boys good-bye, climbed into the wagon and started for the station. In the hope of seeing a partridge on the way, I slipped cartridges into my gun. About half way to the railroad a bird went whirring out from beside a log, presenting a splendid shot. The log lay on the slope of the river bank not more than ten feet away. He went straight away, but, alas, right across the river. What was the use in shooting a bird only to have him fall in the water where I could not hope to get him? And then what happened? As we sat there at least a dozen birds followed the first one, going one at a time. I could not see them until they started to fly and then a few strokes of their wings put them over the swift current. I could look down on their backs and for at least fifty yards they were in plain view, with not a bush or tree branch to get in the way of a sure aim. It took self denial not to pull trigger on them. But I have always made it a rule to shoot nothing merely for the sake of killing, and I could not have retrieved one of those birds under the circumstances. It seems to me that if I go back to that country again I have earned the right to have a chance at the broods those birds may raise next summer. Going back again? Who ever turned away from a successful fishing trip without intending some day to go back and catch the "biggest fellow that got away."

ILLINOIS. RICHARD GEAR HOBBS.

WILDFOWL IN TEXAS.—II.

IT will not do to leave the river without introducing you to our driver, who, I am afraid, was too much like a typical native; that is, "born rather tired," but with a great deal of curiosity and native shrewdness.

Will V. had found Zach Oit, living some distance from the river, and made inquiries about the "raft" and possibility of getting around it, or means of portage, and Zach came down to our camp just as supper was ready. He excused himself from joining us, having just eaten before leaving home, and besides, "didn't hanker arter ducks anyways, liked pork better."

His curiosity, like that of others in this region, was much aroused in regard to our motives in coming down in this section of country, and credulity was shown in his expression (probably justified by our personal appearance after a long boating trip), if not in his speech, on receiving negative answers to his questions of whether we were fishin', trappin' or huntin' ducks for their feathers. He stated, however, on getting better acquainted, that he didn't think we were "low down enough to be fishin'."

After cautious investigation of us and our outfit, he made propositions for the hauling, qualified with the remark, "I reckon that you uns have got money enough to pay me;" and being satisfied on that important point the bargain was closed.

After meeting Zach the next morning at a ferry some three miles below, loading up boat and baggage on a rather dilapidated wagon, drawn by a light team, to say the least about the horses, the twenty-mile portage was undertaken, and there was our opportunity for learning something concerning our jehu.

He claimed to be a genuine cowboy, ruined, so far as his legitimate profession was concerned, by the fencing of pastures during the past few years. He had tried fishing the river and succeeded admirably at that, "but it was a too-low-down business", (and too much hard work, probably), so he had changed to buying chickens, eggs and butter and trading in tinware for a season, and now had been farming for a couple of years.

Zach freely acknowledged he did not like the business and was not very successful, having to buy corn thus early in December, but then he was going to put in twelve or thirteen acres next season. His experiences in farming were amusing enough, yet pitiable, for without doubt no more fertile land or propitious climate can be found in the United States; and energy and practical knowledge are the only requisites for success.

Mast-fattened hogs are plenty on the lower Colorado, however, and our friend Zach will get along all right, and any reader who may take a trip to Elliott's ferry will find him ready and willing to act as guide or furnish transportation.

On Sunday evening, Dec. 6, we launched our boat in the bayou at Matagorda, after the twenty-mile portage over a smooth prairie of very fine land for the most part, given up mostly to grazing. Several visitors came down to see us and our boat, we agreeing, however, that the boat was too small to navigate the bay, and predicting discomfort if not disaster. One good Samaritan informed us where we could find wood and water up the bayou, and then led us to his boat and pointed out a pile of oysters, telling us to help ourselves. Nothing loth, we thanked him and pitched in, taking off the keen edge of an up-country appetite for oysters and carrying a small cargo to our camping place for a later feast. Matagorda Bay oysters are regarded as the best found on the Gulf coast, and some recent shipments to New York have been successful, showing my taste, cultivated on "Rockaways" in my youth, has not become vitiated, when I pronounce the Matagordas equal to any oyster I have ever tasted.

A heavy norther had accompanied us on our portage, and on Monday was blowing nearly a gale, precluding any start and allowing us plenty of time to hunt up water keg, anchor, and other requisites, besides interviewing some of the resident salts in regard to courses and distances on the bays, of which we were perfectly ignorant. We received plenty of advice and directions, for which we were thankful, but which were at once forgotten, and our trip was really made on a dubious course of south and west, stopping where we felt inclined and sometimes where we were forced by stress of weather.

Matagorda, so important a point in the early history of the State, has sadly fallen from its former prosperity, for the bay is continually shallowing, while railroads have provided other markets. Still it would be a grand point for hunter or angler if not so inconvenient to reach.

Tuesday morning, with a moderate wind, we sailed out into the open bay, bound for the oyster reefs, and during

the sail I had opportunity of counting back the years since I had enjoyed the pleasure of handling a tiller or hauling a sheet on salt water, or any open water in fact, and found that twenty-eight had passed. The crisp sea air in my face and the aroma from the marshes greeting my nostrils, brought back the scenes and recollections of younger days, while lessons learned in Long Island bays have not been forgotten, as with perfect confidence our little craft is forced through the unknown swelling waters. Will V. also enjoys the sail, and salt water, but then he has not been long enough away from the coast for the change to come to him as a revelation and a renovation.

Most of the bays on the western Texas coast are beautiful sheets of water, clear and pure, with beaches of shell or shell sand. In some bays, Espiritu Santo especially, small islands or reefs of shell are quite frequent, many of them with mottes of brush, affording fine camping places and good shelter in case of storms arising. Mud flats and sedge marshes, so frequent in tide waters, are the exceptions, and while many bays are shallow the bottom is generally hard and sound. The average tide is only one foot, rising once in twenty-four hours, but continuous winds from one direction have great effect on the water, often changing its level three or four feet.

Reaching the reefs, we found the oyster beds exposed for acres in extent, resulting from the heavy weather.

Some forty or fifty men were hard at work, taking advantage of the opportunity, and joining in we soon gathered all we required, then laid our course for the main land, reaching a beautiful brush motte with wood in abundance. Oyster raw, fried and roasted, and a great many of them, supplemented with ducks brought from the river, comprised our fare for supper and breakfast, while a roaring fire of drift, tempering the sharp air, enticed us to spend the night away from the boat.

Wednesday and Thursday, Dec. 9 and 10, despite some mishaps, afforded as fine sport fishing as we enjoyed on the trip. While cruising along the mainland we discovered an opening in the shore line, and entering, found a bayou some 40ft. wide leading out of a considerable lagoon. Some ducks being about we considered it a favorable place to loiter a few hours, but while trying to get a shot and at the same time to make a landing, by some means the sheet fouled in my gun which was temporarily laid on the washboard and overboard it went, not even leaving a hole in the water to mark the spot. A handy stick lying in the boat was at once thrown on the bank, and the position marked, sail at once taken down, and that gun was to be recovered immediately. The case looked different, however, when the water was found to be about 8ft. deep, bottom muddy, with considerable grass. After anchoring persistent effort was made with the sprit to locate the gun, but the sprit proved too bouyant; then the two lower joints of my rod and a short tip with two fish hooks lashed on securely, were brought into action. At last the gun was located, and while one of us held the boat in position the other grappled. Several hours passed, but then the gun must be had, and after various and sundry catches and slips on the part of both of us, Will V. caught a grip in the guard and the gun was rescued. It was a Winchester repeater; and covered with salt mud and weeds, dripping with ooze, the grip and fore end well scratched, was a woeful sight. The soaked shells from a full magazine were, however, readily thrown out without clogging, and after a thorough washing inside and out in the salt water (our fresh water supply being limited), a good roasting before a fire, and plentiful application of vaseline, the gun worked as well as ever, and continued to do during the remainder of the trip without further attention. The old gun may not be a beauty, but it was honest under difficulties, and the rust spots and scratches are honorable scars, which will serve to recall many incidents of the trip of more pleasurable nature in which the gun took an active instead of a passive part.

While I was engaged with building a fire and cleaning my gun, Will V. took a walk up the bayou and arouud the lagoon, returning in time to eat a meal I had prepared (he never missed being back at meal times). He reported plenty of ducks in the lagoon, but not water sufficient for the boat, and the bayou was full of fish.

Later, while paddling up the bayou, we discovered the fish to be redfish (channel bass) of good size, and amused ourselves by punching several of them with an oar, for we had no thought of their biting in such confined water, although it was deep.

Reaching the lagoon we found it too shallow for the boat, and I decided to try for a fish, but after much work was able to secure only three diminutive minnows for bait; then thinking the "F" silk line on my reel rather delicate for such fish, it was unreeled and a new linen line substituted. The first and second casts cost me a minnow, but with the third I made fast, and during the next ten minutes had sport enough for an all-day's fishing. The bass was out of the water as much as in it, the favorite maneuver being a rush and break, trying to fall upon the line; but the pace soon told, for there was no sulking, and soon Will V., who had returned, had the landing net under him and a 7-pound prize was on the grass.

The bait question had to be solved, so the fish was killed and a piece cut from his silvery side. Will V. was now all anxiety to fish, but too impatient to rig up his rod, taking instead a hand line with some small hooks attached. He had bites, but that was all, for the hooks were stripped off as if they were glass.

In the meantime I was fast to a fish which, having taken as much line from my reel as I could spare at one time, I was now following up and down the bayou, giving him the butt pretty severely. Finally my prize was conquered, and a grip in the gills aided by the net laid on the bank a fresh water channel cat of fully eighteen pounds, but probably fifty minutes had been used in conquering him.

My next fish struck succeeded in breaking the line just above the hooks, and then for some time not a bite was had.

A couple of fishermen from a boat off shore came searching for redfish, and said they would haul a seine in the lagoon (the bayou being too deep) the next morning as the fish would stay all night. They reported the lagoon as generally fresh water, which accounted for the channel cat being present, but the water was unquestionably salt now.

Another strike while they were present again resulted in the loss of hooks, and on examining the line I found it not much stronger than pack twine; and still wonder at my success in taking the fish I did, but great care had been exercised, for as my rod was only an ordinary split-bamboo bass rod with short tip I was afraid to test very hard.

Night being at hand we returned to the shore where wood was plentiful, and soon had a fish fry in progress.

The eating of redfish direct from the water is a new experience to those who are accustomed to eating them only after being on ice, and only a trial, accompanied with a camping appetite, would possibly convince some skeptics that there is a great difference in flavor as well as grain of the flesh. J. V. B.

Natural History.

CATCHING WILD ANIMALS.—II.

YELLOWSTONE NATIONAL PARK.

[Continued from Page 173.]

WHEN bedtime came I tied the calf elk up in the tent with us to protect it from the rain and any wild animal that might come prowling about. I had the calf in one corner and the two dogs in another. About two in the morning the calf got hungry, it got up and began nosing around and calling for its mother. It trampled over men and dogs, until the latter left the tent in disgust. I got up and warmed up some water, mixed a mess of condensed milk, warmed this nicely in a bottle and put a rubber nipple over the top, thinking it would take something to eat. I fooled with that calf for half an hour trying to get it to suck, but it would not. So I tied it up short, made it lie down and turned in, but my troubles had but just begun. It kept me awake all night with its crying. I tried to make it suck from the bottle in the morning, but no. I suppose it did not like the taste of the milk. Dolph and I were in a hurry to pack up and get to Yancey's, where we could get fresh cow's milk. The elk was crying all the time. When the horses were brought up, Dolph suggested that we try the calf with the mare, to see if it could get something to eat there. I held it up, while Dolph held his hand over the mare's eye. As soon as the calf smelt the mare's udder it reached for a teet and went to sucking. The colt came up on the other side, to get some breakfast, too, but we drove it away. There was no difficulty now about feeding the calf, except as to quantity. The mare did not offer to kick, but we would not let the calf come near her until we had a hand over the eye on the side we held the elk, ready to drag it out of danger if the mare showed signs of using her hoofs on it.

We had some little trouble getting it to Yancey's. I did not want to trust it on top of the packs, so I carried, led and drove it the four miles we had to travel. It would follow the mare, but was in danger from the colt, who took a decided dislike to it, kicking at it at every opportunity. So I had to let Dolph go on with the pack, while I came on more slowly with the calf. I had quite a time practicing calls until I found I could imitate one or two so that the calf would understand and answer. Toward the last I had to carry the calf all the way; no easy job, as it weighed about 40lbs.

When we reached Yancey's I tried it with fresh cow's milk but could not get it to drink or suck. Every two hours I tried it, but the stupid thing would not learn. I had to pour milk down its throat to keep it from starving. I had the calf about six days before it learned to feed from a bottle. I found most of the elk calves just as stupid; a very young one would learn to feed in a day or two, while one a week old would be two weeks learning.

For a few days I was busy fixing up one of Mr. Yancey's log cabins, building a large pen and safe shelter for young animals. I was up nights, too, with the calf, feeding it reduced cow's milk, warmed in a bottle over a candle or in a water bath if the fire was not out. I had the elk in a room next to the one I camped in. Its cries during the night would keep me awake; to keep it still I would get up and feed it, when it would quiet down so that I could get a little rest. I had to keep all the animals near by so that I could take care of them if anything disturbed them in the night.

On May 24 Moody, Sam, Dolph and I went out to hunt up horses, and anything in the way of game we could find. I left the elk in charge of a young lady at Yancey's who promised to try and feed it.

We crossed the Yellowstone and followed the Cooke City wagon road to Specimen divide. Moody went to the left, Sam, Dolph and I to the right, to look over as much country as possible. As soon as we approached the crest we found a few cow elk, which did not run off as they usually do, so that we were sure there must be calves there belonging to them. We separated, hunting the ground over carefully. The cows would run off a hundred yards or so, then turn and watch us. If the dogs got any distance ahead of us the elk would circle around on that side. Once, when we all went over a hill, one cow ran up on it to look at us. Just then Woody came up through a hollow close by and said he had found a young elk but no horses. I told him that I had found his horses but no elk, although I was sure there were calves close by. I showed him where he could find the horses, only a short distance further on. He pointed out the tree where the calf was. I sent Dolph to tie it up, while I kept on hunting for more calves. We rode back and forth, hunting all the groves, looking under trees, among the rocks and anywhere that we thought would shelter an animal.

Dolph now joined in the hunt. We worked back over ground we had passed over once when I saw an antelope watching Dolph. She was standing beside a granite boulder in a slight depression. I rode toward her slowly watching her, and looking the ground over carefully. I was sure I had ridden before within 50ft. of where the antelope was now standing, but rode toward her with the intention of looking to see what she was doing there, or whether she had anything for me. When within 50yds. she saw me and started off on a trot. I went at once to the rock and saw two queer yellowish-gray things in the most awkward positions imaginable. The only parts of them that seemed natural were their heads. Those were on the ground right, but their bodies and legs were twisted about, legs sticking out here and there as though they had been stepped on by some huge foot and flattened out. I dismounted, took a small rope and tied it around their necks without either one offering to escape; if I lifted their heads a little they would let them drop back where they had been. They were doing just as they had been ordered, "to lie still and not move under any circumstances." When I had the rope on them I picked them up to stand them on their stilt-like legs, but for quite a while they acted as though their legs were broken. Finally, however, they showed life enough and attempted to run, bounding about and crying pitifully. I picked them up in my arms to carry to where the little elk was. They were two little bucks not over ten hours old, but as bright and pretty as any young animal I ever saw. Having all I could attend to for the day I started Dolph off after a pack horse and outfit to carry the young animals, giving him three hours to make the trip. We were a little over seven miles from home.

I tied the two antelope up in some low brush and made a shelter for them with my gum coat, for I could see showers of hail and rain coming. The little elk was protected by the giant fir, under which her mother had cached her. It was almost impossible to distinguish any difference between the elk and roots, among which she lay. If elk are stupid about some things they are surely able to cache their young where they are difficult to find.

The two dogs seemed delighted with the new pets; Bobby would roll over and over and run around, trying to get them to play with her. She would run up and lick them and then run around in a circle until I drove her away. They were too young for such sport. Leo took a liking to the antelope, but I would not let him come near for fear such an object might frighten them to death. I left her to watch the horse and animals, and hunted around for more young and to learn of likely places where I could find them later. I could see Sam and Moody on the other side of the river next to Slough Creek hunting horses; could see several bands of antelope and a few elk. I watched for Dolph, following the road with my field glasses until I could see him coming on the lope. He was coming fast enough sure. He likes to ride fast, what boy don't? But this time it pleased us both. I busied myself gathering grass and spruce boughs until he got there with Fisher, the pack horse. He had two canvas panniers hung over the pack saddle, and putting a few boughs in one I put the calf in a sack and laid her on the boughs. The other pannier I filled almost full of boughs and grass, spreading it well open with sticks. On the soft spungy mass I placed the two antelope, then threw a long burlap over the whole, tied it down carefully, leaving the elk's head out, and cut a hole so that I could see the antelope. We started off just as a hard shower came up. It rained very hard for a few minutes, beating in the elk's face, so we thought we would name her "Rain-in-the-Face." The antelope were sheltered by the sack and rode very comfortably. The elk got tired holding up her head so rested it on Fisher's neck when the storm passed and went to sleep. Fisher is my favorite pack animal when I have any children, babies, young animals or anything that must be carried very carefully.

We could not travel faster than a walk, so were three hours getting home. The antelope never offered to move. The elk struggled a few times but gave it up and rode safely in. I put the antelope in the room where I lived, not daring to trust them with such big clumsy things as the calf elk. When I offered the antelope their milk in a bottle they took hold at once. While one would be sucking the other would be trying to get hold too, running its little black tongue out—a tongue as black as the rubber on the nipple of the bottle—trying to crowd the other away, or if one was sleeping it would wake up at the noise made by the other feeding and come jumping. All I had to do to call them was to imitate the sound they made feeding; when they heard it they would spring from their beds to the middle of the floor before looking for me. Catching sight of the bottle they would come bleating something like a lamb, not so loud, but more pitifully, their black tongues out ready to take hold of the bottle. Sometimes when I was sitting at the table they would come up and paw and strike quite angrily to attract my attention. I had to feed them, if possible, every two hours during the day and at least three times during the night. They would not let me sleep. When they got hungry they would run about on the floor and try to jump up on the bed, but as soon as they had had a feed they were back in their beds.

We had an open fire-place in the room, where we did our cooking. This was the favorite place for them to lie. It was only by watching them every moment that we could keep them out of the fire. When doing any cooking we would build a fence of boxes about the fire-place. Even then we could not leave them a moment; they would jump against a box, knock it over, and stand close to the fire; if it was a large one even scorching their legs in the hot coals. I used to put water on the fire as soon as we were through using it. They would lie down on the warm ashes unless we piled a lot of boxes in the fire-place. They were so exactly alike I could not tell them apart until one night a candle dripped on the head of one while I was warming some milk for him, giving him a mark he carried until killed six weeks later. I was very much attached to them. When one got sick I thought it was going to die, and I did not leave it all day, but did every thing possible until he was better. They did not show the white marks on the neck and belly seen on older antelope, but the long white hairs were very plain on their rump. These they have the power of spreading out like a fan, which they do when frightened. I can always tell when they are going to run. You will see this white mass of hair commence to widen; then look out, for they are going to start. My little friends would make quite a showing of their white rumps, if they saw anything that alarmed them. They would run about the cabin and slide on the floor when trying to stop themselves. If the dogs happened to be sleeping they would run over them. Bobby would have to get on the bed to get out of the way, Leo used to have to go out doors or stand up to keep out of their path. I could feel the place where their horns were starting. It was just over the eyes, and so close that there is only room for the upper lid between the eye and horn. This enables them to see without showing any part of their body. E. HOFER.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will ma free on application a descriptive circular of Mr. Grinnell's boo "Pawnee Hero Stories and Folk-tales," giving a table of conten and specimen illustrations from the volume.—Adv.

THE VALUE OF NATURAL HISTORY.

THE naturalist is not infrequently asked, "Of what use are your studies? It is true they are interesting; your specimens are beautiful; I have no doubt you find your occupation congenial, but I cannot see that the results are of real value; there's no money in it."

This aspect of the case is so foreign to the student's accepted ideas of the importance of his own especial pursuit, that he may find himself puzzled to make a satisfactory reply. A stranger to the world of finance, he cannot place a money value on subjects which he has been trained to regard only from the standpoint of the scientist. For this reason he attempts a scientific reply, not pausing to think that to the lay mind his explanation will be quite as unintelligible as the investigations which led to the original question.

There are, however, two sides to the question, and every branch of natural history has its economic as well as its scientific aspect. For example, the determination of "geological horizons," the identification and relationships of fossil animals, appear to the popular mind of slight importance as compared with the analysis of minerals; in other words, a geologist is of practical value only as a mineralogist, while as a palæontologist his labors have no pecuniary worth. In a similar manner the ichthyologists may describe innumerable fishes, may study their relationships to past and present forms, and may classify all the known species in order that he may further treat of their life-histories; but it is only when the ichthyologist becomes a pisciculturist that his studies assume a value which can be expressed in figures. Still, the maintenance by our government of a Fish Commission, and the establishment of fish hatcheries where may be propagated millions of food fishes with which to stock our depleted streams, is unanswerable proof of the practical value of ichthyology. For it is only through careful, scientific study as an ichthyologist that the fishculturist is enabled to intelligently direct his efforts.

An entomologist or "bugman" is supposed to spend half his time catching insects with a net, and the other half in impaling them on pins. Fortunately the results of the studies of entomologists are now receiving the consideration they deserve, and not only has our Department of Agriculture its Division of Entomology, but many States are establishing similar bureaus where the systematic study of insect life may be pursued. It must be obvious to the least scientific-minded, that if we hope to effectually combat the ravages of noxious insects, our first step should be a thorough study of their habits. Before making an assault a general studies the forces and position of his enemy in order that he may direct his movements to the best advantage, and if we expect to destroy an insect pest, we must first become thoroughly familiar with its modes of life, and thus discover under what conditions it may be most effectually attacked.

The word ornithology is generally pronounced with an effort, while the work of an ornithologist is commonly supposed to consist of blowing eggs and stuffing birds. The sceptic may be told of the æsthetic side of ornithology, of the pleasure to be derived from a study of the habits of birds, their songs, the intelligence displayed by them in nest building, their migrations, and the hundred beautiful phases of bird life, or he may be told in the words of Professor Morse, that "there is no group of animals which exceeds birds in varied and suggestive material for the evolutionist. . . . . An attentive and patient study of the birds has established almost every point defined by Darwin in his theory of natural selection, . . . indeed the student need go no further than the birds to establish every principle of the derivative theory." Still I doubt if this statement will appeal to him, or increase his respect for the ornithologist as a useful member of society—the dollar mark is wanting. If, however, it is asserted that without the presence of birds the earth would not be habitable, he may be sufficiently impressed to grant that objects so important to man's existence may be worthy man's attention.

As yet we are on the threshold of a knowledge of the relationships of birds to man, but let us cite one easily demonstrable instance where ignorance of birds' habits has resulted in direct pecuniary loss. In 1885 the Legislature of Pennsylvania passed an act which provided a bounty of 50 cents on each hawk and owl killed within the limits of the State. As a result of this act $90,000 was paid in bounties during the year and a half which succeeded the passage of the law. This proves the destruction of nearly 128,000 hawks and owls. Dr. Merriam, the ornithologist of the Department of Agriculture, in commenting on this fact says: "Granting that 5,000 chickens are killed annually in Pennsylvania by hawks and owls, and that they are worth 25 cents each (a liberal estimate in view of the fact that a large proportion of them are killed when very young), the total loss would be $1,250, and the poultry killed in a year and a half would be worth $1,875. Hence it appears that during eighteen months the State of Pennsylvania has expended $90,000 to save its farmers a loss of $1,875. But this estimate by no means represents the actual loss to the farmer and the tax-payer of the State. It is within bounds to say that in the course of a year every hawk and owl destroys at least 1,000 mice or their equivalent in insects, and that each mouse or its equivalent so destroyed would cause the farmer a loss of 2 cents per annum. Therefore, omitting all reference to the enormous increase in the numbers of these noxious animals when nature's means of holding them in check has been removed, the lowest possible estimate of the value of each hawk and owl to the farmer would be $20 a year or $30 in a year and a half.

"Hence, in addition to the $90 000 actually expended by the State in destroying 128,571 of its benefactors, it has incurred a loss to its agricultural interests of at least $3,857,130, or a total loss of $3,947,130 in a year and a half, which is at the rate of $2,631,420 per annum! In other words, the State has thrown away $2,105 for every dollar saved. And even this does not represent fairly the full loss, for the slaughter of such a vast number of predaceous birds is almost certain to be followed by a correspondingly enormous increase in the numbers of mice and insects formerly held in check by them, and it will take many years to restore the balance thus blindly destroyed through ignorance of the economic relations of our common birds and mammals."

To their credit be it said that the legislators of Pennsylvania were not slow to recognize the error which a lack of proper information had caused them to make. A State ornithologist was appointed, and through his efforts this ruinous and absurd law has been repealed, and further, by the distribution of a State work on ornithology the inhabitants of Pennsylvania may claim a better knowledge of the value of birds to man than the people of any other State.

Let us look at the subject now from a somewhat wider and more general aspect. The importance of quarantine stations will not be questioned, even though their accounts and reports have no debits and credits. We pass here from the domain of pure natural history into that of medicine; the question of health is involved, and health can be shown to have a market value, since without it the accumulation of riches is, as a rule, impossible. But why should we so jealously protect our cities from the incursions of cholera and fever microbes, which at the worst can only occur as an epidemic, when we have permitted and continue to permit the introductions of such universally destructive pests as rats, mice, English sparrows, cockroaches, clothes moths, buffalo beetles or "carpet bugs," hessian flies, elm-beetles, etc., etc. Not one of these animals is a native of this country, and although they may assume the form of a scourge and cause the loss of millions of dollars, their further introduction or the appearance of equally harmful vermin is a subject which has not yet concerned legislators.

What we have written here is an outline merely of some of the more striking aspects of economic natural history. The instinctive, insatiable craving of the human mind for a knowledge of the things that be, the inborn desire to solve the great problem of existence, have not been touched upon, but even without these powerful pleas for a study of the life of the world, it is hoped that sufficient commercial importance has been given to some phases of zoological investigation to assure the naturalist that he may pursue his private study and at the same time fulfill his duty to his fellow-men. NATURALIST.

WILD GEESE IN WINTER.

MAPLE CORNER, Willington, Conn., Feb. 11.— *Editor Forest and Stream:* About three o'clock in the clear, bright, sunlight of yesterday afternoon a very large flock of wild geese flew over, following the course of the Willimantic River, southward. They were flying in regular harrow shape and very low, the even movement of their wings and their musical call being distinctly audible. "Honk! honk! honk!" called my husband in a good imitation. A little ripple ran along the line, and the leader flew downward and circled over the place from which the sound proceeded to ascertain, evidently, who was presuming to hold him to account for their unseasonable appearance, and becoming convinced that it was one not in authority, he flew back and resumed his place of command. During the evening there was a halo about the moon, and to-day the snow is falling heavily. Will some of the FOREST AND STREAM readers give their theory in regard to these aerial travelers and their course at this unusual season. Where can they be to-day? If any one sees a corresponding flock will they kindly report?

Yesterday morning for the first time I heard the voice of a bird that always visits here in late winter or early spring. I have never seen him, but knew his not unmusical yet somewhat shrill "*She ling! she-ling! she-ling!*" "Oh, hear that bird?" I said to a person whose whole life has been spent hereabouts. "Do you know what it is?" "Bird? I didn't hear anything. It wasn't an oriole, was it?"

I am prompted by several inquiries that have been made, to say that any information in regard to forests and streams in this "undiscovered country" will be cheerfully given in response to a note of inquiry from any of your readers. ANNIE A. PRESTON.

[A general impression exists among those who have never given particular attention to the subject, that migratory birds never fly north in winter. This belief is due to thoughtlessness alone. If questioned, no one would say that he believed that birds begin to fly south at the approach of cold weather, and continue to move in this direction without ever turning round until spring is at hand. He would say that he believed they went south in autumn until they reached their wintering ground, and that while they remained there they made local flights in any direction that pleased them, north, south, east or west. Now in open seasons the geese winter in southern New England, and there they may be seen by those who look for them, flying north or south or in other directions. The following is an example of this: On a river which empties into Long Island Sound in Connecticut, is a cove fed by a warm spring brook, and the waters of this brook are often open late into the winter, and some winters do not freeze up at all. In this cove, some years ago a flock of geese used to feed, spending the night there, and each morning at daylight, or soon after, flying south to the sound where they remained during the day, to return at night to the cove. Usually, the flight to the cove was made after dark, and the return journey about daylight, but sometimes in stormy or foggy weather the birds were later in their morning flight, and earlier at evening. The northern flight might thus sometimes be seen by people unacquainted with the local habits of this particular flock of geese, and such observers would truly say that they had seen a flock of geese flying north in winter. But as has been seen, this northern flight meant nothing at all. What the facts may be in regard to the birds seen by our correspondent, we do not know, but it is altogether probable that the matter could be easily explained. Many of the matters in nature which, to those of us who have not studied them, seem most surprising, are so only because of our neglect of the subject in hand.]

DEVELOPMENT OF THE LAMPREY.—We are informed by Mr. William Bahme, of Newlin, Pa., that he had a lamprey, Feb. 1, which changed from the blind to the eyed stage of its existence. The little larval lampreys are called sand eels and may be obtained in the fall of the year. The eyes begin to appear in February and the transformation is quickly accomplished. Mr. Bahme found a lot of the larvæ in the river where a fallen tree had collected leaves in abundance; they were near the surface in the sun and were soon changed from the blind to the eyed state. He believes that the blind and toothless condition of this little river lamprey lasts five years. The observations are of great interest and Mr. Bahme intends to study the subject thoroughly.

CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

CHICAGO, Ill., Feb. 6.—If I am not mistaken it was my fortune to be one of the first, if not the first to start the "Last of the Buffalo" heading which for five years has been doing such yeoman service in the general press. In the articles written in 1886 in another paper it seemed certain that the Buffalo Jones calf trip of that year had really gotten to the last of the buffalo. Developments since then have shown that such was not the case, and the *dernier* bison is not even yet, as see later columns of FOREST AND STREAM. Certainly it is surprising and pleasing to know that so large a number of these animals still remain native in the Yellowstone Park.

FOREST AND STREAM has advantages in questions like these in natural history which few journals approach, and it has kept check on the actual status of the American buffalo question more accurately, I imagine, than any other journal. Certainly it is most gratifying and delightful to learn that this thoroughness of method has not been confined to this country alone, but has also surprised and taken a field in Europe. Mr. Waldeck's papers on the European bison will be read with an exceptional degree of interest by all classes of our sportsmen. It will be news to most of them to learn that any such animal exists in Europe to-day, if indeed they know that it ever did so exist. It will be a surprise to them to see, on looking at the engravings, how general is the resemblance of this animal to the American bison. The chief surprise, however, will be to think that this species should still remain alive and in representation to-day in a country so old and crowded. If this be so, what right have we to think of letting our great native and typical animal die out? The thought should shame us as a people.

The paper should be congratulated on having secured a news sensation of general merit, as agreeable as unexpected. I am inclined to think it should not be looked upon merely as an interesting topic well handled. It ought to be a starting point for a practical interest in our own native bison. It ought to be the first stepping stone in a plan for national legislation for the protection and increase of our animal—a plan whose success is certain enough, so long as an American journal can show the picture of a single bison alive in Europe to-day. It may be that FOREST AND STREAM has done a great specific service to the people of America in this. It may be that after a time we shall not concern ourselves about finding news of the "Last of the Buffalo," but shall say that there never is going to be any last buffalo at all; that such a thing would be a shame, and so must not be in America.

E. HOUGH.

BIG HORNS.—Messrs. W. W. Hart & Co., of this city, recently showed us a large collection of moose and elk horns which they have lately received from the far Northwest. The pairs are about equally divided between the two species, and contain some very fine examples of each. One pair of moose horns have on each shovel a curious fold, and the antlers are besides very large. A pair of elk antlers are especially noteworthy because much less widely separated than is usually the case, and having the points of the antlers curiously turned up.

THE LINNÆAN SOCIETY OF NEW YORK.—A meeting of the society will be held at 8 P. M. at the American Museum of Natural History, Eighth avenue and Seventy-seventh street, March 16. Paper by Mr. L. S. Foster, "The Winter Birds of the Vicinity of New York City."

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

WOLF HUNTING IN RUSSIA.

RUSSIA is preëminently the country of wolves. In America it is only under very exceptional circumstances that wolves pursue men, and the wolf is hunted and trapped by the skin hunters without any sense of danger to lend excitement to the chase; but in the great uninhabited plains and vast forests of Russia wolves continue to exist in uncounted numbers, and the hunters who lust after the excitement of the wolf hunt must lend themselves to be hunted.

The method generally pursued is for three or four well-armed hunters to charter a troïka, a sleigh with three horses harnessed abreast. A young pig is taken into the sleigh with them and the party move off at an easy pace over the snow. Arrived at the plains, or the edge of the forest or waste, the coachman gives the horses the reins, and they bound along at a good pace, the center horse trotting, the horses on the flanks breaking into a swinging canter.

The young pig, unaccustomed to the inconveniences of travel, raises his voice in remonstrance at the unpleasant jolting, and, finding no relief, fills the air with his plaintive lamentations.

The squeal falls like music on listening ears; a first wolf raises his sharp nose, scents the keen air, pricks his ears, and, having taken in the direction of the music, raises his own voice in a howl, which, although intended only as a call to his fellows and modulated with excitement and satisfaction, is anything but a cheerful note for any save ears attuned to it by love of the chase.

To that dismal howl come fainter howls in distant response, and those howls awaken still more distant howls, as yet unheard, the news of game ahead being telegraphed from wolf to wolf, from troop to troop, in ever widening circles, until every wolf within a radius of several miles has joined in the pursuit.

Very soon the leaders have sighted the sleigh, and, finding that there is nobler game than a stray pig, they maintain a cautious distance, waiting for the auxiliary

forces whose eager yelling is borne upon their ears from all sides through the run, crisp air, until the troop, increasing in numbers, closes up upon the hunters with the silent irresistible fury of the avalanche.

For such sport a cool and courageous driver is of first importance, for the horses, having an instinctive dread of wolves, are soon wild with terror; striving to take the bit in their teeth, and rush ahead with a blind fury, regardless of all obstructions.

From the moment the wolves have ventured close to the sleigh the firing begins; at first with careful aim, but as the wolves pour in from all sides, the air is filled with a dense cloud of fine snow particles, obscuring the wolves, and the hunters fire at random. The horses and sleigh with its troop of wolves on flank and rear, enveloped in a cloud of snow particles raised by themselves, roll on like a whirlwind; the shouting of the coachman, the squealing of the pig, the howling of the wolves, the screaming of the terrified horses, and the rolling thunder of the rapid fusilade unite to create a sense of terror and excitement, in comparison with which tiger hunting on elephants is as child's play.

As long as the coachman maintains control of his horses all goes well; but if he loses control, or if a horse falls or the sleigh upsets, all is over. The next day or the day after searching parties going out would find the sleigh and harness and guns in the snow, but of the horses, the hunters and the pig, only the big bones would remain to tell the tale.

It is now a little more than a year ago that the Prince Repnine, with two companions, engaged in such a hunt, which brought them more than the danger and excitement they calculated on, and came within an ace of being their last hunt.

The party set out one evening in a large sleigh; each hunter was armed with a pair of double-barreled guns and a hundred and fifty cartridges. The Prince commanded the rear, and his companions took charge, one of each flank.

On reaching the steppe, an immense desert covered with snow, the coachman shook his reins, the horses broke off into a canter, the pigs began to squeal, a few wolves howled in response, and ere long the hunters saw the shadowy form of half a score of them following in the rear, but they were few in numbers and maintained a respectable distance, waiting for reinforcements. Gradually their numbers increased, they approached the sleigh, which was gliding at an easy but moderate pace over the snow, the coachman holding the excited horses well in hand. A band of at least twenty wolves was allowed to come to close quarters before the firing commenced. A shot was fired, a wolf fell; there was great excitement and apparent disorganization of the troop, and it appeared to the hunters that their pursuers had been diminished one-half.

In fact seven or eight of the more famished brutes had remained behind to feast on their fallen comrade, but their ranks were soon full again; on all sides one heard howlings responded to by howlings; on all sides wolves sprang up as if out of the snow, their sharp noses showing themselves between a pair of eyes glowing like carbuncles.

They were at close quarters now, and numerous enough, and the three hunters maintained a rolling fire into their ranks, but although every ball hit home, the band continued to increase in numbers.

Ere long the troup was swollen to vast numbers, which began to crowd upon the sleigh: the pace increased with the excitement, and the vast cavalcade flew over the snow, silent as death but for the dismal howling of the wolves.

With their center a few yards in rear of the sleigh, the troop formed themselves into a crescent, the two horns of which were far in advance of the horses on either side.

The pig, which had before been stimulated to squeal, was now kept as quiet as possible; the unexpected number of the wolves foreboded danger, and at every cry of the pig their fury and audacity was redoubled. The firing was maintained without intermission, but already our hunters had fired away half their cartridges. There remained only about two hundred between the three of them, and they were surrounded by more than a thousand wolves.

The two horns of the living crescent began now to draw toward each other, the wolves were evidently acting in accordance with a concerted plan, they were bent on forming a circle which should inclose their prey in its center, and gradually close in upon them till escape would be hopeless; for if only one of the horses were brought down, resistance could hardly be prolonged another minute.

The horses snorted, screamed and plunged frightfully, but nothing gave way, and the coachman maintained his control over them.

"What do you think of it, Ivan?" asked the Prince of his coachman.

"The enraged beasts have tasted blood," said he, "and the longer you continue firing the more their numbers increase. If you will leave it to me, Prince, I will turn the horses' heads homeward and give them their heads."

"Can you rely upon them?"

"I will answer for them."

"And will you be responsible for us?"

The coachman did not reply: he saw that the critical moment had arrived in which the Prince and his friends, awed by the growing terror of their situation, were not unwilling to see him take the command. Without another word he wheeled them gradually round in the direction of the chateau, and gave them their heads. The noble brutes, wild with terror and excitement, no sooner felt their heads free than they bounded off at a furious pace, the sleigh scarcely seeming to hamper their movements.

The coachman, while letting the horses go at their best speed, continued to wheel them round, and almost in an instant they charged down upon one of the flanks of the wolves, which scattered right and left as the horses plunged among them. The horses were no more galloping now, they were flying. At this moment the hunters raised their guns again for another shot.

"For your lives," cried Ivan, "don't fire!" They obeyed.

And now it was seen that the wolves had come to a standstill: they were evidently nonplussed by the unexpected maneuver, their tactics had been spoiled and they did not know what to do next.

In this minute of indecision the horses, straining at top speed, had shot nearly half a mile ahead, and when the wolves renewed the pursuit they appeared to follow but slowly, the huntsmen soon ceased to fear that the wolves would overtake them.

But there was no slackening of speed, and a quarter of an hour later our hunters entered the courtyard of the chateau. The Prince estimates that in this quarter of an hour the horses had covered a distance of six miles, but a severe critic might remark that he probably did not look at his watch until some minutes after the start.

The following day the Prince and his party visited the field of battle on horseback, and the bones of over 200 wolves attested to the steadiness of the shooting and to the numbers that were present at the banquet.—*Translated from the French for Forest and Stream by C. F. Amery.*

THE MONGOLIAN PHEASANT.

Editor Forest and Stream:

Judge O. N. Denny, late counsellor to the king of Corea, and to whom we sportsmen of the northwest Pacific coast owe such a deep debt of gratitude for introducing the Mongolian pheasant into this country, has just favored me with a most delightful chat about the characteristics of the bird in its native country.

It will probably be remembered by many of the readers of FOREST AND STREAM that while the Judge was U. S. Consul-general at Shanghai, China, he procured and sent to us, at his own expense, about 50 pairs of pheasants of various varieties, including the ringneck Mongolian, green Japanese, copper, tragopan, silver and golden, none of which cost his less than $8 per pair in China.

Some of his remarks will be of interest to those numerous persons who have been trying to determine whether these pheasants will be able to endure the rigors of Eastern winters. The Judge says that they undoubtedly can. He informs me that 40 degrees below zero is nothing unusual in that part of Mongolia where the pheasants bearing that name were procured. Then there is another trait that is characteristic of all of them. They exercise good judgment during cold snaps and seek out sheltered places and visit the stacks, sheds and barns of the farmer, and are hardier and better "rustlers" than even the Bob White. The Judge says that all this talk about the pheasants being destructive to the farmers' crops is bosh, and the birds are made the victims of such slanders by those who are seeking excuses for killing them. Before he sent any of the birds here he thoroughly investigated their habits and characteristics, to the end that he might not be held responsible for introducing a pest into this country, as he "did not wish Americans to curse him as the Australians curse the man that introduced rabbits into their country."

He went into the fields of China and was shown where the pheasants had turned clods in their search for crickets, worms, etc., and after careful inquiry and observation unreservedly declares them to be insectivorous and the friend of the farmer. He also pleasantly referred to their pugnacity and said that in China hawks and kites let them severely alone.

In this connection permit me to relate a little incident that transpired down at the Honeyman Shooting Preserve, on Sauvie's Island, near Portland, not long since, the truthfulness of which is vouched for by Mr. James Honeyman and two other well known Portland sportsmen:

The gentlemen had gone to the house for lunch, when their attention was attracted by the actions of a large hawk near the house. A cock Mongolian was standing on the fence intently watching and boldly countering every movement of his hawkship. The hawk would circle and dart, but Mr. Pheasant was always ready for him and met him squarely in mid-air with spurs and beak. The battle lasted a long time, as the hawk seemed loth to lose such a tempting dinner. Now and then the hawk would circle over an adjacent bunch of grass and then return to the gentleman on the fence. Presently, while the hawk and cock was engaged in battle, a hen pheasant left the bunch of grass and hurried into the thick sal-lal brush, where the cock soon joined her, leaving the hawk to seek his dinner elsewhere.

PORTLAND, Oregon, Feb. 22. S. H. GREENE.

A MONTANIAN ON THE PARK.

Editor Forest and Stream:

Some time ago a bill was introduced in Congress by Senator Sanders, which granted a right of way from Cinnabar, the terminus of the National Park Railroad, to Cooke City. It now appears from the papers that another bill has been introduced by the same gentleman, asking the Government to segregate that portion of the National Park up the Gardiner River, taking in Soda Butte Creek and East Fork Yellowstone River. Both these streams are the home of elk, deer and a few buffalo that live in the Park, and as maps will show, to segregate that portion of the Park, would about divide the Park in half.

Now, it is necessary that Cooke City should have means of transportation, and if the proposed route via Gardiner was the only practicable route, it would seem unreasonable to deprive them of the right of way through the National Park, provided surveys could show the above route a practicable one. This has not been fully demonstrated by survey. But there are practicable routes from the Northern Pacific R. R. to Cooke, perhaps the best being that which has been surveyed by way of Clark's Fork of the Yellowstone, and which would in no way interfere with the "National Park." Some years ago that route was found to be eminently practicable: without heavy grades, and it was learned that it would open up the most extensive coal fields in Montana, and new mining districts as well. The fact that the "Clark's Forks" route would open up the best coal fields in Montana would perhaps be a reason for the N. P. R. R. Co. to oppose this route to Cooke City, since that company now contro's the coal supply of eastern Montana, and will do so until other railroads penetrate new fields.

Another route for a railroad to the "New World" mining district (Cooke City) is what is known as the Stillwater route, which would be a road from Stillwater town on the N. P. R. R. to Cooke City about 62 miles long, upon which a preliminary survey has been made and found practicable, the route following the Stillwater River to its source near Cooke City.

In addition to the above two routes, which are proven by maps and surveys to be practicable, perhaps a route from the N. P. R. R. at Big Timber following the Boulder River would be found available. All those routes would reach the heart of mines tributary to Cooke City, besides opening up others, which would probably prove equally as good.

Now, I believe that if it was left to a vote of the people of Montana, we would find that a majority was opposed to any railroad being allowed to pass through any part of the National Park, as well as to the cutting off any portion to accommodate any railroad company, and further, they would *vote No* on the question of the segregation of any portion of the National Park, especially that part north and east of the Yellowstone River and Soda Butte Creek.

The countless thousands of buffalo and elk which a few years ago roamed over the country are now practically extinct, except the few that find refuge in America's only National Park, protected by the strong arm of the Government, and even deer, mountain sheep and antelope have become very scarce outside. The valley of the East Fork of the Yellowstone, which Congress is asked to segregate, is one of the least elevated and most open portions of the Park, and there the game of all kinds congregate in winter—a fact that no honest man in America can deny—and a railroad, with its accessories, would drive all the game out of the Park, destroying their last winter refuge, and in a few years elk, deer and buffalo would be as extinct as the mastodon.

Besides, it is not proven that the route via Yellowstone River and Soda Butte Creek is practicable. I have been in Montana for many years and have failed to find any one who knows that even a preliminary survey has ever been made to Cooke City from Gardiner over the proposed route.

It may be that some one has surveyed the coal fields near Mount Everts, and that this is only a scheme to get hold of these coal lands rather than one for a railroad!

The route via Yellowstone River and Soda Butte Creek, even if found to be the most practicable, would inevitably be controlled by the N. P. R. R. Co., and the cost of transportation would possibly be but little less than now.

Another thing to be considered in the matter is the fact that if the N. P. R. R. Co. is allowed to pass through the National Park, or to have a slice cut off, to accommodate that company, it is quite probable that the Great Northern, Union Pacific, Burlington and Missouri, and other railroads leading in that direction, would ask the same privilege.

Now that the Park has been extended south and east to include a larger area, additional efforts should be made to protect the fish and game, and wardens should be appointed who would honestly endeavor to do their duty; men acquainted with the country, not old "skin hunters," but men who would protect instead of destroying or permitting others to do so.

My view is that the National Park is the property of the people of the United States. Montana is no more interested in its preservation than the people of Maine or Texas, the grounds being the wonderland of all worlds—and while Senators or Representatives from Montana may have friends interested in such encroachments as that proposed—it is hardly to be supposed that Senators and Representatives from Middle or Southern States have any interests, save to stand by the National Park, and to them we look to preserve the Nation's pleasure ground intact. And while syndicates and corporations have been unceasing in their efforts to so obtain and control the Park so that all visitors would be forced to pay them tribute, we are under great obligations to many Senators, and especially to Senator Vest, for their loyalty to America's National Park, as it is now comparatively free and intact.

If the Government wants to cut the Park up to favor one railroad, I say take the soldiers away and open the Park wide open, and then if the people want to see any game, they may find it in Alaska, where one skin-hunter told me there was plenty of room for our game.

Thousands of dollars have been sent to Washington to lobby this bill through. Segregrate never.

UNCLE SAM.

A JACK RABBIT DRIVE.

Editor Forest and Stream:

I send a photograph illustrating the "drive" method of destroying jack rabbits, practiced in southern California. On last Saturday a drive took place near Fresno in which, it is said, nearly two thousand horsemen engaged. A tract of country embracing about twenty square miles was swept by the riders, who closed in from all sides driving the rabbits before them. About 15,000 rabbits were thus forced into a central corral of wire, where they were killed with clubs.

More than 50,000 rabbits were killed in a series of drives which was made near Bakersfield last winter. Fruit growers are compelled to thin out the jack rabbits occasionally, or the large, rapid-breeding creatures would eat up everything they could plant.

It was announced that the rabbits taken at Fresno would be distributed among the poor of San Francisco; but this was not done as they were not in good condition. At times the rabbits are infested with the larva of the *Cœnurus*, a parasite of the tapeworm group. These appear as large watery blisters on the flesh of the animal, the succeeding stages in the development of the *Cœnurus* taking place in the stomach of the coyote, or other carnivorous animals preying upon the rabbits.

So many coyotes have been killed here during the past year that their decrease may have the effect of relieving the rabbits of this parasite in some degree, by preventing its complete development in the coyote's stomach. The bounty of five dollars, which is paid in California on coyote scalps appears to have had the effect of increasing the jack rabbits in proportion as their natural check was removed. The coyote law, made in the interest of shepherds, has proved detrimental to the interests of the horticulturists. It is said to have induced systematic coyote killing in other States, the scalps being smuggled across the State line for this ridiculously large Californian bounty.

As a natural result of the wholesale slaughter of coyotes, it has become necessary to adopt active measures to protect the ranches from the rapidly increasing jack rabbits. San Bernardino county now offers a bounty of 25 cents on rabbit scalps, and other southern counties will soon be compelled to do the same. C. H. TOWNSEND.

SAN FRANCISCO, Cal., Feb. 16.

BUFFALO EXTERMINATION FORETOLD.

Editor Forest and Stream:

The extinction of the American bison or buffalo is often spoken of as being due to the immense slaughter of these animals within the last few years; and in view of this fact, the following extract from an old book may be interesting, as showing that it was fully foreseen 50 years ago. The book referred to is "George's Commerce of the Prairies," published by Wiley and Putman, in 1844. Josiah Gregg was an old Sante Fe trader, and published two very interesting romances, giving an account of eight expeditions by wagon across the prairies, over the old Santa Fe Trail, and says as follows:

"This animal furnishes almost the exclusive food of the prairie Indians, as well as covering for their wigwams, and most of their clothing; also their bedding, ropes, bags for their meats etc.; sinews for bowstrings, for sewing moccasins, leggins, and the like, besides sustenance for the numerous travelers and trappers who range upon their grazing regions.

Were they only killed for food, however, then natural increase would perhaps replenish the loss, yet the continual and wanton slaughter of them by travelers and hunters, and the still greater havoc made among them by the Indians, not only for meat, but often for the skins and tongues alone (for which they find a ready market among their traders,) are fast reducing their numbers, and must ultimately effect their total annihilation from the continent. It is believed that the annual export of 'buffalo rugs' from the prairies and bordering 'buffalo range' is about 100,000, and the number killed wantonly, or exclusively for meat, is no doubt still greater, as the skins are fit to dress scarcely half the year. The vast extent of the prairies on which they now pasture is no argument against the prospect of their total extinction, when we take into consideration the extent of country from which they have entirely disappeared; for it is well known that within the recollection of our oldest pioneer, they were nearly as abundant east of the Mississippi as they now are upon the western prairies; and from history we learn, that they once ranged to the Atlantic coast. Even within 30 years, they were abundant over much of the present States of Missouri and Arkanses; yet they are now rarely seen within 200 miles of the frontier. Indeed, upon the high plains they have very sensibly decreased within the last 10 years."

So you see, the prospect of their extinction was prophesied long ago, but such warnings seem to be of no avail against the combined greeds of lucre and slaughter. Let us only hope that men may get sufficiently wiser, so that the elk, the mule deer, the grouse and the turkey, may not be exterminated like the bison. VON W.

CHARLESTOWN, N. H.

A HUNTER OF THE KANKAKEE.

IF you have been near the Kankakee River you have heard of Hosey Barnes. Until old age, with its attending infirmities, came upon him, he was the mighty hunter of that famous river. He settled on its erratic banks somewhere in the '40s, and ever since he has seen its swift current slip by his door, and has breathed the miasma coming from the adjoining marshes. Slight of body but strong in character, he pursued the even tenor of his simple way, carving out of the wilderness a comfortable home and laying by enough for his needs. He built his house a few miles east of English Lake, as the ducks fly, but many miles by the river, on the border of that vast expanse of marsh, dotted with little wooded islands, which became the paradise of sportsmen and trappers. He knew every kink and turn of the river for many miles, and every slough where the ducks came to roost, and could pilot the hunter through the cane by night or day with unerring instinct, when it seemed to the bewildered senses of the novice like going into another world. The hunting season was his harvest, and he made it so agreeable that his hospitable house became the Mecca toward which the eyes of many sportsmen annually turned.

Fortunate was he who could get Hosey's individual services; he was sure of a large string of birds at night, and he was sure of an entertainment that always comes from a decided personality.

When a man is of a positive temperament, self-controlled, self-reliant, self-assertive, and yet lacking qualities that would raise him out of the common herd into a clear and imposing individuality, we say he is a "character." Perhaps they did not know how otherwise to estimate him. There was that about him that commanded respect, although one was easily aware of his limitations and his weakness.

Personally, his figure was rather slight when I first knew him, and his shoulders rounded, a long gray beard hung from a square jaw, his mouth was firm and his dark eyes looked at you in an honest unhesitating way, his step was quick and decided.

He was known far and near as "Hosey," and if one said he was going to "Hosey's," it conveyed as clear an idea of destination as if he had said he was going to Chicago. His speech was frank, as became an honest heart, and having a clear idea of right and wrong, he did not hesitate to express his opinion of any dishonest action. One would have felt uncomfortable to have done a mean thing in his presence. Being, then, a man of integrity, he early made his influence felt and naturally became a justice of the peace of his township. His stern sense of justice became apparent to those who had occasion to test it.

He welcomed all hunters alike, making no distinctions; he made them feel at home and gave much of his time to their personal wants, while it was very evident that he trusted largely to his good wife to appease the appetites that must have seemed at times very formidable. I never knew him to misrepresent the shooting; but when the "fever" came on—that delicious indisposition—many used to go down there, although Hosey's advice had been to wait awhile. I never saw any one who did not have a good time, however poor the shooting might be. It must be said, however, that there are many things a party of hunters can do in comfortable quarters, ten miles from a railroad and two miles from the next door neighbor. Hosey was a constant companion of his visitors, always the last to retire and the first to get up, not seeming to care how much time elapsed between these two events. No doubt the "stock" and household duties suffered at this season of the year, for he was not over fond of manual labor, except as it had a direct application to hunting. He was always ready for ducks, politics and "seven up," and it didn't make any difference how these came, when they came, whether singly or in pairs. One usually found it to his advantage to acknowledge Hosey's superiority in the first and last of these, and to avoid as much as possible any allusion to the second.

Hosey was a Democrat of the old school, and his faith in the party was beautiful in its simplicity. He seemed to think it could do no wrong. His assumed superiority in duck shooting and seven up came largely from the conviction that whatever he did and whatever he had were the best of their kind and therefore of much consequence and worthy to be talked about. His mental horizon was contracted, and like harmless egotists generally, he had an appreciation of facts out of all proportion to their significance. On driving over from the station we would have our attention called to the excellent points of "that cream pony;" this would be good for several miles. I remember that one night when he and I were on the marsh he killed a towering mallard with his little gun after I had fired both barrels ineffectually. I promptly acknowledged his skill, but this was not sufficient; the incident assumed such proportions in his own estimation that he must refer to it many times and inform each new comer, relating the details with exasperating minuteness. But one easily forgot his little weakness he was such a good companion and entered so fully into all the sports of the hunter.

It is all passing away, hunters and hunting alike. The river will be drained, and then the cane will be turned into corn, and the kingly mallard, looking to the right and left will, seek in vain for a roosting place. Fortunate are those who can say they were on this Kankakee in the palmy days of duck hunting, when every day was a "red-letter" day. They have a priceless store of memories against the time when men are said to live over again their early lives. R.

KALAMAZOO, Mich.

"FOXES CLIMBING TREES."

I HAVE no special acquaintance with the habits or accomplishments of foxes, but have noticed some discussion in FOREST AND STREAM with a caption similar to the above. An incident of yesterday's turkey hunt near Fort Myers will dispose of the question.

Riding toward Myers, after the hunt, I heard the dog barking in the edge of the cypress. I slipped two buckshot cartridges in my gun and ran down to the edge of the swamp, and there found a red fox astride of the first limb of a leafless and perfectly perpendicular cypress, at least thirty feet from the ground. The dog had chased him up a tree, but how he climbed it is a mystery, for, as Uncle Remus says, he is "a creetur' which has no claws." The tree he was on was fifty feet from any other tree.

ST. JAMES CITY, Fla., Feb. 21. F. S. J. C.

ALUMINUM.—I am glad to see that my query as to aluminum has struck a responsive chord on the shores of the Pacific. It shows the wide circulation of FOREST AND STREAM. It does not seem to have hit any of your advertisers yet, though, and I would like to suggest further that as I see it advertised in large lots at 65 cents per pound, and as it only weighs one-quarter as much as copper, an equal bulk of it, in a reel, a drinking cup, or a match box, can be furnished as cheap as "bronze," which is a compound of copper and tin, and as the weight in one of these small articles is only an ounce or two, the cost of the material even at $1 per pound would add only two or three cents to the cost of the finished article. Whoever "gets on to the market" first with such articles is sure to make money out of it.—VON W.

ENGLISH SNIPE ARRIVALS.—*Editor Forest and Stream:* Will not brother sportsmen, especially in the East, give some notes on the habits and earliest dates of spring arrival of the English snipe. I think this will strike a keynote of interest with the "fraternity" everywhere, as it seems to me this royal little game bird is very little known about among sportsmen generally.—A. W. JONES.

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 15 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents Wild Fowl Shooting; see advertisement.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

TROUTING IN THE CASCADES.—XII.

THE MOLALLA COUNTRY.

GEORGE knew when he had enough of a good thing, and soon went back to the flesh-pots of Portland. But Harry and I sorrowed after our mountain idols and would not be comforted. We hungered after the weird chasms, the ghostly pools and demoniacal rapids of unknown regions. We craved for communion with nature in her own wild realms, where she reigned, supreme and unrestrained queen of freaks, fissures, caverns and the other monstrous offspring of her own power and vanity.

It was now two days since we returned from the North Fork expedition. Our muscles and tendons were recovering their elasticity to a degree; the cracks in our bones were healing, and already we were planning another tour of investigation.

There is a class of anglers that are never satisfied. I must admit that I belong to that class. If I knew that I could go down here to the bank of the Willamette and catch a barrel of trout in an hour, I would disdain to play the part of the piscatorial swine. But if some one should suggest a trip into the rugged mountains to some half mythical stream about which nobody could furnish us with any definite information as to distance, country or fish, I would be ready in a minute. It is my misfortune and I am the sufferer—always promising reformation, and always seeking new waters. The first question to be determined was, wether we would follow the crest of the mountain until we got above the crevasse of the North Fork, and then working down to the stream, follow it into the domains of the "big burn," or tackle the still more uncertain South Fork. I was in favor of the North Fork while Harry favored the South Fork.

We flipped a quarter and Harry won, of course. So we set to work preparing for what proved to be the most severe trial in all my fishing experience.

With light rolls of blankets, but otherwise well supplied with the necessaries for a three or four days' trip we were on our way the morning of the 12th, to unravel the secrets of the mysterious South Fork. For once I was a little dubious about results; not that there was any uncertainty about rapids, pools, wild scenery or trout, but serious questions respecting our comfort and even our safety presentsd themselves. Half a mile above the Forks we found a place on the stream, which although not exactly impassable, was too suggestive of danger to suit me.

High above, on the precipitous walls that confined the stream, innumerable boulders were hanging as if by threads, apparently ready to descend at even the suspicion of a jar, and as we would have to work our way through the chasm upon the little shelves and jagged points of the broken strata, I rather seriously demurred. Harry was bolder and rather more disposed to take the risk; but while we were arguing the question, the sudden, comet-like plunge of a giant boulder, with its rattle and roar and splash into the foaming river among its erratic brethren, brought Harry around to my view of the matter, and we quietly retraced our steps, fishing as we went, to the forks and thence up the divide, with which, to the crest, we were now somewhat familiar. As we rested on the same old log the dogs commenced to growl, and a voice behind us exclaimed, "Kla-hów-ya, ni-ka kwass kowmux." (How are you? I'm afraid of the dog.) Turning, we saw an old Indian grinning at us, whom we took to be Indian Henry, spoken of by Uncle Billy Vauhn. "Kla-hów-ya six, chäh-co yah-kwa six pu wa-wa," said I, as I put my foot on old Mike's neck. "Hy-as kloshe," said the Indian, as he approached and sat down. Knocking the ashes out of his pipe, he grinned again and queried, "Kim-oolth?" I handed him my tobacco pouch, from which he slowly abstracted not only a pipeful but a little for a rainy day. Handing me the pouch, which I was glad enough to get back, he remarked, "Mes-see, hy-as kla-how-yum ni-ka, me-si-ka hy-as kloshe." (Thank you, I am very poor, you are very good.)

After a pause, during which he puffed away valiantly, he inquired, "Ik-ta mi-ka tik-eh?" "Trout," I responded. After another pause he asked, "Ik-ta mi-ka tum-tum ó-coke ill-a-he?" (What do you think of this country?) to which I responded, "O-coke hy-as kloshe." (It is very nice.) Another pause, and I thought I would interrogate him a little. "Kon-si lo-lo mi-ka mit-lite yáh-kwa?" (How long have you lived here?) I asked, to which he replied, "Kwon-e-sum ni-ka mit-lite" (I have always lived here).

I would have liked to "wa-wa" longer with Lo, but, not being a professor of Chinook, I concluded that it would be a waste of time to try to get much information out of his "untutored mind" with my untutored tongue, and we left the poor old aboriginee to the enjoyment of his *ta-peép* and *kim-oolth* and trudged along. We worked our way to the south along the ridge for a mile or more. It was not yet night, but we decided to take it easy and camp on the mountain for the night. It became decidedly uncomfortable as night shut down.

The wind came directly down upon us from the eternal snows of old Mt. Hood and chilled us through—all except those portions of our anatomics fried by the roaring camp-fire. About midnight Harry sat up in bed, his teeth chattering as if he had the ague, and I soon followed suit. Sleep was entirely out of the question, so we stirred the fire and sat and counted stars, and timed the withered moon in her slow flight while we patiently awaited daylight. Like a kettle that never boils when watched, the sun disdains to gratify peepers that anxiously watch for the tints that betoken approaching day. But other people had to be accommodated even if it didn't matter much about us, and finally we stole enough gray streaks from the lazy morning to see to prepare our coffee. As the sun found out that we were getting along without him he hurried up from behind the mountains to enjoy our miseries during the day. So we packed up and struck out through the forest for the South Fork.

For a mile we pushed through the tangled sal-lal and fallen trees. At last we could hear the roar of the clamorous stream. We reached the edge of a precipice and gazed down into the depths. Half a mile below or, rather, under us a streak of silver was writhing and twisting like a serpent and howling like the storm. This was the South Fork again, in her morning dress. We worked along until we struck an incline, created, probably, by an avalanche. We slid down, and I can assure you that we fully appreciated the trials and tribulations of the ordinary avalanche. There's nothing in it. But when we arrived within about 40ft. of the stream we found ourselves headed off by an abrupt perpendicular wall, down which it was impossible even to slide, so we cooned it down an old tree that had evidently been driven in and tilted up against the cliff by some winter freshet. The fates must take care of the return trip, and we ignominiously dismissed reflections about the hardships in store for us that crept into our minds now and then. Maybe we were affected by the madness of our distracted surroundings and had ourselves gone mad.

The water was green, whether from reflecting the verdure of the mountains or with rage at the impeding boulders that tormented its mad flight I do not know. The lapping, foaming, bellowing torrent seemed larger than the main Molalla, and as we were forced to cross at each rapid we were soon wet to our hips. At each bend in the stream a deep pool had been gouged out of the bluff that was absolutely impassable. Without our packs we might have got along easier, but we must keep them with us or suffer even greater hardships from hunger and cold.

Jumping from boulder to boulder like mountain goats, but with occasional slips, falls and free baths, we worked our way slowly up the stream. At noon we stopped long enough to clean our fish and make our coffee. We wrapped the trout in bright green ferns and suspended

the bundle from a limb by a rope, in the deep shade out of reach of prowling varmints, and proceeded on our way. Such trout and such fishing had only been dreamed of by us. Imagination may have pictured such waters, but this was the first full realization of those dreamy pictures and waking anticipations of trout and trout waters either of us had ever experienced. We need not have fished far, for a dozen pools would have furnished us with all the trout we wanted, but not knowing when another opportunity might offer for the investigation of the Upper Molalla, we pushed forward as rapidly as possible. None but anglers can appreciate with what intoxicating bliss we appropriated nature's hidden treasures. Enamored, infatuated with the weird stream, we could hardly resist the temptation to go on and look further into the secret recesses of nature's inner temple, even when night, sweet nature's dusky maid, had drawn her sable curtains down.

"Harry," said I, "let us take a tumble to ourselves and quit."

"All right; just wait until we get to the cascades in the bend," he replied. And soon we were at the designated spot making our last cast for the day. A bright fire soon crackled at the mouth of an unfinished cave, our coffee was boiling and our trout frying in the broiler, and our blankets hung near the camp fire to dry. Then we sat down and ate and chatted as only hungry, happy anglers can eat and chat after a hard day on the mountain stream. We cleaned our afternoon's catch, wrapped it in fern, and put it down on the cold rocks near the water and turned in. Of course the night was uncomfortably cool, but exhausted nature asserted her rights and we went to sleep. Several times I was awakened by old Mike, who seemed to be restless and watchful. It must have been shortly after midnight, when the dogs brought us both to our feet by their vicious growls. As we jumped up the dogs, emboldened and with hair bristling, dashed down toward the bundle of fish by the stream.

"A coon must be after our fish," said I.

"What's the matter with cougars and wildcats?" Harry suggested, and added, "The dogs wouldn't take on so over a coon."

An hour later Harry's opinion was emphasized by an infernal yell that rang out horribly somewhere on the mountain above and which was presently answered from near the stream below. We did not know whether it was a cougar matinee or a demon pic-nic, but I assure you we kept our camp fire roaring the balance of the night, and on until it was broad daylight. Suspending our bundle of trout and cacheing our luggage we fished up the stream until noon and then retraced our steps to the camp of the previous night. Our trip had terminated at an enormous boulder that sat defiantly in the edge of a deep pool at the foot of a long rapid. Standing on the rock we lifted eight trout out of the pool, none of which weighed less than a pound; then, sadly turned our backs to the hidden wonders above, that appealed to us so alluringly. I believe that this was the only time in my life that I really wanted wings. But we had done as much as could be expected of mortals and we felt grateful for the rations of happiness which had been assigned to us.

Another night by the stream, another day with its rapids and pools and we were well down toward the forks. We had passed the place at which we had descended to the stream, hoping to find some easier way out, but none had presented itself, and here we were in the cul de sac of the gorge. It was a trying position to place two heavily laden, weary fishermen in. Through the gorge, a half mile would put us on the trail, while over the mountain—another wretched night, another day of weary toil.

"Let's try the gorge," said Harry, and I responded, "It's a go." So we repacked our fish and luggage; then we jumped up and down and yelled to loosen the suspended boulders that seemed to be curiously watching our preparations from above. Like two cats we crept along the narrow shelves, scarcely breathing for fear of awakening some sleeping boulder that might grind us to dust.

The trip through that gorge was the most entertaining to my nerves, for a short trip, in all my fishing experience.

But here we were again in the mellow haze of the open valley, listening to the evening carols of the happy birds, the mournful ditties of the sorrowing crickets and closing the last chapter of my trouting experience in the lovely Molalla country. S. H. GREENE.

PORTLAND, Oregon.

["Judge Greene's Molalla letters are delightful," writes our contributor "Von W.," of Charlestown, N. H., "I wish I could be with him for a week this summer." The appreciation and the wish must have been shared by a host of readers, who have followed these happily told relations of an angler's outings in the Northwest.]

ANGLING NOTES.

STRIPED BASS are now being caught with nets in large numbers, but it will be some time before they can be taken with hook and line. Generally the first bass or "rock fish," as our Southern anglers call them, are taken about the middle of April in our waters, and I am surprised to learn from a Potomac angler that they do not take striped bass in that section before May 1. I am inclined to think that if they tried fishing for them a little earlier with patience and perseverance and proper bait, they might find the season open by the first or middle of April.

As to the question, "What is the proper bait to use?" I hardly know what to say. Striped bass will take artificial flies, phantom minnows, live minnows, shrimp, crabs, clams, fiddler crabs, lobster, menhaden, squid, young eels, etc., etc. So from this bill of fare the angler can select whichever he can best obtain. Large striped bass, I mean the big fellows that are taken along the Atlantic coast, prefer the menhaden to any other bait, though a lobster tail will answer when the mossbunker cannot be obtained. Near New York the favorite baits seem to be shedder-crab, shrimp and the red or white sandworm. One of the most successful ways of killing striped bass in our waters is to troll for them with a small gang well filled with sandworms, above which a small metal or mottled pearl spoon revolves as the fisherman rows slowly over the ground. No sinker is necessary, as the swivels are heavy enough.

Further south, the eel tail pulled over an 8-0 Sproat hook is used for trolling and is a very successful bait.

Small striped bass will take the fly very well at times in brackish water, and are very lively on a fly-rod. A shrimp cast in the same manner is also very taking.

Large bass are very shy and require light but very strong tackle. When chumming for these fish they will often rush up and take the small bits of menhaden in plain sight, but the next instant will turn away from the most tempting bit of bait on a hook. For this reason the bass fishermen of West and Pasque islands and other clubs along our coast prefer 9 or 12 thread lines, even if rather light for 50lbs. fish, experience having taught them that unless the water is discolored, larger lines show too plainly.

The rods used for this style of fishing should be made in one piece with a short removable butt for convenience in traveling, and, of course, the reels, to withstand the rush of these fish must be of the best quality. The knobbed O'Shaugnessy hooks are best for large bass, say Nos. 8-0 and 9-0, and for medium and small fish Nos. 4 0 to 6-0 sproat are generally preferred. Kirby bend hooks are not in favor among anglers for striped bass. On March 15 the anglers of Cleveland, at least those who are so fortunate as to belong to the club, will open the trout season at Castalia, near Sandusky, O. The writer expects to be there if the weather permits, for in the month of March the weather is a very important factor when it comes to fly-fishing, and there is no telling what we may have on that date. The members are overhauling their tackle and making great preparations for the occasion and fine sport is expected. SCARLET-IBIS.

BOSTON PICKEREL FISHERMEN.

WASHINGTON'S BIRTHDAY might well be called pickerel day, in the New England States at least. It is not intended to intimate that the Father of His Country had anything like a pickerel in his nature, but rather that the tired merchants and professional gentlemen in the cities, as well as the farmers and country boys, are coming more and more to regard this as the holiday for fishing through the ice. Never has the day been more thoroughly devoted to this pastime by Boston anglers and sportsmen than this year. Preparations were made and parties made up days beforehand, and best of all, the weather was propitious.

The Loring party was one of about the best of the pickerel parties that went out from Boston the day before the 22d. It was made up of R. T. Loring, of the Chamber of Commerce grain trade; C. A. Loring, of the New York & New England Railroad freight department; E. Clement Holden, of the lumber trade, and G. H. Holden, of the clock trade. They went to Foster's Pond, in Andover, Mass., and a splendid day they had of it.

Before they went there was a deal of discussion as to the relative merits of tomcod or shiners for bait. But finally they decided on tomcod, and they came back well pleased with their decision. They found that the tomcod lived longer on the hooks, and that they made a tougher bait, the pickerel not generally succeeding in unbaiting the hook without getting caught. They obtained their bait of a man in Lowell, who makes a business of keeping live bait for sale. But they found that they were not alone on the pond. There were over 500 lines in the pond on that day, and the Loring boys express surprise as to where so many pickerel could come from, since nearly all of the fishermen had more or less of luck. The Loring party got 16 in all, and two of their large ones weighed 10lbs., the largest one being considerably over 5lbs. The boys were satisfied, as to numbers, and much pleased with their trip.

C. Claude Tarbox, also of the Boston grain trade, is a great lover of fishing. He had his pond all selected before the 22d and had his bait where he was sure he could "put his hand on it" in season. He went to Stetson's Pond in Boxford, with a friend or two, and they had fine sport.

Another most enthusiastic fisherman is Mr. A. W. Tompkins, of Waltham, with Foster, Weeks & Co., in the Boston grain and produce trade. Mr. Tompkins, with his friends in Waltham, supports a good camp a few miles up in the country, and they go there both for ice fishing and summer fishing, driving up with good teams, of which they are especially fond. On the 22d Mr. Tompkins, with A. S. Hartwell, J. A. Tolman and "Skipper" Somes went to Herd's Pond, in Wayland. It ought to be mentioned right here that Mr. Somes's front name is not "Skip" nor "Skipper," but so well is he known by the cognomen that his real name is neglected. This party had remarkably good luck. They took 38 pickerel and 2 black bass, one of which weighed 2lbs. and the other 2¼lbs. They used shiners for bait. They had the bait caught and saved beforehand. Last fall they caught 2,000 shiners at the Outlet, in Brighton, and they have had them in reserve for pickerel fishing. Mr. Tompkins says that they have used the last of them, however, and that is considerable bait for one winter. There were a great many lines in the pond, and all seemed to get fish.

On the Sudbury River, at different points, considerable fishing was done on the 22d. One party, including W. W. Hartwell and John Jemson, had excellent luck. They caught pickerel on nearly every line, and they had a good many lines out. Charley Nichols with a friend or two also had forty lines out on the Sudbury River. They took a great many fish. Charley, or "Nick," as he is better known, is one of the greatest fishermen in his neighborhood, and that is saying a good deal. He goes as often as occasion permits and his lines are among the most successful. Roberts Pond, or the old Cambridge reservoir, was lined with pickerel fishermen on the 22d, and some good hauls were made. One boy, I could not learn his name, came home to Boston by train that night. He had an enormous pickerel by the gills. It must have weighed six or seven pounds, and the boy's face was radiant. He will be very likely to visit the old reservoir again on the first opportunity.

The Commodore Club, at the head of Moose Lake, in Hartland, Me., has lately been visited by a delegation of some 30 of its members, with invited guests. The party went for fishing through the ice, and they had fine sport. The party included some of the best known lovers of the rod and line in Boston and vicinity. Several of the members of ex-Gov. Brackett's staff were in the party. Among them may be mentioned Col. H. T. Rockwell, Col. J. M. Hedges, Col. Buffington, Col. Fred M. Wellington, John A. Lowell, H. W. Tenney, Wm. Gray, Dr. Carter, John Lakin, Arthur W. Pope and Francis Bacheller, and several others, all the above of Boston. In the party there was also Mayor Frank Harris of Pawtucket and Maj. Merrill, of Lawrence, State Insurance Commissioner. They found the Commodore club house commodious as ever, and hospitable enough for them all. These winter excursions to this famous club house are greatly enjoyed, and there are reports of good ice fishing, though the weather is very cold up there—almost always 10 or 12 degrees colder than in Boston, and perhaps 15 to 20 degrees colder than in New York. Another party of the club's members and friends is to start in a day or two, of which the FOREST AND STREAM shall have an account.

As a result of the fishing on the 22d a good many pickerel came into the Boston market, and yet not as many as last year, nor as many as might have been expected, since the day was a fine one for the sport of fishing through the ice. But there is naturally a dislike among sportsmen toward seeing game fish in the markets, and hence few of the fish caught by the lovers of fishing for the sake of fishing find their way into the markets. There is also an antipathy among lovers of the rod and gun toward game and fish that find their way into market. This is well illustrated by an actual circumstance connected with pickerel fishing on Feb. 22. Mr. James L. Raybold, salesman at the commission house of Hyde & Wheeler, has probably sold many tons of pickerel, such as come to market. He would never think of carrying one home for his own table though reared in the neighborhood of the Adirondacks and as dear a lover of rod and gun as there is in the world. But a friend went on the 22d to a pond "down on the Cape." They put out some "night lines" and had a nice pickerel on nearly every line. The friend came back. He visited the house of Mr. Raybold, and not finding anybody in the kitchen, he helped himself to a platter on which he left a fine pickerel, nicely dressed. This he put into the refrigerator, and left without notifying the household. But in the morning the fish was cooked, and Mr. Raybold claims that it was one of the nicest fish he ever tasted. SPECIAL.

THE MIGRATION OF EELS.

MR. H. C. FIELD, in the New Zealand *Journal of Science* for November, 1891, gives some interesting notes upon the migration of eels in New Zealand. He says: "These fish come up from the sea in large shoals about the months of October and November, only about two inches long and as thick as a straw, and work their way up the tributary streams to very high elevations, large numbers living in swamps. They surmount the waterfalls by wriggling upwards among the wet moss beside the falls; the Maoris assert that each fish takes hold of the tail of the one in front of him with his mouth, so that they all help each other to ascend. This much is certain: If the head of the column is dislodged, the whole fall down; and the Maoris take advantage of this to catch large quantities of these 'tuna riki' (little eels), by holding flax baskets below a column and then detaching them. They then dry them for winter food, just as they do the whitebait, and the little eyeless fish of the volcanic springs at the head of the Roto-aire Lake. I know streams, tributaries of the Mangawhero and Wangahu rivers, which swarm with eels that have surmounted falls 200 feet to 600 feet high. Again on the west side of the Wanganui river, near the heads, there was formerly a large swamp, the surplus water of which trickled into the river over a flat of sand, several chains in width. In the autumn of 1856 or thereabouts, a gentleman who had been to the Station, was returning late in the evening, found a great number of large eels wriggling their way across the sand from the swamp to the river, and brought a string of them as large as he could carry, back to town with him. For several nights afterwards, several of us visited the spot and secured a large number. The migration lasted for about a week. The Maoris are perfectly well aware that the large eels migrate to the sea with the first autumn rains, and catch great numbers of them with traps at that season. The rain, no doubt, causes the water of the streams and lakes to rise, and so increases the pressure as to warn the fish to migrate. It was probably in this way that the eels of the Chatham Island lagoon, mentioned by Mr. Smith, knew that their way to the sea was open."

There are several lakes near here in which there are no eels, and any Maori would at once tell you this is because these lakes do not communicate with the sea. Up to 1855 or 1856 there were no eels in Virginia lake. The main road was then constructed northwards from Wanganui, and to enable it to be carried along the southern margin of the lake a trench was dug through the lowest adjacent ground and the water was lowered three feet or so. In the following spring, it is said, eels ascended to the lake in considerable numbers, although they had to surmount a fall of about twenty feet in height. Several years later this trench was deepened in order to increase the supply of water in dry weather. After this more eels found their way up to the lake, and the runs of eels continued until the lake was utilized as a source of water supply for the town about 1873, when the outlet was closed. It was soon found that the lake could not be relied on as a source of water supply as it drains no appreciable area of land, and therefore pipes were laid to bring into it water from another larger lake two miles distant. This lake is connected with the sea and contains eels, and every autumn some of the large ones endeavoring to migrate seawards, come through the pipes into the Virginia lake. This is known for certain, as the eels sometimes stick fast in the pipes and cause a stoppage of the water.

The presence of eels in Virginia Lake is no mystery and and they are certainly not bred there, as the young are never found in the lake. Very few are caught and they are all of a size worth taking, never under 2lbs. weight, and as high as seven.

THE OPAH IN CALIFORNIA.—In our issue of Oct. 31, 1889, we announced the capture of the first recognized specimen of the opah in California waters. The fish remained unknown to those who saw it, or a copy of the photograph made from it, until its identification by FOREST AND STREAM. This example, weighing 70 or 80lbs., was taken in October, 1888, in Bolinas Bay. Mr. C. H. Townsend has sent us a photograph of a second specimen, weighing 70lbs., which was captured by fishermen at Monterey. The opah from Bolinas Bay was sent to Redding, Cal., where it was cut into steaks and pronounced a good food fish. A description of this remarkably handsome species

is published in our columns of Dec. 17, 1891, and an outline is given showing its curious form. As for the colors of the opah, words can only feebly express their splendor. It would be difficult to find a fish on the California coast which has greater interest to students and to museum collectors.

THE NEW YORK GAME BILL.

THE Gould bill was reported in the New York Assembly last Thursday. From an advance printed copy the following summary of its more important provisions is given:

FISH COMMISSIONERS—GAME PROTECTORS.

FISH COMMISSIONERS.—The Governor shall appoint five commissioners of fisheries to serve one, two, three, four and five years respectively, subsequent terms to be for five years. (Requirement that one commissioner must be appointed from each judical district stricken out.) The chief office shall be in Albany, but there may be a branch office in New York city.

GAME PROTECTORS.—The Commissioners of Fisheries shall appoint twenty game protectors, who shall be subject to the control of the Commission and may be summarily removed by it. The chief protector's office shall be at Albany. Salary of chief $2,000 per year, with $1,000 for traveling expenses. Salary of others, $500, with $450 allowed for traveling expenses. One-half of penalties collected shall go to protectors.

On recommendation of supervisors or any incorporated society for protection of fish and game the Commissioners may appoint special protectors, who shall have the same powers as the State protectors. Peace officers shall have same powers as game protectors. It is the duty of every protector to seize and summarily destroy forbidden nets and illegal fishing devices, which are declared to be a public nuisance. The expense of such seizures shall be a charge against the county.

GAME ANIMALS.

DEER.—Deer shall not be hunted or killed between Nov. 1 and Aug. 15. Venison shall not be sold or possessed between Nov. 15 and Aug. 15; possession between Nov. 1 and Nov. 15 is forbidden, and shall be deemed a violation, unless it shall be proved by possessor or seller that such venison was killed legally or out of the State. No fawns shall be killed at any time. (Prohibition of killing does has been taken out.) Traps and devices, including salt-licks, forbidden, and deer shall not be caught, hunted or killed by aid thereof. One person may take only two deer in a season.

Sec. 44. "Deer shall not be hunted with dogs between the eleventh day of October and the tenth day of September following. Dogs of the breed commonly used for hunting deer shall not be permitted by the owner or person harboring the same to run at large between such dates, in the forest where deer inhabit. Deer shall not be hunted with dogs in the counties of St. Lawrence, Delaware, Greene, Ulster at any time, or in Sullivan county between the first day of December and the first day of October." Sec. 45. Dogs chasing deer in violation of this act may be killed.

Transportation of deer or venison forbidden from or through any county, except that one carcass may be transported from county where killed when accompanied by the owner. Possession by common carriers, unaccompanied by owner, is a violation. Prohibition does not apply to head and feet or skin. Crusting deer is forbidden. Moose, caribou and antelope shall not be hunted, killed, possessed or sold in the close season for possession of venison.

HARES AND RABBITS shall not be killed between Jan. 1 and Sept. 1; nor shall they be caught in traps, nor traps set for them.

BLACK AND GRAY SQUIRRELS shall not be killed between Jan. 1 and Sept. 1.

SUNDAY.—Shooting, hunting, trapping and caging birds or wild beasts on Sunday is forbidden.

PENALTIES for violation of deer law, fine of $100; other sections $25.

BOUNTIES are provided of $10 for a bear, $30 for grown wolf, $15 for pup wolf, $20 for a panther. (No bounty for a fox.)

GAME BIRDS.

WILDFOWL.—Web-footed wildfowl, except geese and brant, shall not be pursued, shot at, hunted, killed, possessed or sold between March 1 and Sept. 1; nor pursued between sunset and sunrise. Shall not be hunted, save with shoulder-gun, nor from any boat other than one propelled by hand, nor floating device, nor by use of bough-house more than 50ft. from shore.

QUAIL shall not be killed between Jan. 1 and Nov. 1; nor sold or possessed between Feb. 1 and Nov. 1; possession between Jan. 1 and Feb. 1 forbidden unless possessor shall prove the lawful killing.

WOODCOCK AND GROUSE.—"Woodcock, ruffed grouse, commonly known as partridge, or any member of the grouse family," shall not be killed between Jan. 1 and Sept. 1. Possession and sale forbidden between Feb. 1 and Sept. 1; possessor between Jan. 1 and Feb. 1 must prove lawful killing. Transportation from any county is forbidden, except from county where killed when accompanied by owner. Possession by common carrier for transportation shall be a violation unless birds shall be proved to have been killed out of the State.

PLOVER AND SNIPE.—Wilson's [bill reads "Willow's] commonly known as English snipe, plover, mud hen, gallinule, grebe, bittern, surf bird, curlew, water chicken, bay snipe or shore birds shall not be killed between Jan. 1 and Sept. 1.

OTHER WILD BIRDS, not named in this chapter, shall not be killed at any time; nor their nests destroyed, but this shall not incude the English sparrow, crane, crow, raven, crow-blackbird nor kingfisher.

ROBINS, BLACKBIRDS AND MEADOW LARKS shall not be killed between Jan. 1 and Nov. 1.

SNARING OR TRAPPING grouse and quail is forbidden; no snare or trap shall be set; it is a public nuisance and may be summarily destroyed.

PENALTIES for violations of any of these provisions is a fine of $25 for each bird killed, trapped or possessed.

COLLECTORS may obtain certificates from an incorporated society of natural history or from the Regents to collect bird specimens for scientific purposes.

LOCAL GAME LAWS.

RICHMOND COUNTY.—Non-residents are forbidden to shoot without a license from a justice of the peace, fee $10.

WOODCOCK shall not be killed in Lewis, Warren, Fulton, Hamilton and Saratoga counties between Jan. 1 and Aug. 1.

LONG ISLAND.—The following provisions apply to Kings, Queens and Suffolk counties: Web-footed wildfowl, except wild geese and brant, shall not be killed between May 1 and Oct. 1; nor at any time between sunset and daylight. Floating devices for shooting wildfowl may be used on Long Island Sound, Great South Bay west of Smith's Point, Shinnecock and Pecowsic bays; in any part of these counties boats propelled by hand may be used, and sailboats on Long Island Sound, Gardiner and Peconic bays. Plover, Wilson's (commonly known as English) snipe, rail, sandpiper, mudhen, gallinule, bittern, surf bird, snipe, curlew, water chicken, bay snipe and shore birds shall not be killed between Jan. 1 and July 1. Woodcock and ruffed grouse (partridge) shall not be killed except between Jan. 10 and Nov. 10, nor sold between Feb. 1 and Nov. 10. (On Robins Island quail may be shot between Oct. 14 Feb. 1.) Hares and rabbits shall not be killed between Jan. 10 and Nov. 10. Deer shall not be hunted or killed for five years from Aug. 14, 1892, except from Nov. 10 to 16 inclusive. Black and gray squirrels shall not be killed between Jan. 10 and Nov. 10.

Where an act is prohibited between certain dates, it is not lawful upon the date first named and is lawful upon the date last named.

FISH.

FISH.—It is forbidden to pollute any waters of the State with dye stuff, coal tar, refuse from gas-houses, sawdust, shavings, tan-bark, lime or other deleterious substances, "in quantities destructive to the life of or disturbing the habits of fish inhabiting the same." It is forbidden to take fish by drawing or shutting off any water; or by any device except angling. The use of dynamite or other explosive is forbidden, except for mechanical and mining purposes. No trout of any kind, salmon trout or land-locked salmon shall be taken from any of the waters of this State for stocking a private pond or stream. Fishing through the ice is forbidden on any waters inhabited by trout, salmon trout or land-locked salmon.

TROUT of any kind shall not be taken between Sept. 1 and May 1. No trout of any kind, salmon trout or landlocked salmon of less than six inches in length shall be taken. No trout, salmon trout, or landlocked salmon shall be disturbed on the spawning beds.

SALMON TROUT AND LANDLOCKED SALMON shall not be taken between Oct. 1 and May 1.

TRANSPORTATION.—Trout of any kind, salmon trout and landlocked salmon, caught in any of the waters of the State shall not be transported from any county except when accompanied by the owner.

BLACK BASS OR OSWEGO BASS shall not be taken between Jan. 1 and May 30. No black bass of less than 8in. in length shall be taken.

MUSCALLONGE shall not be taken between Jan. 1 and May 30.

SALMON shall not be taken between Aug. 15 and March 1; nor shall any salmon be retained of less than 18in. in length.

SIZE OF MESHES.—The use of seines, pound-nets, gill-nets or fykes, the meshes of which shall be less than 1½in. bar, is forbidden.

SALMON TROUT, or lake trout may be sold at any time, if not taken in close season; possession between Oct. 1 and May 1 is forbidden unless possessor proves lawful capture.

FISHWAYS.—Signboards erected by the State shall be maintained at 50 rods from a fishway, and fishing within that limit is forbidden.

FISH PROPAGATION by the commissioners and the operation of private hatcheries are not affected by any foregoing provisions.

PENALTIES.—The penalty for polluting waters, taking fish by drawing off waters, or use of dynamite, is a fine of $100; for taking trout or bass of unlawful size $10 for each violation; for violations of other provisions, $25 for each violation and $10 for each fish.

ADIRONDACK FISH PLANTING.—No fish except trout, Adirondack frostfish or landlocked salmon, shall be placed in Adirondack waters (unless the fish are non-preying or non-destructive, such as usually contribute food for the species named) except under immediate supervision of the Fish Commissioners.

LOCAL FISH PROVISIONS.

No fish shall be taken except by angling in the St. Lawrence and Niagara rivers and Lake Champlain, nor in Lake Erie within one-half mile of the shores of any islands, nor in Lake Ontario within one mile of the shores of any islands, except that in the county of Oswego they may be taken one-half mile from shore. ("The waters of Lake Ontario in the county of Jefferson includes between Pillar Point, in the town of Brownville, and the town line between the towns of Lyme and Cape Vincent, including Chaumont Bay, Griffin Bay and Three Mile Bay, are hereby exempt from the provisions of this act,") except that bass may not be taken between Jan. 1 and May 30, nor of less length than 8in. Possession of fish unlawfully taken is forbidden.

Fishing through the ice is permitted in Lakes Ontario, Erie and Otsego; Rondout Creek below Honk Falls; the Hudson and Niagara rivers.

In Lakes Erie and Ontario the meshes of nets shall not be less than 2in. bar.

Taking fish by any means other than angling is forbidden in Rondout Creek and in the Hudson River above the dam at Troy, save as follows. Shad and herring shall not be taken from Rondout Creek or Hudson or Delaware rivers between June 15 and March 15; nor shall shad nets be permitted to remain in said waters from sunset on Saturday until sunrise on Monday; between March 14 and June 15 shad and herring may be taken by nets; and between Sept. 1 and May 30 bullheads, catfish, sunfish, suckers, eels, pickerel, sturgeon, white and yellow perch may be caught by hoop-nets, fykes and gill-nets in the Hudson River and Rondout Creek below Honk Falls.

Salmon, black bass, trout, salmon trout and pike-perch caught in nets in the Hudson River shall be thrown back.

In Raritan Bay and adjacent waters in Richmond county no device except angling shall be used for taking fish. In the Harlem River or East River or adjacent waters nets shall not be used.

"In Black Lake, Mud Lake and Yellow Lake in St. Lawrence county, bullheads, eels, suckers, catfish and pickerel may be caught with spear, except during March, April and May, and pike in Lake Champlain, in Essex county." It shall be lawful to fish for suckers, bullheads and pickerel with nets and fykes, to shoot or spear them through the ice, in any waters of Warren county except Schroon Lake and Long Pond or Glen Lake.

In Champlain, Seneca, Cayuga, Keuka, Canandaigua, Skaneateles and Owasco lakes, bullheads, catfish, eels, suckers, perch, pickerel and sunfish may be caught by hook and line through the ice.

In Oneida River eel weirs may be maintained of lath not less than ½in. apart, with clear passage way, at low water, of not less than 10ft.

Black bass shall not be fished for in Lake George between Jan. 1 and Aug. 1, nor in Black Lake, St. Lawrence county, between Jan. 1 and May 5.

Minnows for bait may be taken in any waters not inhabited by trout by nets not exceeding 40ft. in length.

In Coney Island Creek and waters of Gravesend Bay, one-half mile each way, the meshes of nets shall be not less than 4in. square (except hoop-nets for flounders between Oct. 14 and April 1).

In Spring Brook, in Monroe and Livingston counties, trout shall not be taken between Sept. 1 and April 1.

In the Susquehanna River and tributaries wall-eyed pike, yellow bass and pike shall not be taken between Nov. 1 and May 30.

In the waters of Queens and Suffolk counties (Long Island) trout shall not be taken, sold or possessed between Sept. 1 and April 1; salmon trout and landlocked salmon between Oct. 1 and April 1; black bass between Jan. 1 and May 30; in Jamaica Bay and the inlet thereof fish shall not be taken by any means except angling, which shall be lawful on any day of the year between April 1 and Dec. 1.

For full text of important sections see next issue.

MASSACHUSETTS FISHERIES AND GAME.

THE twenty-sixth annual report of the Commissioners on Inland Fisheries and Game contains much interesting information for anglers. All the fishways reported upon are in good working order. The way at Lawrence was passed by various kinds of fishes, at first by suckers and alewives, followed by lampreys, salmon, chubs, eels and black bass. In all 66 salmon were seen in the fishway, the first on June 12 and the last on July 31. The number of salmon is smaller than last year, but the catch at Plymouth, N. H., for spawning purposes was 75, an unusually large supply. Black bass are increasing rapidly in the Merrimac and the Concord. The State received about one-half million trout eggs for its share of the joint work at Plymouth and 200,000 additional were bought. The Commissioners expect to have about 500,000 young trout for distribution in April and May next. The number planted in 1891 was 580,000. A new hatchery is now under construction at Sutton, Worcester county, which will greatly enlarge the capacity for trout production. Col. E. B. Hodge, who has charge of the Plymouth hatchery, planted 200,000 salmon fry developed from eggs taken from native Merrimac River salmon, besides 132,000 hatched from eggs obtained from Bucksport, Me. These were deposited in the Pemegewasset from one mile to twenty miles above Livermore Falls, before the yolk sac was fully absorbed. Col. Hodge firmly believes that the fry have a better chance to exist on natural food than by means of any kind of artificial sustenance. The largest salmon taken at the Falls weighed 30lbs. and, as usual, more males than females were secured. Brook trout began spawning in July and August, but no ripe males could be found, and the loss of eggs was very large.

In the investigation of the reproduction of the lobster, it was found that the bulk of the eggs are deposited in June, July and August, and that little progress is made in the development of the embryo until the water reaches a temperature of 50 degrees; the eggs begin to hatch at a temperature of 55 degrees. The experience of the Commissioners led them to adopt the plan of planting egg lobsters in suitable places in order to stock the waters. Great difficulty was experienced in preventing the capture of undersized and egg-bearing lobsters. More than 14,000 of these were taken from sunken cars by Capt. Procter and liberated in depleted waters. Some of the fishermen engaged in this illegal traffic were taken from their vessels, prosecuted and fined. The number of lobster eggs planted along the coast was about 138,000,000.

The report of the conference of the Fish and Game Commissioners of the New England States, which is published in the appendix, contains many interesting discussions on matters of public importance. Among other things, the black bass is treated at considerable length. In New Hampshire the open season for this fish begins June 15. Commissioner Hodge admits that this may be a little too early, but as June is almost the only month in which fly-fishing for black bass can be had, the law is defended. In Massachusetts the season opens July 1, while in Maine the bass is without protection and there is an unreasonable prejudice against the fish, which is by no means shared by summer visitors to the State who are attracted there by the bass fishing. In Connecticut, also, there is a crusade against the black bass, and the farmers are debating how to get rid of this fish in small ponds and lakes. One of the objections to it in this State is that it destroys the pickerel, and only one application for black bass was received by the Connecticut Commission in 1891.

MINNESOTA GAME AND FISH.

BY courtesy of Mr. W. F. Dealing, of Minneapolis, we print, in advance of its official publication, the full report of the Minnesota Game and Fish Commission.

The Minnesota Commission of Fisheries (William Bird, of Fairmont; Niles Carpenter, of Rushford; and Robert Ormsby Sweeney, Sr., of Duluth) was organized in 1874; and was superseded and re-organized May 5, 1891, by the Game and Fish Commission of Minnesota as now constituted: Pres., Robt. Ormsby Sweeney, Sr., Duluth; Vice-Pres., W. S. Timberlake, St. Paul; Treas., W. P. Andrus, Minneapolis; Rec. Sec., A. F. Ferris, Brainard; Wm. Bird, Fairmont. The report is as follows:

Hon. Wm. R. Merriam, Governor of Minnesota:

Herewith I have the honor to lay before Your Excellency the eighteenth annual report of the Fish Commissioners' operations—but perhaps more properly the first report of the Game and Fish Commissioners of Minnesota, which also includes the work of the last months of the older State Fish Commission, as organized originally in 1874, and which by act of last Legislature merges into the present organization, with its broader scope and complete guardianship of all appertaining to the game and fish within the broad domain and jurisdiction of Minnesota.

In compliance with the law creating it, the new board met May 5 at the Capitol building, and the organization was completed by the election of officers and appointing warden and superintendent. Mr. Frank L. Stetson, of Minneapolis, was appointed State Game Warden and Mr. Thos. S. Watkins Superintendent of Fisheries. These gentlemen were selected for their respective positions from a large number of candidates and for their fitness alone.

The first duty of the new board was to acquaint themselves with the condition of the property, apparatus and equipment in their possession. For this purpose the entire board visited the hatcheries and grounds at Willow Creek and found them internally serviceable, but externally greatly in need of repair. The reason given was that the old board did not care to go to great expense on repairs until the lease of the grounds, which was about to expire, could be renewed, and second, financial stringency, having only funds enough for the proper propagation and distribution of the fish in territory already planted, and nothing for new territory. For these reasons the walks, fences, grounds, etc., showed the need of repairs and closer attention.

The board have secured a new lease of ten years of the premises, at an annual rental of $400 for the first five and $600 for the succeeding five years. With this new lease, we propose to repair the buildings and fit up the grounds in a manner creditable to a worthy State institution, and we have accordingly expended the modest sum of $2,500 in the pleasing and attractive place now presented. Superintendent Watkins had charge of the work.

The new law authorized the board to appoint four deputy wardens, but for financial reasons it was deemed inexpedient so to do, but instead have appointed special or local deputies in various counties where needed, without stated salaries, but with their legitimate expenses paid when in discharge of their duties, and a reward (general) of $25 for conviction of violators acted as incentives for them and other civil officers to take a more active interest in the matter and secure greater respect for the law.

We find that the effect of the new law has been as a whole beneficial. There are defects in it, however, omissions and deficiencies from time to time and some occasions most provokingly. We are glad to say the community generally uphold and approve its requirements and commend its enforcement, particularly in the older and more thickly settled portions of the State.

As we reach out into newer counties we find an element who are impatient of the least restraint upon their lawless inclinations, reckless disregard of law, and defiant and threatening attitude assumed against the wardens or any one interfering with their indiscriminate slaughter of both fish and game.

WHO ARE THE VIOLATORS?

First, a class of "fellows," young and old, who, armed with a cheap gun, and a desire to be classed as a sportsman, go out at unlawful seasons and wantonly slaughter the young birds before they have left the hen. This class are very cowardly and a round fine will generally put a quietus on their "hunting," especially in that particular locality.

Second, are those who associate with, and presumably are, gentlemen, and offer the very tame excuse that the other class spoken of are securing the best of the game, and a few birds or deer cannot make much difference. This class being more intelligent are more wary and consequently harder to control, but, fortunately, fear arrest, so that violations from this class are becoming less frequent.

The greatest injury and devastation to the game and fish in our commonwealth are perpetuated by the professional hunters and fishermen, who are simply organized banditti sent out by the game and fish dealers, not only of our own State, but agents of dealers in other States, the use of every forbidden and evil device known to the craft to secure the game in quantities, regardless of the age, size and condition. They operate in gangs of from three upward, have complete camping outfits, tents, nets, guns, etc. They are thoroughly posted as to the best places to carry on their nefarious work, and there they stop until every living thing in the game line is practically exhausted, or until they are routed out by the wardens, or, as rarely occurs, by indignant citizens. I say rarely advisedly, for we are told by citizens, every little while, of violations, notably at White Bear and Bald Eagle lakes, and that it "has been going on for years;" you suggest a prosecution and they simply refuse to testify "for fear of bodily harm and damage to property."

Many of these violators carry on so prosperous a business that they have confederates conveniently located within telegraphic reach to notify them of the approach of danger. An instance occurred on the Duluth & Winnipeg R. R., at a time when one of the wardens was buying a ticket of the agent at Cloquet he was "spotted" and the "gang" was notified of the warden's approach. When he arrived at the grounds the parties were found quietly fishing with hook and line, but patient search brought forth the nets, which were soon rendered unserviceable. It was ascertained beyond doubt that nets had been furnished by some of the local dealers in the neighborhood of this illegal work, and one of the specials interviewed one of them, when the following almost verbatim conversation was held:

"Good morning, Mr. ——, I'm just thinking I'd get a net or seine of some kind, but I haven't got any money; I just want to know what I can do with you; Bill —— and French —— told me they got their nets here." Dealer—"Yes, I believe we did let them have some nets. Your having no money don't matter. If you'll give us security for the net we'll let you take it. Where do you think of going?" "I ain't quite made up my mind of two or three good places I hear are pretty good fishing points." "Have you any friends

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

FIXTURES.

DOG SHOWS.

March 1 to 4.—First Dog Show of the Keystone Kennel Club at Philadelphia, Pa.

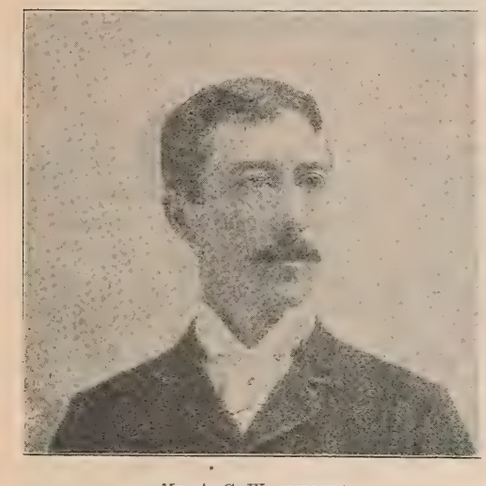
March 8 to 11.—Washington City Kennel Club, Washington, D. C. Fred. S. Webster, Sec'y, 711 Fourteenth street, Washington, D. C.

March 15 to 18.—Second Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Sec'y.

April 6 to 9.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. C. Steadman Hanks, Sec'y.

April 13 to 16.—Third Annual Dog Show of the Continental Kennel Club, at Denver, Col. R. W. Isenthal, Sec'y.

April 20 to 23.—Fourth Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.



May 4 to 7.—Annual Dog Show of the California Kennel Club, at San Francisco Cal. Frank J. Silvey, Sec'y.

Sept. 12 to 16.—Fourth Annual Dog Show of the Toronto Industrial Exhibition Association, at Toronto, Canada. C. A Stone, Sec'y.

FOREST AND STREAM EXTRA.

From the FOREST AND STREAM *Dog Show Extra, published on the last day of the show.*

WE are confident that readers will be pleased with the FOREST AND STREAM DOG SHOW EXTRA. For the first time in the history of bench shows in this country there is given, while the show is still in progress, a complete account of the work done by the judges, with intelligent comments on the exhibits and the awards. For the first time it is thus made possible to study a judge's awards in the light of his explanation of his reasons for making them.

MR. A. C. WILMERDING.
Spaniels.

How difficult has been the undertaking, and what its successful accomplishment means, only one who is at once a dogman and a journalist can begin to comprehend.

For the labor involved we shall be amply repaid if the EXTRA shall serve the purpose intended and prove to be of practical service to its readers.

The EXTRA is to be accepted as an earnest on the part of the kennel management of FOREST AND STREAM to make the paper more valuable and more useful in the immediate future than ever before. The EXTRA is only one of many enterprises undertaken in the interest of fanciers, and possible only because of the energy and resources of this journal. Already conceded to be *the* kennel journal of America, the FOREST AND STREAM will not be contented with mere pre-eminence, but will originate and execute new enterprises in the interest of dogs and fanciers.

The Westminster Kennel Club has given a grand show and it is only fitting that the event should be thus appropriately recognized by FOREST AND STREAM. In the EXTRA the exhibitors have a novel souvenir of the event.

THE NEW YORK DOG SHOW.

In years to come there may be a greater gathering of blooded canines in New York city, but it is quite safe to say that in nearly everything that pertains to the management of the Westminster Kennel Club's dog show, little or no improvement can be suggested. The old barn-like structure that did duty for so many years with its unsightly walls and draughty aisles would have spoiled the effect of the best arrangements that could have been planned. Now it is different. With a building that is quite up to modern taste in decoration and architecture, the *tout ensemble* of the show is both pleasing and effective.

All the dogs are benched on the main floor, so that there is no cause for dissatisfaction in that respect this year. The Spratts Company have arranged the benching most artistically, and the four good rings in the center of the building seemed quite sufficient for the purpose, as when six rings are placed there is considerable confusion in serving them. This reminds us that we never attended a show where the dogs were brought before the judge so expeditiously and with so little confusion. The writer can testify personally to this, for in many cases it was impossible to get the awards from the judge's book before it was required for the checking off of the next class. The rings, as usual at New York, were well looked after by the "scavenger," so that at all times they were sweet and clean.

With management so perfect it must have been intentional to deprive the public of the chance to identify the dogs by

MISS ANNA H. WHITNEY.
St. Bernards and Newfoundlands.

the large lettered cards in vogue last year. There was considerable grumbling at this, round the ring sides. At every public gathering of this description, whether it be a horse show or a cattle show, cards that will enable the public to identify the animal under judgment are and should invariably be attached to the animal. Then it was thought the building was kept at too high a temperature in the evenings, but this may in great part have been caused by the immense crowds.

New York seemed to just tumble itself into the coffers of the W. K. C. The pretty women—the toilets—the brave men—it would take an abler pen than mine to do them justice. To sit in one of the balconies and look down upon the swarming scene of beauty and fashion all come to do homage to man's best friend makes the lover of a dog, indeed, feel proud that the day has come when an intelligent and discerning public has determined that the dog should stand on an equality with the horse. Dog show week is one of the pivotal points in the world of society, and where society goes the rest of New York is willing to follow.

We never remember a show where the aisles were so filled with representative dogmen. It seemed as if every man who during the past ten years had been even remotely connected with dogs had come "just to have a look round, you know."

J. L. Winchell had mastiff matters pretty much to himself, and F. T. Underhill was also an interested spectator. The St. Bernard owners were out in force; Messrs. Reick, Ruppert, E. B. Sears, E. H. Moore, and with him Blackwood Fay, in separable as usual; Mr. Cushman, R. T. Rennie, Mr. Joeckel, president of the St. Bernard Club; the owner of Halfway Brook Kennels, F. E. Lamb, whose Santa Rosa arrived too late; the Diffenderffer brothers and W. C. Farber from Baltimore, J. O. Thurston, Mrs. Nicholson, with some promising young winners as usual; Mrs. Smyth and Mrs. Meecham, in ecstacies over Sunray's good win; Dan Foster, kissing Leicester in his joy; C. T. Barney and lots of others whose faces only we know. Mr. Leibacher had his great Danes, and Carl Heimerle, whose unfortunate loss of Irene does not seem to have dampened his spirits and Harry L. Goodman, with Melac in charge.

Mr. Hanks, proud again of his wolfhound winnings with Leekhoi; John E. and Bayard Thayer, when not busy with the fox-terriers took a peep at their deerhounds, and Albion C. Page was round about with Olga. Greyhound men were out in force; Messrs. Pope, Whiton, Huntington and Watson, and S. C. Symonds was looking after Mr. Purbeck's interests as as well as his pet dogs, also Jas. Black with a "didn't-I-tell-you" look. Pointer men: T. G. Davey, E. R. Bellman, James L. Anthony, T. H. Terry and A. D. Lewis, R. C. Cornell, W. H. Hyland, J. H. Winslow, Dr. Daniels and George Jarvis. The setter men were well represented by S. L. Boggs, Frank Windholz, F. G. Taylor, Dr. Hartman, John Brett, P. H. O'Bannon, C. Osborne, Wilson Fiske and the "Spectre act," S. C. Bradley with the redoubtable Rowdy Rod; L. Gardner and Roger.

Irish setters: Dr. Sauveur, Dr. W. Mills, Max Wenzel, W. L. Washington, Louis Contoit, C. T. Thompson, F. C. Fowler, Geo. Langran, H. B. Anderson, telling how he beat them at High Point with Nugget; L. A. Van Zandt, John J. Scanlan, A. W. Pearsall, etc. Gordon men: Mr. James B. Blossom, Dr. Meyer, H. F. Smith and Inwood Kennels. Spaniel men: J. P. Willey, W. West, E. M. Oldham, R. P. Keasbey, Geo. H. Bush, C. T. Sackett, Geo. Bell and young Sprackling. Collie men were round, too, Henry Jarrett, F. R. Carswell, R. McEwen, Eugene Van Shaick, Jas. Watson. John H. Mathews, John Coles, C. D. Cugle, E. A. Woodward, H. D. Kendall and Mr. Hobbie were interested spectators when the bulldogs were judged. Frank Moorehead, Jr., Frank Dole, Dr. Sneden, and John Whelan are all interested in the bull-terriers, and Mr. Manice, M. J. Asche, and Sidney Dillon Ripley were well pleased to see such a good lot of dachshunde. E. O. Brooking, F. W. Chapman, H. L. Kreuder, and H. V. Jamieson were all busy with the beagles. When the fox-terriers came in lots of big men trooped into the ring, August Belmont, L. & W. Rutherfurd, Clarence Rathbone, the Thayer brothers, John A. Logan, Jr., Harry Twyford, German Hopkins and H. Granger; a representative gathering. Walter J. Comstock was out with his Dunmurry and other terriers. C. T. Symonds, A. W. Smith and Dr. Foote were all there when the black and tans frisked into the ring. G. M. Carnochan and W. H. Russell looked on at the Dandie and Bedlington terriers, too, and Kirby and Ben Lewis fought their Sir Staf-

Mastiffs, Great Danes, Bloodhounds, Russian Wolfhounds, Deerhounds, Greyhounds, English Foxhounds, Poodles, Bulldogs, Bull-Terriers, Fox-Terriers and all other terriers, Dachshunde, Toy Spaniels, Italian Greyhounds and Pugs.

NEW YORK DOG SHOW, MADISON SQUARE GARDEN.

ford and Lovett battle once more. Mr. and Mrs. Senn were interested in the Yorkshires, besides Mr. Symonds and George Thomas.

A. E. Pitts and Al Eberhart and Miss Bannister represented the pug division; and then the ladies interested in the toy spaniels; Mrs. Clarke, Mrs. F. Senn and Mrs. Franklin with Lady Hillary. J. Otis Fellows had a little of everything, and W. Wade had his annual gossip. The influence of the W. K. C. show on dogdom is far-reaching, and at no time has this been better demonstrated than this week.

Mr. James Mortimer had everything well arranged, but still he was busy everywhere and little escaped him, and compliments flew toward him enough to turn any man's head. John Read, his assistant manager, cool and quiet as ever, looked after his part equally well, and marshalled his forces with soldierly precision. No dirty straw or rubbish in the aisles, under these two men. The attendants are good on the whole, and look well after their duties. Spratts of course are feeding, and Sanitas kills any offensive smell instanter. Dr. Glover keeps an eye on the dogs, but there is little for him to do—he took care of that at the gate. With the exception of one or two puppies who had caught cold, I saw very little disease.

St. Bernards.

Judge—Miss A. H. Whitney.

This handsome, noble breed still keeps its place in popular favor. The quality, however, of the home-bred ones does not keep pace as yet with their popularity. Here and there one meets a likely youngster, but there is sure to be some structural fault that interferes with its general type. This applies more to the rough than the smooth. Of course, consequent to the very numerous high-priced and valuable importations, the money prizes are well taken care of, and in individual specimens we can defy England now. Miss Whitney got to work on time, and in her usual quiet and confident way brought either joy or misery to the expectant ones.

The challenge dog class brought out Kingston Regent and Plinlimmon, Jr. This was a keen enough competition to commence with. In legs and body, in length and nowhere else, Plin beats the other dog, whose great stockiness and height in build makes him appear short. Comparatively, in head, however, the New York dog smothers his opponent despite the fact that he has no blaze; in depth of muzzle, skull and expression there is no comparison, and this, no doubt, gave him the prize. In bitches Lady Livingston's intense quality, handsome markings and well matured body could not be denied, and she was easily first, Manon going off considerably to what I have seen her; she is beaten in skull and general contour of head by Republican Belle, who won, but Manon has it in bone and body; it is a toss up anyhow, and were Manon as shown a a year ago she would win.

Then the open class trooped in—a goodly crowd and bewildering no doubt to the unpracticed eye, but Miss Whitney strolled among them unconcerned, and picking the chaff from the wheat selected five or six to stand in the middle, and these

Champion Hector.

are found in their places in the prize list. Sir Bedivere was a foregone conclusion, and there was nothing to push him, and luckily, for he was not by any means in the bloom we saw him last year. He has been ill with diarrhœa, and the effect in his loins and quarters and his faults in hind parts are more apparent. His great beauty and quality, however, is not reduced in any degree, and he won easily. Second place needed some judging, and I cannot agree with the type selected. If Sir Bedivere is right then the other two, so much unlike him, should not be up so close. They (Donald and Lord Melrose) are grand dogs, of immense size, in fact the largest out, but I think we want a more compact dog, with the shadings, etc., that are characteristic of the breed, and more than aught else, legs and feet that are properly formed. These Donald and Lord Melrose have not. Donald is better behind than Lord Melrose, but is beaten very much in front. Lord Melrose has the better shaped head, more massive. These two were placed side by side; Melrose is the taller, and his straight hocks do not seem to interfere with his action at all; he strikes one as too narrow throughout barring head. Donald moves weak behind, is plain faced, has great depth of chest, but is narrow and flat-ribbed, and quarters fall away too quickly. Jim Blaine is a better all-round dog than either, and might, following type, have been second. He was not in his good Chicago condition and showed a bit slack in back, but his bone, legs, action and quality are very good. His head is well formed; all he lacks is size, and compared to the second and third dogs he is small. Refuge II., fourth, takes some critical examination. He has a number of good points, loosely thrown together, lots of quality, a well-shaped head, spoiled by eye and lack of shadings, immense bone, good depth, his forelegs are not straight, but he was rightly placed. He has so many good qualities that stock dogs need, he should make his influence felt over here. Lothario, vhc., is another good little one, well known. Marc Anthony is flat-sided, nearly all white in color, good depth of muzzle but pinched, skull too peaky, shows lots of quality though. Aristocrat still needs his coat, and without this, excepting his good St. Bernard character, he is not a striking dog; was about rightly placed; he wants showing to win. Princelimmon was described at Albany; his peculiar head puts him back. In the hc. lot, Vindex, hardly the dog I expected him to grow, has still a capital head, coat could be straighter on quarters and legs, good front, but like his "dad" he goes to pieces behind. Troy is flat-faced, nice bone and size. Bevis is weak in pasterns, bad quarters, straight hocks, flat-ribbed. Marquis of Ripon is not a badly formed dog, and no doubt his slight twitching put him back; his forelegs are not straight, good body and coloring, shows lots of quality. Prince Royal is too curly coated.

The bitch class was not so good on the whole as the dog, but still was very interesting because of the first appearance of Princess Florence. Perhaps it is superfluous to say she is a grand bitch, was shown a trifle above herself, and her coat needs a little manipulation. It can be straightened very soon. In head she might, for length of head, be better in skull; muzzle and head generally of excellent depth, and her ears are as they should be; in chest, shoulders and forelegs she is grand

MR. W. C. REICK'S "PRINCESS FLORENCE."

her body—who can find a fault—it is very deep, roomy and rangy; her immense depth of loin and breadth are very noticeable, and her broad hips and massive quarters are fully in keeping with the rest of her body; in hindlegs she at times stands a trifle straight, but her movements are as active as a kitten—the last word describes her playfulness and activity better than anything else—a grand bitch, and it is a pity she could not have met closer competition. Lady Gladwin, capital body, legs; eyes too bloodhoundy, giving queer expression, excellent front, and hindlegs all that could be desired; muzzle deep and square, but skull not in keeping; a beautiful and small sized. Cæsar is long in head too, and with a body that a bitch could be proud of, long and deep, walked lame or very queerly. Ino II., long head and snipy, light in bone, hind parts the best. Leon in hc.'s has a plain yellow head and not much type about him.

In bitches Charmion proved the winner; well formed from shoulder back, lacks depth, narrow head, feet a bit open, bone straight and plenty of it. Minna, second, shows lots of quality, faulty in pasterns and feet, her coloring is her best part. Lady Leeds, third, is small sized, has lots of quality, too flat in skull and light in bone, nice brindle and white coat, bitch, showing lots of quality and well shown. Lady Sneerwell is rather Roman-nosed and not true in front, but is nevertheless a capital bodied bitch. Lady Melrose is out of coat and has not filled out to promise, hocks, however, are better than last year, forefeet turn out a bit and body is not yet as deep as it might be, loin and quarters strong and of good shape. Altonette, fourth, I have spoken of before; she was looking well. In the vhc. lot Queen Regent wants more flesh, nice shaped head, bit plain, good legs and color. Her Highness is plain and long-faced, light bone and short in body. Guess Noble I preferred, better in body, bone and skull. Root has not stop enough and is weak in muzzle. Lady Bountiful loses in head and body color, good bone and legs. Lady Blyde, a pretty bitch, not stop enough and weak in pasterns.

Dog puppies were nothing very striking. Ben Hur, far the best, better size, coat and head could be improved, but is excellent in body and bone. Egmont, second, lacks size, has quality, feet turn out, nicely formed otherwise. Sir Victor loses in head and front, and the others need no particular mention. Bitch puppies had some fairly promising ones. Mount Zion Lelia has too much white: good skull and bone, muzzle could be better, body of course undeveloped yet. Princess Wang is thick and unshapely in head, not formed yet, good bone. M. S. Flora is white colored, not stop enough yet, bit straight behind. M. S. Sylvia will no doubt make up into a better one than either, good bone and body.

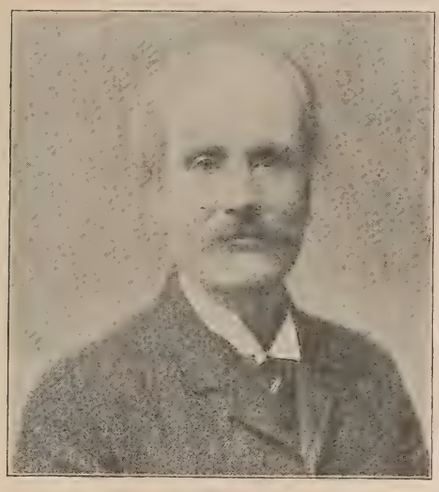
Challenge Smooths. It was a fitting tribute to Empress of Contoocock to be alone in her class, as she is in reality; she was in excellent condition. There were no dog challenge entries. The open dogs were an advance in quality and showed comparatively to much greater advantage than the rough class, as they were chiefly home bred ones. Competition lay between Leicester, the novice winner last year, and Mr. Moore's young dog Melrose. Leicester won. This is not unqualifiedly indorsed, however. Melrose beats the other in good body. Appolona, fourth, is better in body and legs than head, which is not massive enough, but well formed. Janitress, reserve, is lacking in bone, snipy muzzled. forelegs too much under the body. Beauty Victoria, hc., has a full light eye and is whippety throughout, did she not deserve anything.

In dog puppies Melrose simply walked away from his only competitor, Basil, whose snipy muzzle and shallow body were made worse by comparison.

Bitch puppies saw Bellegarde the winner; altogether too much like a bloodhound in head, wrinkle, dewlap and expression. Gwynne, second, has a weak, snipy face, but nice markings. These were the only competitors.

In novice dogs, Melrose won well in hand from Marc Anthony, as may be surmised from the previous criticism. Crown Prince, third, has also been noted. White Friar, vhc., I could not find, but Sir Richard, vhc., a son of old champion Flora II., as printed above, is a bit straight behind, feet turn out, is undeveloped yet, nice skull, but muzzle not deep or square enough. Of the hc. lot, Paddy is weak in pasterns and light in body; Barney is lathy in body, long-faced, and carries his tail too gaily. Prince Clifford, c., should have been higher; well-colored, good forelegs, bit straight behind, head, if houndy, is massive, good depth of muzzle and nice body. Maximus, c., is one-half brindle, the other orange, a most peculiarly colored dog. Harold Saxton, hc., is too fat, coat all ways but the right one, is short-bodied, carries tail up and has no blaze. Earl of Essex, vhc., I forgot to mention, he is as fat as a pig, good skull, fair muzzle, but coat curly. Bitches were a capital lot, and winner Sunray looks like making a very handsome bitch when she gets in coat, plenty of bone, nice rangy body, good markings, muzzle could be fuller before the eye, feet could be straighter placed, but action is activity itself—a good bitch. Charmion, second, has already been spoken of. Harmony, third, a litter sister to Sunray, loses in ribs, is narrow in front, flat-boned, hocks turn in a bit, good

MR. E. B. SEARS' "SIR BEDIVERE."



shoulders, chest, feet, breadth of skull and from quarters down. Leicester excels him in body, simply through age, as Melrose is but ten months old. Time will reverse this decision, I think; though this detracts in no way from Leicester, a good dog. Patrol, third, has a good skull, faulty before the eye, lacks shadings, hocks could be truer, good body and forelegs; a plain dog. Scottish Leader was hardly in show shape; just come over; has a well formed body, eye a little deep set, shows good fore bone, not quite straight, body needs time and flesh, hind parts well made and is a good mover; a dog that is sure to do well. Bellisarius, fourth, faulty in skull, a plain head, good forelegs, faulty in quarters and brindle colored. In the vhc. lot, Douglas lacks symmetry in body, a bit long-faced loin and quarters, head long and rather narrow. Poor old Alton left some good stock behind—Melrose and Sunray are a pair that any could be proud of. Vernon Beauty, vhc., has a weedy body, nice forelegs, hind not so good, is a bit straight-faced, but has fair depth and is nicely marked. The others, with the exception of Tippecanoe Queen, who loses in head and hind parts, have been described before.

There was no denying Mr. Reick's more even lot for the kennel prize with Princess Florence to take care of Sir Bedivere. It is perhaps as well that these two did not meet in competition, as Princess Florence's coat was not at its best, and Sir Bedivere was not in his proper condition either. The awarding of specials will be found in another column.

Newfoundlands.

Judge—Miss A. H. Whitney.

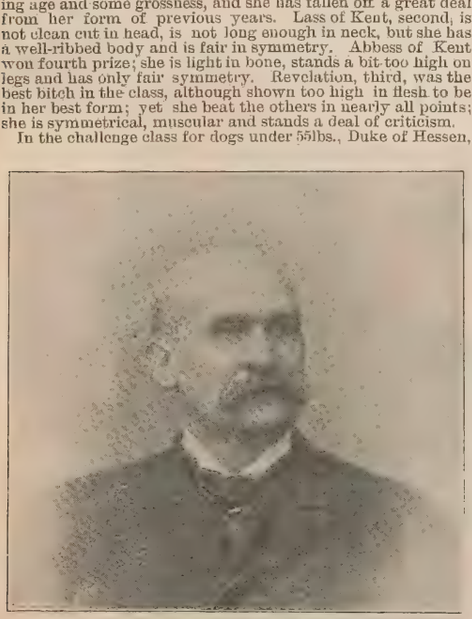
A small entry but showing a good deal more type than usual. Prince George, second, had to give way again to his son, Prince Hal, in body and bone, but is better in texture of coat. Rover, third, presses both very close, is better in skull and muzzle than either, is large and has an excellent coat; his

MR. J. M. TRACY.

Pointers, English and Irish Setters. American Foxhounds and Chesapeake Bay Dogs.

temper is not of the best or I could say more of him, good bone and straight legs; coat very straight, plenty of it. In bitches Tory Lass has a better type of head than New York Lass, but is smaller, her coat is soft. H. W. LACY.

Pointers.



Judge—Mr. J. M. Tracy.

The entry was a good one in point of numbers, but the quality of the dogs shown was very uneven, there being some which were remarkably superior in quality and a number which were ordinary or inferior. The Westminster Kennel Club exhibited several of the dogs comprising the club's kennel, nine in all, King of Kent and Lad of Bow being first on the list. In the challenge class for dogs, 55lbs. and over, Lad of Kent, a winner this year, and well known, won over Pontiac, which won second, the latter showing coarseness, and is beaten in shoulders, body, and especially legs and feet, by the other. Tempest, the reserve, is also coarse. Revel III. had a walkover in challenge class for bitches; she was not in first-class condition.

The open dog class for heavy weights had nineteen entries, and was not remarkably superior in point of quality. Duke of Dexter, first, is good in head, neck, body; legs and feet are good; he stands out at elbows, which is his chief fault. Second was won by Graphite, plain in head; he has good bone, neck, legs, feet and stern, and his quarters are well developed. Westminster Drake, winner of third, shows quite a lot of coarseness, but he shows good pointer character, and is a well built, coarse dog. The winner of fourth, Bracket's Lad, is wide in front, narrow in loin, ordinary symmetry; head fairly good. The reserve, Duke of Richmond, is heavy in skull; he is about a fair dog. The rest of the class received deservedly but little notice, but one, Tory White, receiving vhc.

Ten heavy-weight bitches competed. First was awarded to Woolton Game, hardly the best bitch in the class, she showing age and some grossness, and she has fallen off a great deal from her form of previous years. Lass of Kent, second, is not clean cut in head, is not long enough in neck, but she has a well-ribbed body and is fair in symmetry. Abbess of Kent won fourth prize; she is light in bone, stands a bit too high on legs and has only fair symmetry. Revelation, third, was the best bitch in the class, although shown too high in flesh to be in her best form; yet she beat the others in nearly all points; she is symmetrical, muscular and stands a deal of criticism.

In the challenge class for dogs under 55lbs., Duke of Hessen,

DR. H. CLAY GLOVER.

Gordon Setters.

not in first-rate condition, won over Launcelot, second, the reserve going to Ossining. In the corresponding class for bitches three competed. Rosa May, a symmetrical small bitch, tidily and well built, won over Stella B., second, and Lady Graphic reserve.

In the open class for dogs under 55lbs. there were nine competitors. Inspiration, shown in good condition and well known, was first. He is smoothly made and of good quality. Jap, second, is narrow in muzzle, light in bone in forelegs, is a trifle light in chest and only fair in symmetry. Ridgeview Dazzle, third, is cheeky, short in neck and coarse in head; he has lumber in his shoulders and is coarsely built. Graphic's Topic, fourth, is flat in ribs and light in body and muzzle; he has a good neck. Celso, vhc., is ordinary and hardly deserved notice.

The light-weight class for bitches was well judged, Lady Gay Spanker, a bitch of excellent symmetry and good in neck, head, legs, feet, back, quarters, stern and shoulders, won first easily. Second went to Miss Rumor, also an excellent bitch, a good second. Renie II. won third. She is short in neck, and was shown in too high flesh. Irene, fourth, is light in bone in forelegs; she has a good neck and a fair head; she is deficient in short ribs. Lass of Kippen, vhc., is flat in ribs and narrow in back. Belle Vernon, the reserve, is only an average bitch. In puppies, Marshall Soult, first, was defective in forelegs, light in body; he was fairly good in head and neck. The second-prize winner, Duke's Lad, is inclined to leggiuess and has a plain head. Trinket, third, is light in body and not good in forelegs, head not well shaped. Fanny Sheffield, third, has a plain head and short neck; otherwise she is fairly good. Diamond, the recipient of c., is not worthy of notice. In the novice class, Bella was first; she was out of condition. Second went to Ridgeview Dazzle, already noticed. Grousedale, third, is an ordinary dog. Mr. Davey won the kennel prize easily with his four dogs, Westminster Drake, Revelation, Lady Gay Spanker and Miss Rumor. Duke of Hessen won first for best pointer, a rather doubtful win over some of the bitches.

English Setters.

Judge—Mr. J. M. Tracy.

The challenge class had four competitors, Edgemark winning over Count Howard, Cincinnatus and Rockingham, the fifth entry, Paul Gladstone, being absent. Cincinnatus, the reserve, was easily the best dog in the class, and was shown in good condition. Edgemark, also shown in good condition, won first. He is inferior to Cincinnatus in legs, shoulders, muscular development and symmetry and type. Count Howard has grown gross, is very sour in expression, and moved about the ring heavily and sulkily. In the corresponding class for bitches, three competitors appeared. Princess Beatrice was first easily, with Albert's Nellie a good second, the reserve going to Zona.

The open class, which contained twenty-four competitors, was won by Hope's Mark, a dog of unusual spirited appearance, is not a good bench show dog nor is he the best dog in the class. He stands on good legs and feet; he was shown too thin in flesh, which made him appear light in short ribs, in

MR. THOS. H. TERRY.

Secretary of the Westminster Kennel Club.

which he is deficient; in neck he is a bit too short, and is too heavy in skull. His lines are racy in build, but he is not built in proper proportion in respect to symmetry. It is only recently that he has been retired from field work to prepare for the bench show, consequently he was not in bench show condition. Breeze Gladstone, second, has a round, short muzzle and is straight in stifle and straight from point of shoulder to forearm. Roderigo, third, is beginning to be a wreck of former greatness, as he is shrunken in quarters, gone in mouth, and shows effects of age generally, and he should not be shown on the bench with any hopes to win. Rhwilas, fourth, is a dog of ordinary quality in many ways. Toledo Blade is better in head, stifles and type than any of the others, and was awarded vhc. He has thickened too much in ribs, but was far ahead of anything in the class. Gladstone, unnoticed, was thin in flesh, but showed good quality and was deserving of vhc. Tony Gladstone, the reserve, is well known. Real English, unnoticed, might be better cut in head, but otherwise he is an excellent dog in every way and has an unusually spirited action. Sir Frederick, also unnoticed, was deserving of three letters, he being too good a dog to ignore entirely.

The English setter bitches were a fairly good lot. Gossip, first, is a symmetrical bitch, good in body, legs, neck, feet, stern and back, was shown a little too fat. Laundress, second, has a good head, a clean neck well placed on good shoulders, and good body; she does not stand so well on her feet as the winner, and is less symmetrical. Two bitches of more than average quality, Bessie Avent, light in muzzle, and Bonnie Gladstone, thin in flesh, won third and fourth respectively. Lady Dudley, vhc., was not in good condition; she is too light in muzzle; her head is well shaped: good forelegs, although a trifle too light in bone. Spectre, the reserve, is better than an average bitch. Canadian Lillie, hc., stands squarely on good legs and feet, has a good, well-ribbed body, and quite equal to third and fourth. Queen of Fashion, c., is light in body, but otherwise is a very good bitch.

The field trial class for dogs and bitches which had been placed at any field trial in America, brought together a number of celebrities. First went to Hope's Mark, second going to the cobby little dog Rowdy Rod, having a good muscular development. His neck is a trifle too short. Third went to Roderigo, and fourth Rhwilas; Cincinnatus, Toledo Blade, Roger, Antonio and Fannie M. being unnoticed.

The puppies were few in number, there being but three dogs and two bitches. The novice class had twelve entries. Sheldon first, showed a little throatiness, he has a good head, body, legs and feet, but was not in bench show condition. He was closely pressed by Orlando, second, a dog of a great deal of merit; Cassio, a fair dog, won third. The judging of these classes did not give satisfaction. The Blue Ridge Kennels easily won the kennel prize. Hope's Mark won the specials for best English setter in the open classes with a field trial record, and best English setter, which he did not deserve.

Irish Setters.

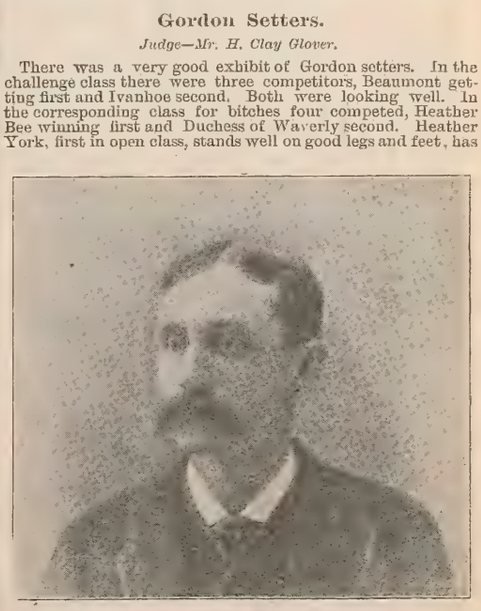
Judge—Mr. Wm. Tallman.

Four competed in the challenge class. Tim, not in good condition, being too high in flesh and not in the best of coat, won first, Seminole winning second. In the corresponding bitch class Laura B. won easily over Elfreda.

Twenty dogs competed in the open dog class. They were

MR. A. D. LEWIS.

Collies.



quite a good lot although there was a part of the class which had little show merit. Duke Elcho won first. He has good color, coat, body, neck, and he is symmetrically built. His head might be cleaner cut under eyes and his knees are a little large. Glencho of Belvidere, second, is heavy in head and he was not in the best of coat or condition. He has good quarters, legs and feet. Nicho, third, is too heavy in skull. He has good legs, feet, fairly good neck and general symmetry. Fourth went to Rockwood Daisy, showing a lightness in muzzle, good legs, body, feet and symmetry. The reserve, Kenmore, is somewhat heavy in front, and has a fair head and symmetry. Young Glencho, Tim's Dandy, Rock, Robin Hood, Exile II., Judge and King Elcho were each awarded vhc., and all merited the three letters.

Twenty bitches competed. Norna won first. She has a good head, legs and feet, a well-ribbed body, good quarters, and she stands squarely on them. Edna H., second, is a fairly good bitch, not shown in the best condition. Daisy, third, is light in color, good feet, legs well-made, but a trifle long, good head and neck, a trifle throaty, quite a good bitch, deserving the place. Alice Kent, fourth, is loosely built and her feet are too large. Kildare Dorris, the reserve, has good shoulders; she stands a little over on knees, good body. Bonnibel is small in head, but she well deserved the three letters which she received. Gyneth and Bessie Glencho II., vhc., were only fairly good. Hazelnut II. and Cora B. also received vhc. The former is open in feet. Four dog puppies competed. Rockwood Dandy, winner of fourth in the open class, was first. Second went to General, a coarse puppy. Five bitch puppies competed. Avondale, the winner, has a plain head, but otherwise is quite a good puppy. There were twelve in the novice class, Duke Elcho first, Glencho of Belvidere second and Daisy third, all competing in the open classes. The Oak Grove Kennels won the kennel prize and Tim the special for the best dog.

Gordon Setters.

Judge—Mr. H. Clay Glover.

There was a very good exhibit of Gordon setters. In the challenge class there were three competitors, Beaumont getting first and Ivanhoe second. Both were looking well. In the corresponding class for bitches four competed, Heather Bee winning first and Duchess of Waverly second. Heather York, first in open class, stands well on good legs and feet, has

MR. WILLIAM TALLMAN.

Irish Setters.

good color, well-ribbed body, good head, shoulders and neck, his knees are a bit large. Comus has a coarse head, poor tan and long in coat. Third went to Prince of Wales, heavy in skull, not first-rate in forelegs and deficient in symmetry; light in eye, but a better dog than the second prize winner. The rest of the class was ordinary. Seven bitches competed. Janet, a well-known bitch, shown in good condition, won nicely. Flomont, second, is narrow in muzzle, might be longer in neck, and she carries some lumber. Maid of Waverly, third, is good in tan, light chest, and a fairly good bitch. Countess Roxie, winner of fourth, has a coarse head and the tan is not good, and she carries a lot of lumber. Queen Noble, Pansy

MR. HENRY JARRETT'S "CHRISTOPHER."

and Venus, vhc., are better than the average. There were four puppies shown, about an average lot. The winners in the novice class, Maid of Waverly, Pansy and King Noble, were in the open classes. Mr. Jas. B. Blossom's exhibit won the special prize for best exhibit of four. Beaumont won the special for the best Gordon setter. B. WATERS.

American Foxhounds.

Judge—Mr. J. M. Tracy.

The Avent pack of American foxhounds gave tongue in merry style, and if I cannot say much for their makeup in body their voices are all right. Foxes Rock and Rob were at New York last year. Parson is a dog of heavier build, more on a light English type; he was described at Providence show. In bitches, Mattie, a black and tan, won, with Femur, also at Providence, second, and another of the Avent dogs, Flora, third. Music was given reserve.

Collies.

Judge—Mr. A. D. Lewis.

The classes were good and the quality ahead of previous years. The dogs owned by the Chestnut Hill Kennels being entered for specials only gave the smaller kennels a chance of

DUKE OF HESSEN.

getting into the prize list, but still I notice that all the winners, excepting in puppy and novice bitch classes, were either bred or formerly owned by this kennel. The Seminole Kennels supplied the winners in challenge and open classes, and their dogs were all shown in good condition.

Challenge Dogs—Wilkes had a more formidable opponent than he has yet met in Charleroi II., and although he won on this occasion, we expect to see this decision reversed when the older dog gets into condition. He only arrived from England on Friday and was not looking at all fit. I was much surprised to find him so good in head. Two years ago he looked like going very coarse. Roslyn Dandy was outclassed.

Challenge bitches—The Chicago winner, Roslyn Clara, was absent. Metchley Surprise won rightly over Cora II.; both are well known.

In open dogs, The Squire won easily. He is not in so good coat as last year, is going in front and at last begins to show age a little. Maney Scot, second, was the largest collie shown, and was in splendid condition; he has an immense coat of good texture, but is much too coarse in head, bad in ears and wrong in expression. Roslyn Conway, third, showed up well in the ring, but he is wrong in head and front, and should not have beaten Prince Wilkes, fourth, a big racy-built dog with fair coat, excellent body, a bit too long perhaps, good legs and feet, and an excellent mover; skull not well formed, ears carried low and are rather large. If his skull improves, which it probably will do, he will make a good headed one, as he has good length and muzzle. Ormskirk Shep, reserve, is a typical little dog, showing lots of quality; at times he stands out in front, and carries a bad tail. Oliver, vhc., should have been in the money; he has a very good coat; would do with more length, and he is short of frill; he is a well-made one, good in legs and feet, moves well and shows lots of character; his head does not seem quite right, but he has good expression.

In open bitches it was a close thing between Jakyr Dean and Duchess of Fife, the latter is best in size, length of coat, tail and ears; the former wins in head, expression, body and moves better. Nancy Hanks, third, is a very fair bitch, good coat, size, ears and expression, short in skull. Dot, reserve, is a well-made bitch, but too small.

In dog puppies, Chrysolite, first, was far ahead of anything else in the class. His head, ears and expression are all that can be desired in a puppy: he is of good size for his age (10 months), splendid coat, perfectly straight and of good texture and has a good tail; from nose to tip of tail he teems with quality, and even to-day compares favorably with his illustrious sire, Christopher, whom he much resembles both in type and color. Sheriff, second, was unfortunate in meeting such a good one, as he is quite a fair puppy, good in coat, size and legs and feet and quite up to the usual run of American bred ones. Buzz, third, is small and wrong in head, but was rightly placed.

In bitch puppies Velrose, first, is quite a good one, especially in size, coat, loin and ears; she was an easy first. Nyda, third, might have been placed over Vignette, second, but both are common ones, and not likely to be heard from.

Novice dogs. The winners all appeared in the open class. Novice bitches. Duchess of Fife was first, with Gypsie K. second. This bitch also won fourth in open class; she is a sweet little black, white and tan, soft in coat, but good in head and expression.

The Chestnut Hill Kennels won for the best kennel with Christopher, Wellesbourne Charlie, Flurry III. and Golden Clipse. Christopher won the stud dog stakes with Chrysolite and Ormskirk Shep, and also special for best in all classes. It was a grand sight to witness the judging of this class, which contained Christopher, Wellesbourne Charlie, The Squire, Roslyn Wilkes and Flurry III. Christopher was shown in splendid condition and had many admirers; he was, however, closely pressed by Wellesbourne Charlie; the latter is the best in size, ears and expression and shows most character, while Christopher wins in coat, head, color of eye and is probably the better mover. Alongside of these dogs The Squire shows age and we should like to see his owner put him on the retired list. He is undoubtedly one of the grandest collies ever produced and has seen the day when he could beat the best of them.

Spaniels.

Judge—Mr. A. C. Wilmerding.

A poor Irish water, Romeo, only one shown, was given third prize.

In Clumbers, Boss III. and Lady Bromine getting in fine shape, won in their respective classes.

In challenge field dogs, Beverley Negus hardly looked himself in coat. In bitches, ch. Bradford Ruby beat Gladys in head, skull and muzzle especially, and in front; neither is in very fine shape as regards coat.

In open dogs Judex won; he is full broad in skull, one leg is very good but the other turns in a bit, good body and coat. Elcho runs him very close if he does not beat him; loses a little in muzzle, good bone and excellent body and coat. Bolus, though right in body, is badly fronted and coarse and thick in head; Rideau Rab has a bad front, light body and is high on leg; Nigger, hc., is too full in skull and wavy-coated, short in muzzle, too.

In bitches, Ace of Spades, heavy in whelp, could not nevertheless be denied, skull better than muzzle, coat superb; Dame Trot, second, is small in comparison but has a good head, body, coat and is fairly good in front. Woodland Sallie, third, loses in muzzle, and has more of a cocker body, but nice front.

Any other color, Patti was the winner, little full in eye, excellent front, body a bit short; Fancy, second, has good, straight forelegs, plain in muzzle, too fat, coat a bit wavy; Vie W., third, is chunky and short-faced. Donald, vhc., is too leggy and stary-eyed, a working sort.

In challenge cocker dogs a number of well-known dogs were on hand, the winner eventually proving to be the red Cherry Boy, an excellent choice, beating Jersey in head, front and body. Black Dufferin, reserve, looking well; Rabbi, vhc., while Black Duke, not so good in coat as he ought to be, took hc. In the ladies' lot I Say won in head, coat and bone over Bessie W.

In open dogs Fascination, by Obadiah, proved himself well named, and George brings out another good one; capital head, good square muzzle, straight front, and a cocker body, nice coat, only wants a little time. Prince W., second, is out of shape, full in skull, good muzzle, out in front, nicely formed body and quarters. Snowball, third, is well-known and should have been in better coat. Obadiah is also an old familiar face, shown in good trim. In vhc. division Pluto, Jr., seems over weight, is wide in front, and a bit dish-faced. Benedo, is a little high on the leg, full in skull, light in body. Hc. lot, Jim the Dude has a field spaniel type of head, Sancho G. is snipy-muzzled, and coat is inclined to curl. Adam is well known, and shows effects of constant traveling. The hc. division had nothing of any moment.

In bitches, first went to Amazement, a well-known animal, shown in nice condition; Woodstock Daisy, second, muzzle could be squarer and front not straight enough, nice ribs, loin and quarters. Hornell, third, has a bad front, skull too full and body should be shorter. Woodstock Dora, reserve, is a bit domy in skull, out at elbow, good otherwise. Vhc.—Black Duchess, weak in muzzle, very good forelegs, but moves badly behind; Nemo, too full and round in skull, and light in body. Hc.—Little Nell is well known, off in coat at present; in fact, most of the Willey kennel are not in their normal bloom; Connie is too full in eye, and skull could be flatter to improve her; La La, muzzle not square enough and body too long; Meg Obo is heavy in shoulders and skull not as it should be; Eve has been doing the circuit.

In any other color Jessie C., the winner, is not quite wide enough in front, bit heavy in shoulders, otherwise quite good, Ditton Brevity is wide in chest, out at elbow; too full in eye. La Tosca is undershot and too full in brow, an old winner. Mona, reserve, a nicely fronted little red bitch, weak in muzzle and a bit too long cast. Firefly, vhc., is pinched in muzzle, but behind the shoulder is A1. Nina W., c., should have had more letters, is more of a cocker, and barring skull, little fault can be found. Red Rose is weak in muzzle, stands on "gun-barrel" legs, but body is a little too long.

Puppies were of all types. Juno Grant, barring front, is a capital little cocker with a good shaped head, perhaps a bit strong, and was shown in excellent condition. Fascination ran second. Woodstock Daisy, reserve, has been noted before. Amusement, vhc., is too long in body, or altogether of field spaniel type; nice front. Kobo, vhc., I failed to find. Lady Fidget, hc., has a good shaped head but too long for a cocker.

The novice winners have been mentioned before.

On the whole the spaniel classes were filled with a promising lot, but the type is getting considerably mixed.

Beagles.

Judge—Mr. R. F. Mayhew.

Not a very good gathering, only a few showing true beagle type, though there were several that looked as if they could travel, and be more at home in the field. In challenge dogs Roy K. won, rather on large size, not quite true in front, but of stronger build than Frank Forest, who loses to the other in loin and quarters. The well known Lou won in bitches, better type than Twintwo, who has not improved but is a good field dog. In open dogs The Rambler won, though closely pressed by Whalebone, who is rather coarse but has a good head and capital hound coat, good bone and straight forelegs.

COUNT HOWARD.

Hunter, third, has a long pinched muzzle, long in body, soft coat, good pins; Lee II. is too fat, full in skull, ears not just right and stands a little wide in front; a rather coarse dog. In bitches, Emeline, well known, was placed first, second going to Forest Queen, whose ears are thrown too forward, is a little wide in front and coat is soft and wooly; Lady Lee, third, has a blind eye which detracts from an otherwise good head and was shown too fat; Stella, reserve, is coarse in skull, heavy in

MR. J. L. WINCHELL'S "BEAUFORT'S BLACK PRINCE."

shoulder and coat not hard enough. Lady Vic stands out at elbow a little, muzzle faulty before the eye, good coat. Daisy II. is fairly good in head and true in front. With the exception of Rattler IV. the winners have all been mentioned in novice class; he is dish-faced, nice coat, but seemed thin and out of sorts; Somerset Helen, third, stands on good legs, but coat is not of correct feel and texture.

Beagles, under twelve inches. Clochette, a daughter of

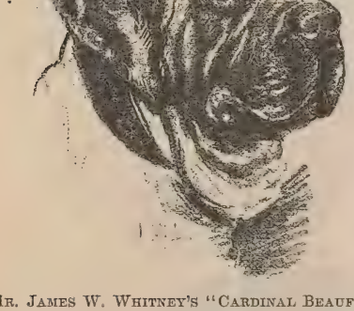
Mr. Walter J. Comstock's "Crate."

Blue Bell and Frank Forest, is a sweet little thing with a capital feel of coat and straight front. Rye II. is too fat, has not stop enough, ears nicely hung and coat fairly good.

Basset Hounds.

Judge—Mr. R. F. Mayhew.

The only one shown was Bertrand, getting old, and the judge could do no better than second for him.



H. W. Lacy.

Mastiffs.

Judge—Mr. George Raper.

Commencing with mastiffs, Sears' Monarch, the only entry in the challenge class, failed to put in an appearance; the corresponding bitches failed to fill. Open dogs produced an entry of nineteen, among which Beaufort's Black Prince stood out in bold relief, a grand-headed fellow showing immense mastiff character, his legs and feet are also strong and sound, and his chest broad and deep; he certainly is a little short in back and underneath hardly covers enough ground, then his stifles are rather straight; with these exceptions he is a beautiful specimen, and I predict he will have a brilliant future. Merlin, the recipient of second money, shows considerable character, his expression being excellent; not so massive in skull as the winner, or so deep and square in foreface, and in body he lacks the enormous depth of chest possessed by Mr. Winchell's favorite; however, in general shape and formation, and in action and activity, he excels, and in the two latter particulars he beat Hans Sachs, a very fair-headed dog, rather light in eyes; this dog was shown in excellent condition. Mr. Durkee's Melrose Prince is too short in body, but his head is commendable, and he thoroughly deserved his complimentary card, as did Cardinal Beaufort; a big-skulled dog, certainly, but very short-faced, and with moderate feet and rather light hindquarters. Arminius, hc., is too long and weak in foreface and his skull lacks massiveness, his good body qualities warranted his card. Duke II., a short-muzzled dog, stood No. 4 on the list; he is rather pale in markings, but possesses good bone and nice depth of chest and loin. The brindled Duke of York is cow-hocked and moves badly behind, but his other good properties secured him honorable notice.

Bitches were an indifferent collection, among which Duchess secured the blue ribbon; very good in general type and character. Lucy II. fails in head, but her good body just enabled her to beat the weak-faced Nellie, who lacks character; and the brindled Lady Orson has gone all to pieces, her legs and feet and action prevented her getting higher than fourth. The prizes in dog puppies were withheld, and only third honor was given in the corresponding class for bitches, that to Thelma, who is too small and never likely to develop into a

Mr. James W. Whitney's "Cardinal Beaufort."

show specimen. In novices there was no denying the claims of Grandee, who won comfortably, his opponents all were of moderate caliber, as for himself, he has bad feet, rather pale markings, and he wants more depth and squareness before the eyes. Brun is faulty also in foreface and light in bone, he has a good body and moves well. Of the rest, Lucy II. was the best. The special for the best mastiff in the show was easily carried away by Beaufort's Black Prince.

Bloodhounds.

Judge—Mr. George Raper.

In bloodhounds, Mr. Winchell's Victor's grand head, well-placed eyes, lengthy ears and immense loose skin enabled him to beat Belhus who has the better quarters, but his skull is much coarser and he lacks the quality and high class character of the winner. Jack Shepard, not shown in very grand condition, possesses a very fair head, good legs and feet and moves well. Jack the Ripper, a very large hound, is generally wanting in quality. In bitches there was no disputing the claims of Judith, a beautiful bodied bitch standing on sound legs and feet, and her head is very typical, although in wrinkle and ears the winner in the dog class beats her, but in other essential properties she scores all round, hence the award that placed her ahead for the special for best bloodhound in the show cannot be seriously questioned. Benison is small, though she shows plenty of quality. She was the only other competitor, for Delfan did not meet her engagement.

Great Danes.

Judge—Mr. George Raper.

Great Danes were numerically a very fair collection, the majority were either undersized or coarse. In the challenge class Melac, shown in excellent form, easily disposed of Pascha, The Imperator being absent, a regrettable coincidence. Pedro, a fair-sized brindle, very symmetrical in build with excellent type of head and good legs and feet, won first in the open competition for dogs, beating Tirus II. both in smartness and quality; the latter, a big black and white dog, is excellent in build, but rather coarse in skull. Cesar, a beautiful type, was shown wretchedly thin, still his claim for third position were substantial, for Marco has very heavy shoulders and is not near so correct in head, character or type. Tiras has awfully big, open and thin feet, otherwise he might have got more than a plain commendation, for in some essential points he is quite commendable. Tiger's legs and feet are indifferent and his eyes are too bold and prominent; he was hc., and so was the shapely Duke, a nice quality blue who lacks bone and substance generally. Of the rest Cæsar, vhc., and Pasha, vhc., were the best.

Lufra, shown in excellent form, carried off the blue ribbon among the weaker sex. She is very cleanly built, showing no undue coarseness, a typical-headed bitch with lengthy, arched and very muscular neck, grand shoulders, very fair loin and strong hindquarters; her legs and feet are also very commendable. Slightly bigger in stature is Flora Florida, but her condition was not A 1. She droops away under the shoulders, and does not move near so well as Mr. Jaggard's representative. Quite a nice-bodied bitch is Nora II., and she was exhibited in fine form; her head, although right in type, is short, and her neck might with advantage be longer; bone she has in abundance, and her feet are compact and firm. Flora was certainly fourth best; she is light in lip and

Mr. R. F. Mayhew.

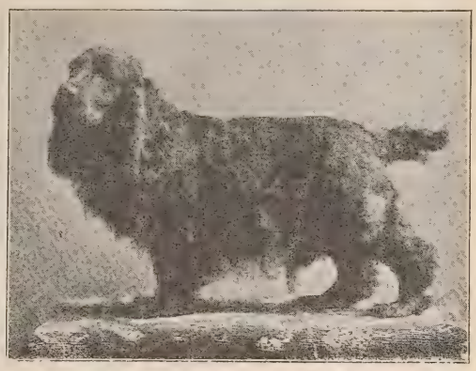
Bassets and Beagles.

her thin condition was against her, and this tended to make her hindquarters look all the lighter. Another fair specimen that suffered from want of flesh was Princess Ilse.

In dog puppies Hannes could not be denied, his head is already inclined to be coarse, still in type as good as any that opposed him, and he beat the n easily in bone and body. Bismark II. is a very nice type, but exhibited in poor form. Third only moderate, and as he gets older the coarser he will go. Little comment need be made about bitch puppies, for among the trio that came before me, only Countess possesses any creditabl properties, and she, I am afraid, will never develope into anything above the average. The special for the best great Dane in the exhibition was awarded the challenge-prize winner Melac, Pedro easily securing the reserve ticket.

Barzois or Russian Wolfhounds.

Judge—Mr. George Raper.



This breed, now fast becoming popular, did not muster in great force. In dogs Leekhoi, a big upstanding dog, possessing an excellent head, nice ears, good neck, well placed shoulders and good legs and feet, won very easily; he is a little flat-sided and would be better were his hind-quarters more powerful and his coat finer in texture. Czar, who succeeded him, is coarse throughout, his neck being short and shoulders loaded and heavy. Of the four bitches entered Modjeska, who won premier honors at Albany and Birmingham, failed to fulfil her appointment, the real issue therefore rested with Svodka and Flodeyka, both the property of the Seacroft Kennels, the former surperior in head, neck and general substance, scored well; her kennel companion is too short in head, but her coat is admirable both in quantity and quality. The special for the best dog was won by Leekhoi, that for the best bitch by Svodka.

Deerhounds.

Judge—Mr. George Raper.

Owing to a mistake in the numbers, Clansman was credited with first prize in the challenge class, but in reality this honor was awarded to Robber Chieftain, who is cleaner in neck and shoulders and not so sluggish in action. In the challenge bitch class Olga won somewhat easily over Wanda, whose obese condition exaggerated her always rather heavy shoulders. Both these bitches possess typical heads and good bone, but under the circumstance and condition in which they were exhibited I thought Mr. Page's bitch won with plenty to spare. One of the most typical dogs in the show won first honors in the open class, I refer to Hillside Warrior, a beautiful-headed dog, with good eyes and expression, clean muscular neck, deep chest and splendid legs and feet; he might be wider over the hips and with advantage have more muscular thighs; anyhow, he is built strictly on the right lines, shows considerable quality, without the least suspicion of any coarseness or lumber.

Hillside Raven, who stood No. 2 on the list, is a big, fine, raking brindled puppy, just a trifle coarser in skull and not so correct in eye nor so lengthy in neck, but slightly better in hindquarters, where this dog particularly excels. Another very commendable specimen shown by Mr. Page—I refer to Argyle—was given third. Alko, not so powerfully built behind as Warrior, is in every other essential his equal, and there was not the slightest doubt about his being third best, for Chief, who stood next in order, cannot compare in head, his light eyes detracting much from his character. An unfortunate coincidence occurred in this class. Mr. Larocque had entered a dog and bitch, and by some oversight or carelessness the wrong numbers were placed on the chains, hence

Messrs. Luckwell & Douglas's Ch. "Black Duke."

he was not judged. However, the committee afterward had the class rejudged, and so well did he compare with Argyle that he was awarded an extra third; he is slightly heavier in hindquarters and stronger in loin, but in shoulders, neck and head he loses considerably. A big, good headed dog is Alpine, his hind action, however, is faulty.

In bitches Hillside Romola scored easily. This is a most handsome specimen, well nigh perfection, her most serious fault being her large ears and her color—a light wheaten—does not at first sight show up her many excellencies. To begin with she has perfect bone, her legs being straight as arrows. In head there is little room for complaint; her neck, too, is powerful, yet clean, lengthy and well set on; sound but sloping shoulders, behind which she shows immense power and substance, her ribs being deep and well sprung, and her loins and hindquarters powerful; these good qualities, in addition to her great size, placed her bang in front; in fact, she afterward was awarded the special for the best deerhound in the show, and I consider she richly deserved the honor. Her sister, Hillside Sylvia, similar in color and style but rather smaller in size and not so powerful in build, was placed second, beating Hillside Ruth, a good coated bitch whose action is commendable but her head and shoulders are inferior to the winners. Dunrobin Lufra has deteriorated in legs and feet; her head, although rather short, is very typical in shape. She was vhc., but Thora was passed over, not being up to the exhibition form. Bismark, a racy quality-like dog built on true lines, won first in puppies, he being succeeded by Fanny, who is much inferior in outline and shape, and Malcolm, from the same kennel, is spoiled by his bad legs and feet. Struan, hc., is light in substance, and Dansloy too small and weedy. The Hillside Kennels won all the specials.

Greyhounds.

Judge—Mr. George Raper.

With few exceptions greyhounds were not a brilliant group. In the challenge class Gem of the Season, who never was seen to better advantage, experienced no difficulty in beating Highland Chief, whose shoulders have become loaded and his feet are not so sound and compact as could be desired. This dog suffered defeat when in competition for the best dog who had won a course at any public meeting in America or Great Britain. Balkis, whose reputation is well known, proved too many for him, beating him both in neck and placement of shoulders, as well as in ribs and thighs; both dogs moved indifferently behind. Spinaway was the only entry in the bitch challenge class, but she added further honors to her credit by winning the special prize for the best bitch in the show.

Open dogs found Ornatus, a very fair black and white dog, to the fore; he was shown in nice condition and is a fair all-round specimen, without particularly excelling in any one point. The next best I took to be Pious Pembroke, almost as good as the winner, certainly a little shorter in neck and plainer in shoulders, but more perfect behind, with slightly better legs and feet. Oldstone, the recipient of the yellow ribbon, is not lengthy enough in neck or clean enough in

Mr. Almon E. Pitt's "Bonsor."

shoulders, and judging from his general conformation he would not go a great pace from the slips, although if substance is any recommendation he should possess stamina. Of the rest Royal Crest was my choice; his neck is short and his shoulders too upright; generally a bit common. A dog that has seen better days is Conspirator, whose legs and feet are now faulty and his thighs are very light.

Bestwood Daisy, a smart, showy brindle and white, shows immense quality at the sacrifice of substance, nevertheless she could not be denied premiership honors, for although Lily of Gainsboro exhibits more power and is larger, her legs and feet are not so good and she droops away too suddenly behind. Queen in Black and Drytime were placed third and fourth in the order written, the former's legs and feet had to a certain extent given way, while Drytime did not appear to the best advantage—a rare-bred bitch who, if my memory serves me correctly, did well in the field. In dog puppies, a big well-reared black and white son of Prince Albert and Grace Briant

JOHN MOOREHEAD, JR.'S "STREATHAM MONARCH."

easily secured the coveted blue ribbon. This youngster is well reared and gives promise to develop into a good-looking specimen, but the same remark, I am afraid, won't apply to Sir Regis, who on form to-day was unquestionably second best, but with time and age he may develop undue muscle, for his neck is somewhat short, and his shoulders heavier and coarser than they should be. A nice puppy is Duke of Kent, but spoilt in rearing, his rather weak pasterns and flat feet prevented him taking a higher position. In bitches there was no denying the claim of Princess Victoria, a handsome black and white built strictly on racing lines, she shows plenty of quality, too, and is more likely to improve than deteriorate with age. Little Wonder, also a strapping sapling, requires further time to furnish and develop, she is built on good lines, possessing, as she does, capital shoulders, deep ribs, firm, muscular loin and well-developed quarters. She won second honors, easily beating Dolly Drake, a shapely black with moderate feet. Charming May, reserve, is rather flat-sided, and Poland Duchess, hc., is too short in neck, while her forelegs are not particularly good. Mr. Purbeck took the team prize. Several specials were won by Balkis and Gem of the Season, while, as before stated, Spinaway disposed of all the bitches in the competition for the National Greyhound Club medal.

English Foxhounds.

Judge—Mr. George Raper.

English foxhounds only secured seven entries in the two classes, six of which were part of the Radnor Hunt. In dogs their Pompey, an excellent specimen with few faults, was placed ahead, he is a size small, but his beautiful head, nice shoulders, perfect legs and deep body with charming hindquarters, secured him the coveted card. Tester, also a good hound, little inferior in build, but a little plainer in head, was second, with Tapster third, a strong dog but rather coarse in comparison. Flourish, who scored in bitches, was much admired, her head, both in shape and type, is lovely, and her legs and feet quite commendable, she is built on racy lines, showing a fair amount of substance, too, not quite so perfect, however, in this respect as Bonnybell, who loses to her in head, neck, expression and character. Shot, a rare-bodied bitch, was placed third; she is a beautiful mover and a rare hound in the field, or her looks belie her, had she only a good head and sounder bone she would take an immensity of beating.

Harriers.

Judge—Mr. George Raper.

Harriers, of which just half a dozen were forward, and all from the Pennbrooke Hunt, found the blue ribbon carried away by Countess, a beautiful-headed bitch, whose good legs, feet and shoulders, outbalanced the few points in which Guilty excelled, and therefore warranted her being placed in the highest position. Flourher, like the former, is a little deficient in head, not so wrong in formation, but too short.

Poodles.

Judge—Mr. George Raper.

Styx, the only entry in the challenge class, did not meet his engagement. In open dogs Fritz a shapely dog with immense lengthy coat of sound color, had little difficulty in placing first prize to his credit, and after he added further honors to his name, winning as he did the special prize for the best poodle in the show. Leon who succeeded him is a shapely, typical specimen, heavily coated too, but his coat is not so dense in color. Tell, a very active shapely corded specimen, was selected for third in preference to Darkie whose coat is more profuse and longer, but it is unsound in color, a great fault. Bodega, vhc., a good head dog; is rather leggy, and Toby's coat is hardly so close as it might be, in character and type I liked him much. Only two bitches were forward, Czarina, a nice specimen who won here last year again scored over Topsy, whose head is not so perfect.

Any other color.—All the winners in this class were white. The first, Leo W., is a sweetly pretty bitch in shape, make, and texture and quality of coat, but in head she loses to both Jack and Askine, who took second and third prizes in the order named.

Bulldogs.

Judge—Mr. George Raper.

These formed a remarkably grand group, the best lot that has ever been got together in the States, thanks to the interest of the American Bulldog Club, who liberally subscribed a number of valuable specials. Owing to the absence of Harper, the competition in the dog challenge class was nil, Bo'Swain walking over for the money. In bitches Soudan was opposed by The Graven Image, the latter scoring a decisive victory. This bitch, although not very large in head, is well finished, her muzzle being short and truncated, stop fairly deep, skull typical in formation; in general build and muscular development she possesses few faults.

Coming to the open dog class the struggle for supremacy in reality lay between Stanley and Pathfinder, who is at present in poor condition, and to this fact his defeat is in a great measure due. His foreface, as it always was, is very thin, but his under jaw is well turned up and his stop deep and well defined; he has capital shoulders, too, and stands wide in front upon excellent legs and feet, his worst fault being his long back, here Stanley scored well over him; he is also deeper through the muzzle and a trifle bigger in skull, and being in better form, and all points duly considered, he left off a decided winner. Handsome Dan, a showy brindle and white, whose capital outline and style is catching, could not be passed over for third. A fair-headed dog but not quite massive enough in muzzle and rather short in skull, *i. e.*, wanting length from eye to ear. Carisbrooke, a big-headed dog, shown exceedingly well, is tight in skin and lacks finish in face, his under jaw being too short and not truncated enough. Monarch VI., vhc., stands too high on the leg and his face and muzzle are wanting both in width, depth and substance.

Carrie, the winner in the class confined to bitches over 40lbs., has many commendable properties. She is fairly well finished in face, fairly broad in chest, with good bone and body; stern is too long and very faulty in carriage. Magpie has just the same fault, and she is not quite so correctly finished in muzzle; in most other essential properties there is little to choose between them. Lady Regent wants more wrinkle, and her skull is rather short; her feet are also faulty; she is very shapely, has good bone and a well-placed stern. Lena Langtry has seen her best days; always a fair-bodied bitch, but although her skull is large she lacks looseness of skin, and her under jaw should be longer.

In the competition for dogs under 40lbs., King Lud, recently imported, scored a comparatively easy win; a very good dog he is, too. Not only has he a large head, but it is very typical in shape and formation; his chest is also wide, his shoulders well placed, bone heavy, body short and well ribbed; his stern, however, is an eyesore; not only is it

MR. FRANCIS G. TAYLOR'S "BREEZE GLADSTONE."

placed too high on his back, but it is very defective in carriage. Cardinal Wolsey, a short-faced dog of fair make and shape, is wanting in wrinkle, and poor old Oswego has shrunk in head and body, and is only a patch of his former self.

In the next class that good bitch Saleni had no difficulty in securing the blue ribbon and afterwards won the special for the best bulldog or bitch in the show, in addition to several other extra prizes. Peckham Lass, who succeeded her, was well beaten, not only in head properties, but also in body. The other competitors were very moderate. In puppies Nobby Twist was a long way the best; he has a very faulty ear; but won easily here as well as in the novice competition; also luckily came in for a fair share of specials. King Lud was awarded the special for the best dog, his most dangerous opponent being Stanley, who is slightly higher on the leg and not so perfect in foreface.

Bull-Terriers.

Judge—Mr. George Raper.

Bull-terriers made a capital display. In the challenge class Prince Bendigo had no difficulty in disposing of The Earl, whose head is not so typical. In the corresponding class for bitches Enterprise scored decisively, winning well all round, while in the open class (exceeding 30lbs.) that good specimen Streatham Monarch won with a good balance in hand, being decidedly better in length and formation of head, not so dark in eye as Carney but better placed, then in body and general quality and style he has an advantage, points that afterward enabled him to beat all the bull-terriers in the show. Carney, who has done some winning, made a good second, he is a showy customer and was put down in very good condition. Whelan's Young Marquis, a good-bodied dog possessing plenty of bone, is rather coarse in skull and lippy. Diamond King, vhc., also commendable for his excellent body properties, has a long stern, which is carried too high and his eyes are placed too wide apart. Young Marquis falls off below the eyes, and his feet are thin and open.

Bitches over 30lbs. found Edgewood Fancy a good winner, nice both in condition and shape of body and also typical in head; she beat Queen Bendigo well in length and strength of muzzle; the latter is a rare made one. Rose, reserve, is shapely in head, but her stern is very coarse and badly carried. Winning Wagtail, a shapely, good-bodied bitch is a trifle short in skull and too full in lips. Under 30lbs.—Here Dusty Miller got home in front of Tom Beverley, who is quite young, hence unmatured. Slightly better in head properties than the winner, but beaten decisively in body. Nettie, a small, nice quality bitch, was given third, with Ideal reserve, the latter nice in head and short backed, but her very coarse, badly carried stern detracts greatly from her character.

Maggie Cline and Tom Beverley were placed in the order written, in the novice class, while in puppies Viscount, a good bodied son of Diamond King and Duchess, could not be denied the blue ribbon. Edgewood Fly, a promising puppy, requires further time to furnish. Mr. Dole's collection was awarded the team prize, his lot being level and of commendable quality.

Dachshunde.

Judge—Mr. George Raper.

Rubenstein, deteriorated considerably, has grown wide in chest and heavy in shoulder, and being also plainer in head he was beaten somewhat easily by Windrush Rioter in the challenge competition.

Open Dogs.—Here Zulu II. scored well, better in head and lengthier in body than any of his opponents, among whom Superbus II. was the best, the latter, rather short in head and not so low in the leg, was awarded second, with the good-bodied and plain-headed Lorbass third.

Bitches were a better collection, both more numerous in number and uniform in quality. The winner turned up in Pollywog, a nice-headed bitch, good in crook and skin and fairly lengthy in body, standing near the ground. Another good red—I refer to Janet—was given second, very lengthy and shapely, with characteristic skull and ears, but a bit snipy in face. Quite a good bitch was the third winner, Diane von Beyenrode, not quite so long as either of those placed above her, but equally low and quite as correct in type. Seiglinde, very low on legs, did not show to advantage, otherwise she might have done better; a real nice specimen, that could not be induced to show herself. Thelma, vhc., is rather heavy in shoulders and shown in too obese condition. Miss Much, hc, shows quality but is too short in body. Begonia was far-away the best puppy. Mr. E. R. Manice secured both the specials, one offered for the best brace and one for the best team of four.

Fox-Terriers.

Judge—Mr. George Raper.

Fox-terriers were, without exception, the best group in the show. In the challenge class for dogs all the celebrities were present, there was Raby Mixer, Starden's Jack, Suffolk Toby, Lucifer, Raffle and Blemton Victor II., the latter, a home-bred one, had youth in his favor, and after a careful searching, his number went up, a decision that was favorably received; other honors were in store for him, for in an after competition he won the grand challenge cup and other valuable specials for the best fox-terrier in the show. Victor possesses one of the best heads in the show, his expression is keen and fiery, both the face and skull nicely balanced and cleanly chiseled, his neck is perfectly free from any throatiness, and of moderate length, well let in to clean yet muscular shoulders without being abnormally narrow in front, he stands straight and true, his shoulders being clean, back moderately short and coat excellent, with advantage he might be more muscular in loin, a remark that applies with equal force to his hindquarters, which are a trifle light. Raffle was given second, much the same dog as ever, but well beaten here in size, coat and head action. Lucifer has deteriorated and Raby Mixer looked coarse, but his condition was too obese.

In bitches the struggle for supremacy lay between New Forest Ethel and Dona, the latter shown in best form, had a slight advantage in body; Ethel looked stale and did not move well at all, a fault that just enabled Dona to score.

Open dogs found the recently imported Starden's King to the fore; he was shown much too fat, hence looked coarse, always a bit thick in head and soft in coat, faults now inherited in a greater degree; however, his expression is correct; he has immense bone and is very true in front and sturdy in build. Blemton Rasper, faulty in formation of skull, which is too round, has rather bold eyes, but in shape and make he leaves little to be desired, were his coat a trifle longer and harder it would be better. Warren Daysman, a very showy, well-made, white puppy, could not be denied third money; granted he is a little weak before the eyes, but in other respects exceedingly smart and he showed to great advantage, too. Raby Trigger, reserve, shown well, has improved undoubtedly; his expression might be keener and his coat harder. Ebor Spendthrift, vhc., has gone off in head and did not look well. Painter is smart, but there is not enough of him. A beautiful bodied dog spoiled by a plainish head is Victor Vator; he was also vhc., as was Dobbin, a fair-shaped dog, snipy in muzzle, with rather heavy shoulders. Brokenhurst

MR. CLIFFORD A. SHINN'S "SIR STAFFORD."

Tyke, vhc., is weak in face, rather coarse in neck and quite thick enough in shoulder, a sturdy terrier notwithstanding, showing considerable style and quality.

In bitches Dusky II., who was looking exceedingly well, just landed the premier prize for Messrs. Rutherfurd. She scored well in bone, coat, loin and thighs over Miss Dollar, who was shown in very soft condition, and her coat at present is awfully long, open and woolly, hence her defeat. Spinster, a very shapely level made bitch, was third, rather short in head no doubt, still a useful sort, who beat Resume well, the latter, showing badly, is not quite true in front or perfect on her legs. Vixen, vhc., is weak in jaw and light in bone, a smart bitch otherwise. The reserve ticket was handed to Tuxedo Beauty; shown in grand form, she is slightly heavy in ears and shoulders.

Warren Daysman scored well in puppies, beating Vandal, a youngster of promise, nice head, eye and expression grand front and fair body, of course he is young, lacking muscular development. Suffolk Surprise, weak in jaw and rather round in skull, is otherwise a very smart dog, true in front, with rare depth of ribs, strong loin and sound hindquarters. Beverwyck Punster, res., is in some respects a very good dog, his coat is not hard enough and his elbows are rather loose, hence at times he stands rather wide in the front. Sparkler's plain head is somewhat compensated for by his good body and straight legs and feet.

In bitch puppies, Beverwyck Moonray had no difficulty in winning, for the competition was only weak. She is overdone with leather, otherwise a neat, level-made bitch. Bonaly Belle, weak in and quite long enough in body, was second best, no third prize being awarded.

In wire-haired dogs, Suffolk Tenzel, the best terrier in the class, and a good one, spoiled somewhat by being a size or so too large, could not be denied first, for the competition was not of a very keen character, though Ebor Snowberry is by no means a bad stamp. However, he is not so clean now in shoulders as he used to be, neither are his ears small enough. Of the rest, Suffolk Grip was by far the best; his light eye and low-placed ears somewhat detract from his character. In bitches, Brittany was far away the best. She beat Suffolk Tassel well in character and style. The latter showed badly, and could not at all times be induced to carry her ears in the orthodox fashion.

The awards in the novice class were almost a repetition, Blemton Rasper winning, with Warren Daysman second and Blemton Vola third. In bitches, Beverwyck Moonray scored again. Woodale Refusal, a very neat made smooth, beat Brittany for second money.

The Blemton Kennels' had quite a successful day, winning both the team prize and also that for the best brace.

Irish Terriers.

Judge—Mr. George Raper.

In the challenge class Breda Bill, shorter in face and thicker in skull, was well beaten by Dunmurry, a very nice bitch, who also took the special for the best Irish terrier in the show. Open dogs found Boxer II. to the fore, the best-headed terrier in the class, and also truer in shoulders and front than Hanover Boy, who has the best coat and bone. Jack Briggs promises to develop into a good terrier, he is but young and now a little long and loose in body, but his sound color, typical head and expression and good bone secured for him the third money. The reserve place being held by Bruce, a game looking customer, but heavy in shoulders. Parnell, vhc., is coarse in muzzle and thin in feet, while Rags is too light in bone and full in eyes. Only two prizes were awarded in the bitch class, first honors going to Red Rag, a very nice bitch, who beat Erin easily, for the latter at present is entirely out of coat. The special offered for the best brace was taken by Mr. Comstock's representatives.

Black and Tan Terriers.

Judge—Mr. George Raper.

These classes brought out nothing new. Broomfield Sultan, looking well, was all alone in the challenge class for dogs, while in bitches Matchless secured a walkover, owing to the absence of Buffalo Lass. Merry Monarch also failed to meet his opponents, hence only three dogs competed in the open class. Here a severe contest took place between Prince Regent and Salisbury, between whom there is little to choose. The latter's stern is faulty and probably this accounted in a

IRISH WATER SPANIEL CH. "HARP."

great measure for the former's win. In bitches Louie, shown in grand fettle, won with consummate ease from Broomfield Madge, a nice-headed bitch, gone a little wide in front, and Rochelle Carmencita, a beautiful-shaped terrier, nice in color and markings, but too round in skull and slightly full in eyes. Rosette, plain in head and unshapely in build, was the only other competitor. Rochelle Majestic, better in body than head, won easily in puppies from Mispah and Madgelein. Both the brace and team specials were awarded the Rochelle Kennels.

Only one Welsh terrier was forward, namely Mephisto Dick; only a moderate representative, hence the first prize was withheld.

Dandie Dinmont Terriers.

Judge—Mr. George Raper.

Another poor collection. Sir Robert, better in head and length of body, easily disposed of King of the Heather in dogs and Heather Madge was a long way ahead in bitches. Meg of the Mill shows age and is very stilty in action; she was given second on sufferance, for both Heather and Jane are undershot, but for this fault they would have been in the money. Mr. Ed Brooks's pair secured the special.

Bedlington Terriers.

Judge—Mr. George Raper.

Here Tick Tack, shown in nice condition, was all alone in the challenge class. Christmas Carol was entered, but failed to meet her engagement. In the open class for dogs Qui Vive could not be denied, for he excelled both in head and body properties. Chemist, placed second on the list, being not so good in eye, ears or coat, while Editor is weedy and light. In bitches the first prize was withheld. Polly Warkworth, the

MR. JOHN E. THAYER'S "RABY MIXER."

only representative worthy of notice, was given second. The special for the best brace was awarded Mr. Russell's representatives.

Skye Terriers.

Judge—Mr. George Raper.

The challenge class found Sir Stafford opposed by Lovet, who was well beaten by the former dog, who has by far the most characteristic head in addition to possessing much more bone; in middle piece he also scores, and in coat, both texture, length and denseness, he gains a number of points.

Open Dogs. Here Sir Roger won easily, by far the best type and better shown than Bruce or Pedro. Bitches were not a very attractive lot. Bessie, who won here last year, again scored, but she had only Heather, who is short in body and longer on the leg, opposed to her.

Scotch Hot and Kilstor were a long way ahead in Scottish terriers; both possess fair heads, good expression and ears, and the first named is a well built terrier with hard coat.

Yorkshire Terriers.

Judge—Mr. George Raper.

Yorkshires were a very poor lot. Royal, alone in the challenge dog class, has faded in color, and Venus is a bit light also. She was alone in challenge bitches. This couple won the brace prize easily. Flash was the best coated dog in the open competition. His color is not correct, still he could not be denied, for all the rest were more or less very faulty and not up to show form. Duchess, the winning bitch, carries a fair amount of coat, but it is too wavy and silvery; Darling, second best in the class, being too dark in color.

Toys were also below par, all those on view being apple or round-headed and poorly marked.

Pugs.

Judge—Mr. George Raper.

Pugs were better. In the challenge class for dogs, Sprake, a good-colored, nice-bodied dog with fair skull and ears, but a little weak before the eyes, easily disposed of Bob Ivy, shown fat and very weak in muzzle. In bitches, Beaty III., although a little defective before the eyes, has a good skull, shortish face and good wrinkle, while in body she compared very favorably with Bo Peep II., who only beat the former in color of eyes. Bonsor, a nice little dog very shapely in build, with nice skull and foreface, won in the open class, and afterward the special for the best dog in the show; that for the best bitch was carried off by Beaty III. Toadie, a nice-colored one, was well ahead of the bitches, she wants depth and squareness in face, and was shown rather fat. Sara Bernhart is lighter in body and not so typical; while Mabel, who took third prize, was not shown in good condition, and her face is too long.

Toy Spaniels, etc.

Judge—Mr. George Raper.

In the challenge class the King Charles Milwaukee Charlie, owing to his moderate condition of coat, was beaten by the Japanese pug Nank-i-Poo, but the former was good enough to win the special offered for the best toy spaniels. Open dogs found Romeo to the fore, he being shorter in face and larger in skull than Prince, who at present is not in good coat, while Bend 'Or, Jr., is altogether too dark in color, otherwise a nice dog. Lady Hillary was well ahead in her class; she has a short, square muzzle, high and big skull and fair body. Wings is rather leggy, but in Topsy she had not a very high-class specimen to beat.

Prince Charles or Rubys—The latter variety was represented by Marguerite, moderate in color, otherwise a nice spaniel, she won, beating Bell, who is out of coat.

Japanese pugs were a very meritorious collection. In dogs, Kioto, shown in grand coat and condition, won well from Punch, a nice-headed dog, with excellent texture of coat. So has Che-si, the recipient of third; the latter is rather long in back. Tokio is very small—a nice one very, not now in full coat. Otello and Yoko deserved their cards, both being representative specimens. Chequo, the winning bitch, is a real gem. She is very short indeed in face, big in skull, and carries an excellent coat. Tamah, also very typical, is a shade longer in face. Ki-Ku, small in body, is just a trifle weak in muzzle. She got third, with Mona reserve. Among the rest I much admired Maimee, Ootah, Judy and Hama, all of whom received complimentary cards.

Star was by far away the best Italian greyhound; and of the brace of Schipperkes that entered the ring Sophia was a long way the best.

The miscellaneous class was divided. In one division Beauty, a good smooth sheep bitch, won, beating the poodle Sheffield Lad. In the other competition a Mexican hairless dog won easily, beating the Maltese, Beauty.

George Raper.

SPECIALS.

MASTIFFS.—Kennel prize for best four by one exhibitor, not filled. New York *Herald's* medal for best dog, J. L. Winchell's Beaufort's Black Prince. New York *Herald's* medal for best bitch, M. A. Hubbell's Duchess. American Mastiff Club's prizes: Westminster challenge cup and diploma for best bred dog or bitch under three years, J. L. Winchell's Beaufort's Black Prince. Club's challenge cup and diploma for best American-bred dog or bitch, J. L. Winchell's Beaufort's Black Prince. Taunton gold medal (breeder's prize) for best American-bred under two years, J. L. Winchell's Beaufort's Black Prince. Club's challenge cup for best belonging to members, J. L. Winchell's Beaufort's Black Prince. Club's challenge cup and diploma for best bitch, withheld. Old English Mastiff Club's forty guinea challenge cup, J. L. Winchell's Beaufort's Black Prince. For best of opposite sex to winner of above, withheld.

ST. BERNARDS.—Best kennel, New York St. Bernard Kennels. Westminster challenge cup, E. H. Moore's Melrose. *Herald* medal for best rough dog, Wyoming Kennels' Sir Bedivere. Best bitch, New York St. Bernard Kennels' Princess Florence. Best smooth dog, D. P. Foster's Leicester. Bitch ditto, Duchess Kennels' Empress of Contoocook. Club medals: Best rough dog with 2 of his get, R. T. Rennie's Vindex. Best American-bred smooth dog over 12mos., J. Keevan's Patrol. Best rough ditto, E. H. Moore's Lord Melrose. Best American-bred smooth bitch over 12mos., J. Ruppert, Jr.'s Empress of Contoocock. Best rough bitch ditto, E. M. Moore's Lady Melrose. Best American-bred smooth dog under 12mos., E. H. Moore's Melrose. Best rough ditto, D. Mann's Egmont. Best smooth bitch ditto, J. Ruppert, Jr.'s Bellegarde.

BLOODHOUNDS.—New York *Herald's* medal for best, J. L. Winchell's Judith.

GREAT DANES.—Best kennel, G. Leibacher. New York *Herald's* medal for best, H. G. Nichol's Melac. German Mastiff or Great Dane Club's for best, H. G. Nichol's Melac.

RUSSIAN WOLFHOUNDS.—Greyhound Club's medal for best dog, Seacroft Kennels' Leekhol. Greyhound Club's medal for best bitch, Seacroft Kennels' Svodka.

DEERHOUNDS.—Best kennel, John E. Thayer. New York *Herald's* medal for best, John E. Thayer's Hillside Romola. Greyhound Club's medal for best dog, John E. Thayer's Hillside Warrior. Greyhound Club's medal for best bitch, John E. Thayer's Hillside Romola.

GREYHOUNDS.—Best kennel, Arthur W. Purbeck. Best winner at coursing meeting in America or Great Britain, N. Q. Pope's Balkis. New York *Herald's* medal for best, N. Q. Pope's Balkis.

FOXHOUNDS.—Best kennel American hounds, J. M. Avent. Best kennel English hounds, Radnor Hunt.

POINTERS.—Best kennel, T. G. Davey. Best in open class with field trial record, Hempstead Farm Kennels' Woolton Game. New York *Herald's* medal for best, Hempstead Farm Kennels' Duke of Hessen. Pointer Club's field cup, Hempstead Farm Kennels' Duke of Hessen. *Sporting Times'* prize for best black and white dog in open class, Rufus Delafield's Fritz. *Sporting Times'* prize for best black and white bitch in open class, Maumee Kennels' Barmaid.

ENGLISH SETTERS.—Best kennel, Blue Ridge Kennels. Best in open class with field trial record, Blue Ridge Kennels' Hope's Mark. New York *Herald's* medal for best, Blue Ridge Kennels' Hope's Mark. English Setter Club's medal for best bitch with two of her get over 12 months, Rosecroft Kennels' Donna. English Setter Club's medal for best dog with two of his get over 12 months, J. M. Avent & Bayard Thayer Kennels' Roderigo. English Setter Club's medal to breeder of three best dogs or bitches over 12 months shown, Memphis & Avent Kennels. English Setter Club's medal for best dog or bitch with field trial record, Blue Ridge Kennels' Hope's Mark.

POODLES.—New York *Herald's* medal for best, M. W. Reid's Fritz.

BULL-TERRIERS.—Best kennel, F. F. Dole. *Herald's* medal for best and S. L. Boggs's prize for best, John Moorehead, Jr.'s Streatham Monarch.

DACHSHUNDE.—Best kennel (2), E. R. Manice. Best brace of bitches by one exhibitor, E. R. Manice's Janet and Venus II. Best bitch, Morris J. Asche's Pollywog.

SPANIELS.—American Spaniel Club prizes: Club cup for best field spaniel, Albert E. Foster's Index. Club cup for best American cocker spaniel, J. P. Willey's Juno Grant. American Field cup for best sporting spaniel, any breed, J. P. Willey's Juno Grant. George H. Whitehead's trophy for best cocker stud dog with two of his get, J. P. Willey's Jersey with Juno Grant and Prince W. James L. Little's prizes for best five Clumbers, and best Clumber dog under 2 years, not filled. James L. Little's prize for best Clumber bitch, Mercer & Middleton's Lady Bromine. R. H. Eg-

DR. H. T. FOOTE'S "SULTAN."

gleston's prize for best black field dog in open class, Albert E. Foster's Index. James P. Willey's prize for best field spaniel other than black, Rowland P. Keasbey's Bridford Ruby. Luckwell & Douglass's prize for best cocker spaniel other than red or black, J. P. Willey's Little Ben II. Murray Hill Hotel prize for best brace field spaniels, Rowland P. Keasbey's Bridford Ruby and Beverley Negus. J. F. Kirk's prize for best brace liver spaniels, R. H. Eggleston's Ace of Spades and Dame Trot. Charles H. Mason's prize for best field bitch, Rowland P. Keasbey's Bridford Ruby. F. H. F. Mercer's prize for best Irish water spaniel, W. Vandenbergen's Rome. American Cocker Kennels' prize for best bitch showing two of her get, J. P. Willey's Black Duchess. George Bell's cup for best field spaniel by member, R. H. Eggleston's Echo. Edward M. Oldham's prize for best field bitch, Rowland P. Keasbey's Bridford Ruby. O. B. Hark's prize for best cocker bitch in open classes, Ancient and Modern Spaniel Kennels' Amzement. E. H. Morris's prize for best field bitch other than black or liver, Dr. S. J. Bradbury's Patti.

BULLDOGS.—Bulldog Club of America's prizes: Grand trophy for best dog or bitch, Wheatley Kennels' Salina. Porter cup for best of opposite sex to winner of grand trophy, Illwis Kennels' King Lud. Puppy bowl to best American dog or bitch between 6 and 15 months, Illwis Kennels' Nobby Twist. Sawyer cup for best novice dog or bitch, Illwis Kennels' Nobby Twist, Club medal for

best American bred dog, A. B. Graves's Handsome Dan. Club medal for best American bred bitch, not filled. Club medal for best dog or bitch in open class, Wheatley Kennels' Salem. Club medal for best puppy under 12 months, Illwis Kennels' Nobby Twist.

BEAGLES.—Best kennel, Rockland Kennels. The *Herald's* medal for best, Rockland Kennels' Emeline. National Beagle Club's prizes: Best dog, bred by owner, Somerset Kennels' Whalebone. Best bitch, bred by owner, Somerset Kennels' Somerset Helen. Best dog, owned by member, Rockland Kennels' The Rambler. Best bitch, ditto, Rockland Kennels' Emeline. Medal for best four, ditto, Rockland Kennels.

FOX-TERRIERS.—American Fox-Terrier Club prizes: Best in show, Blemton Kennels' Blemton Victor II. Best in open classes, J. E. Thayer's Starden's King. Best in puppy classes, L. & W. Rutherfurd's Warren Daysman. Best brace, Blemton Kennels' Blemton Victor II. and New Forest Ethel. Best wire-haired, J. Mortimer's Suffolk Toby. Best brace wire-haired, J. Mortimer's Suffolk Toby and Suffolk Teazel. Grand challenge cup for best in show, Blemton Kennels' Blemton Victor II. Stud Dog Stakes, 1890, L. & W. Rutherfurd's Warren Daysman and Warren Symbol. Second division, Fifth Grand Produce Stakes, 1891, Blemton Kennels' Blemton Rasper. First division, Sixth Grand Produce Stakes, 1892, L. & W. Rutherfurd's Warren Daysman. Yankee Stakes, 1891, Blemton Kennels' Blemton Rasper. Best kennel, Blemton Kennels. The *Herald* medal for best, Blemton Kennels' Blemton Victor II.

IRISH TERRIERS.—Best brace, W. J. Comstock's Dunmurry and Boxer II. The *Herald* medal for best, W. J. Comstock's Dunmurry. Mitchell Harris n's prize for best American dog puppy, G. F. Newhall's Roslyn Patrick.

BLACK AND TAN TERRIERS.—Best brace, Rochelle Kennels' Broomfield Sultan and Rochelle Carmencita. Best, Rochelle Kennels' Broomfield Sultan. A. W. Smith's prize for best American puppy, Rochelle Kennels' Rochelle Carmencita.

BEDLINGTON TERRIERS.—Best brace, W. H. Russell's Tick Tack and Cheerio.

SKYE TERRIERS.—Best brace, Clifford A. Shinn's Sir Stafford and Bessie.

TOY SPANIELS.—Best brace, Mrs. F. Senn's Romeo and Bell. The *Herald* prize for best in show, Mrs. S. S. Blood's Milwaukee Charley.

ITALIAN GREYHOUNDS.—Best brace, Mount Washington Kennels' Spring and Star.

Forest and Stream, Feb. 25, has Full List of Awards.

AMERICAN KENNEL CLUB MEETING.

THE American Kennel Club held its annual meeting in Madison Square Garden on Thursday, Feb. 25. The roll call showed a quorum present. Mr. August Belmont presided. The minutes of the last meeting were read and accepted. The treasurer then produced his report, but as it had been published in the *Gazette* the reading of it was dispensed with. Mr. Belmont then took the floor and made some remarks concerning newspaper reports which intimated that he was tired of his office. He explained at some length that he was not tired of the office, but that in future he could not, perhaps, devote so much time to the business of the A. K. C. as in the past, if he were elected president, and that if there was anyone available who could do better, he would willingly retire in his favor. Furthermore, he said he had in no way authorized the statements concerning his being tired of his office.

Mr. Anthony took the chair as temporary chairman. Mr. Belmont was unanimously elected president. Mr. Thomas H. Terry was elected vice-president. Messrs. James Watson, Wilson Fiske and Dr. M. H. Cryer were elected a Stud Book Committee for the ensuing year. Messrs. John S. Wise and James L. Anthony were re-elected an Advisory Committee. There was no unfinished business. The report of the Stud Book Committee was accepted and placed on file. It showed a constant growth in the support of the stud book. The recommendation that the book be issued on April 1 was adopted. The meeting then adjourned. The Executive Committee then went into session. The report of the last meeting was read and accepted. The resignation of the Northern Illinois Poultry and Pet Stock Association was accepted. The Youngstown Kennel Club has ceased to exist, so it was stricken from the list.

The Seattle Kennel Club, Seattle, Wash.; Androscoggin Kennel Club, Lewiston, Me.; Tri-City Kennel Club, Davenport, Ia.; Keystone Kennel Club, Philadelphia, Pa.; Hermitage Kennel Club, Elmira, N. Y., were favorably considered and elected to membership. Dr. Perry's letter of withdrawal was read. The application of Chas. M. Nelles for reinstatement was considered and was acted upon adversely. The secretary's report was read and accepted. The treasurer's report showed a good financial condition and a good cash balance. The clubs in arrears are to have sixty days in which to pay their dues or be dropped from the list. The report of the committee on bringing field trial wins under the jurisdiction of the A. K. C. was adopted and recommended.

Mr. A. P. Vredenburgh was elected secretary-treasurer for the ensuing year. The name of the Continental Kennel Club, on its request, was changed on the list to conform to the charter name of the club, which is the Continental Kennel Club Company. The Committee on Pedigrees asked for more time. The matter of moving the office of the A. K. C. up town near Madison Square Garden was considered, and a committee was appointed to select suitable rooms for the purpose, and also in addition a room or rooms for visitors was to be considered. The matter of having medals made for special prizes, one to be given to the best of each breed at all shows held under the auspices of the A. K. C., was referred to the committee which had charge of the selection of new offices. Several protests were referred to the Advisory Committee.

A committee was appointed to see if better arrangements could not be made with express companies for the transportation of dogs to and from shows. A committee of three was arranged for, to be appointed by the Chair, with a view to the making of better arrangements regarding the importation on dogs, the restrictions now in force being almost prohibitory. A resolution was passed, the purport of which is that no claims for dates shall be allowed till the September meeting of the club. If necessary, the club will arrange the circuit and give such dates as will be most conducive to the success of the circuit A standing committee of five is to be appointed on rules, to revise the rules and submit any amendments to the club.

THE INS AND OUTS OF SPECTRE.

NEW YORK, Feb. 25.—*Editor Forest and Stream*: The assertion contained in a paragraph of your last issue that I sent the setter bitch Spectre out of the ring is absolutely false.

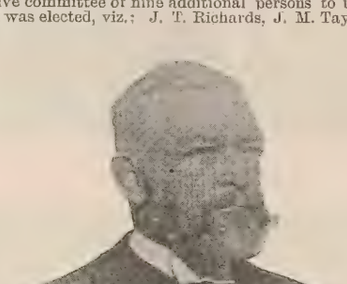
JOHN M. TRACY.

[Our authority for the statement that Spectre was ordered out of the ring is Mr. Fiske himself, corroborated by Mr. John Brett, of Spratts Patent. It was Mr. Fiske, however, who subsequently took the bitch back into the ring.]

A Successful Control.

The W. K. C. is unique in one sense, other clubs' officers seem to change almost yearly, but the names always connected with the W. K. C. seem to go on forever. Messrs. T. H. Terry, H. B. Cromwell, F. R. Hitchcock, the Rutherfurd brothers, R. C. Cornell, F. O. De Luze, G. De F. Grant, Elliot Smith, G. S. Floyd Jones are names familiar to us at W. K. C. shows for ten years past; and when the show is on, they each do their best for it as stewards in the rings or in other ways.

It seems that a race has been concluded between Mr. Hacke's Barzois and some of the better greyhounds of the West. Here is a good chance for the West to accumulate some Eastern capital at a low rate of interest.



MEETING OF THE POINTER CLUB.

THE Pointer Club of America met at 4 P. M. in Madison Square Garden. Mr. John S. Wise in the chair. About a dozen members were present. Owing to the absence of the secretary, Mr. Geo. La Rue, the greater part of the order of business could not be followed. The protest of Dr. J. R. Daniels, against the decision of the judges of the Central Field Trial Club in awarding the club's special prize of $100 to Duke of Hessen, he claiming it should be awarded to Promotion, was rejected, the club declining to pass upon the protest, as in the club's opinion the matter was out of its jurisdiction, and it was so resolved. It was resolved that the secretary send a check of $100 to the Central Field Trial Club, and to notify said club of Dr. Daniels's protest, and to request said club to await a protest from him if he has one to make, as he protested to the Pointer Club by mistake. A copy of the resolution was ordered to be sent to the Central Field Trial Club and Dr. Daniels.

There was a balance of $175, above all indebtedness, in the treasury. It was decided to give a $30 special at the Boston show to be divided, $20 to go to the breeder and $10 to the owner of best American bred pointer dog in show, and owned by a member of the Pointer Club. Also at the Washington and Pittsburgh shows, $10 each for the best dog and bitch. The list of officers elected is as follows; President, Chas. Heath; Vice-President, John S. Wise; Secretary-Treasurer, Geo. La Rue. Delegate to A. K. C., G. Muss-Arnolt. Executive committee, Messrs. Terry, Tracy, Arnolt, Anthony and the officers of the club. Messrs. J. L. Anthony and B. Thayer were elected to membership.

ENGLISH SETTER CLUB MEETING.

THE annual meeting of the English Setter Club was held at Madison Square Garden, Tuesday, the 23d. It was preceded by a meeting of the executive committee, which attended to some routine business, and which elected the following to membership in the club: Richard Merrill and G. G. Pabst, Milwaukee, Wis.; C. M. Rounds, San Antonio, Texas; Bayard Thayer, Boston; Wm. Bryce, Jr., and Howard Cook, Bergen Point, N. J.; Mr. Robertson and Mr. Stent, N. Y. At the annual meeting Mr. Pierre Lorillard, Jr., was re-elected president; F. W. Whitlock, 1st vice-president; J. M. Tracy, 2d vice-president; Wilson Fiske, secretary and treasurer. An executive committee of nine additional persons to the above officers was elected, viz.: J. T. Richards, J. M. Taylor, Wm.

MR. JAMES MORTIMER,
Superintendent W. K. C. Show.

Bryce, Jr., Wm. Tallman, J. M. Avent, P. H. O'Bannon, Dr. W. A. Power, G. E. Osborn. A motion was made to abolish the list of judges. An amendment was offered providing for a new election of judges, and a provision was made that all ballots should be sent in in sealed envelopes to be opened in April by the executive committee.

A committee was appointed to revise the constitution and by-laws. Another of five to arrange for occasional meetings, when a dinner will be served. It was voted that the first one be held in Boston on the second day of the show—time and place to be decided by the committee. A resolution was passed urging the membership to do what they could to increase the membership of the club, and that each member be requested to send in, at once, at least one new name. Mr. T. G. Davey, of Canada, promised ten, and was heartily applauded. Among those present were: Dr. N. Rowe, Bayard Thayer, P. H. O'Bannon, G. G. Pabst, J. M. Tracy, Wm. Tallman, Geo. Jarvis, J. T. Richards, J. M. Taylor, A. Huidekoper, Wilson Fiske, G. E. Osborn, Dr. H. Clay Glover, T. G. Davey, F. W. Whitlock, Dr. W. A. Power, Wm. Bryce, Jr., and J. M. Avent.

AMERICAN SPANIEL CLUB MEETING.

THERE were fifteen members present. The Secretary reported that ten new members had been elected. Some unimportant changes were made in the by-laws and constitution. The treasurer's report showed a balance of $100 and a clean debit account. Executive committee appointed for next year: A. C. Wilmerding, Jas. Watson, E. M. Oldham, E. H. Morris and Rowland P. Keasbey. An Executive committee meeting was held right after. Election of officers: President, A. C. Wilmerding; Treasurer, E. M. Oldham; Secretary, Rowland P. Keasby. A fuller report will appear in our next issue.

Uncle Dick Reports the Spaniel Club Dinner.

Spaniel Club dinner, Morello's. President Wilmerding in chair. Keasbey, Oldham, Winslow, Browning, Heath, Douglas, Uncle Dick, the father of the club; Gillman, Morris, H. Tallman, Twyford, Powers, Bell.

Good lay out, etc.
Remarks by all the company.
Oldham sings.
Ought to be more such meetings.

Business.

CLAY CITY, Ill., Feb 7, 1892.—Forest and Stream Pub Co.: Please insert the inclosed sales in your next issue of the FOREST AND STREAM. Your paper is *proving one of the best advertisers for profit we use.*—THE SILVER SPRING KENNELS, per W. W. Mankes, Manager.

A Warning to Foxes not to Ride.

THE Derry (N. H.) *News* records: H S. Rowe and Rev. C. W. Taylor captured two foxes while out riding one day last week.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

PHILADELPHIA DOG SHOW.

PHILADELPHIA, Pa.—(*Special to Forest and Stream*).—Wind, rain, snow and everything that tends to make one feel uncomfortable in the open air was the state of the weather in which the Keystone Kennel Club's first show opened this morning. When I arrived everything was in order, and judging commenced promptly at 10 A. M., continuing without intermission in one or other of the two rings during the day, and the 422 entries were all judged and specials awarded by 6:30 P. M., a record for a show of this size that I believe has not before been accomplished.

Tattersall's, where the show is held, is a light, airy building—horsy, but very clean. The benches are on two floors, but the stairs are wide and dogs are easily handled. The rings were well served, so that there was little delay. Mr. Watson, who is the prime mover and organizer of the show, had everything in good order, and the catalogue has very few, if any, mistakes, so well is it gotten up.

The dogs on exhibition are a good lot, as the prize list shows, and the show is just a reflex, on a smaller scale, of the gathering at New York last week. Among those present I noticed Dr. Hartman, C. T. Thompson, F. G. Taylor, John Lewis, Col. Ruppert, W. C. Reick, Mrs. Buckbey, A. C. Wilmerding, R. P. Keasbey, Geo. Bell, J. M. Avent, James Mortimer, F. R. Carswell, Mrs. Smyth, Mrs. Meecham, Gen. Huidekoper, Charles and W. S. Diffenderffer, Frank Dole, Carl Helmerle, H. W. Huntington, Henry Jarrett, J. Otis Fellows, and the usual handlers. The attendance, notwithstanding the weather, has been fair. A marked catalogue will be issued to-morrow, and with good weather there is nothing to prevent the show being a success. The complete awards is as follows:

MASTIFFS.—*Dogs:* 1st, P. J. Walsh's Pluto; 2d, J. B. Nelson Jr.'s Jefferson; 3d withheld. *Bitches:* 2d, D. Woodson's Lady Caution. *Puppies:* 1st withheld; 2d, J. H. Wallace's Roman Caution; 3d, P. Noyes's Rose Caution. High com., G. D. Gideon's Heizog.—LOCAL—1st, S. L. Berswanger's Harry; 2d, H. Weston's Nero III. Reserve, H. B. Foster's King. Very high com., F. P. Smith's Monte. Com., C. P. McCurdy's Prince.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—*Dogs:* 1st, W. C. Reick's Kingston Regent. *Bitches:* 1st, W. C. Reick's Republican Belle.—OPEN—*Dogs:* 1st, J. Ruppert, Jr.'s Aristocrat; 2d, W. C. Reick's Refuge II; 3d, W. Pierson's Bevis. Reserve, Cobb & McLear's Sir Lion. Very high com., Misses Walbaum's Faust. Com., R. M. Agnew's Bruce. *Bitches:* 1st, W. C Reick's Guess Noble; 2d, reserve and very high com., J. Ruppert, Jr.'s Lady Gladwyn, Ellen Terry and Alfonette; 3d, Swiss Mountain Kennels' Sunray. High com., Cobb & McLear's Duchess of Arlington. Carswell's Dell Wilkes; best in show, Chestnut Hill Kennels' Wellesbourne Charlie. Fox-terriers.—Best kennel, Blemton Kennels.

H. W. L.

AMERICAN FOX-TERRIER CLUB.

NEW YORK, March 1.—*Editor Forest and Stream:* The American Fox-Terrier Club offers the following specials at the show of the New England Club: $10 for the best fox-terrier (dog or bitch) in the show, $10 for the best fox-terrier (dog or bitch) in the open class, and $25 for the best exhibit of four fox-terriers. Also the Apollo and Home-Bred Puppy Stakes will be decided at that show, and the Yankee Stakes of 1890; that is, for puppies born between March 1, 1889, and March 1, 1890.

At the Washington dog show the club offers $10 for best fox-terrier in the show (dog or bitch), $10 for the best fox-terrier (dog or bitch) in the open class, and $5 for the best fox-terrier in the novice class (dog or bitch). Also the Tomboy Stakes of 1892 will be decided in Washington.

The annual meeting of the club was held on Feb. 24, 1892, at the Madison Square Garden, and the old board of officers was re-elected. The club also decided to recommend as a judge of fox-terriers Mr. T. S. Bellin, of Albany, N. Y., in the place of A. L. Weston, of Denver, Col. Messrs. Belmont, Rutherfurd and Vanderpoel were appointed a committee to arrange for a fox-terrier show during the coming year, and also to communicate with the Mascoutah Kennel Club, of Chicago, in regard to the dog show to be held during the World's Fair in 1893. I will notify you further in regard to what has been decided as to the two latter matters.

AUG. H. VANDERPOEL,
Sec'y American Fox-Terrier Club.

FOX-TERRIER CLUB MEETING.

THE Fox-Terrier Club met on Wednesday afternoon, when last year's officers were re-elected. A committee was also appointed to confer with the National Greyhound Club with respect to holding a joint show some time during the summer, and Messrs. Vanderpool, Belmont and Rutherfurd were chosen to confer with the World's Fair regarding the exhibition next year.

Business.

LATROBE, Pa.—*Editor Forest and Stream:* In reply to my advertisement in FOREST AND STREAM the large number of answers I received and pressure of business prevented me from answering all; but I will have a printed list of my dogs made up soon, and will send to any one on application.—DR. JOHN A. HARTMAN.

DOG CHAT.

THE great Fullerton has once more demonstrated his superiority over other greyhounds by finally defeating, after three most severe trials, Fitz Fife, the runner up, and thus winning outright for the third time the Waterloo Cup. The meeting at Altcar was postponed from the previous week and commenced Feb. 22. The conditions of the stake are: The Waterloo Cup, for sixty-four subscribers, £25 each. Winner, £500; second, £200; two dogs, £50 each; four dogs, £30 each; eight dogs, £20 each; sixteen dogs, £10 each; the Waterloo Purse and Plate, £360. Total, £1,600. Mr. Hedley was the judge and T. Bootman slipper. We cannot name the 32 winners in the first round, but those left in the third round were Happy Augury, Race Course, Young Fullerton, Ivan the Great, Fullerton, Rhymes, Pleasant Nancy, Patrick Blue, Fitz Fife, Silver City, Jim of the Hill, Texture, Roman Oak, Annihilator, Full of Mischief and Neston. Afterward Race Course, Fullerton, Fitz Fife and Roman Oak were left in. Fullerton was a great favorite at odds of 14 to 1 on. In the final heat Fitz Fife and Fullerton ran an undecided and then another course was run, but this did not settle matters, and still another course had to be gone through before Fullerton was returned the winner. Fullerton bounded away with a lead in the final course of four lengths, and though Fitz Fife drew up, the crack was never headed. Fullerton is by Greentick out of Bit of Fashion, and is owned by Col. North, while Fitz Fife, that must be a wonderfully good greyhound, is by Royalty II out of Budelight, and is owned by Mr. G. F. Fawcett. The history of the cup shows that the first cup was established in 1836, and it was then a small affair, being an eight-dog stake. It was first won by Lord Molyneux's Milanie. It was increased to sixteen dogs the following year, and to thirty-two dogs in 1838, at which number it remained until 1857, when it became a sixty-four-dog stake, and it has remained so from that time.

The excitement and the prevailing topic of conversation along "pet dog row" at the Garden was the claiming of the King Charles spaniel Daffodil by a young lady from Brooklyn. The young lady was positive she was right and the matter was taken to court, where it was eventually proved that the dog belonged to Miss Willetts, the claimant, it having been picked up by a boy who sold it to the Rothschilds, the defendants, who claimed $50 for expenses and the sum they had paid for it. Judge Duffy finally gave one of his characteristically Solomonic decisions—that before Miss Willetts could get her dog she must pay the defendants $30 After a long struggle with principle and a love for the dog, the claimant eventually compromised on a basis of $25. Miss Willetts gets her dog and the defendants everything else. Such a decision seems to put a premium on dog catching.

A number of sales were concluded during the show. Mr. G. W. Glazier sold the mastiff Ingleside Maximilian to Dr. C. A. Louquest, of Boston, Mass., for $600. Mr Scanlan sold the Irish setter bitch Avondale, by Inchiquin out of Jess, for $250. Mr. John H. Mathews sold a bulldog pup by Quiberon out of Derby Hebe, for $125. Mrs. Nicholson sold to Clinton J. Edgerley the St. Bernard Mount Zion Sylvia for $100. Mr. A. W. Pearsall, of the Redstone Kennels, L. I., sold the Irish setter Cherrystone to Mr. John D. Crimmins.

At the auction sale of Mr. John A. Logan, Jr.'s fox-terriers, held on Thursday afternoon at Tattersall's, fair prices were realized. Dominica went cheap, fetching only $350. Verdict, that has come more into notoriety now as the dam of Victor II., that won everything before him at the show, brought $175, Oriole Sullivan $145, Brilliant $70, Verona $35, Rapture $25, Baccarat $21, Vice $20 and Sparkle and Triumph $14 each.

At the Rutherfurd sale the next day prices, as usual, were good. About forty dogs were sold and these brought an average of $30. The highest bid was $80 and the lowest $11.

Mr. L. C. Whiton was so elated over the good showing made by his greyhound Spinaway at New York, where she won the special for best bitch in the show, that visions of winning the Waterloo Cup coursed through his mind, and a cable was soon on its way to find out the lowest that a service of the great Fullerton could be secured for. Back came the answer $200. It was pretty stiff, but then the flag had just gone up for the fourth time over Fullerton, and it was now or never. Spinaway therefore sailed on the Etruria Saturday morning, and will be in charge of Mr. John Douglas, we believe. She will be kept in England till it is known whether she is in whelp, and if not will remain in Mr. Raper's kennels and be trained for some coursing events.

Thanks to the vigorous exertions of Mr. G. W. Glazier, the stupid statute of Massachusetts making outlaws of "bloodhounds" has been repealed. All dog men are under an obligation to Mr. Glazier for this, as ignorant legislation concerning dogs is apt to work mischief to all.

We have received the first proofs of the Boston show's premium list. In challenge classes the prizes are the club's silver medal. In open, for the more important breeds, $15, $10 and $5 is the order; other breeds have $10, $5 and $3 and $10 and $5. The specialty clubs are quite liberal, and some valuable trophies can be picked up, while the club's kennel specials of $15 and $10 are worth winning. The judges, as far as we know, are Mr. James Mortimer for nearly all the non-sporting breeds, Mr. James Bellin fox-terriers, and Mr. Davidson sporting dogs. Spaniels have classification No. 3. Entries close March 19, and the fee is $3 all round. We sincerely trust that exhibitors will do their best to give Boston a record entry, for while new shows are springing up all over we must not forget the old ones, or those which stood the brunt when dog shows were not so popular as at present.

We have been unable before to allude to the death of Mr. Nichols, editor of the English *Stock-Keeper*. The loss of such a widely known and popular journalist and fancier must be well nigh irreparable, and our esteemed contemporary has the sincere sympathy of FOREST AND STREAM.

Owing to lack of financial support Dr. Gibier says he must soon close his Pasteur Institute on West Tenth street.

Mr. S. C. Bradley, the expert field trial handler and trainer, requests us to mention that there is no Fort Wayne Kennel, that having ceased to exist when the Greenfield Hill Kennel was formed. He desires this to be known, as letters are sometimes sent to the Fort Wayne Kennel instead of to his kennel at Greenfield Hill, Conn.

The average newspaper portrait would afford reasonable ground for a libel suit. The portraits of Westminster show judges and others given by FOREST AND STREAM to-day are noteworthy as excellent likenesses.

Among the new offers for sale this week are the following: English setters, E. I. Bunidge, L. A. Pearle; beagles, Rockland Kennels, Andrew Laidlaw; pugs, W. M. Stuckey; St. Bernards, Andrew Laidlaw, L. Daniels; Irish setters, C. M. Acklen; pointers, Will Allen. The Seminole Kennels offer collies, pugs and Irish setters at stud; J. Hellen offers St. Bernards. A. H. Moore wants a man to take charge of St. Bernards. The New England Kennel Club announces its eighth annual bench show.

After the Albany show Mr. Frank Dole sold the bull-terrier Carney to Mr. W. H. Keeler, to be delivered after the New York show. Mr. Keeler has in turn sold this noted bull-terrier, along with Edgewood Fancy, to Mr. E. D. Hayes, owner of the Tubby Hook Kennels, of New York city.

Those who were not able to attend the New York show should send to this office for a copy of the DOG SHOW EXTRA. It is a fitting souvenir of the best dog show yet held in America.

Mr. A. M. Hughes, who was so long and favorably known in St. Bernard circles and who handled old Apollo in his exciting competitions with champion Hector, his son, has been buried in Chicago for some time past, but now, we are pleased to say, will be seen among us again. Mr. James W. Whitney, owner of the Flour City Kennels, has secured his services as manager, and it is more than probable, under Mr. Hughes's experienced care, this kennel will soon be able to show some young mastiffs of its own breeding.

Col. Ruppert, not satisfied with the location of his kennel at far-away Poughkeepsie, will remove them to his brewery gardens on Third avenue, New York, where he will have a chance to see them every day and so become better acquainted with his own dogs. He will sail on April 2 for England and, perhaps, bring a good bitch or two back with him. Mr. W. C. Reick sails for Spain in the course of a week or two and will return with Col. Ruppert in May.

The judging of Mr. George Raper was a revelation to our showgoers and a revelation that some of them did not like. We have been admittedly weak in our smaller breeds of dogs, and because some mediocre animals from a want of something better have gained a "home-made" record, owners have run away with the idea that they are good specimens of the breed. It seems foolish, therefore, for them to question the judgment of a man who thoroughly up to date comes from the very hotbed of keen competition in these classes, and from his vast experience must surely know what he is doing. Further than this, Mr. Raper, through the FOREST AND STREAM, told our readers in the EXTRA his reasons for his action while the echo of the decision was still in the ring. Mr. Raper is much pleased with his reception in this country. When asked what he thought of the country, he answered, "Why, man, they haven't given me time to see it yet!" Further on he remarked that the management of the New York show could not be improved. Mr. Raper sails for England in time for the Preston show, April 7, where he judges.

Mr. Mortimer will pay a visit to the old country in June and will be away for some time. This well-known judge and manager was much put out at the statement in a Western paper that he was leaving the W. K. C. to accept the management of the Hempstead Farm Kennels. While he will have the management of the Farm he will also have a pecuniary interest in the business, which will include buying and selling of all sorts of stock, their importation, etc., in fact there is no limit to the scope of their transactions, so that Mr. Mortimer will have every opportunity to exercise that executive ability he is so noted for.

There were rumors of an earthquake at the show, and it did seem as if the sturdy building was trembling in some seismic throes, but it was only friend Bradley showing off the "liberty" of Rowdy Rod for the field trial special.

Professor Hampton and his circus pleased every one immensely, and the two cats in their mimic ring were very amusing. The professional air with which John L knocked Kilrain through the ropes and out was an achievement in training that surprised the knowing ones.

The enterprise of the FOREST AND STREAM in issuing an extra the last day of the show with a full account of the show elicited many expressions of astonishment and congratulations. The pictures alone were considered unapproachable. This is only a forerunner of other surprises which the FOREST AND STREAM has in store for "our dogmen." Our friend "Hunky Dory" has an opportunity now to make a graceful retraction and "bury" the past. There are interesting features connected with the New York show that must necessarily lie over another week, or the fishing man, the shooting man and the yachting man will cut us dead.

The enterprise of the FOREST AND STREAM in reporting the Irish Setter Club meeting that did not take place, will, we are sure, be duly appreciated.

The Fox-Terrier Club's show at Oxford, England, was a great success as far as the quality of dogs is concerned. The open bitch class is said to have been the best ever brought together in a dog show, and a number of promising youngsters made their debut.

At Cruft's show, the Duchess of Newcastle purchased the Psovie Borzie (this is the latest name) Oudar for $1,000 from the Imperial Kennels. It seems very much as if these dogs will soon vie with the St. Bernards in lofty prices.

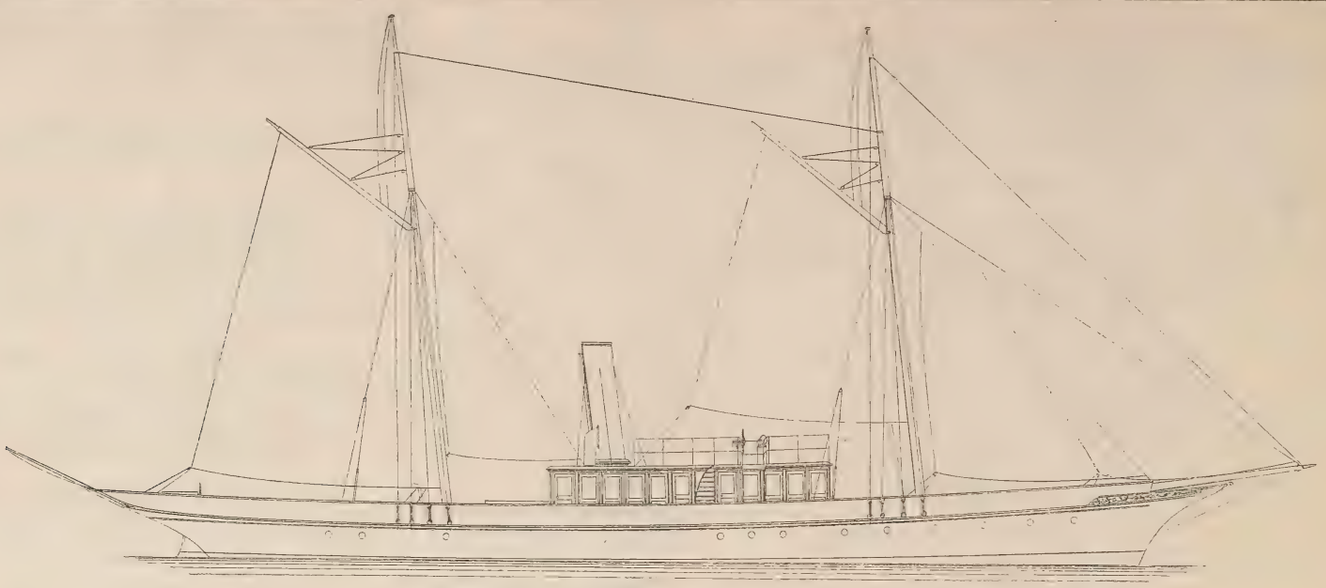
We are very much gratified by the success of the engravers in providing such excellent portraits of the Westminster judges. They are capital likenesses, the excellence of which will at once be recognized.

NOTES AND NOTIONS.

THE prominence of the "field trial" ideal in the setter judging at the recent New York show again illustrates the silliness of attempting to base show awards on field trial performance. It is very strange that men of ordinary intelligence should so constantly flounder on this subject. Take a certain noted stud pointer as an illustration; a flashy catchy looking dog, he is deficient in many of the most important features of a workman, yet he undeniably is a good performer in the field, but is so in spite of his conformation, not by reason of it. As a postulation, it might be said that it is his resolution, his "grit," that carries him through, and that he must finish a day's work much more wearied than a dog of such conformation as Graphic for instance. The Graphic type of dog being better constructed for endurance, does his work with a lesser draft on his "grit," yet this insensate folly of departing from sound, fundamental principles to follow will-o-the-wisp exceptions has already given us a lot of very weedy pointers because, in one exceptional instance, a bad pointer turned out a good performer.

* * *

The absurd over-value Americans place on canine pedigrees, probably results from their own poverty in that article.



THE ONLOOKER.

PHILADELPHIA K. C. FIELD TRIALS.

Editor Forest and Stream:

The Philadelphia Kennel Club have made satisfactory arrangements with the Eastern Field Trials Club for the use of the grounds of the latter at High Point, N. C., for their field trials this year. They will be open to the world, and will commence Monday, Nov. 28, and continue until finished. Liberal purses will be offered, of which due notice will be given.

FRANCIS G. TAYLOR, Sec'y.

SAIL PLAN OF CRUISING STEAM YACHT.

BRUNSWICK FUR CLUB TRIALS.

THE third annual meet of the Brunswick Fur Club took place at Great Island, Brunswick, Me., commencing Feb 15 and continued throughout the week, the Gurnet House being headquarters. The Gurnet House is what might be termed the home of the club, for it was here that it was organized and held its first meet, and although meets and field trials have been held in different sections of Maine, New Hampshire and Massachusetts, it still loves to follow sly reynard over this rough and hilly country and to gather around the fireside in the land of its birth. On Feb. 15, as the trains on the Maine Central entered the depot at Brunswick, there might have been seen scores of fox hunters and hounds. Here we were met by brother fox hunters of the town, and so perfect were the arrangements that not the slightest delay was experienced, and soon all had started for headquarters, five miles away. The sleighing was simply immense and the evening a glorious one, but all could readily see that the prospects for hunting were poor indeed, the ground being covered to a depth of some two feet with snow, having a sharp crust; yet all seemed willing to make the best of it, and if need be to hunt sly reynard by the fireside, which was done to the satisfaction of all.

On arriving at the Gurnet House, which we found to be brilliantly illuminated, the club's colors flying at full mast and everything looking so cheery within, we were met by Landlord Jorden and family with oldtime hospitality and shown to our rooms. Soon the bugle call announced that tea was waiting, and all marched to the dining room below. On opening the door what a sight awaited us! The ceiling and walls of the spacious room were tastefully decorated with the club colors, while here and there hung elegant paintings, snowshoes, guns, etc. Surely this was a fox hunter's paradise. After enjoying one of Landlord Jorden's best spreads all returned to the paelors and smoking rooms to enjoy the pipe of peace and contentment. Here might be seen the oldtime fox-hunters, men that have followed the gamest of all our New England animals over these same hills and mountains sixty years or more ago. These men still cling to their first love, the old New England foxhounds, with ears that sweep the morning dew, while here and there might be seen men younger in years, consequently younger in experience, men full of life and ambition, that love excitement; they naturally take to their thoroughbreds, yet all seem willing that each should have what suits him best. This is why the Brunswick Fur Club thrives and prospers. Harmony and brotherly love exist at all times.

In the evening a business meeting was called, Vice-President Heffenger in the chair, and the following gentlemen were elected officers for the ensuing year: Pres., Dr. A. C. Heffenger; First Vice-Pres., Dr. F. H. Wilson; Second Vice-Pres., Mr. A. B. F. Kinney; Third Vice-Pres., Mr. W. S. Russell; Treas., Mr. W. B, Stone: Sec'y, Mr. J. H. Baird; Master of Foxhounds, Mr. R. D. Perry. Executive Committee: Mr. L. O. Dennison, Mr. O. F. Joslyn, Mr. H. J. Given and Mr. S. Decatur.

During the meeting Mr. A. B. F. Kinney, of Worcester, Mass , presented the club with an elegant silver medal, suitably inscribed, to be awarded the foxhound showing the most endurance at our fourth annual field trials. Mr. Kinney is not only vice-president of the Brunswick Fur Club but is president of the Worcester Fur Company, and a more enthusiastic fox hunter cannot be found in New England. The club then elected seven new active members, while the following gentlemen from the South and West were elected honorary members: Capt. T. H. Craig, Marshall, Texas; Maj. G. Val. Young, Waverly, Miss ; Mr. E. H. Walker, Hammock, Ky.; Mr. J. M. Avent, Hickory Valley, Tenn.; Mr. G. J. Garrett, Columbus, Ga.; Maj. S. A. Crump, Macon, Ga.; Mr. Ras Hicks, Dyersburg, Tenn.; and Dr. J. W. Morris, Palmyra, Mo. As it was voted to open the field trials to general competition, or in other words "open to the world," it is hoped that these gentlemen will join us at our fourth annual field trials and bring with them the cream of their kennels, that we may judge for ourselves the suitability of their foxhounds for our New England hunting.

The following morning dawned bright and clear, but terribly cold, the mercury indicating 18 deg. below zero; in consequence of this and of the terrible footing the master of the foxhounds decided that the hounds should remain in their kennels a portion of the day at least. These kennels were erected during the past season and they were found to be all that could be desired, each foxhound having a separate stall and everything scrupulously clean. Here on the right might be seen the old New England foxhounds almost without number; next were the celebrated Walling pack of beagles and foxhounds of the following strains: Walker, Cook, Wild Goose, Shaggy, Buckfield, J. M. Avent, Southern Pennsylvania, Byron, and crosses between these. The club has recently had an addition to its kennel of foxhounds, Mr. G. J. Garrett, of Columbus, Ga., having sold his old stud dog Wheeler to President Heffenger, Mr. Seely and Mr. Decatur; this dog was purchased for the purpose of introducing the July strain into our kennels.

As the weather remained unchanged and poor prospects for the better, the master of foxhounds decided that after dinner the foxhounds should be taken out and divided into some six or eight packs, each going in different directions, this to be done each day for the remainder of the meet, the result being some very exciting runs, but owing to the terrible footing for the hounds the usual number of pelts were not taken. On examining the hounds at the end of the meet they were found to be badly bruised and cut, yet "for all that" not a foxhound showed the white feather. In conclusion I will say to all fox hunters tried and true, that the Brunswick Fur Club is not only the largest fox hunting club in the United States, but it is the only club of the kind having a charter. We have a large reserve fund, so that in case of adversity we may not be found wanting. As our membership is limited, we hope that you will improve this golden opportunity and join us; attend our meets and field trials, and my word for it, you will not only live happier but you will live longer. J. H. BAIRD, Sec'y.

NATIONAL BEAGLE CLUB MEETING.

AN executive meeting of the National Beagle Club was held at Madison Square Garden on Feb. 25, Pres. Chapman, Vice-Pres. H. L. Kreuder, O. W. Brooking, W. A. Power and H. V. Jamieson being present.

Messrs. W. L. Diffenderffer, Baltimore, Md.; F. C. Phoebus, Bernardsville, N. J.; R. F. Mayhew, Brooklyn, N. Y.; were elected to membership.

Voted that the next field trials be held at Nanuet, Rockland county, N. Y., commencing Monday, Oct. 24, 1892.

Voted that arrangements be made for holding a bench show under the A.K.C. rules in connection with field trials on the first day of the meet.

Voted that an entrance fee of $3 be charged in all classes of the bench show at the trials.

Voted that prizes of 40, 30 and 20 per cent. of entrance money be given; 10 per cent. to go to club.

Voted that the following classes be made; Class 1, challenge dogs and bitches. Class 2, open dogs, Class 3, open bitches, Class 4, dogs under 13in. Class 5, bitches under 13in. Class 6, puppy class for dogs and bitches.

Adjourned. H. V. JAMIESON, Sec'y.

COLLIE CLUB MEETING.

AT the annual meeting of the Collie Club, held at Madison Square Garden, Feb. 24, the officers were all re-elected, and the following gentlemen were appointed on the executive committee: J. Van Schaick, Thos. H. Terry, W. Gilmore Hoffman, Martin Dennis, H. B. Cromwell, James Watson, Chas. H. Jackson, J. D. Shotwell, J. L. Lincoln, Jr., Dr. Louis C. Sauvier.

The treasurer's report showed the club to be in a flourishing condition financially and with an increased membership.

MR. MORTIMER WILL STILL SUPERINTEND.

JUST as we go to press we have this from Mr. Jas. Mortimer: "In explanation of the premature announcement in some of the sporting papers to the effect that I have decided to sever my connection with the Westminster Kennel Club, I desire to state that a proposition was made to me some time ago in this connection, and I have had the matter under advisement until now, finally deciding to make a change, which appears to me will result to my advantage. My relations heretofore existing with the Westminster Kennel Club have been without exception of the most cordial character, and while I regret the termiuation of these official relations, I am pleased to know that it is but partial, as the club has arranged with me to superintend and still manage its annual bench shows."

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $2.00. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

THE GOVERNMENT OF THE A. C. A.

Editor Forest and Stream:

The following draft of a proposed amendment to the constitution of the A. C. A. is submitted in the hope that it may bring on a discusion and lead to suggestions from old A. C. A. men.

The proposed changes are in line with the ideas expressed of late by a number of leading canoeists.

ARTICLE VI.—*Board of Governors.*—Sec. 4. In each division at its next annual meeting the active members thereof shall elect, in the same manner as their regular officers, one member of that division to serve on the Board of Governors of the Association, whose duty it shall be to have general control of the funds and finances of the Association. The Board of Governors at their first meeting shall, by lot, determine their terms of office, one to retire on Nov. 1, 1893, one to retire on Nov. 1, 1894, one to retire on Nov. 1, 1895, and one to retire on Nov. 1, 1896, and thereafter all members shall be elected for a term of four years, or until their successors shall be elected. The commodore shall be a member *ex officio* of the Board.

Duties.—Sec 5. It shall be the duty of the Board of Governors to appropriate and apportion suitable sums to the officers and committees for necessary expenses for the running of the Association and the meets, etc., from the finances in the hands of the treasurer; and the President of the Board of Governors shall approve all bills paid by the same. They shall hear and determine all questions of dispute on appeal from the decisions of the regatta and executive committees when referred to them.

Quorum.—Sec. 6. At all meetings of the Board of Governors three shall be necessary to make a quorum, but in the event of the absence of any member from any cause, the executive committee of the same division from which he comes may select any other member from that division to represent him during his disability only, and in the event of a vacancy occurring the same shall be filled for the unexpired term by the active members of the division in the same manner as for a full term.

Meetings.—Sec. 7. The stated meetings of the Board of Governors shall be held during the annual meeting of the Association in August and at the annual meeting of the executive committee in November, but special meetings may be held at any time and place at the call of the president or at the request of three members of the board.

Officers.—Sec. 8. The officers of the board shall be president and recorder, whose duties shall be similar as in other organizations, and they shall be chosen annually at the annual meeting in camp.

Art. IX., Sec. 1. Amend by striking out the word "Commodore" in the sixth line and inserting "President of the Board of Governors."

FEBRUARY 20. F. L. DUNNELL.

A STICKFUL OR SO.

OUR friends, the yachtsmen, seem to be drifting into a lower class. Let them shave off about 3ft. more and we can give them a try in the canoes, the result is not, in my mind, a foregone conclusion in favor of the canoe as some canoeists would have it.

Speaking of amateurs, what pure amateurs we canoeists are. It is a true pleasure to see men struggling for position for the honor connected with it, as is the case in the A. C. A. regattas. In the League of American Wheelmen there is a continual quarrel over the amateur question, and a prominent cyclist said to me the other day, "I suppose that the only sport in existence where pure amateurism exists is in the American Canoe Association."

My definition of an amateur in canoeing is somewhat like this, "An amateur is a gentleman who can earn his living without being dependent upon cash remuneration for canoeing prowess, or who does not want to make a business of his recreation."

That premonitory unrest that indicates the coming of a new season is now being felt throughout the length and breadth of the canoeing world. Soon the warm sun and drying winds will waft the smell of paint and varnish far and wide, and the canoe fleet will assume its new dress for 1892. To those who take some time to think about the matter I would suggest, begin thinking right away. I waited last spring to think it over, and in consequence did not get on the water until June. My fingers are all barked, and the quicks full of pumice stone and varnish, and the Ilex family members, 1, 2, 3 and 4, are all smooth as gooseberries.

I wonder why it is that clubs will put off the date of their annual elections until the season opens. This year several of the largest clubs in the Eastern Division do not hold their elections of officers until May 1 or thereabouts. The A. C. A. year book is thus either delayed or rendered incomplete. The advantages of this late election are not very apparent, and it would be infinitely more convenient to have such business meetings before the boating season. ILEX.

DECK AND INTERIOR PLANS OF CRUISING STEAM YACHT. DESIGNED BY ALFRED H. BROWN, ESQ., 1891.

CRUISING STEAM YACHTS.

THE accompanying drawings show a sea-going steam yacht of a size and type hardly known in America, but which are specially adapted for the double purpose of a convenient summer home and for the winter trip to the West Indies, which is each year becoming more a matter of course with yachtsmen. Though not pretending to the speed of some of the American yachts of the same length, she possesses a most desirable average of good qualities; moderate in first cost, very economical to run, ample and well arranged accommodations, and the ability to go anywhere. She was designed by Mr. Alfred H. Brown, designer of Semiramis, Eros and other large yachts, for Mr. Sheldon, a British yachtsman; and is intended for cruising to Norway and the Mediterranean.

Her dimensions are: Length over all, 116ft.; l.w.l., 103ft. 4in.; beam, moulded, 15ft. 6in.; depth of hold, 10ft. 6in.; draft, 9ft. Displacement, 155.4 tons; tonnage, 110 tons. The engines are the ordinary two cylinder compound, cylinders 13 and 24 by 18in.; this type being adopted as being for the purpose practically as economical as the triple expansion, and involving less wear and tear. The boiler is of steel, 9ft. 6in. by 9ft., fitted with the Serve ribbed boiler tubes and working at 100lbs. pressure. The engines are guaranteed to indicate 200 H. P., giving easily a speed of 10 knots, on a consumption of 3 to 3½ tons per 24 hours. Her ordinary speed at sea will be 9 knots, at which the consumption will be about 2½ tons; which, with a bunker capacity of 13 tons, means about 1,000 miles steaming on her bunker coal. The weight of engines and boilers with steam up will be 28 tons.

The accommodations have been carefully planned to give the greatest possible comfort to five persons, and at the same time to secure good crew space, a point so often neglected. The owner's room, about 7ft. 6in. by 14ft., extends across the vessel, with a large bath and toilet room adjoining and communicating with it and the passage. The bath is heated by a copper coil from the boiler, discharging outboard. The main saloon, just forward, is 11 by 13ft., fitted in polished American oak, with silk tapestry panels. The steering is done entirely from the bridge, leaving the deck saloon unobstructed by a wheel, and with room for a curved sofa and large table. The accommodations aft include two good staterooms and a ladies' cabin, all the sleeping rooms being finished in enameled white pine, with polished mahogany fronts to berths, washstands and other furniture. The yacht is now building on the Clyde, and will be launched in time for use this season.

RACING FIXTURES.

Editor Forest and Stream:

I note from the reports of the meetings of the different clubs that the Seawanhaka Corinthian and New Rochelle yacht clubs have both named Saturday, July 2 as the date of their annual regattas and that the American and Riverside clubs have selected Saturday, July 9, for theirs.

It seems unfortunate that the clubs concerned could not have decided on dates that did not conflict. Having two important racing events on the same day on the same waters can only work to the disadvantage of both clubs. The owner of a racing yacht is compelled to decide which of two regattas he will enter for, whereas if the events were held on different dates it is probable that he would start in both races.

The New Rochelle and Riverside clubs have certainly a prior right to the dates named through having been the first to decide on them besides having always held their annual races on approximate days in former years.

If the American had selected Tuesday, July 5, and the Seawanhaka Thursday, July 7, with the Larchmont regatta on the Fourth, a series of important races would have been established, and race week on the Sound would have been made a greater yachting success than it is likely to be if the clubs stick to the dates selected.

The entry list for the past four years has been so proportionately small that no club can afford to lose the entries of any of the yachts of the racing fleet, and owners have a right to demand that they shall have an opportunity to start in the races of all the clubs in the Sound circuit if they so desire.

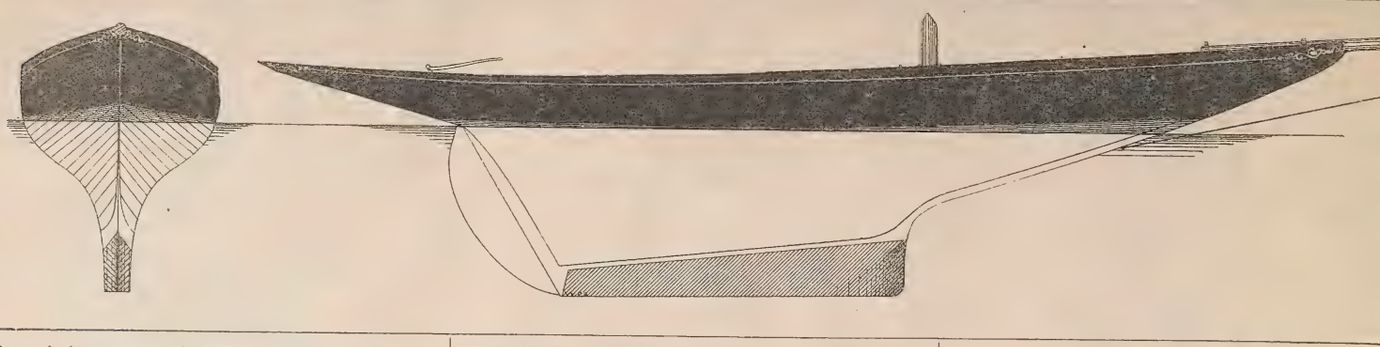
FRANK BOWNE JONES.

WASP.

THE sentiment that almost invariably attends the launching of a vessel, especially a yacht, was conspicuous only by its absence at Bristol on Tuesday morning. The American flag flew from a high staff near the machine shop and a crowd of townspeople filled the south gallery of the building shops, but with these exceptions the business and bustle of the daily routine went on as usual. The only strangers present were Mr. John Hyslop, of New York, and two or three newspaper men; the owner, Mr. Archibald Rogers, being absent, while Capt. Charles Barr, who will command the new yacht, had not yet arrived, as it will be some time before the work of fitting out will begin, although the yacht is to all intents completed save the stepping of the spars. The new steam yacht which was built just astern of Wasp was launched on Feb. 23, and laid beside the wharf, leaving the slipway in the shop entirely clear.

At the head of the slip, facing the visitor as he entered to door, lay the new craft from which so much is expected. Unlike her older sister, Gloriana, she makes no small pretentions to good looks, and and though the stem in itself is not handsome, nor the stern so light and graceful as in many of the newer yachts, the boat is certain to present a pleasant appearance when afloat and in commission. So far as mere conventional finish is concerned, Gloriana depended on no such artificial charms; in her case it was "Handsome is that handsome does," but in Wasp the conventionalities have received more consideration. The green bottom and plain white topsides of Gloriana have been replaced by a bottom of copper bronze, the copper line carried up a little above the true loadline, while the topsides are a glossy black, relieved by a broad gold stripe and carved scrolls at each end.

The accompanying sketches give a very good idea of her general appearance, though the boat really has more hollow above the keel than the section shows.



Even now, after she has been afloat for a year, the true dimensions of Gloriana, other than her official waterline, 45ft., are unknown; the various statements which have appeared from time to time being unverified and often contradictory, consequently it is needless to say that the dimensions of the new yacht are enshrouded in still deeper mystery. The approximate dimensions of Gloriana are probably as follows: Length from stem head to taffrail, 71 to 72ft.; l.w.l. (official), 45ft.; beam, 12ft. 10in. to 13ft.; draft, at above l.w.l., 10ft. 3in. The corresponding dimensions of Wasp are probably over all, stem to taffrail, 72ft.; l.w.l., 45ft. 6in.; beam, 12ft. 6in. to 12ft. 9in.; draft 11ft. to 11ft. 3in. The displacement is, to judge by eye, very nearly the same, but in spite of the close agreement in dimensions, there is a marked difference in many leading features, and it will not be far from correct to say that Wasp is even more closely allied to Dilemma and her numerous and interesting family of fin keels than to Gloriana and the more conventional cutter models of the 46 and 40ft. classes.

Looked at from the starboard bow, as one enters the door of the shop, the first idea is of a fin keel craft, a very long, round sectioned and generally canoe-shaped hull, perched upon a short, thin and deep fin, and though a closer examination made modify this first impression, it by no means disappears.

The midship section is much like Gloriana, the beam being apparently a little less, while the depth of bilge is the same and the total draft decidedly greater. Looked at from abeam however, the resemblance to Gloriana disappears very quickly. The after overhang is the same, the rake of sternpost is apparently the same, about 35 degrees, but the post runs down to the heel of the keel, instead of stopping a little above it. The keel, instead of curving upward both forward and aft as in Gloriana, is perfectly straight for a length of about 20ft., the contour being very closely shown in the drawing. While in Gloriana the line of the stem was practically straight for some distance below water and slightly concave from the water to the stemhead, in the new boat the same line is one convex curve from about under the mast up to within a short distance of the stemhead, from which point it turns in quite rapidly, as shown. The whole bow is fuller and rounder than in Gloriana, both in section and waterlines, and if the stem line were produced in the same way as in Gloriana, the overhang would be something astounding. As it is, the really vital features of Gloriana, the round form and fulness of waterline, are carried out still further, while the mere overhang which was the subject of so much idle talk last spring, is practically no longer. The whole bow and forebody suggest the new fin keels, in which craft Mr. Herreshoff, with an actual length of overhang which is quite moderate, has preserved the large area of waterline plane and the clean diagonals which are really the original and vital features of all his later yachts.
